Ranklechick is a svelte and stylish ghoul who lives on a space station in the future. The space station is alive, but Earth more or less isn't. It's a devastated ball of mud coated in a layer of nanites forming a slimy grey porridge. One night Ranklechick succumbs to his life long ambition and flies to Earth with his three legged cat, Pumpernick, to manifest the ghost of Charles Dickens and thereby obtain his autograph. Naturally things don't go quite according to plan... Studio Tavicat produces an above average venture into humour fiction that comes across as Oscar Wilde meets Chuck Jones meets *Astro Boy*. Worth a look.~WW

RANMA½

Viz: *7 issue limited series (Part one) 1992-1993*, 11 issue limited series (Part two) 1993-1994*, 13 issue limited series (Part three) 1994-1995*, 11 issue limited series (Part four) 1995*, 10 issue limited series (Part five) 1996*, 13 issue limited series (Part six) 1997-1998*, 11 issue limited series (Part seven) 1998-1999*, 13 issue limited series (Part eight) 1999-2000*, 11 issue limited series (Part nine) 2000-2001*, 11 issue limited series (Part ten) 2001-2002, 11 issue limited series (Part eleven) 2002-2003*, 1 issue + 2003 to date*

Ranma½ is your basic martial arts transsexual romantic comedy. What? You want more? Oh, okay... Teenage studmuffin Ranma Saotome is a martial arts expert from China, affianced at birth, by agreement between the fathers, to one of the three Tendo daughters, heiresses to a martial arts dojo in Japan. When Ranma shows up to meet his putative brides, the girls get a shock. 'He' appears to be a girl. Furthermore, his father appears to be a panda. This is due to an accident at a group of legendary cursed springs. Ranma, and Saotome senior, can revert back to their normal forms, but, needless to say, circumstances always conspire to make Ranma 'girl up' at the least appropriate moment. This causes endless embarrassment not only for Ranma him/her self, but also for Akane, the tomboyish Tendo daughter who eventually, against the better judgement of both of them, becomes the reluctant object of his affections.

Before long the strip is awash with similarly afflicted characters, transforming willy nilly, as well as sundry non-transforming, but equally bizarre, friends, foes, relatives, rivals for Ranma's affections and so on. This is first-rate slapstick, elegantly executed by writer/artist Rumiko Takahashi, which never loses sight of the core of attraction and exasperation between Ranma and Akane Tendo that makes them, in the middle of all this chaos, solid and appealing characters. It does become repetitive, particularly when read in the graphic novels, of which there are twenty-one volumes to date, but it remains consistently entertaining. Yes, the same jokes are used again and again, but, bafflingly, they remain funny.~HS

Jurassic Park: RAPTOR

Topps: *4 issue miniseries 1993, 4 issue miniseries ('Raptors Attack') 1994, 4 issue miniseries ('Raptor's Hijack') 1994*

Steve Englehart continues the story where the film left off in the *Jurassic Park* miniseries, with Doctors Grant and Sattler trying to round up the missing raptors. In keeping with the 'horror' elements of the film, the good doctors end up stuck on a cargo plane with the beasties, having been captured themselves by a mercenary hired to smuggle out the dinosaurs. Michael Golden's covers promise more than the Armando Gil and Dell Barras artwork delivers. In 'Raptors Attack' Englehart continues the story, naming the three remaining Raptors (Alf, Betty and Celia) and having them chased through the jungle by. Englehart's anthropomorphism is irritating, while Chas Truog's artwork (from 2 onwards) is unimaginative. The third series is again written by Englehart, who introduces a talking raptor, stretching credibility even further. Neil Vokes provides more interesting visuals, but the whole thing is sketchy and unfocused.~NF

RAPTORS

NBM: *3 volumes + 1999 to date*

Vicky Lenore and Benito Spiaggi are assigned to investigate a series of bodies, completely drained of blood with a pin driven into a cyst behind the right ear. Two mysterious figures, brother and sister, are responsible for the deaths, but it's Vicky's investigation into the links between the victims that almost leads to her own death. Volume two introduces Aznar Akeba, summoned by the Council of Vampires to deal with the threat. Vicky, meanwhile, meets and is seduced by the Raptors, Drago and Camilla. They are the children of Don Molina, who opposed the Council when it chose to seek power rather than just nourishment from humans. In volume three, a man dressed as a priest helps Benito find the missing Vicky, who's drawn closer to Drago and Camilla, and Aznar also learns more about his true relationship to them. This is an occasionally lyrical, violent, erotic, richly illustrated series from writer, Jean Dufaux, and artist, Enrico Marini, offering a compelling narrative and complex characterisation. A new volume is expected from the original French publishers in 2003, but it's too early to predict a release date from NBM.~NF

RARE CREATURE

Slave Labor: *4 issue miniseries 2000**

A story of a bleak and surreal quest for love as frail little Amelia Mire undertakes a physical, emotional and spiritual journey with a most unwholesome boy next door, in an allegory that borders on the bizarre. Chockful of peculiarity, this goes places that *Little Red Riding Hood* should have but didn't. Obscure, but readable, with persistance.~WW

Roarin' Rick's RAREBIT FIENDS

King Hell: *21 issues 1994-1997*

The comic is like a group workshop on dreams: Rick Veitch starts by recounting one of his, then in the letters page people write in with one or two of their own, and finally there are stories about dreams from other creators (e.g. Al Davison in 11, Lee Kennedy in 19). It's interesting, and done with a spirit of lively curiosity untainted by analysis or navel-gazing. Have a look at any that come your way, but you probably won't feel the need to hunt them all down. 1-14 are collected.~FC

RASCALS IN PARADISE

Dark Horse: *3 issue miniseries 1994**

On the frontier of the universe a duplicate Earth, circa 1932, has been created as a giant resort by the civilised planets of the 24th century. Unfortunately, due to a computer error the world has been covered with tropical jungles, sparsely populated by ancient civilisations. In the tradition of Edgar Rice Burroughs, Jim Silkie crafts a tale of lost treasure, tribes of apes and damsels in distress. Magazine-sized, it's a beautiful production with engaging characters – including one based on the director, Sam Peckinpah.~NF

Justin Hampton's RAT

Aeon/Back Bone Press: *1 issue 1997*

Now better known as an illustrator, Hampton employs two distinct and accomplished styles on this story of a man annoyed to breaking point by society around him. After getting drunk and reading the comic strip in his favourite biker magazine he decides to act on his anger. Planned to run for three issues, only the one appeared, but it's worth a look anyway.~WJ

RAT BASTARD

Crucial Comics: *6 issues 1997-1999*

A detailed and well conceived future where the human gene pool has been diluted, permitting the existence of Experimental Life Forms, hence the Rat Bastard of the title. He's a surly investigator living on his wits in an almost universally corrupt society. The comic is credited to the Huja Brothers, a picture of whom appears on the website, but presumably one of them is Cliff Galbraith to whom everything is copyrighted. Whoever they are, they've constructed fast moving, funny and imaginative stories, drawn in a style more commonly associated with European artists. 1-4 were promoted as a miniseries 'Fix for a King' as Rat Bastard investigates the deaths of several taxi drivers encountering many unsavoury types in discovering why. They include the annually appointed king, who adopts a variation of Elvis' persona, Elvis being largely worshipped as the one true God. The follow-up deals with the one day a year when vengeance without legal consequence is permitted in the city, and the Rat has plenty of enemies.~FP

RATMAN 2000

Slave Labor: *One-shot 1999*

Sunny Becker is a born loser on a one-way trip to nowhere until his life is changed forever when he adopts the identity of the reluctant Ratman in the world of professional wrestling. It's hard to believe, after reading this somewhat bizarre and crudely-drawn 'humour' title, that anyone at Slave Labor thought this idea was worth sixty-four pages. Even more amazing than the price of $7.95, this is the work of DC senior editor Mike Carlin, who should know good comics from bad.~DB

RATS!

Slave Labor: *One-shot 1992*

Fred, a rat, is fed up with the bad reputation of his species and, when he meets a rat who says that she's a dog, thinks he may have met a like-minded companion. However, he soon finds himself caught in the middle of a conflict between Chowder (a rat), George (a cat), and the evil Baron Molehang, the worst rat of all time. Scott Saavedra tells an amusing, witty story in his usual clean-lined style.~NF

RAVAGE 2099

Marvel: *33 issues 1992-1995*

Paul-Phillip Ravage is head of the eco police, which everyone seems to know is utterly corrupt. The exception is Ravage himself who, despite having been the force's top agent, has no idea. When he does start to question things, his boss immediately frames him, but he escapes to fight back as an eco-warrior, using rubbish as his weapons. The most amusing example of this is his adoption of a hub cap as a shield. This first incarnation of Ravage is written by Stan Lee, and is truly awful. The character is a composite of things Lee felt were 'hip' at the time: ecology and a gritty attitude, but the whole thing feels like your granddad trying to rap. When he leaves with 8, you think things must surely get better, with Pat Mills and Tony Skinner taking over the writing. But no, it's still just as bad, only in a different way. Now no longer an outlaw, Ravage becomes a were-beast/businessman. As it turns out, his dad owns a multi-national, something they neglected to mention in earlier issues. By 22, the writers decide that they too are bored with the corporate shenanigans, and Ravage mutates yet further, going on a road trip which culminates in a showdown with arch-nemesis Dethstryk (a Doc Doom knock-off we first meet in 3). Things are quickly wrapped up, and by 33, it's thankfully all over. The only highlight is Joe Bennett's pencils, which start in 22, but this comic is very much a dog.~DB

This can be achieved by gathering together the missing mystic Rave Stones. Haru is aided by the faithful Plue and the stacked Ellie. Its just what you expect, so act accordingly.~WW

RAVEN CHRONICLES

Caliber: *16 issues 1995-1997*

Aimed squarely and obviously at the *X-Files* fans, Raven Inc is a group of investigators looking into assorted Fortean topics. Spontaneous human combustion, vampires and pyrotechnics feature in the earlier issues, all of which are marred by clumsily inserted infodumps. 5 gives background information about the team, and ironically the best issue is 4, the most obviously similar to an *X-Files* episode. Only two of the team participate in the investigation of a ghostly hitch-hiker, elegantly drawn by Rick Taylor. Further commendable artwork is to be found from David Hill, David Boller, Galen Showman and Mark Bloodworth in 7, 8, 10 and 16 respectively, but the writing doesn't reach a similar standard. 1-3, 5 and 6 are collected in Myths and Methods, 15 doubles as *High Caliber* 4, and the team also feature in the superior *Red Diaries*.~FP

RAVENS AND RAINBOWS

Pacific: *One-shot 1983*

Showcase for the early work of Jeff Jones, containing a collection of short strips and some portfolio pages. A number of different styles are on show, but his predilection for single-page strips is already in evidence; his fantasy is more successful than his science fiction. The most fully realised piece is the washed-out, sombre 'Spirit of 76'.~NF

RAVER

Malibu: *3 issue miniseries 1993*

It's difficult to conceive that Malibu were so desperate for the minor celebrity cachet a comic written by *Star Trek* and *Babylon 5*'s Walter Koenig might bring that they unleashed this pitiful hotchpotch of seemingly stream-of-consciousness trash.~FP

RAW

Raw: *8 issues 1980-1986*

Penguin: *3 books 1989-1991*

Emerging from the ashes of *Arcade, Raw*, under editor Art Spiegelman, was a ground-breaking anthology magazine that brought to prominence a whole generation of cutting-edge cartoonists. Its lavish tabloid size and high production values engendered experimentation rather than narrative, and the first issue suffered from a certain preciousness that occasionally resurfaced throughout the run. By 3, however, Spiegelman had assembled a roster of exceptional talents that brought an intelligence and breadth of vision rarely previously seen in the field. The most prolific contributors included the neo-primitive Gary Panter (3-6, 8), savagely pointilliste Drew Friedman (1, 2, 6), the wistful chronicler of urban decay Ben Katchor (2, 3, 6) and the 1950s-influenced Charles Burns (3-8). Spiegelman, with co-editor Françoise Mouly, was also concerned to bring European artists to a larger English-speaking audience, most notably Jacques Tardi (1, 5), Joost Swarte (1-3, 5-7) and Muñoz and Sampayo (3, 6).

Almost inevitably in a magazine of predominantly short stories, the few lengthier pieces stand out, and it was Muñoz and Sampayo's epic 'Mister Wilcox, Mister Conrad' in 3 that was one of the comic's highpoints. Other notable extended works included Pascal Doury's frenzied and frankly indescribable 'Theodore Death Head' in 5, and Robert Crumb's biographical 'Jelly Roll Morton's Voodoo Curse' in 7. Above all else, though, *Raw* was home to Spiegelman's masterpiece, the harrowing Holocaust-based 'Maus'*, which ran in instalments from 2. The first chapters were collected by Pantheon/Penguin in 1987, causing an immediate sensation and eventually winning the Pulitzer Prize. Buoyed by its success, Penguin initiated the Raw Books line, the flagship title of which was a revived and expanded *Raw*. Under Penguin *Raw* was paperback-sized and 200 pages long, causing an immediate re-positioning towards extended narratives, which made the title more substantial than ever. All the previous incarnation's principal cartoonists returned, and were joined by new contributors Loustal (1), Baru (1) and Chris Ware (2, 3). Rounding out the package were judicious reprints (with Basil Wolverton in 1 and a lengthy Krazy Kat section in 3) and showcases for the bizarre, notably the obsessive and troubling art of Henry Darger. The comic is absolutely essential, and repays repeated viewings.~DAR

RAWHIDE KID

Marvel: *151 issues, 1 Annual 1955-1957 (1-16), 1960-1979 (17-151), 4 issue miniseries 1985*

Max: *1 issue + 2003 to date*

Oddly for a comic that spanned three decades, the first run of *Rawhide Kid* was a decided flop. And no wonder, with template stories and dull art. The revival in 1960 was a different story, as the combination of Stan Lee and Jack Kirby honed the style later so successfully applied to the early Marvel superheroes. By and large Rawhide Kid was indistinguishable from other Marvel sure-shots roaming the Wild West, but some sprightly dialogue and the occasional inventive plot from Lee and Kirby between 17 and 32 provided the best of the run. Thereafter it's mediocrity all the way, and don't be suckered in by inferior art from the likes of Jack Davis and Al Williamson. From 115 the first series is all reprint, and few are likely to have noticed. The 1985 miniseries jumps forward a few decades, when the appellation 'Kid' is more than a tad in error. It's plotting by numbers as our man acquires a sidekick towards the end of his life.

---

* Available in a collected edition

The Max miniseries offers a strictly contemporary interpretation of the Rawhide Kid's continual awkwardness around women. It's not an invalid speculation, and there's a charm to John Severin's illustrations, but a calculated sniggering to Ron Zimmerman's script so far belies all plausible explanation of this being anything other than sensationalism. A prominent parental advisory banner at double the usual size adds to the feeling of exploitation.~WJ

THE RAY

DC: *6 issue miniseries 1992*, 29 issues (0-28), 1 Annual 1994-1996*

On the death of his father, teenage Ray Terrill discovers that he's been lied to all his life. Having been literally 'kept in the dark', told that exposure to bright light will kill him, he finds that the reverse is true, and that light empowers him, as he is the son of the light-wielding hero of the 1940s, the Ray. Visited by an apparition of his natural father, now an intangible being, young Ray has to cope with being patronised by a 'ghost', contend with a mysterious conspiracy, and learn the basics of super-heroics, all while trying not to burn his pants off with his new-found powers! Scripted with unexpected dexterity by Jack C. Harris and stylishly illustrated by then relative newcomer Joe Quesada, the miniseries was a sleeper hit, resulting in an ongoing berth shortly thereafter. The continuing title, with the new creative team of Christopher Priest and Howard Porter, began with an unpromisingly pedestrian two-parter, in which our hero teaming up with Superboy left no superhero cliché unturned. However, Priest rapidly developed several of his characteristic quirks on this series, including unusual narrative viewpoints, (many early issues are epistolary, Ray telling the events to the Black Canary) time-travel machinations, and so on. In fact, it could be said that he over-relies on them, as frequently clarity is sacrificed for the sake of showing-off. Nevertheless, there are moments of freshness and invention, an early example being 9-10, when young Ray inadvertently contributes to his own father's origin. But Priest, at least, is seen to be making an effort; the bafflingly-popular Porter remains as stunningly generic as ever.

Events take a dramatic upturn around the late teens. Jason Armstrong becomes regular penciller, and pays some attention to the storyline, providing attractive and dynamic work, while the increasingly confident Priest relies less on legerdemain and more on character-driven narrative. The story remains elaborate and multi-levelled, but the complexity is justified and rewarding, as Ray's relationships become more and more convoluted. Towards the end of the series, Ray has discovered several unsuspected branches on his family tree, has acquired troublesome knowledge about his father's past and his own future, and has deliberately entered the employment of one of DC's deadliest villains. Just as you're getting keenly interested in how all this mess is going to be disentangled – it isn't! Instead, the series is cancelled, and the character unjustly condemned first to cannon-fodder status in *Extreme Justice*, and then, in a really creepy move, the role of 'twenty-something who likes to hang around with underage teens' in *Young Justice*. The series is too narratively choppy for an unconditional recommendation, and Priest is a writer whose eccentricities have only become more honed with time, but it's brighter-than-average superheroics.~HS

RAY BRADBURY COMICS

Topps Comics: *5 issues 1993*

As the title suggests these are adaptations of Ray Bradbury's short stories, including in 1 and 2 reprints of EC stories by Al Williamson and Jack Davis ('A Sound of Thunder' and 'The Black Ferris' respectively). The first and third issues have dinosaurs as a theme. Highlights here include another version of 'A Sound of Thunder' by Richard Corben in 1 and an adaptation of the classic 'The Fog Horn' by Wayne Barlowe in 3. The second issue concentrates on horror and provides the highlight of the series, Harvey Kurtzman and Matt Wagner collaborating on 'It Burns Me Up'. 4 includes excellent work by Mike Mignola and Ron Wilber but 5 is a letdown, despite a frontispiece by Moebius and Ross MacDonald's imaginative attempt at adapting 'The Trapdoor'. There's also a one-shot titled *The Illustrated Man*.~NF

RAYNE

Sheet Happies Press: *4 issues 1995-1997*

Anthropomorphic sword and sorcery with added technology is the background to this story of Rayne, searching for answers about her past, accompanied by Dohr, as they encounter a renegade wormlord after Dohr has been wounded by a rat creature. This is well-realised by creator Gary McCluskey, in a pleasing style that contains elements of both Mike Kaluta and Berni Wrightson.~NF

Avatar: *One-shot ('The Ravening') 1999, one-shot ('The Furies') 2000, one-shot ('Bleeding Heart'), 2 issue microseries ('Til I Bleed Daylight') 2000*

Beginning as a black and white violent-babe title, that it was marginally better drawn than many vanity efforts, although still not by any means well, and was regularly published ensured this title a following. Razor, named after the distinctive blades she wears on her arms, is Queen City's defender of the weak, preying on criminals in a particularly unpleasant fashion. Any inventiveness is in the way she tortures, maims or kills them. The first miniseries expands the horizons a little by restoring Razor from the dead and introducing ongoing supernatural elements. From 12 the main series was titled *Razor Uncut*. It ran concurrently with the many miniseries, and, confusingly, with the second ongoing series, which was a slightly tamer (although no better) series intended for more general consumption. Over the main series, various other scantily clad violent women were introduced and later published in their own titles, most notably Stryke, Tommi Gunn and Poison. Incredibly, if anything, the Avatar issues are even poorer than the original series. Including assorted team-ups (and not counting the myriad variants) there's a total of over a hundred *Razor* comics, and despite the intention, not one of them is worth a wank. Literally.~WJ

RAZOR/DARK ANGEL: THE FINAL NAIL

Boneyard: *One-shot 1994*

In the editorial, writer Hart Fisher mentions this was plotted in half an hour at a Wendy's restaurant. One can easily believe that was the most time and care given to any aspect of this. Two mercenaries with a past meet up, and, since one of them's a scantily-clad bimbo, one imagines there's supposed to be sexual tension between them, but the cripplingly inept art means this isn't even any good as a Bad Girl comic.~HS

RAZORGUTS

Monster: *4 issue miniseries 1992*

Set in a future where a Fourth Reich calling itself the Hierarchy has taken control of humanity while it waits out the effects of a plague in sealed five thousand storey buildings. The action follows a group of rebels as they fight their way up the tower to kill the cyborg Kommandant who has had his stomach replaced with rotating metal blades. Seemingly simplistic in approach, the story by Barreiro is full of twists and moments of real power, and the art by Solano Lopez is a joy to behold.~WW

RAZORJACK

Jack Publishing: *1 issue 1999*
Com.X: *2 issue microseries 2001*

Disappointing tale of hard-boiled cops drawn into a supernatural holocaust as an extra-dimensional demon queen called Razorjack tries to break into our reality. It's replete with blood and guns and bad language but despite being beautiful to look at, John Higgins' script simply fails to grip the attention. The Jack Publishing issue starts the story (reprinted in the first Com X issue), and also reprints the first two issues of Higgins' work on *World Without End*.~WW

RE-ANIMATOR

Adventure: *3 issue miniseries 1991-1992, one-shot ('Tales of Herbert West') 1991, 4 issue miniseries ('Dawn of the Re-Animator') 1992*

The first, colour, miniseries is a competent but pointless adaptation of Stuart Gordon's fantastic 1985 gutbucket B-Movie. Writer Steven Phillip Jones fails to capture the film's sleazy black humour, and artist Christopher Jones owes too large a stylistic debt to the mainstream work of David Mazzucchelli. Mind you, both creators look like Renaissance men compared to the jokers behind the meritless black and white prequel 'Dawn of the Re-Animator', one stiff that definitely doesn't deserve resurrection. The one-shot is a collection of musty Lovecraft stories accompanied by wretched full-page illustrations.~AL

REACTO MAN

B-Movie: *3 issues 1987*

A big fan of obscure 1940s superheroes, Ken Holewczynski created a new one, Reacto Man, who shoots gamma rays from his eyes. Back-up 'Man in the Moon', is written by Brian Augustyn in similar fashion, with nutty scientists and bizarre deformed crooks common to both. The 1940s feel is accurate, and these simple stories will probably be a guilty pleasure for some.~WJ

REACTOR GIRL

Tragedy Strikes Press: *6 issues 1991-1992*

Committed to exploring comics in a variety of forms (photo strips, mixed media, puzzles), around the central theme of urban life, this Canadian anthology continues from a run of minicomics published by editor Michel Vrána. It's key creators are Jason (Jay) Stephens (1-5) and Carol Swain (1-4), the former with schoolboy Sparkie McGee's ABCs of things not to eat or that make you bleed, the latter with noir tales in her distinctive style. In 3, the mother and son team of Sylvia Markle-Craine and Nick Craine offer a melancholy view of old age while Cinders McLeod asks why there are no women cartoonists in a simple, yet endearingly cartoony style. Better known for work elsewhere, Dylan Horrocks turns up in 4 and 6, Adrian Tomine in 5-6. The more avant-garde approaches are the least satisfying, but the quirkiness of a McLeod and the clear line of Laurent Cilluffo (6) offer a way past the more wilfully difficult selections.~NF

READ THIS BOOK AND DIE (LAUGHING)

Art & Soul: *One-shot 1995*

A sampler for Marc Hempel's *Tug and Buster* and for Mark Wheatley's *Radical Dreamer*. In *T&B*, Big Tug is the silent manly type, and little Buster idolises him and lives for their joint babe-quests. Nice comments on 'male bondage' (as Buster calls it). *Radical Dreamer* is probably about some conspiracy to exploit dreams, but it's unreadable, so who can be sure?~FC

REAGAN'S RAIDERS

Solson: *3 issues 1986*

Having President Ronnie and his cabinet dress up in superhero suits to personally kick ass where it's needed might have been as funny as it was obviously intended to be. The excessive patriotic dogma undermines any humour, though. That the assorted artists make little effort weakens the idea further, with Dick Ayers and Rich Buckler in 1 wearing out their lightboxes tracing Ronnie's face from photos leaving them no time to draw anything else competently. Funny in the manner of people who consider repeating "U.S.A." over and over is participation in political discussion.~FP

THE REAL GHOSTBUSTERS

Now: *3 issue miniseries 1989, series one 28 issues 1988-1990, series two 8 issues, two Specials 1990-1991*

The main series is an adaptation of the TV cartoon, written by James van Hise with art mostly by John Tobias and Brian Thomas. At the start the pacing was poor and the dialogue very disjointed, but things soon improved and from 3 most stories are quite readable if not remarkable, with 4 having some art Evan Dorkin would surely sooner forget. 6 stands out with some amusing spoofs when TV programmes are invaded by ghosts, though the fun's over about halfway through. Also of interest is 21, a special containing three stories by different writers and artists, including Phil Elliott. The variety is refreshing, and the stories seem much stronger when corseted into eight pages. The miniseries is an adaptation of *Ghostbusters II* by van Hise, Tobias and inker Rich Rankin. It's quite lively and amusing, with a much tighter story than most in the main series. Save it for a rainy day, though. The art on the second series is better, and there's the extra care taken in presenting puzzles and activities for the core pre-teen readers, but that being the case perhaps they shouldn't have stretched the first story over four issues.~FC

REAL GIRL

Fantagraphics: *9 issues 1990-1995*

Advertising itself as "The Sex Comik for all genders and orientations... by cartoonists who are good in bed", this anthology has strips from a lot of interesting creators. There's Waller and Worley, Eddie Campbell, Diane Noomin, Mario Hernandez, Joan Hilty, and Roberta Gregory, but editor Angela Bocage doesn't seem to bring out the best in any of them, as the contributions tend to be perfunctory, rambling, or simply feeble. In the entire run to date, the two most interesting features have been the back cover to 3, by the late Cara Sherman-Tereno, depicting a scary-but-sweet post-coital moment, and the selection of *Dykes To Watch Out For* strips by Alison Bechdel reprinted in that same issue. The S & M issue, 9, tends, amusingly, to sell quickly whenever it surfaces due to the cover subject, despite not really being very well done.~HS

REAL LIFE

Fantagraphics: *1 issue 1990*

The work of Mark Zingarelli was a pleasing sight in late-1980s anthology titles, and this one-shot collects several strips, most dwelling on the morbid side of life. Good as his strips about killers are (with an excellent, and possibly apocryphal, tale about the King of Ethiopia and the electric chair), the highlight is the remorseful tale of Augie's Miracle Meats. It combines happy childhood memories with sad decline, and is told in memorable fashion. The writing and art are engaging throughout, and those looking for more intelligent comics could do far worse than sample *Real Life*.~WJ

REAL STUFF

Fantagraphics: *20 issues 1990-1994*
Starhead: *1 issue (Real Schmuck) 1993*
Eros: *6 issues (Real Smut) 1992-1993*

Dennis Eichhorn's work stands out from the introspective autobiographical crowd because he experienced more of life: the majority of his stories are anecdotal with no particular message, and he's far more in-your-face than many of his proselytising colleagues. At times he's an asshole, in fact. Notwithstanding, a veritable who's who of early 1990s 'alternative' artists contribute to *Real Stuff*, and interestingly enough, considering there's a minimum of five stories each issue, the material becomes stronger towards the end of the run, exemplified by the reminiscences about nutty 'musician' Wild Man Fischer. Expressively drawn by J.R. Williams, they're in 14 and 16-20. At his best Eichhorn's anecdotes are good comic material, at his worst vainglorious boasting, but there's something worthwhile in every issue. When Fantagraphics began their Eros line, Eichhorn's sexually based stories were cleaved off into six issues of a companion title, *Real Smut*. Isolated from the diversity of his other vignettes, the theme is strained, with 4's disturbing story of childhood vaccination an exception. There's also a single issue of *Real Schmuck*, featuring a tale relating to a story about a McDonalds heiress printed in *Real Stuff* 9, and allegedly turned down as an issue of *Real Stuff*. It's a good selection, worth looking out.~FP

REAL WAR STORIES

Eclipse: *2 issues 1987 & 1991*

The Department of Defense tried to stop the distribution of *Real War Stories* 1, published on behalf of the Central Committee for Conscientious Objectors. The second issue highlighted the work of Citizen Soldier, an organisation dedicated to protecting the civil and human rights of its GI/veteran members. Neither volume is successful as a comic. Both have good writers and artists (Joyce Brabner, Brian Bolland, Steve Leialoha, Bill Sienkiewicz, Paul Mavrides) but only rarely do they attempt anything interesting as far as the form goes. In 1 Alan Moore effectively contrasts an ex-soldier's past and present life, while 2's highlight is Greg Baisden and Stephen DeStefano using *Alice in Wonderland* to satirise arguments about the use of military force. This is not to say that the title fails in its objective of expressing the tragedy of war, it's simply that the impulse to teach us this often outweighs artistic considerations.~NF

REALITY CHECK!

Tavicat: *2 issues 1995*
Sirius: *12 issues 1996-1998*

Sometimes charming set of stories about Collin, his mates, and Catreece, who's smarter than the average cat. Smart enough, in fact, to activate and plug into Collin's virtual reality scenarios via a game helmet. In the VR world she adopts the guise of a sexy catwoman, and complicates his life when he goes online with his friends. This could have been *I Dream of Jeannie* for the computer age, but settles instead for gang of pals plots, with Collin's dysfunctional family played down and incorporating more and more manga touches as it progresses. Creators Rosearik Rikki-Simons and Tavisha Wolfgarth-Simons are responsible for a well produced all-ages comic that sometimes sets the whimsy button too high, but should have a wide appeal. The first two Sirius issues reprint the Tavicat publications in colour, and 1-6 are available as a collection.~WJ

THE REALM

Arrow: *12 issues 1986-1988*
Weegee: *1 issue (13) 1989*
Caliber: *8 issues (14-21) 1989-1992, Series two 13 issues 1993-1995*

Four earth teenagers are transported to The Realm, populated by magic, demons, elves, dwarfs and orcs. There they discover they also have dormant mystical talents, which one parlays into a position of great power. Guy Davis draws the first twelve issues (not very well) of this complex saga featuring so many characters and locations it becomes difficult to keep track of them. It's likely only fantasy fans will enjoy the initial material, but anyone starting the second series from 5 can pick up what's going on without having to concern themselves about the meandering earlier stories (although there is *The Realm Handbook* for the curious). By that time new writer Brent Truax has whittled down the cast and set up intriguing political scenarios. 9 is a flip-book sharing space with *Deadworld* 12; it's in issue 4 of the first series that Deadworld premiered. 10 does the same with *Zone Continuum* 2. 1-15 were collected by Caliber.~FP

REALM OF THE DEAD

Caliber: *3 issue miniseries 1993**

The *Deadworld* characters invade The Realm. Only of interest to diehard fans of either series. Issue 1 comes with two alternative covers, each featuring characters from one series.~FP

REBEL SWORD

Dark Horse: *6 issue miniseries 1994-1995*

A loose drawing style, reminiscent of Gene Colan's later pencil-only artwork, enhances the odd story of a young Japanese teenager getting involved with Kurdish rebels in Turkey. Yoshikazu Yasuhiko's artwork is well worth a look but his script is rather overwrought and meandering. A curiosity.~NF

R.E.B.E.L.S.

DC: *17 issues 1994-1996*

Virtually impenetrable sequel to *L.E.G.I.O.N.*, featuring lots of pointless fight scenes, often involving the equally pointless Lobo. It's about a group of rebel superheroes taking on the sinister interplanetary security agency L.E.G.I.O.N. Seventeen issues of bickering nonentities and ugly artwork by artists named Arnie Jorgensen and Derec Aucoin – truly for hard-core *Legion of Super-Heroes* fans only.~AL

RED DIARIES

Caliber: *4 issue miniseries 1997**

Raven Chronicles very closely resembles *X-Files*. So much so that the kind of cases this freelance agency solves tend to be of the aliens/monster/demon variety. *Red Diaries* is a spin-off miniseries using the regular cast to try and solve a real world mystery, namely was Marilyn Monroe Murdered? Writer Gary Reed and pencil artists Laurence Campbell and Chris Jones go one step beyond your average conspiracy theory tale using the McGuffin of Monroe's diaries and as much real fact – whatever that means these days – to produce a superior drama package. It stands up with the best work of historians and moviemakers dealing with the JFK conspiracy theories. The characters wander through the corridors of power and the seedy backstreets of the mob trying to solve a thirty-year-old murder and survive. A skilful intermingling of comics narrative and text features, plus the understated and compelling black and white art and file photographs, results in a particularly satisfying exploration, if not explanation, of a mystery with no solution.~WW

Rudyard Kipling's RED DOG

Eclipse: *One-shot 1988*

Mowgli and the *Jungle Book* animals prepare for the arrival of a fearsome pack of Indian wild dogs. In attempting to remain faithful to the source material P. Craig Russell has produced a densely verbose comic. His art is beautiful, though, unmarred by the vivid colouring that often characterises Russell's work.~WJ

RED HEAT

Blackthorne: *One-shot 1988*

Enjoyable enough adaptation of the Walter Hill film. Axel Laxamana produces reasonable likenesses of Arnold

Schwarzenegger as a Russian police officer trying to extradite a member of the Russian Mafia, but not so good of James Belushi as the American cop who has to look after him. Also available in a 3-D edition.~NF

RED HERRING

Splash Comics: *1 issue 1997*

When young Sea Intelligence Corps Cadet Herring returns from a mission, he finds High Tide Base deserted, apart from a mutant fish-dog who attacks him. Hearing noises from inside the base, he finds Professor Lymph's surly-but-sultry assistant, Nurse Mackerel, in a compromising position; topless, and possessing an unusually hirsute chin and a set of furry boobies! Herring, Nurse Mackerel, and a strangely altered ally must rally round to defeat the tonsorial menace of "The Five O'Clock Shadow", before it's too late for the baldies of the world! What writer/artist William Potter was on when he did this, or where he hoped to take it if it ran more than one issue, is open to speculation, but if you drink enough fizzy supermarket lager it all makes perfect sense, and is fun in a check-your-brain-at-the-door way.~HS

RED MASK of the Rio Grande

AC: *3 issues 1990-1992*

1950s Western reprints from *Tim Holt*, a Magazine Enterprises comic based on the RKO Western star, which from 42 was retitled *Red Mask*, by Gardner Fox and Frank Bolle. 1 is in colour but 2 and 3 revert to black and white, including a peculiar simulated 3-D effect. Fox's clever mysteries and Bolle's rugged artwork make *Red Mask* one of the better Western series of the period.~NF

RED MEAT

Black Spring Books: *1 volume 1996*
St. Martin's Press: *1 volume ('More Red Meat') 1998*

These are collections of Max Cannon's newspaper strip, featuring such characters as Earl, Stiff Stacy (a Dick Tracy parody), Ted, his son and neighbour, Reuben and Milkman Dan. Cannon uses simple heavily outlined cartoons, normally three identical or nearly identical panels to a strip (slight differences are, or are part of, the punchline). The humour is very black and twisted, subverting the expectations of what is 'decent', and, occasionally, very funny indeed.~NF

RED MOON

Millennium: *2 issue microseries 1995*

As a way of padding out a licensed story drawn by then hot Brazilian artist Mike Deodato, it's split into two parts and given a framing sequence. The entirety makes for a bog standard werewolf comic, although John Bolton fans might want 1 for his cover illustration.~WJ

RED RAZORS

Fleetway/Quality: *2 issue microseries 1991*

Extrapolating on the world of *Judge Dredd*, Razors is a Sov Block Judge, transformed from criminal to the judiciary courtesy of some selective neurosurgery. Accompanied by his talking horse, inevitably named Ed, he's something of a maverick, and must retrieve the stolen remains of Elvis Presley and stop a Stalinist coup. All too self-consciously wacky writing from Mark Millar includes too many throwaway elements that just don't gel (simulacrums of the *Scooby Doo* cast for one), but artist Steve Yeowell more than holds his end up.~FP

RED ROCKET 7

Dark Horse: *7 issue miniseries 1997-1998**

Red Rocket 7 is one of six cloned copies of a man who escaped his alien abductors in 1948. Managing to return to Earth with a robot called The Org, his clones spend decades in hiding; all except 7 that is, who has become involved with rock music. All six clones are captured in the mid 1970s and when the survivors, in turn, manage to escape it takes them twenty years to return to Earth. The series protagonist is rock journalist Lynn Hayes who is writing a piece on Red 7 to accompany his 1990s comeback. When 7 disappears Lynn and clones 2 and 5 get caught up in a running fight with the aliens. She finds a box of postcards that chronicle Red 7's career from the 1950s to the 1970s including meetings with everyone from Little Richard, Elvis and John Lennon to Jimi Hendrix, Brian Jones and David Bowie. Red 5 fills in the gaps as his relationship with Lynn deepens.

Creator Mike Allred's blending of alien intervention and the real-life history of rock and roll is a unique and very successful one, with each issue LP size. His artstyle handles B-movie aliens and caricatures with equal gusto. Allred's obvious love of rock and roll makes this a very enjoyable series for pop enthusiasts – and with a story that connects to boot! Beware of the far-from-perfect binding of the collection.~SW

RED SONJA

Marvel: *Series one 15 issues, 1976-1979, 2 issue microseries 1983, series two 13 issues 1983-1986, one-shot ('Scavenger Hunt') 1995*

Sonja is a redheaded swordswoman created by Robert E. Howard, who also created Conan the Barbarian. Howard may or may not have dressed her in a chainmail bikini, but it suggests that European winters were a lot warmer in those days as that's what she wears throughout the Marvel Feature run preceding her first solo series. This can be divided roughly into two parts: 1-11, written by Roy Thomas and Clara Noto, with artwork by Frank Thorne, and 12-15, mostly written by Thomas, with artwork usually by John Buscema. In both parts the stories are sprawling and pointless, though the occasional scene shows genuine imagination, such as the giant imprisoned queen of the bee-creatures (6), the dream-like details of the enchanter's house (10), and Sonja's trip across the 'River of Death' (14). Thorne's artwork is the main reason for reading, and it's not enough reason to persist issue after issue. Don't bother with the 1983 microseries as the only point of interest is that Sonja has abandoned the bikini in favour of a gymslip. Don't bother with the second series either, for that matter. It's tedious, rambling stories by various writers, and a succession of artists who seem to have been given no directions to her appearance other than: "She's got long red hair. And she looks like a porn starlet". By the end you're wondering if Thorne's artwork was just a figment of your imagination. Could there really have been an artist who respected her enough to make her frightening? The 1995 one-shot is no better.~FC

RED SONJA

Cross Plains: *One-shot 1999*

Episode from the early days of Red Sonja as she hunts for the murderers of her parents and gains some useful experience as a thief. Scripted by Roy Thomas and Steve Lightle with artwork by Lightle, this is a high quality production. The story is an at least respectable example of the sword and sorcery genre; the fluid pencils are reminiscent of both Frank Thorne and Barry Windsor-Smith whilst retaining Lightle's own, sharply-defined line.~NF

RED STAR

Image: *10 issues (1-7, 7.5, 8- 9) 2001-2002*

Set in a war-torn dystopia where the United Republics of the Red Star have been locked in a brutal war of attrition with Alistaan for decades. The prologue in 1-4 features Maya Antares who casts spells, or protocols as they say, and is a warcaster in the URRS army. Convinced that her husband Marcus did not die nine years previously, Maya reminisces and we are shown Marcus' part in the battle of Kar Dathra's Gate. A god and a goddess, Troika and Pravda, battle for Marcus' life in 3. 5 is a stand-alone piece, while the second story arc in 6, 7 and 7.5 is set in Bahamut, capital of Alistaan. The Nogorka guerrillas resisting the URRS assault include fifteen year old Makita who has a letter written by Marcus. In 8 she delivers it to Maya. The goddess is duly pleased and in 9 she commissions Maya and her colleagues to go North to soulprison Archangel. Christian Gossett's sooty linework imparts an organic feel – as if the pictures were drawn in smudgy biro on blotting paper. The scripts are credited to Bradley Krayl who maintains the formal Russian feel well. The design values are stunning and the war machines with a future soviet world well-realised. The facial and figurework shows evidence of a John Byrne influence under the incredible colour rendering by Snakebite who is also Gossett's main designer. A graphic tour de force.~SW

RED TORNADO

DC: *4 issue miniseries 1985*

An ill-advised series, featuring early Kurt Busiek scripting and lacklustre Carmine Infantino art, in which the android member of the Justice League of America thwarts a takeover of the world by an intelligence that unifies every machine on Earth. The Tornado's always been a stultifyingly boring character, and, sadly, this series does nothing to help.~HS

RED WOLF

Marvel: *9 issues 1972-1973*

Although he's the ancestor of the character in *Avengers* 80-81, to all intents and purposes it's the same guy: a Native American and his faithful wolf. The final three issues return to the modern-day character. Certainly not a bad comic, but certainly not a good one either.~FP

REDBLADE

Dark Horse: *3 issue miniseries 1993*

The demon Engetsu crosses over to the material world, and the undead samurai Redblade is sent back to life to thwart him. Fast-paced, action-packed and not without moments of interest, but let down by writer Vince Giarrano's mediocre art. The storytelling is so bad you have to check you're reading the series in the correct order and not missing an issue.~HS

REDEEMERS

Antarctic: *1 issue 1997*

Spun-off from *Warrior Nun Areala*, this is more traditional superhero fantasy, which is not to say it's any good. Of the five lead characters, only three are named (including Shotgun Mary, for those interested) and the story is confusingly about the team being introduced in a dream by a captive magician in order to prepare them for a real battle against the villain, Azarette. For the continuation of the lead story, the reader must seek out *Warrior Nun: Black and White*.~NF

REDFOX

Harrier: *10 issues 1986-1987*
Valkyrie: *10 issues (11-20) 1987-1989*

Redfox began life as a strip in a role-playing magazine and to the end remained a comic in the *Elfquest* mode, squarely aimed at fantasy fans. There are wizards and wicked sorceresses, quests, a cute anthropomorphic companion and a basque-clad heroine with a big sword. However, it was a million miles away from 'babe' titles like *Shi*, and later issues were written with a lightness of touch that sometimes makes up for the pedestrian story-lines and wooden artwork.~FJ

REDMOON

Comics One: *6 volumes + 2001 to date*

The amount of volumes available to the American market suggest a great faith in this on the part of the publishers, and it's difficult to see why. Not that it's bad, mind, but it's hardly outstanding. The surprise comes in the first volume, when it's revealed that this isn't just another high school story, but a science fiction fantasy. You'd hardly know it from the art, though, which tells the story almost entirely through figures with few settings or backgrounds. Volume 1 comes with a free CD enabling you to play a *Redmoon* game online.~WJ

REED RICHARDS

Marvel: *3 issue miniseries 2000*

A look at Mr Fantastic in the days before the Fantastic Four. As the life of a dedicated research scientist might not be compelling, he's unimaginatively recast as Indiana Jones by writer Peter David in an early encounter with Victor Von Doom. Even art by Duncan Fegredo can't raise this above ordinary.~FP

REESE'S PIECES

Eclipse: *2 issues 1985*

A collection of short horror stories with art by Ralph Reese, and with various writers. It's standard stuff: carnivorous plants, cannibals in the sewers, yetis and curses – and with consistently weak endings. The artwork's quite versatile, but it doesn't make enough of a difference.~FC

RE-GEX

Awesome/Hyperwerks: *2 issues (0-1) 1998*

Rob Liefeld rehashes his own plundering of other people's work in another truly appalling team comic as yet more semi-clad semi-literate superfolk team up to point, pout and pontificate. Read 'em twice and you still won't know what's going on. Total rubbish.~WW

REGULATORS

Image: *3 issues 1995*

The first series about the day-to-day life of a group of supervillains, spotlighting one team member each issue. Well written and drawn by Kurt Busiek, Ron Randall and Dan Davis, the best issue is 3, looking into Arson's head and extrapolating the difficulties of life while constantly on fire. Advertised as six issues, only three were published.~WJ

REID FLEMING, World's Toughest Milkman

Last Gasp: *One-shot 1980*
Eclipse: *5 issues 1986-1990*
Deep Sea: *9 issues 1996-1998*

Reid Fleming is a great comic creation, bridging the gap between the underground and slacker generations. David Boswell's pugnacious anti-hero, a confrontational, hard-drinking every(milk)man, treats his employers and customers with equal contempt, and has a long history, first appearing as a weekly page in an underground newspaper in 1977. The Last Gasp magazine includes a number of these early adventures, as well as extended stories. The lead, 'A Day Like Any Other', contains all the key elements of a good Reid yarn: he terrorises passers-by who make fun of him, threatens customers – "78 cents or I piss on your flowers" – tangles with his obsessive, square-headed supervisor and goofs off with his narcoleptic best mate, whose manhood he constantly demeans. Boswell manages to keep up a high standard of humour throughout the extended five-issue storyline in the Eclipse issues, simultaneously developing his considerable drawing abilities. Two-fisted humour at its best. Reid also appears in the one-shot Heartbreak Comics, and the Deep Sea series reprints all the previous issues before beginning new material with 7. By this point Boswell's cartooning has loosened up and become more frenetic during the fights and chases. In 8 there's a wonderful sequence where two skater boys shoot past and flick bogeys at him, only to find they're being chased down the street by Reid skating on top of his milk truck. However, despite updating the setting a little, the jokes remain the same – his passion for a TV show in which the main character has been in a coma for years, his unrequited sourness, and the sheer ridiculousness of taking two-fisted milk delivering as a subject for a comic.~FJ

RELATIVE HEROES

DC: *6 issue miniseries 2000*

Five super-powered children make a cross-country trip to Metropolis after the death of their parents. Along the way they have to face a god, the D.E.O. and some aliens. The eldest's plan is to enlist Superman's aid and become a superhero, the youngest wants Superman to bring her parents back to life. As written by Devin Grayson, this is not so much about superheroes as about growing up and dealing with problems outside normal experience, without adult guidance. There's a charm to the series and Grayson's dialogue captures the youth of the characters. Yvel Guichet's manga-influenced artwork is adequate, but not striking.~NF

RELENTLESS PURSUIT

Slave Labor: *4 issue miniseries 1989-1990*

One of many injustices against the 19th century Native American population was the forced removal of the Nez Percé tribe from their Oregon homelands. The resulting conflict spread through four states as the tribe attempted to flee. In telling this tragic story Jeff Kear's enthusiasm and research more than compensate for art that could be improved.~FP

The REMARKABLE WORLDS of Professor Phineas B. Fuddle

Paradox Press: *4 issue miniseries 2000**

A knowing Hollywood style homage to late 19th/early 20th century fantastic fiction by the likes of Verne and Wells. Two scientists, cheekily named after the comic's excellent colourist Angus McKie, leave Edwardian London, swarming with strange creatures, by time machine to search for the missing Professor Fuddle and to untangle the timeline knot which is causing all the havoc. They inadvertently land in technologically enhanced versions of Ancient Egypt and India. Boaz Yakin's English dialogue and habits don't always convince (too much talk of "pints" for men of this class) but Erez Yakin's detailed and imaginative art makes this a substantial good-quality read.~GK

REN & STIMPY

Marvel: *43 issues, 8 Specials 1992-1996*

Developed in association with Nickelodeon, the cable station that produced the madcap serial, the comic version lacks the violent edge that the cartoon has. The relationship between the two characters (a snarling chihuahua and his big, dumb, rather disgusting cat friend) is nowhere near as acidic as in the show and a lot of the jokes are rather hoary. One gets the impression that it's being written for a slightly younger audience. Certainly it's a corporate product, with numerous hands writing, pencilling and inking in each issue, although the success of *The Simpsons* suggests that this doesn't have to be a drawback. The art is heavily stylised, but again not as eccentric as the cartoon, and lacks the energy of the original, possibly because that is so fast-moving any paper representation would be a little 'flat'. Pretty good if you really like *Ren & Stimpy*, but unable to stand up on its own without a knowledge (and enjoyment) of the show. 1-20 are available in book form.~FJ

RENEGADE ROMANCE

Renegade: *2 issues 1987-1988*

Charming covers from Gilbert (1) and Jaime Hernandez introduce a delightful anthology. With the traditional romance comics formula redundant by the 1980s, the contributors were people with individual visions. The art throughout is excellent, but there are far more decent plots to match it in 2. The exceptions in 1 are editor Trina Robbins' adaptation of a novel concerning love during the Russian revolution, continued in 2, and the charming Bob Rozakis and Stephen DeStefano strip in which a woman waiting on a park bench sees her life parade before her. That team also contributes to the second issue, with DeStefano completely changing style for a humorous recitation of marriage vows. Other highlights of the second issue include David Hine's story of an old romance comic passed around current-day Brixton, Deni Loubert and Steve Leialoha's spotlighting a man torn between two loves and the woman he leaves, Colleen Doran's Beardsleyesque stylings, and the tearful 'Dreams' from Jackie Estrada and Barb Rausch.~WJ

RENFIELD

Caliber: *3 issues 1994**

Writer Kyle Garrett conceived the novel idea of relating the story of Dracula via his first victim, Renfield. While attempting to be literary, it's all rather ponderous and portentous as a captive Renfield raves in an asylum while the kindly Dr Seward attempts to understand and cure him. The art of Galen Showman impresses, and would improve, but as with many Caliber titles, the series was never completed, although Caliber produced a collection of these issues.~WJ

Jim Chadwick's RENNIN Comics

Reckless Muse: *1 issue 1997*

Tom Rennin, oddly beaked inhabitant of Goose Creek, is chased around town by his wife, who's been turned into a giant after eating some home-grown apples. Accompanied by his neighbour, they seek refuge in the town's secret underground bomb shelter/anti-communist arsenal. This appears to be a parody of 1950s paranoia and small-town values with its somewhat simple-minded characters, but the joke's stretched very thin, though Chadwick's artwork is sharp.~NF

REPLACEMENT GOD

Amaze Ink: *8 issues 1995-1996**

Image: *5 issues 1997*

Engaging and unhurried comedy fantasy featuring Knute, a vagabond street performer with an unsuspected destiny, just trying to get by and get the girl against a backdrop of mayhem, and political intrigue in a world where magic and a clunky kind of technology exist side by side. Engrossing and easy on the eye, the mystery of just who is the eponymous deity takes second place to lots of sight gags and plain old charm from creator Zander Cannon. Great fun for those with a whimsical bent, but short on developments for the impatient.~WW

REPORTER

Aeon: *One-shot 1997*

A pontification on the honesty, necessity and integrity of writing, encompassing a story within the discussion. It's a ponderous comic, given to the introduction of incongruous and superfluous characters, presumably to fill the vast spaces between the two protagonists. Likewise the centrepiece diversion occupies fourteen pages to relate a very slim story. Ironically, given the premise, the saving grace is Dylan Williams' cartooning.~FP

REPTISAURUS

Charlton: *6 issues (3-8), 1 Special 1961-1963*

Continuing from two issues of *Reptilicus*, the first of which adapted a B-movie in which a giant dinosaur is grown from a frozen preserved limb. Most of Charlton's giant monster comics at least had the saving grace of some Steve Ditko art somewhere along the way, but *Reptisaurus* goes for all out mediocrity.~WJ

Artemis REQUIEM

DC: *6 issue miniseries 1996*

Artemis is a more headstrong and callous version of Wonder Woman who appeared in issues leading up to 100 of *Wonder Woman*'s second series. Clawing herself from the grave in 1, she adopts the new identity of Requiem and joins a group called the Hellbinders, who combat assorted mystical creatures. It's uninspired stuff from writer Bill Messner-Loebs, and the distorted figurework of pencil artist Ed Benes moves beyond styling into hilarity. Still, at least *Requiem* provides the answer as to why superheroines wear such preposterous costumes. They obviously can't find real clothes to fit those peculiar bodies.~FP

RESIDENT EVIL

WildStorm: *4 issue miniseries ('Fire and Ice') 2000-2001*

Based on the video game of the same name, the magazine-sized publication has great packaging, but the story and art are woefully derivative, as the team of hand-picked generic action types execute rescue missions and assaults, pitted against mutant Zombies and traitorous humans. Yawn. 'Fire and Ice' sees the zombie stompers divide into two teams to seek out the origins of the virus that creates monsters, but of course there's trouble in store from within the group. It's slick, glossy, vapid, and awful.~WW

The RESISTANCE

WildStorm: *2 issues + 2002 to date*

Once there Brian is made as a Stray, only to be rescued by Surge, a leader in the armed resistance movement. He is then hopelessly caught up in a deadly struggle that seems destined to lead only to death. RESTAURANT at the END of the UNIVERSE

DC: *3 issue miniseries 1994-1995*

Continues from *Hitchhiker's Guide to the Galaxy*. Adapts the book of the same name (inaccurately) or the last eight radio episodes (extremely inaccurately). Reassuringly, however, where the comic book version is inaccurate, it is at least definitively inaccurate. Sequel: *Life, the Universe and Everything*.~APS

Warlock Silver Surfer RESURRECTION

Marvel: *4 issue miniseries 1993*

Continuing from the Silver Surfer graphic novel 'The Homecoming', the Surfer is offered the chance to resurrect his recently deceased love Shalla Bal. The price? A favour to be called in at a later date by Warlock. The Infinity Watch, Death and Mephisto all appear in a rather padded script by Jim Starlin, who also pencils. If you're already a fan you'll probably have bought this, otherwise it's not the place to start.~WJ

RESURRECTION MAN

DC: *28 issues (1-27, 1,000,000) 1997-1999*

Mitch Shelley wakes up from being dead with no memory of his past, but with a strange super-power. As the series progresses, Mitch finds out who he was and how he came to be dead and why, now, after a trip to The Lab, he's incapable of staying dead (1-12). Along the way he picks up some friends and some chilling enemies, his wife and best friend included, and every time Mitch is killed he revives with a different super-power. There's a gruesome guest appearance from Hitman in 10, who keeps killing Mitch until he awakes with a useful ability. The uncertainty of this last aspect of the strip is what keeps it fresh. Female assassins, the Body Doubles appear throughout the series, amusingly in 6 and as part of a sequence that leads to some answers about The Lab and its mysterious benefactor (14-20). Offered membership of the JLA in 21, the final storyline brings Mitch into contact with the Forgotten Heroes and Vandal Savage (22-27).

As written by Andy Lanning and Dan Abnett, Mitch is not wholly original (there's a similar character in the *Wild Cards* novels), but the stories are well scripted with a healthy mixture of mystery, superheroics and horror, and better than average storylines. The scratchy, noirish artwork by Butch Guice creates an atmosphere that well suits the writing. There were some guest appearances of note, including the JLA in 2 and 21, Batman in 7, Hitman in 9-10, and Supergirl in 16-17 (crossing into Supergirl 24). *Resurrection Man* 1,000,000 was published in 1998 as part of the *DC One Million* crossover event.~NF

Morality play about the validity of vigilante justice and the evils of child abuse. Not a bad comic, but the worthiness and research are hammered home and the often amateur artwork is a distraction.~FP

Keith Laumer's RETIEF

Mad Dog: *6 issues 1987-1988*, One-shot ('Retief of the C.D.T.')1988*

Adventure: *6 issue miniseries 1989-1990, 4 issue miniseries ('Retief and the Warlords') 1991, One-shot ('Grime and Punishment') 1991*

Earth diplomat Retief is oddly fair-minded for his chosen calling, and adept at outflanking both his superiors and alien races in interplanetary dealings. A fine satire on administrative prevarication and procrastination, there's little to fault the Mad Dog adaptations of Laumer's short stories. They're working with very witty material, but Jan Strnad's writing is faithful and Dennis Fujitake's Moebius-influenced art is ideally suited to the mix of human and alien in the stories. Well-considered and never dull, it's a testament to Fujitake's style, considering the number of talking-heads shots required each issue. The switch of artists to Steve Vance with the Mad Dog one-shot is jarring. At Advenure Bruce Balfour adapts the material well as the art continues to deteriorate, although the series never becomes unreadable. Their best is the final issue of the first miniseries with an exaggerated swipe at organised religion.~WJ

Xanth Graphic Novel Vol. I RETURN TO CENTAUR

Father Tree Press: *1 volume 1990*

Casting leaves no fantasy cliché unrepresented populating a world "where everyone and everything has some magical power". In practice this consists largely of literalisms such as horses controlling bad dreams and exploding cherries. The over-riding irony is that Richard Pini, adapting the largely plot-free Piers Anthony novel *Isle of View*, has crafted far better fantasy with his own *Elfquest*. The one charm is Dennis Fujitake and Gary Kato's art, predominantly influenced by Steve Ditko, but overcoming Ditko's often claustrophobic layouts. Children may enjoy this, but should be warned it only adapts half the novel.~FP

RETURN TO THE EVE

Monolith Graphix: *6 issues 1994-1995*

Due to a strange virus, the Kazites are a society of blood-drinkers, who use mushrooms to visit alternate realities and have developed magickal technologies. They are destroyed from within during a dispute between the Emperor and his son, Kehar. In Russia, 1921, Kehar allies himself with a descendant, Galya, who steals the Worm Tome (a book of spells) and the Emperor's bones (1-3). In the second storyline, 'Illuminations' (4-6), Galya's grandmother, Yelena, in an arranged marriage, travels to meet her new husband in Ireland (based on the Brothers Grimm story, 'The Robber Bridegroom'). Originally planning an eighteen issue series, Holden and Shelley Morris aim for grand scale actions rather than emotions, leaving the narration at some distance from the characters, but the intricacy of the artwork and its illustrated borders is captivating, with similarities to Philippe Druillet or Moebius.~NF

REVEAL

Dark Horse: *1 issue + 2002 to date*

Reveal is a pretentious anthology that attempts to mix Spyboy, Buffy the Vampire Slayer and Lone Wolf and Cub 2100 with art (Pablo Picasso's 'The Dream and the Lie of Franco'), alternative comics (by R. Sikoryak and the Fillbäch Brothers) and autobiography (Joe Casey's most honest work). There's little of interest here in the writing, but the artwork by Francisco Ruiz Velasco, Jeff Matsuda and Craig Thompson offers at least some enjoyment.~NF

Solar, Man of the Atom: REVELATIONS

Acclaim: *One-shot 1997*

Following *Man of the Atom*, the Acclaim heroes become aware of the impending catastrophe and undertake various plans to thwart or survive the end of the world. The Seleski twins reunite and begin the search for God/Solar. When he finds them, he reveals the true origin of the Acclaim

Universe and with a God-like whim sheds his skin and his power and disappears. The Seleskis, believing their universe to be saved, succumb to temptation and take on his power, thereby reactivating all the doom prophecies. To be continued... Although a little heavy, and low on action, this one-shot from Jim Krueger and Patrick Zircher is an intriguingly different spin on power and corruption. This was re-packaged as a book along with the *Man of the Atom*.~WW

REVENGERS
Continuity: *6 issues 1985-1989*

The confused consumer should be warned that the first four issues of this title have *Revengers* in very small lettering above a large *Megalith* logo, and, indeed, the first issue is a Megalith solo comic. Not that this matters overly, though, as the writing rarely rises to the level of competency and the sole appeal is the art. For 1-5 that was provided by Neal Adams and is probably his best of the 1980s, and even Larry Stroman's work on 6 is quite presentable. The first two issues also contain back-ups, Crazyman in 1, his first appearance, and Shadow Hunter in 2, strangely reprinted from Marvel's *Bizarre Adventures*.~DAR

The REVIVAL
Bare Bones: *One-shot 1996*

An account of the early days of Christianity in the USA. A large crowd gathering to hear a preacher in East Kentucky witnesses a number of extraordinary events, and the clever pun and full horror of the title aren't apparent until the end. Either ingenuously faked or taken from contemporary accounts, *Revival* falls short of being compelling, largely due to the limitations of James Sturm's art. Neither does it have anything original to say about religion, but it's nonetheless a unique story worth a glance.~FP

REVOLUTIONARY GIRL UTENA
Viz: *2 volumes + 2002 to date*

When Utena was a little girl her parents went away. When she realises that they are dead she throws herself into a raging river. A dashing stranger saves her, giving her a ring with a mysterious crest. Her Prince tells her to grow into a strong, noble woman before disappearing. From that moment on Utena's life is changed. She resolves not merely to become a Princess for her dream saviour, but rather a Prince just like him! As the years roll by, she tracks tiny clues that lead her closer to her Prince, and eventually teenage Utena enters the ultra-exclusive Ohtori Academy where she knows he is waiting for her. Her extraordinary character marks her out and after a few trials, capably handled, she is invited to join the elite society of the Student Council called the Rose Seal, quickly rising to high rank. But is the Rose Seal merely a spoiled rich brat club or does it have a more sinister purpose? And how is her mysterious Prince involved? Written and drawn by Chiho Saito (from a story by Be-Papas), this was originally introduced to English speaking readers in the Manga anthology *America Extra*. Despite trappings of gothic romance and shojo (girl's story) sensibilities, it's a markedly Japanese piece with a quirky, not to say unbelievable, central premise and its bewildering concentration on social positioning, Identity and the power and role of an individual within a group. An acquired taste.~WW

Robin Snyder's REVOLVER
Renegade: *6 issues, 1 Annual 1985-1986*

Starting out as a science-fiction anthology (1-3) and then switching to 'Fantastic Fables', *Revolver* perhaps failed by trying to reach too many readers. Certainly, the main attraction of the title has to be Steve Ditko's sharp, detailed strips, whether the Jack C. Harris-written space adventure of Star Guider that harks back to the 1950s (1, 2) or Ditko's own, EC-style 'The Hand of Ages' (4). Nothing else really stands out, though early work by graduates of the Kubert School (Mandrake, Bissette) can be found alongside the work of old pros like Henry Boltinoff (1, 2 ,4, 5), Vicatan (1), Adolpho Buylla (4, 6) and Irwin Hasen (2). The annual, with a wonderful Alex Toth cover, contains a mixture of old and new material under the banner 'Frisky Frolics'. Ditko's very literal Killjoy rubs shoulders with Doug Moench and Ernie Colón, Robert Kanigher and Irwin Hasen, and several one-pagers from the regular series. *Ditko's World*, featuring Static numbers 1-3 and *Murder* 1-3, is also known as *Revolver* 7-9 and 10-12 respectively, while the annual is 13.~NF

REVOLVING DOORS
Blackthorne: *3 issues 1986-1987*

Steppen wanders a strange fantasy world where there are no straight answers. He unwittingly unleashes a beast that chases him into the arms of an old man, who tells him that he is the outsider predestined to alter the ancient balance (whatever that might be). This has its moments visually in a sub-Bernie Wrightson style, but the drawings are also often misshapen and as it's unfinished (a fourth issue was planned), it's difficult to tell whether it's meant to be a dream or a joke.~NF

The Adventures of REX the Wonder Dog
DC: *46 issues 1956-1959*

Originally a fighting (K-9) dog, Rex soon progressed to wholly civilian adventures with his owner, Danny Dennis. Ever ready to fight crime or rescue someone from distress, Rex found himself travelling all over the world (and sometimes off it in later, sci-fi-driven episodes), usually fêted as his reputation preceded him and generally behaving like a comic version of Lassie. Each issue contained two Rex stories, usually drawn by Gil Kane, often heavily but not unattractively inked. The third story, however, was Detective Chimp. Bobo, deputy to a Florida sheriff, always seemed more capable of solving local crimes and capturing crooks than his owner. Over the series, the developing artwork of Carmine Infantino is a delight until his command of movement (for example in 41's skiing adventure) clearly foreshadows his upcoming work on *Flash*.~NF

REX HELLWIG
Black Cat Productions: *1 issue 2000*

Sadly the only issue of a funny comic starring the eponymous Rex, whose business card reads "Anything. Anywhere. Anytime." Just after dealing with a costumed villain at a funeral, Rex is approached by the government to take on The Global Dominator League. You know they're serious because they have a recruitment video. And that's all there is. Perhaps full colour and low orders were a deadly combination, but anyone who enjoys a laugh should try this.~WJ

REX MUNDI
Image: *2 issues (0-1) + 2002 to date*

Paris, 1933, in a world where magic exists in the form of religious occultism and the Guild of Sorcerers is allied to the Catholic Inquisition. Dr Sauniere is approached by a priest, who's secretly been custodian of a hidden medieval manuscript, to investigate its disappearance. The theft has the smell of magic (sandalwood and sulphur apparently) and evidence points to a prostitute, who Sauniere then finds murdered. The adventures of Brother Matthew, a backup in 0, are continued online. Arvid Nelson promises to surprise readers already familiar with the lore of Rennes-le-Chateau and has made a promising start. Eric Johnson's detailed artwork, however, is often lost in the flat, digital colours.~NF

RHAPSODY
Redlight Manga: *1 volume 2001*

A collection of stories featuring the dubious proposition of incest, more disturbingly often coupled with non-consensual sex, and in the manner of most such fiction, once the sex starts the victim's attitude changes. The casual attitude to an appalling crime is distressing, but Yuuki Ryoh's art is excellent.~FP

RHEINTOCHTER

Antarctic: *2 Issue microseries 1998*

In a mythical, medieval Europe Pope Clement dispatches one of his Warrior Nuns to a village where good Christian folk are being murdered by a river mermaid. On arrival she discovers a more sinister threat to the church than the now captive Rhine Maiden, and must choose between total obedience and her own conscience. An impressive and entertaining spin-off from the *Warrior Nun Areala Universe*.~WW

Andrew M. Ford's RIB

Caliber: *5 issues 1997-1998*

Just when you think you've got this pegged as a thinly disguised polemic about racism transplanting giant worms for black people it moves in a different direction. The tone is largely upbeat as orphaned worm Rib makes his way to Metro City hoping to find a job and learn his parentage. There's a large anti-human community among the worms, and the less confrontational Rib has to tread a careful path. *Rib* is a very upbeat title, at times almost suffocatingly so, investigating potentially interesting territory in a very laboured manner. This is obviously a project close to Andrew Ford's heart, but pages of discussion and the very loose art of Michael Kelleher constitute a selective appeal.~WJ

RIBIT

Comico: *4 issue miniseries 1989*

Magic is being driven out by science, and Sahtee, the last remaining sorceress, decides to fight back by creating a warrior woman. The recipe is nearly finished when Ribit, a lizard-like familiar of Sahtee's, jumps into the cauldron. Ribit does indeed turn into a warrior woman, but she's only three feet tall, and she's bright green. Not that this stops her fighting – it just stops people taking her seriously. Frank Thorne's story has its self-indulgent moments, but is generally quirky fun, and the ending is a true surprise.~FC

The New Adventures of RICK O'SHAY AND HIPSHOT

Cottonwood Graphics: *2 issue microseries 1992-1993*

There can't be too many artists who draw their first comics at 62, but then Stan Lynde did have decades of experience drawing Rick as a newspaper strip. Although the execution is faultless, Lynde's art style betrays his age, but there's a timeless charm to this gentle western, where lines like "I can't think of anybody who wouldn't like your pies" are served up without a hint of irony. It's Hipshot who's the target here, as the exaggerations of a dime novel prompts the visit of assorted gunslingers determined to kill him. Don't expect any surprises, though.~WJ

RIMA The Jungle Girl

DC: *7 issues 1974-1975*

1-6 have Nestor Redondo's finest work in this Amazonian jungle-girl story, based on W.H. Hudson's turn of the century novel *Green Mansions*. Considered rather fast in its time, the story of a young freedom fighter who escapes into the jungle after a rebel defeat and is rescued by a mysterious white-haired woman has great charm and poignancy. Robert Kanigher recounts Rima's origin faithfully and only throws in one or two sub-*Tarzan* storylines to extend the plot, which is mostly concerned with the blossoming but guarded relationship between Rima and the narrator. Redondo is the star, however. His version of the South American jungles is a terra incognita full of sinuous big cats and snakes, his Rima a ghostly figure who is both majestic and innocent. Top all this off with covers by Joe Kubert and you have one of DC's great, overlooked masterpieces. Various Kanigher-scripted science-fiction tales, usually illustrated by Alex Niño, fill the back-up slot.~FJ

RIMSHOT

Rip-Off: *3 issues 1990-1991*

A truly puzzling mishmash of lame hippie humour and seemingly serious psychodrama, drawn in a crude, highly variable broadbrush style that only occasionally verges on the competent. Cartoonist Chris Harmon lobs references to the Vietnam War, Bilbo Baggins and the Jefferson Airplane into his psychedelic melting pot, but somehow forgets to include any of the sex and drugs that might just have enlivened this very dull piece of late underground whimsy.~AL

THE RING of the Nibelungen

DC: *4 issue miniseries 1989-1990*

Roy Thomas has always been fond of adapting the works of others, whether they be by R.E. Howard, E.R. Burroughs or Michael Moorcock. This is probably his most daring and, in some respects, his most successful. Few would have attempted Richard Wagner's Ring cycle – it's four operas, sixteen hours of theatre and music. Yet Thomas manages to retain a sense of the poetry behind the plot, and Gil Kane's dynamic artwork brings the fantastic elements to life in ways that the stage couldn't emulate. Welcomed by opera critics as a faithful vision, Kane's artwork is perhaps too overwrought in places, but Jim Woodring's subtle colouring helps to create an appropriately heroic but tragic atmosphere. It can't really compare to hearing or watching Wagner's original operas but it's a worthy attempt to create a comic for a different audience.~NF

RING OF ROSES

Dark Horse: *4 issue miniseries 1992-1993*

In an alternative Britain where monarchy was not restored with Charles II, by 1991 the country is still in dispute with the Vatican. Lawyer Samuel Waterhouse is asked by the Catholic church to investigate the disappearance of ten priests from a boat on the Thames. Das Petrou's complex setting includes a plague of rats, radio technology which is brand new, and the secret Brotherhood of the Rosie Cross. John Watkiss' artwork is full of shadows and heavy blacks, but it's completely appropriate to this moral thriller. Unusual and well worth a look.~NF

In Fitzcarraldo like fashion P. Craig Russell has devoted much of his career kicking against the pricks with the peculiar idea of adapting opera to comics. While settings are limited only by his fertile imagination, with so much of the appreciation dependent on the music, obviously absent here, one wonders why. Until one looks at the work. Additionally in this instance Roy Thomas and Gil Kane had already adapted Wagner's four operas to critical acclaim. This represents six years of work, though, and is the realisation of a long-held ambition. Over the decades Russell has produced many illustrations based on the operas, a sampling of which are included in the well designed comics, along with preparatory sketches and other editorial material.

Russell's delicate linework, character designs and storytelling are spectacular. While remaining true to his pre-Raphaelite influences, his old tendency to over-elaborate has passed. Fortunately, unlike some opera, the Ring Cycle provides a strong plot to accompany the superb art. It spreads its net wide, but all roads lead back to the God Voton and events set in motion by his ultimately catastrophic attempt to provide a home for the Gods (Norse pantheon). Their involvement and that of other mythical figures places the story squarely in territory familiar to most comic readers. As much as anything, though, this is a spectacle to match any operatic production.

While Russell is the guiding light, it should be noted that Lovern Kindzierski's colouring is stunning, very sympathetic to mood, and to Russell's own distinctive palette. Without it this would have been a far poorer production.~WJ

The RINGO KID

Marvel: *30 issues 1970-1973 (1-23), 1975-1976 (24-30)*

What distinguished The Ringo Kid from other Marvel Western characters was that he was half Native American and half white. Unfortunately, this intriguing springboard for stories was used for little more than the occasional epithet prefacing a fight, and, while they're never bad, there's nothing to make these an essential purchase. Reprinted from the 1950s *Ringo Kid Western*, there's plenty of John Severin art throughout, but he seems to have knocked it out over breakfast before starting work on his EC assignments. Joe Maneely's art is far more impressive.~FP

Former outlaw Rio now wanders around late-19th-century USA seemingly unable to avoid adventure wherever he arrives. Doug Wildey's 'realistic' art is glorious, whether pencilled and inked for the first novel, or richly painted for the others. A master at work, he's able to convey emotion through expression like few others. All the stories are good, but the first is best, a story of abusing the power granted to the railroad pioneers, encompassing war with Native Americans and Mexican bandits. RIOT

Viz: *6 issue miniseries 1995-1996*, 7 issue limited series ('Act Two') 1996**

Riot is an ancient book that possesses many secrets and the magical key to a vast treasure. Billy the Kid, trying to steal the book, is mortally wounded by the book's guardian, Axel, but the book offers him knowledge and a second chance if he will protect Axel for the rest of his life. The first series introduces a rivalry between the Eastern and Western churches and explains that Axel has a brother, Abel, whom Cain (a high priest of the Eastern Church) is hoping to revive by combining the power of Riot with another magical tome, Phantom. The second story sees Billy The Kid facing off against the Lion King while Cain tries to use the witch Cyphone to bring the Moon crashing down on the Western Church.

An updated spaghetti Western set in a ruined world, Satoshi Shiki's *Riot* is a classic love story as well as a violent adventure, pitting against each other a group of characters whose relationships seem sometimes overly complex. It's not an easy read but rewards patience. Shiki's detailed artwork is firmly within Manga traditions, yet its decorative nature and design set it apart. On hiatus in Japan, Viz promise to continue the series as soon as it's available.~NF

R.I.P.

TSR: *4 issue miniseries 1990, 4 issue miniseries ('Brasher Avenger of the Dead') 1990-1991*

Based on a role-playing game, both series deal with someone returned to Earth to find their killers and avenge their deaths. 'Brasher' broadens the scenario by having an ex-policeman avenging other people's deaths, but the first series by Marv Wolfman and Pat Olliffe is more focussed. Wolfman turns out decent horror stories, marred only by vivid colouring. Almost as good as the lead strips, though, are the Nat Gertler written back-up stories, and the best material overall (still suffering from shoddy colours) is his '11 Stories' in the first issue of 'Brasher'. A man's appalling life is recounted in short segments as he tumbles from the top of a building.~WJ

RIP HUNTER TIME MASTER

DC: *29 issues 1961-1965*

Débuting in traditional DC fashion in their anthology title *Showcase* (20, 21, 25, 26), Rip Hunter and his time-travelling exploits sold well enough to ensure promotion into his own title. Rip and associates drop back (rarely forward) through time to moments of historical importance, and encounter any number of renowned figures from the past, only to reduce them all to trivialities. We're firmly in the hangover period from 1950s DC titles, where there was an internal logic and consistency that bore little reality to the outside world, writers assuming that if there was an anomalous element, in this case time travel, then any further need to conform to logic could be thrown out. A typical example is 21, which has Helen of Troy, Scheherezade and Cleopatra among those gathered for a beauty contest to promote a movie. That said, there's an enjoyable daft consistency to the stories, most drawn by Bill Ely, and any issue at random will provide a chucklesome five minutes.~WJ

RIP IN TIME

Due to a temporal mix-up each girl ends up with the wrong man in a world of dinosaurs and prehistoric dangers. Then a government killer from the present is sent back to hunt the detective, who thinks he's still the hunter, in order to protect the secret of time travel and make sure that no one survives. RIP-OFF COMIX

Rip-Off: *29 issues (1-12, 14-30) 1977-1983 (1-12), 1987-1991 (14-30)*

In its long and convoluted history *Rip-Off Comix* went from being a collection of underground syndicated strips to an international showcase to a scattershot presentation of new talent. For 1-7 its material consisted of consistently amazing Freak Brothers, Fat Freddy's Cat and Wonder Warthog strips by Gilbert Shelton, the self-explanatory Dealer McDope by Dave Sheridan, and 'The 40 Year Old Hippie' by Ted Richards. Most importantly, it also featured Bill Griffith's superbly acerbic 'Griffith's Observatory', a career highlight from one of comics' premier talents and later collected as a one-shot.

Between 8 and 12 the title was split 50/50 between Shelton's work and the best of European humour strips, such as *El Vibora* and *Fluide Glacial*, with each issue spotlighting a separate country's work. 11 and 12 are large-format, lavish magazines with a colour section and the initial instalments of Shelton's 'Idiots Abroad', later featured in the *Freak Brothers* comic.

Following a gap of four years *Rip-Off* returned minus the colour and the foreign artists, reinventing itself as a more contemporary anthology, combining new and established cartoonists with the inevitable Shelton. Early issues rejoiced in the fine, predominantly autobiographical work of Dori Seda (14, 16, 17), The Fizz (17, 26) and Dennis Worden (17, 19), as well as better-known artists like Spain Rodriguez, who had a particularly fine war strip in 14. Spain also appeared in the anniversary issue 20, which also has strips by Shelton, Jaxon and Trina Robbins and a text feature on the chaotic history of Rip-Off Press. Sadly, the magazine lost edge after this, and later issues are very patchy indeed, despite the occasional new discovery like Mack White in 26.~DAR

Spin-off from Marc Silvestri's *Cyberforce*. Ripclaw is a Native American, Robert Bearclaw, whose cybernetic claws coupled with the mystical overtones of his origin mean that the character works equally well in supernatural thrillers and more straightforward superhero tales. The special was meant as a prelude to the regular series, and introduced Ripclaw's brother Michael who, though he could summon trans-dimensional creatures, was invariably possessed by them. Ripclaw repulses one creature but loses Michael in the process. The regular series established some sort of civilian life for Ripclaw and introduced Kildare (a sort of Madame Xanadu figure). Kildare aids Ripclaw in a battle between sinister cults for the Ptiorrsh Mirror (1-3), and then Ripclaw becomes the target for a number of assassins (4-6), leading to the return of Misery and continued in the Cyberforce series. David Wohl and Christina Z make a promising start at defining Ripclaw as more than just a Wolverine clone, and Anthony Winn's artwork, with occasional hints at a manga influence, avoids most of the confusing story-telling mannerisms that sometimes seem to define Image titles.~NF

For almost eighty years Ripley's daily newspaper dose of oddities, eccentricities and the inexplicable has been a source of amusement on the way to work, eventually prompting a museum of curiosities. Each of these issues is themed, awkwardly using a narrative voice of one of the (dead) people under discussion. Disappearances, the hard to kill, what were once called Freaks, and aliens are spotlighted in a miserly sixteen pages per issue filled with references and reprints of the newspaper strip. J. Michael Straczynski's RISING STARS

Image/Top Cow/Joe's Comics: *21 issues +, one-shot ('Visitations') 1999 to date*

Widespread anticipation ensued when respected TV writer J. Michael Straczynski announced a story about superheroes in a real world. Pre-publication comparisons with *Watchmen* were inevitable, but whereas *Watchmen* considered how the presence of superheroes might have subtly changed Earth over a period of decades, the cast of *Rising Stars* work in a largely familiar environment. For reasons so far unrevealed, a flash of light affects every unborn child in a small American town, creating 113 super-powered beings. Some become obvious superheroic archetypes, while other possess apparently redundant abilities such as affecting only very small objects by force of will, well explored in 16.

The series begins some twenty-five or so years after the flash, and is intended to cover a period of sixty years. Straczynski's handling of a large cast with conflicting motivations is impressive. While they grew up together, there is no broad consensus among the Specials, as they're known. Some shun society altogether, some serve in other guises, some consider their abilities a licence to abuse, one believes his powers bestowed by God and one of the most powerful acts as a corporate shill before choosing a different path. The series splits into distinct story arcs. Someone is killing the lesser-powered individuals and the remainder notice a corresponding increase in the level of their abilities in 1-8, including a gimmick concluding 5 so obvious once attempted that it's astounding no-one previously used it. There's a ten year leap to 9 and a battle for Chicago, under the control of amoral specials that concludes in 13, and thereafter some Specials with the best interests of the world at large in mind become global vigilantes. 17 picks up a world essentially overseen by superheroes for the betterment of mankind, although not everyone considers this in humanity's interest, and a method of dealing with Specials is developed.

Being a drama writer of note, Straczynski's characters are solid, and his moments of moral imperative and uncertainty are deftly handled. While the writing is never less than absorbing, the art is a serious flaw in the early issues. It started well with Ken Cha pencilling 1-2, but between 3 and 13 penciller Christian Zanier, working from Ken Lashley layouts provides appalling figurework with minimal backgrounds. The whole is sloppy, ugly, well below the professional standards one might have imagined Straczynski required, and possibly the worst art seen on a supposedly major project. This is rectified with Brent Anderson's arrival to pencil the remaining issues to date.

In addition to the regular numbering, there are several slimmer promotional issues initially only given a limited circulation. Two preface the story (titled prelude and ½), and an issue 0 is set early in the chronology. None are essential, but all add small pieces of background for the committed, and they're most easily found gathered in the one-shot 'Visitations'. 1-16 are also available as two collections.~WJ

ROACHMILL

Blackthorne: *6 issues 1986-1987**
Dark Horse: *10 issues 1988-1990*

Rich Hedden and Tom McWeeney create a believable seedy, grimy world where gang bosses are bloated monsters, robots and mutates go about their business, and humans and a veritable platoon of assorted aliens mix freely. At the centre of this lunacy is Roachmill, an investigator possessed of an extra pair of insectoid arms, part of the joke being that while all around him is madcap Roachmill himself is forever grim-visaged. The plots are sometimes thin, but masked by Hedden and McWeeney's rich repertoire of visual gags and general inventiveness. If you like one issue you'll enjoy them all. Roachmill returned in *Dark Horse Presents* 139.~FP

THE ROAD TO PERDITION

Paradox Press: *Graphic Novel 1998*

Despite the multiple Oscar nominations, and for all the plaudits the film version has gathered there has been little acknowledgement of the comic from which it originated. That's an egregious oversight as the movie is an extremely faithful adaptation of what writer Max Allen Collins and artist Richard Piers Rayner created. 1930s mob enforcer Michael O'Sullivan is not a tragic hero in the classic sense, having earned his bad karma manyfold, but is forced into the position of waging a one man war against his former employers. He's accompanied by his pre-pubescent son, and as father and son learn about each other a new respect develops. It's an often brutal coming of age story with a decent ending, and anyone who enjoys crimes stories will like this paperback book.~FP

Comic Zone: *1 issue 1992*
Cult Press: *4 issues 1994*

When Physics professor John Neville's assistant Emily Ash disappears, he visits her home. Reluctantly entering a portal to another reality at the bottom of her garden, Neville finds himself in the sorcerer Solon's land. He meets Twist, a friend of Emily's and they set out to challenge Solon, as Neville's credentials come to the fore. Brilliantly written by Jeffrey Lang, the art is only functional from a Steve Ditko influenced Ted Slampyak rendered adequately by inkers Steve Lieber and John Drury. Neville is an underpowered protagonist whose motivations are cleverly underplayed right to the last scene. All the characters have entertaining degrees of dimension. An excellent read.~SW

ROB HANES Adventures

WCG: *4 issues + 2000 to date*

Continuing the storylines from *Adventure Strip Digest*, this series finds Justice International bought by Drakorp Oil, threatening the independence of its investigators. Rob Hanes sees action in Russia, Hong Kong and the Balkans whilst beginning to search in earnest for his missing father, who may be the soviet mole nicknamed, Glowworm. Randy Reynaldo extends his themes of high adventure and moral decision making by drawing on real-life headlines (even directly linking his stories to characters from *Terry and the Pirates*) and his steadily improving artwork has developed a more naturalistic feel, making for a very enjoyable package.~NF

ROBIN

DC: *5 issue miniseries 1991*, 4 issue miniseries ('II: The Joker's Wild') 1991, 6 issue miniseries ('III: Cry of the Huntress') 1992-1993, 108 issues + (0-107), 6 Annuals, 2 Specials, 1 80pg Giant to date, 4 issue miniseries ('Year One') 2000-2001*

The third Robin, Tim Drake, was the first to receive his own series, after DC tested the market with the miniseries. These explain how Robin came to meet Lady Shiva and make an enemy of King Snake, beat the Joker and face a re-match with King Snake whilst rescuing a new girlfriend, Ariana Dzerchenko, from the KGBeast. The series proper began during the period when Azrael was Batman, establishes Tim in school with Ariana, and introduces would-be superhero, the Spoiler, who is actually the daughter of 1960s villain, the Cluemaster, Stephanie. This sets up a romantic triangle that's not resolved until 56. A bone of contention among readers is the series being interrupted on a regular basis by tie-ins with the main Batman titles, including 'Knightfall' (7-9), 'Prodigal' (11-13), 'Contagion' (27-28), 'Legacy' (32-33), 'Cataclysm' (52-53), 'No Mans Land' (66-73), 'Officer Down' (86) and 'Batman: Murderer' (98-99). This seemed especially difficult when there were also the wider DC Universe crossovers to contend with such as 'Zero Hour' (10), 'Underworld Unleashed' (23-24), 'Final Night' (35), 'Genesis' (45), 'Joker: Last Laugh' (95) and 'World Without Grown-Ups' (101). However, for some readers this was a positive sign that Robin was operating in the same world as Batman.

Early villains included The General and Maxie Zeus, but Robin's major enemy remains King Snake. Developments in Tim's personal life drove most of the subplots, from issues at school (guns and drugs) to teenage pregnancy (Stephanie), and his father's courtship and re-marriage. When his father decides that he's had enough of Tim's mysterious disappearances, Tim is packed off to a private school (74), where his new friends all seem to have secrets, he meets Man-Bat's family and still winds up in battle with King Snake and King Kobra (88-92). At the same time, Batman has decided to take on the training of Spoiler leading to him telling her Robin's identity (87), putting further strain on Tim's relationship with both of them. All of this changes though, when Tim's father is made bankrupt after some bad investments, and Tim is forced to return to Gotham (100). With only occasional exceptions (during crossovers), the series has been written by Chuck Dixon until 100, when Jon Lewis became the new scripter. Dixon's no-nonsense adventures contrast markedly with Lewis' wordier and more cerebral issues, but it remains to be seen how much Lewis can add to the character without taking the series too far from its basic premise. After undistinguished artwork by Tom Lyle on the miniseries, Tom Grummett was semi-regular penciller until 16, followed by a stiff Mike Wieringo. The series suffered from the lack of a regular artist until Staz Johnson (between 35 and 69) and then the smooth, Adam Hughes-like, Pete Woods (from 74) brought some stability, despite many interruptions.

All annuals followed that year's theme, Eclipso, Bloodlines, Elseworlds, Year One, Legends of Dead Earth and Pulp Heroes, but only the last was really successful, being a fun modern western teaming Robin with the Huntress by Dixon and Eduardo Barreto. Greg Land makes 'Robin/Argent' a good-looking proposition, but the story's hardly compelling. Much the same can be said of the writing on the Specials and 'Eighty-Page Giant', the latter being a single story rather than the usual collection of shorts. 'Year One', by Dixon with Scott Beatty, artwork by Javier Pulido, is a reasonable, if unexciting, re-telling of the origin of the Dick Grayson Robin, adding to the existing facts with issues over James Gordon's acceptance of a child working with Batman.~NF

ROBIN HOOD

As far as the writing goes, this is a fair enough cobbling together of the assorted Robin Hood stories by Martin Powell, but Stan Timmons' layouts and poor figurework don't bring the comic to life.~WJ

ROBIN HOOD

ROBIN 3000

DC: *2 issue microseries 1992*

At the end of the 30th Century the alien Sculp rule Earth's galactic empire in return for providing the cure for a mysterious plague. The epidemic is blamed on the Wayne family's experiments resulting in Batman the 20th being hunted down and killed. He leaves his crimefighting legacy in the hands of Robin, his nephew Tom Wayne. Together with underground fighter Aki Wong and kid telepath Moon Bailey, Tom works at exposing the evil aliens and restoring the Wayne name. Along the way the team encounter Genra Carson, an agent of Sculp mastermind Dregon quickly putting her loyalties to the test. The story is episodic and shows evidence of having been originally prepared in eight page instalments with some last minute additions: the artwork is dated 1986-1992. Byron Preiss' writing is plot-heavy and poorly paced, but while artist P. Craig Russell clearly had some fun drawing it this nondescript material hardly deserves its squarebound deluxe format.~SW

ROBO-HUNTER

Eagle: *5 issue miniseries 1984-1985**

A light-hearted hard-boiled Private Eye strip transported into a future setting where robots have become part of the culture and the landscape. Sam Slade is asked to investigate the disappearance of the human colonists on the planet Verdus, and has to discover how Verdus became a world of deranged robots. The strip is all wild action and manic humour, where everything in sight is robotic and has an attitude, from the boots worn, to the chairs and the cigars 'smoked'. Written by John Wagner, the strip first appeared in the UK's *2000AD* and features art by Ian Gibson. Those who like the concept should note Slade returns in the Quality series *Sam Slade.* 1-4 also reprint 'Harlem Heroes' by Tom Tully and Dave Gibbons, a sports strip derived from the film *Rollerball* but with jet-packs replacing the rollerskates.~WW

ROBOCOP

Marvel: *23 issues 1990-1992*

Considering that *Robocop* was only ever, at best, a watered-down version of *Judge Dredd,* Alan Grant seems a particularly apt choice to write Marvel's attempt at stories beyond the movies. Pedestrian (though competent) art from Lee Sullivan gives the series a consistency, but the stories are well below Grant at his best – hacking it out with the minimum of effort. Despite himself, the fact that Grant is much better than this can't help but come through, mostly in the TV news interludes and the dark, sarcastic humour of the in-jokes which pepper the main plots. For all Grant's apparent lack of interest in the character, he does a better job than his successors. After an unremarkable fill-in by writers Evan Skolnick and Stephen Ripinski, illustrated by Herb Trimpe (over Alex Trimpe layouts), Simon Furman takes over the series from 12 until the end. This makes it all too obvious that Grant's humour was the only thing the series had going for it, and Furman's attempts to continue the inter-panel banter fall way short of the mark. If the film left you thinking that there were likely to be any good stories to be had in giving Murphy some characterisation, you were wrong. He's a lump of metal with a heart because he's a Hollywood lump of metal and not even the most vicious Hollywood killing-machine is allowed to be totally schmaltz-free. Do yourself a favour and go read some *Judge Dredd* comics instead.~JC

ROBOCOP

Dark Horse: *4 issue miniseries ('Robocop vs Terminator') 1992*, 4 issue miniseries ('Prime Suspect') 1992-1993*, 3 issue miniseries (Robocop 3) 1993, 4 issue miniseries ('Mortal Coils') 1993, 4 issue miniseries ('Roulette') 1994*

Dark Horse carried on the adventures of Alex Murphy, the cyborg future cop, long after the movies left off. The adventures are presented in self-contained miniseries, with the first, *Robocop vs Terminator,* the best of the bunch, written by Frank Miller, who also wrote *Robocop* movies, and drawn by Walt Simonson. Miller plays on the time paradoxes of the *Terminator* films and the themes of humanity from *Robocop* to craft a clever tale of time travel and big explosions which will no doubt please those who like more of the same on the big screen. 'Prime Suspect', in which a framed Murphy tries to clear his name, is also of a decent standard. In general, give the miniseries a try and avoid the film adaptation. Somewhere buried in at least the first *Robocop* films was a half-decent story, and Dark Horse do a good job of tapping into it to produce some half-decent comics.~JC

ROBODOJO

WildStorm: *6 issue miniseries 2002*

Set in a science academy for exceptionally gifted children, new students are split into competing groups to stimulate their development of robotic devices. There is, however, a sinister presence lurking in the background. It's a good, lightweight piece of American manga written by Marv Wolfman with excellent art from Greg Lane. The back-up strip about sort of miniature robotic Power Rangers doesn't match the lead, but isn't bad either.~FP

ROBOT BATTALION 2050

Eclipse: *One-shot 1988*

One of the numerous black and white parody comics that proliferated at the end of the 1980s, this series was hastily cut down to a one-shot prior to release. When 139 year old President Reagan, serving his 19th consecutive term, commissions the creation of giant robots he starts another cold war arms race and the world trembles as 68,000 ton US Thunderwalkers combat the Red Fluffy Menace of the Chair(man)bears. ROBOT COMICS

Renegade: *One-shot 1987*

Described by creator Bob Burden as "experimental literature guised as a leaking barrelful of rip-snorting, foot-stomping belly laffs" *Robot Comics* is as surreal as he gets. Barely the story of one night at a bar populated by the weirdest of the weird (robots, a man carrying his own tombstone, the Banjo Mummy, Uncle Billy with a pie crust on his head), it's really a series of one- or two-page vignettes, exercises in character. Bizarre but recommended.~NF

ROBOTECH: INVID WAR

Eternity: *18 issues 1992-1994*

When the rapacious Invid, led by the genetics-obsessed Regiss, establish a beachhead on an Earth already devastated by two prior invasions and a civil war between humans and the stranded Zentraedi survivors, the only hope seems to be the military outpost on the Moon. Can Captain Nobutu overcome the base's internal divisions and the Invid blockade before humanity is eradicated? Originally intended as a 12 issue limited series detailing the Invid invasion of Earth, extra stories set during the *Robotech New Generation* adaptations of the TV show were tacked on at the conclusion, which only serve to dilute a solid, well paced thriller.~WW

ROBOTECH The MACROSS Saga

Comico: *36 issues, 1 Special, Graphic Novel 1984-1989, one-shot (Robotech 3-D) 1987*

Adaptation of a highly popular US animated series, itself a combination of three Japanese animé, *Space Fortress Macross, Southern Cross* and *Mospeda*. When a huge alien fortress crashes on Earth during World War III it causes a cease-fire and eventually comes under the control of a benign faction that creates a World Government. When the giant humanoid Zentraedi arrive, eager to retrieve their weapon and the mysterious 'Protoculture' that makes Robotechnology possible, they become foes and eventually allies in an intergalactic conflict. It's all told through the experiences of three young people locked in a romantic triangle; reluctant fighter-pilot Rick Hunter, career soldier Lisa Hayes and Lynn Minmei, a cute and fluffy popstar whose singing causes emotional breakdowns in the aliens. The scripts adapt and embellish the TV episodes and the art, sadly, does likewise. Whereas scripter Markālan Joplin manages to work beyond the Saturday Morning blandness of the teleplays when he replaces Jack Herman in issue 17, creating a depth absent from the source material, the illustration, slavishly following the production style is unpleasantly fuzzy and lacks edge or drama. The remaining episodes of the TV show are adapted in *Robotech Masters* (Southern Cross) and *Robotech The New Generation* (Mospeda).

The graphic novel is subtitled 'Genesis: Robotech', and relates the events leading up to and immediately following the crash of the Super Defence Fortress 1. Carl Macek, Mike Baron, Neil Vokes and Ken Steacy create a readable tale that can be enjoyed without a degree in Robotech History. The 1988 special adapts the transitional episode of the *Robotech* TV show as the *Macross Saga* gives way to *Robotech Masters/Southern Cross*, and can also be read independently of the many other *Robotech* titles. Dana Sterling, born during the first Robotech War of a Terran father and Zentraedi mother, graduates military academy just as the Robotech Masters invade in another attempt to wrest the secrets of Protoculture from humanity. It's solid storytelling from Joplin, Tom Tenney and Mike Chen.~WW

ROBOTECH Miniseries and one-shots

Antarctic: *4 issue miniseries ('Vermillion') 1998, One-shot ('Escape') 1998, two issue microseries ('The Sentinels: Rubicon') 1998, 2 issue microseries ('Covert Ops') 1998, 2 issue microseries ('Wings Of Gibraltar') 1998, one-shot ('Class Reunion') 1998, one-shot ('Final Fire') 1998*

Separate from the ongoing title, these gave assorted Antarctic creators the chance to play with the *Robotech* cast. The best are Greg Lane's 'Class Reunion' and Lee Duhig's 'Wings of Gibraltar', which are at least decently pencilled and aspire to the level of a childrens cartoon show. Those who can coo all day over meticulously drawn robots and spaceships are directed to Duhig's 'Final Fire', but it's a plot free zone. All but hardcore Robotech fans should leave the remainder well alone.~FP

ROBOTECH II:THE SENTINELS

Eternity: *16 issues 1988-1990*, 2 issue microseries ('The Wedding Special) 1989, 12 issue limited series ('The Malcontent Uprisings') 1989-1990, 4 issue miniseries ('Cyberpirates') 1991, 3 issue miniseries ('The Illustrated Handbook') 1991, one-shot ('Swimsuit Spectacular') 1992*

The ongoing series is a slow-paced, but engaging tale featuring the cast of *Robotech:The Macross Saga*, set ten years after the original adventure and ten years prior to the events of *Robotech Masters*. Earth Government prepares a diplomatic mission to the Zentraedi unaware that they have been conquered by the marauding Invid. The expeditionary force defeats an Invid fleet, but at the cost of being stranded light-years from Earth. They ally themselves with the remaining Robotech Masters, powerless to halt a Zentraedi faction intent on invading Earth, let alone the seemingly unstoppable Invid. The Wedding Special, set between 6 and 7 sees veterans Lisa Hayes and Rick Hunter spliced whilst preparing for a diplomatic mission. Intrigue is provided by the sinister Colonel Edwards, intent on scuppering the marriage for his dark purposes. He's a Terran officer with his own devious agenda. His machinations also complicate the regular title. Adapted from the scripts of the unproduced second TV series, this is a surprisingly accessible read from writers Tom Mason and Chris Ulm and artists Jason and John Waltrip.

'The Malcontent Uprisings' precedes Comico's *Robotech Masters* series. Defeated Zentraedi warriors are resettled in camps, but when a food riot results in a massacre, Zentraedi Malcontents begin a guerrilla war. Saboteurs who develop a weapon capable of overriding the pilot controls of Robotechnology provide the plot for 'Cyberpirates'. Discredited Mecha pilot Terry Weston, with the assistance of schoolgirl Dana Sterling must find the culprits and destroy the device before civilisation is plunged into chaos. It's a rushed and inadequate fluff piece. The Illustrated Handbook has facts, figures, sketches and diagrams to help you keep the cast and hardware straight. You could just read the comic, of course. For the 'Swimsuit Spectacular' cast members take a few moments for a quick dip and little posing. Sad but true.~WW

When Little John is threatened, however, Robin's daughter appears to rally the men and take her place as leader of the outlaws. 2 and 3 are effectively an origin story, explaining the deaths of Robin and Marian and where Robyn was raised. Though adding little more than a feminist twist to the original tales, this isn't badly written, but it's let down by stiff and unimpressive artwork from three different artists.~NF

THE ROCK

Chaos!: *One-shot 2001*

Ludicrous tale of WWF champion the Rock forced to fight a veritable horde of over-muscled thugs to thwart the machinations of evil masterminds. Steven Grant and Fabiano Neves know what wrestling fans want in their comics – and its not story, plot or characterisation. Awful stuff.~WW

ROCKERS

Rip-Off: *8 issues 1988-1990*

This is the brainchild of writer/penciller R.L. Crabb, who on the evidence of this turgid rock group soap opera has to be a true child of the 1960s. The comic's treatment of female fans (v. sexist), its belief in the eternal values of guitar-orientated adult rock (v. antiquated), and its sniggering coke-and-dope gags (v. juvenile) all suggest that *Rockers* might have made a bit more sense if it had been set in (and published in) 1968, not 1988. The nadir comes with 5, when wasted lead longhair Rocky Rockford is transported to Disgraceland, a weird cosmic realm ruled by the shade of Elvis Presley. It has to be said that the recording studio/fellatio scene in 8, complete with giant psychedelic floating eyeballs, is very nearly as naff. All in all, it's like Techno never happened.~AL

ROCKET RACCOON

Eclipse: *One-shot 1984*
Comico: *2 issues 1988*
Disney: *2 issues 1991*
Dark Horse: *1 issue (3) 1995*

Dave Stevens' Rocketeer is a labour of love, indulged by fans because it's the best chance we're ever likely to have of seeing more than covers and posters from this meticulous and beautiful artist. The character first appeared in the back of the otherwise forgettable *Starslayer* (2 and 3), and The Rocketeer of the title is Cliff Secord, a young pilot who lives in a world Stevens has crafted from 1930s pulp fiction and 1940s whimsy. It's a world of rocket jetpacks, gangsters, high adventure and model girlfriends who look exactly like 1950s pin-up Betty Page. The period feel is pure nostalgia, the plots light but perfectly weighted, and the art is a dream. Sadly, the production schedule is less so. Even though there's almost always a back-up (by Steve Ditko in the Pacific issues, Mike Kaluta in the Comico ones), Stevens still has trouble turning out an issue more than once every couple of years. One interesting feature of this is that you can almost follow the history of colouring technology improvements from one issue to the next, and by the Dark Horse issue (the most recent to surface, though more are promised), you wish all the issues had had such slick production. For completists, there's also the Disney-published *Rocketeer 3-D Comic* by Neal Adams and a graphic novel adaptation of the (surprisingly faithful) movie by Russ Heath. Plus more posters and merchandising than has ever before been lavished on a comic yet to reach double figures. But then, the *Rocketeer*'s worth it. The entire series is collected in two albums.~JC

Adapting the movie serial King of the Rocket Men, this romps along encompassing action, suspense, red herrings and a fine selection of serial nasties. The Rocketman of the title is security officer Jeff King, who wears a flying suit developed in secret by one member of a group of scientists he's investigating. Another of them is the mysterious Vulcan, supplying information to the Nazis. Christopher Moeller's shades-of-brown painted art, intended to evoke the period, occasionally turns to mud, but it's largely effective. Tune in, turn off, and enjoy.~WJ

ROCKIN' BONES

NEC: *3 issues, 1 Special 1992*

The first issue is patchy, but otherwise this is an unjustly unknown gem. Darren Merinuk takes the pop culture of the 1950s and 1960s, chucks it into a pot and stirs. The result is gag a panel stories in which giant lobsters attack Earth, dead rock bands are revived Frankenstein fashion, and apes are crime fighters. The early *Mad* is a large influence, but in a righteous world all humour comics would be this funny.~WJ

ROCK'N'ROLL Comics

Revolutionary: *71 issues 1989-1994*

It's hard to conceive that even the most devoted of fans will want these rock-star and band biographies. Art is largely hackwork and sometimes appalling (although Chas Gillen makes a brave effort), and while issues written by Jay Allen Sanford from 22 are an improvement on Todd Loren's scripts they're still pedestrian. For British readers the Rolling Stones issue 6 is a hilarious must, with its shorthand presentation, wonderfully bad imagined dialogue and misuse of English terms. The back-up one-pagers in early issues, featuring gags about rock star Stan Back, are actually better than the feeble title pun would suggest.~FP

ROCK'N'ROLL HIGH SCHOOL

Cosmic Comics: *2 issues 1995*

Put together as a music biz promo for Kurt Cobain favourites The Melvins, Bob Fingerman scripts the misadventures of Arnie Zimmer and Pants Velcro at Vince Lombardi High School #8. Good drawing, confusing storytelling, and a slim story about an armoured warrior on a flying dragon terrorising cavemen when a scantily attired female archer comes to their aid. ROGUE

Marvel: *4 issue miniseries 1995*, 4 issue miniseries 2001*

In the 1995 series, the X-Men's power-draining southern belle is separated from her comrades by the abduction of her childhood sweetheart, and forced to confront some remarkably tangible ghosts from her past. Although the Howard Mackie/Mike Weiringo team create an affable romantic adventure, the hackles are erected by the fact that Rogue's lover Gambit occupies nearly half of the series, despite an earlier miniseries of his own in which Rogue didn't get a look in. It appears the Merry Marvel Misogynists didn't have faith in Rogue's pulling power without the clichéd Cajun shoring her up.

The 2001 series flashes back to Rogue's earliest days with the X-Men and details her problems adjusting to the group. It has a lachrymose chickflick plot, as our heroine Learns Lessons about Life&Trust&Loss&Friendship, but it at least shows her taking positive action and making her own decisions. Writer Fiona Avery turns in a decent portrayal of Rogue as confused teen runaway, though Aaron Lopresti's art seldom rises above adequacy.~HS

ROGUE TROOPER

Quality: *49 issues 1985-1990*
Heavy Metal: *Graphic Novel 1993*

Created when readers of *2000AD* selected future war as their preferred topic for a new series, there's a decent concept to Rogue Trooper. He's a Genetic Infantryman impervious to many of the dangers threatening regular human soldiers. If they're killed, the accrued experience and personalities of the G.I.'s can be saved on datachips for eventual restoration, and Rogue is accompanied by three deceased comrades in this fashion. Sadly, despite the potential, Rogue has always been the runt of the *2000AD* litter. Perpetually dull scripts only ever inspired functional artwork, even from the likes of Dave Gibbons, Cam Kennedy and Steve Dillon, as Rogue staggers from one conflict to the next, although Colin Wilson makes a brave stab at rendering the stories in entertaining fashion in early issues, particularly 4. The enticing combination of Dave Gibbons (script) and Will Simpson (art) for the graphic novel also fails to deliver, and one must wonder if all creators are rendered brain-dead upon starting work on the character. Six Titan collections reprint 1-24.~WJ

Tyrone Ford's ROJA FUSION

Antarctic: *One-shot 1995*

Big-eyed manga American style, with a teenage cast who have to repel an inter-dimensional invasion. If you consider similar stuff charming, pick this out of the back issues, but those who find these types of character perennially retarded and irritating should stay well clear.~FP

ROLLERCOASTER

Fantagraphics: *2 issues 1996-1997*

Elsewhere Rich Tommaso combines the detached observation of Daniel Clowes with a more optimistic worldview. That isn't immediately apparent, however, from 1's extended narrative about the final night of a four-day pizza delivery shift. There are plenty of wordless illustrations of scenery and expressions in the nine-panel grid used to tell the story, which might not make for a long read, but works in conveying the sheer exhaustion of the nameless deliverywoman. The odd back-up is a muddied musing on the old ways, and altogether less satisfactory. It's not nearly as disappointing, though, as the wordless and worthless CD sized 2, which is meandering allegory in the form of sketchbook illustrations.~FP

ROM

Marvel: *75 issues, 4 Annuals 1979-1986*

Rom was conceived to promote a toy launch but proved far more successful than its parent product, outliving it by years. Full credit to Bill Mantlo for reworking an old science-fiction concept with new wrinkles. Armoured space-knight Rom arrives on Earth already infiltrated at all levels by evil beings known as Dire Wraiths, who seem human in every respect except to Rom's analyser. When he starts blowing away bastions of the community in a small West Virginia town it understandably raises eyebrows. His neutraliser actually banishes Dire Wraiths to limbo rather than killing them (wouldn't want to upset the younger readers, after all), but the effect is the same and Rom finds himself trying to save people who're after his head.

Mantlo writes the series from start to finish. Beyond the surface his plots often fail the logic test. Why would a Dire Wraith want to marry Rom's friend Brandy Clark disguised as her boyfriend (14)? Why would a prisoner containment van able to fly be driving along snowbound roads (31)? The strength, though, is that there's enough going on, if not to disguise the flaws, certainly to negate them. The always reliable Sal Buscema pencils 1-58 (best inked by Ian Akin and Brian Garvey in 36-50), and Steve Ditko, most often inked by P. Craig Russell in an interesting combination, handles the remainder. There's no single classic issue of *Rom*, but they're almost all okay, if undemanding, with plenty of guest stars along the way. Stories rarely continue beyond two issues, so sampling is simple.~FP

Caliber Presents ROMANTIC TALES

Caliber: *One-shot 1995*

Jason Thompson tells the story of his obsession with Leah, a woman he's initially drawn to due to their shared love of *Star Wars*. A poignant, funny, moving exploration of unrequited love, with a very neat homage to Steve Ditko's *Spider-Man* as back-up.~HS

RONIN

DC: *6 issue miniseries 1983-1984**

Many people were disappointed by *Ronin*, Frank Miller's first major work after a revolutionising stint on *Daredevil*. Others dismissed its artistic mixing of rounded, Moebius-esque forms and manga influences as a necessary evil in the development of Miller's more acceptable, angular style for *Dark Knight Returns*. They are all wrong. *Ronin* has a straightforward plot. A young samurai whose master is murdered by a demon has to kill himself in order to also kill the demon, as his magic sword can only be activated by spilling innocent blood, and he is unwilling to kill a bystander. With its dying breath the demon curses them to meet and fight again down the centuries. Fast forward to a near-future New York in the grip of riots and public unrest. The Ronin – masterless warrior – possesses the deformed body of an adolescent to continue the fight.

Ronin's story is often overshadowed by the richness of its artwork, and Miller undoubtedly wears his influences on his sleeve, particularly in the Koike-inspired Japanese sequences. He uses a very rough line but rounded forms for the 'present', suggesting a perfect plastic future gone bad, and concentrates on building his main characters as the story ploughs towards the inevitable showdown and a tremendously touching climax. He also employs numerous experimental drawing and inking techniques that would provide him with an armoury of expressiveness for the next ten years.~FJ

ROOK

Warren: *14 issues 1979-1982*

Bill Dubay's time-travelling hero proved popular enough in *Eerie* to warrant his own title, where the emphasis was very much on rollicking adventure rather than Warren's staple horror fare. The Rook strip itself was generally entertaining, with nice art from Lee Elias for 1-6, but it was the back-up strips that provided the comic's real highpoints. Chief among these was Alfredo Alcala's barbarian epic 'Vector' (2-7), *Sherlock Holmes*, beautifully drawn by Anton Caravana in 10, Noly Panaligan in 13-14 and 'Bolt' by Alex Niño in 1. Other features of note include Nestor Redondo's gorgeous Bat, and a couple of features from Joe Kubert's obscure Sojourn comic, Lee Elias' detective strip 'Kronos' (8-11) and John Severin's Western Eagle (12-14). For the less committed reader, however, the magazine's best strip is Alex Toth's 'Bravo For Adventure' in 3-4, a superb 1930s adventure strip by one of comics' finest creators that should have a place in everyone's collection.~DAR

The ROOK

Harris: *5 issues (0-4) 1995*

An altogether different proposition from his Warren predecessor, but no improvement. The Rook is now master of the reality flow, involving himself in alternate realities instead of contenting himself with hopping back through time. The first two issues have him fighting the undead in the old West, though, while the latter two see him fighting hoods possessed by a piece of chaos manifesting as a spider embedded in one of them. Oh yes, indeed. The zero issue prints two versions of a try-out strip, one by Kirk Van Wormer, who got the job, and the other by Caesar, who didn't. Shockingly overwritten throughout by Tom Sniegoski in the manner of a schoolboy's creative-writing assignment, the plots are much ado about nothing. Good name, good idea, but mucked up once again.~WJ

ROOTER

Custom Comics of America: *Series one 6 issues, 1 Annual 1996-1997, series two 2 issues 1998*

There's no denying Kelly Campbell's talent as a cartoonist, but when it comes to telling a story it's a shaggy dog one in both senses of the term. Large panels, little plot and many chases don't make for a satisfying read, and that's probably what killed this comic about an animal band and their glamourous companion. The first issue is toned in orange and brown for most pages, and looks very good indeed, and in purple for others and doesn't look as good. Thereafter it's black and white all the way.~FP

ROSCOE! The Dawg, Ace Detective

Renegade: *4 issue miniseries 1987-1988*

Australian not-funny-animal Raymond Chandler pastiche by Martin Trengove. The simple drawings, especially in the first issue, show some life but there are no good ideas here.~GK

ROSE

Cartoon Books: *3 issue miniseries 2000-2002**

This spin-off from *Bone* aspires to the epic and attains it effortlessly. The story concerns the ultimately tragic rite of passage of Princesses Rose and Briar as they seek to harness their dreaming powers. Writer Jeff Smith brings in good and bad dragons, killer rats, brave swordsmen, talking dogs, locust gods and, in 3, a gripping battle. It is stronger stuff than Smith's usually benign *Bone*, but retains that strip's sense of wonder, a sense enhanced by Charles Vess' terrific artwork. Vess has always possessed a fertile imagination but his elegant designs and inventive landscapes have never been better than here. For Rose, his usually elaborate linework is augmented by some of the most gorgeous watercolours seen in comics, making this an essential purchase for any fantasy fan.~DAR

Bongo: *6 issues 1996-1999**

The story of a little green man who "falls to Earth" in a post-war America, and is immediately befriended by scientist/waitress Julienne Fryes and itinerant cowboy Jasper Kudzu (and Jasper's giant rabbit, Dagnabbit), as he flees from the authorities and tries to find his way home. Wittily written and exquisitely drawn by Bill Morrison in a pseudo-vintage style redolent of the old movie cartoons, this comic is a delight.~HS

ROULETTE

Caliber: *1 issue 1990*

Yet another attempt at an anthology from Caliber, but speedily aborted. 'Gaijin', 'Gambit' and 'Lost Angel' were later completed in one-shots, and 'Dutch Decker' with very promising art from Benjamin Wu, was given a miniseries, again never completed. Too bad, though, if 'Renegade Blue' was your favourite strip, although if it was, you should seek medical advice. 'Gaijin' is the pick of the bunch. What's odd about Gabriel Morrisette's future crime story is the start groaning under the weight of the verbiage before several wordless pages precede a more traditional balance.~WJ

ROUTE 666

CrossGen: *6 issues + 2002 to date*

Cassandra Starkweather can see things that she shouldn't be able to. These include the dead spirits of her best friend, Helene, and her grandfather, as well as the dark spirits that capture other spirits on behalf of the Adversary. Cassie is committed to Dr Melchior's Asylum, where her grandfather explains about a war with this Adversary and release her power to see through the human faces of his monstrous helpers, who take roles in healthcare in order to be near to the dying. Accused of murder, Cassie goes on the run, learning more as she goes and facing the continual threat of arrest or death. 5-6 see Cassie befriended by a serial killer, who decides to help her with what he sees as her killing spree. This is an intelligent and well drawn horror fantasy from Tony Bedard and Karl Moline, whose artwork has the right level of realism to offset the 'unreal', with no links yet revealed to the rest of the CrossGen titles.~NF

THE ROVERS

Malibu: *6 issues 1987-1988*

Eternity: *1 issue (7) 1988*

The future is always a grim and desolate place in comics, and there's no trend-bucking for this gang of bounty-hunting teens. Starting from the clichéd scenario, matters improve with an endearing cast and decent art from the team of Scott Bieser and Mike Roberts. *The Rovers* never really moves beyond Troma teens at play, but there's plenty worse. 6 is an origin story of sorts, and a good place to start if you can't locate the first issue.~FP

ROWLF

Rip-Off: *1 issue 1971*

A rollicking good read from an on-form Richard Corben, and to date the only comic to feature Esperanto-speaking Nazi goblins! The story of a dog transformed into a man (sort of) veers from finely etched romanticism to literally bone-crushing action, and remains one of Corben's finest strips. It was later serialised in *Heavy Metal*.~DAR

ROXANNA and the Quest for the Time Bird

NBM: *4 volumes 1987-1989*

Serge Le Tendre's fantasy adventure series was hugely popular when it first appeared in France, drawn by long time partner Regis Loisel in a highly coloured, voluptuous 'heroic' style. Originally called Pelisse, but changed to Roxanna for no apparent reason for the English-speaking market, the books follow the adventures of a band of quirky and very annoying adventurers in a magical world. Sent by a sorceress queen on a quest to find the mysterious Time Bird in order to stop an evil god rising and taking over the world, the pouty, well-stacked Roxanna gets into trouble and is rescued by Brandon, the knight accompanying them. Anyone who's read a fantasy quest book will get the idea, and it's no surprise that Roxanna became a successful adventure game as well.~FJ

ROY ROGERS

AC: *4 issues ('Western Classics') 1989-1991, one-shot ('and the Fourth of July Bandits') 1992, 3 issues ('Western') 1998-1999*

A curious mix of black and white and colour reprints of a whole variety of Roy Rogers strips, plus those of his sidekicks, Dale Evans, Gabby Hayes and even Trigger. Here you'll find early John Buscema artwork on most of the Roy Rogers strips with Russ Manning illustrating the adventures of Dale Evans, but 'Western' includes an Alex Toth version of Roy. 'Western Classics' 3 and 4 feature a higher proportion of articles and photographs. While some of theart's very good, the bowdlerised Western scripts are anaemic. The 'Fourth of July Bandits' is a magazine-sized issue with a scrapbook feature and a new story, told one panel per page in the manner of a colouring-book!~NF

RUBBER BLANKET

Rubber Blanket: *3 issues 1991-1993*

When David Mazzucchelli left the mainstream he didn't do it by halves. These oversized annuals represent a complete change of style, whether it be the minimalist 'Hope and Grope' (a newspaper strip pastiche) or the blocky expressionism of longer stories like 'Dead Dog' (1), 'Near Miss' (1), 'Discovering America' (2) and 'Big Man' (3). His stories are not simple but concern everyday things twisted by obsession. The superb 'Big Man' is about a giant washed up on a shore and taken in by farmers. He preys on their minds, simply by existing, until they betray him to the authorities. Though the title is primarily a vehicle for Mazzucchelli's own work there is also material by Richmond Lewis (1, 2), Ted Stearn (2, 3) and David Hornung (2, 3).~NF

RUBBER NECKER

Alternative Comics: *2 issues + 2002 to date*

Quite strangely compelling stories from Nick Bertozzi using a variety of styles, both artistic and in his writing. The standout is the serialised 'Drop Ceiling', in which the younger partner in an ailing business is charged with making an employee redundant, from where the plot takes off, taking in some unsavoury characters and odd situations. It's the most reality based of the strips, which generally incorporate some fantasy elements. 'Masochism' in 1 uses surreal imagery for a piece that may or may not be intended as analogy, while 'Adrift in a Mid-Life Melodrama', also 1, displays a grasp of human nature beyond Bertozzi's years. In 2 there's a wonderful whimsical piece about a man obsessed with a particular perfume and determined to isolate the source. The back page gag strips on both issues are icing. The drawing throughout is confident, the storytelling choices very mature, and the subject matter hits a nerve in the manner of Dan Clowes or Chester Brown. This is already of an excellent standard, and Bertozzi should progress into a major talent.~FP

RUINS

Marvel: *2 issue microseries 1995*

Journalist Phil Sheldon stumbles through a counterpart to *Marvels* set in a parallel universe where all the events that created superbeings happened with a difference and superhuman abilities work disadvantageously. The world is populated with diseased, mutated heroes, a Kree concentration camp, a prostitute Jean Grey, mutants in "correctional facilities" and the last Avengers quinjet is shot down by the military. An intriguing concept is poorly executed, as Warren Ellis goes for maximum shock value at all costs. Improbably, every character bar Sheldon is thoroughly disagreeable. Cliff and Terese Nielson only manage one and a half issues of gritty, abstract, painted artwork, and the awful contrast of Christopher Moeller's completion strikes like a bucket of iced water.~APS

RUMBLE GIRLS

Image: *7 issues 2000-2001*

Silky Warrior Tansie is a faux manga strip set in a school where teenage girls train to operate giant robotic battlesuits. The heroine is outsider Raven Tansania Ransom, beset by rich girl Carmen Cameron and in girlish love with video heart-throb Crimson August who is coincidentally also her gym teacher. In 3 Tansie meets her giant badger-styled battle suit Badgmander Nan 5^5. Meanwhile corporate suits conspire for Ransom to co-star in a new series of Crimson August vids. As some kind of 'reality check' the last 3 issues feature a kitchen sink short feature starring Poppy Fields written by Warren Ellis. Creator Lea Hernandez draws in a kinetic style that transcends its amateur finish. She uses the full gamut of manga storytelling devices and tics, often at the expense of clarity – not that this will deter devotees. The story does have great humour and a familiarity with the commonplaces of shojo manga and perhaps Hernandez is poking fun at her over-egged plot twists.~SW

RUMIC THEATRE

Viz: *1 volume 1996*

Six stories at a minimum thirty-two pages where domestic drama has a bizarre plot element introduced. A family finds itself looking after a penguin in an apartment block where pets are strictly forbidden; the Hirookas find that the unwanted rubbish left in front of their house belongs to the boss and his wife, or a newly-wed couple's struggle with a huge apparition that does its best to prevent their first home purchase. Collected in Japan as a *Big Comics* special in 1994, these stories are light and sentimental but far from silly. 'Hidden in the Pottery' in particular is a fine example of point-of-view storytelling and the comedy of manners in 'House of Garbage' is paced beautifully. It's disappointing to see Rumiko Takahashi's gorgeously painted opening pages to each story run in mono but this won't prevent any enjoyment of her breezy set-pieces.~SW

Fans of Rumiko Takahashi's numerous successful features get the opportunity to sample earlier series and single stories dating back into the early 1980s in these ninety-six page anthologies. Volume 1 features five stories, including a schoolgirl who travels back in time to find it's no accident that she's arrived where she has, a flying saucer invasion farce with has elements in common with Lum, and 'Maris the Chojo', sometimes referred to as "Supergal", an early outing featuring a Barbarella style superheroine. Volume 2 has four episodes of the spy comedy 'Wasted Minds', about immature secret agents with psionic powers, along with two other stories. Volume 3 features 'That Darn Cat', an autobiographical tale where Takahashi tells of her exploits as a cat-sitter, and in 'Wedded Bliss' a couple who let off steam in destructive arguments are muzzled by their neighbours. Batman: RUN RIDDLER RUN

DC: *3 issue miniseries 1992*

Batman is briefly allied to his old foe the Riddler as he tries to clear his name after being framed for murder by an armoured private-security force. The three issues are drawn very stylishly by Mark Badger and the story, by Gerard Jones, is okay, but they don't really suit each other.~NF

RUNE

Malibu: *Series One 10 issues (0-9), 1 Giant-Size 1994-1995, series two 4 issues 1995-1996*

Rune is a vampire from outer space who's been trapped on Earth for ten thousand years. In that time he has been God and Devil, but is nearing the end of his life due to disease. In the first story arc, Barry Windsor-Smith and Chris Ulm craft a dark and sardonic epic wherein the Dark God is drawn to the energy of a young boy. He is unaware that he has stumbled into a scheme to steal ultimate power from an alien artifact, orchestrated by the government agency set up to monitor and control superbeings. Ulm assumes full writing chores with 7, and when Javier Saltares replaces Windsor-Smith the loss of quality is staggering. Even the addition of the normally competent Len Kaminski and latterly horror veteran Doug Moench and the seminal Marvel character Adam Warlock can't inject life into the mess. From sophisticated suspense to testosterone bubble gum in one easy slide.~WW

RUNE Miniseries and One-Shots

Malibu: *3 issue miniseries ('Hearts of Darkness') 1995, one-shot ('The Dark God') 1995, 4 issue miniseries ('Curse of Rune') 1995, one-shot ('vs Venom') 1995, one-shot (Rune/Silver Surfer) 1995, one-shot (Rune:Infinity) 1995*

Doug Moench provides a partial origin and a turning-point in Rune's existence in the three-issue 'Hearts of Darkness' miniseries drawn by Kyle Hotz in a style similar to that of Kelley Jones. This is an intelligent attempt to move the Rune series on while retaining the vampiric nature of the lead character. The back-up, 'In Dread Memory' by James Felder, is an uninspired battle between Rune and A'Charr, though the artwork by the Pander brothers has its moments. In the *Curse of Rune* (by Chris Ulm and Kyle Hotz) Gemini and Rune are possessed in turn by Warlock's soul gem. The Aladdin Agent Shuriken and Janus are spectators only to a battle which sees Rune cast out of the Ultraverse in a story bridging the first and second Rune series. *Rune vs Venom* typifies the dull crossovers between Malibu and Marvel characters. Rune is accidentally brought into the Marvel Universe and possessed by one of the alien symbiotes that created Venom. In an attempt to discredit Venom, the symbiote takes Rune on a murder spree, culminating in the kidnapping of Venom's girlfriend. Written by Chris Ulm but with a depressing rota of three artists and two inkers, there's actually very little of Rune in this. *Rune/Silver Surfer* features two stories with the same conclusion as Rune takes the six Infinity gems from Warlock and the Infinity Watch, and The Living Tribunal taxes the Silver Surfer with preventing Rune from using all the gems together. At the end of each tale, in a brief fight, the Silver Surfer blasts the gems from Rune's hand but they fall into the Ultraverse, thus paving the way for Loki to find them, leading to the 'Black September' story that ran through all Malibu's Ultraverse titles. The Surfer story is drawn by John Buscema but that's the only hint of quality about this overpriced nonsense.~NF

RUNOFF

Robots and Monkeys: *5 issues + 2000 to date*

With its portrayal of a small rural town populated by eccentrics disturbed by deaths and inexplicable happenings this immediately brings *Twin Peaks* to mind. And that's not a ridiculous comparison in terms of some of the writing. The fictitious town of Range is an island in the middle of a river in Washington state, also home to a native American reservation. For some reason while people are able to drive into Range, no-one can leave, and all broadcast signals are dead. Tom Manning has some glorious character and comedy moments in each issue, but they're limited by poor storytelling. Too many pages are occupied by moments that don't really move the story forward, a particular frustration given the irregular publication. With 5, though, things really kick into gear. Not enough shops stock this, but don't be put off, though, because you can get all issues from www.robotsandmonkeys.com.~FP

In the city of Partington, Simon Archard is a detective comparable to Sherlock Holmes, but with even fewer social skills. His assistant is Emma Bishop, who appears to be on a mission dictated by an unknown superior. She has the power to stop time, but mustn't let Simon know. A visit by the Baroness, Miranda Cross, turns the citizens of Partington against Simon as he's framed for murder, whilst also revealing that Miranda can see Emma when she's using her power. In 5, with Simon missing, Emma must solve a series of murders by herself, while ex-partner, Lightbourne tries to kill Simon in 6 (with guest artwork from Jeff Johnson). Simon and Emma investigate what is apparently a village of vampires in 7-8, while 9-12 explain the antagonism between Simon and Lightbourne, who plans to bring the city down on Simon's head. 13-14 see the pair trying to stop a gang of wreckers. Mark Waid (1-12) has produced some excellent mysteries, enhanced by the larger puzzle of Emma. It remains to be seen whether Scott Beatty (12-14) can continue the good work, as the Wreckers story is predictable. Still, the series is beautifully drawn by Butch Guice (all but 6 and 11), and CrossGen have a policy of keeping the work in print via collections.~NF

Adventure: *4 issues 1992*
Caliber: *2 issues 1996*

Prolonged contact with toxic waste didn't kill Scott Baker, but left him deformed, with acid running through his blood vessels, while anything he touches either dies or rusts. In comics no-one comes away from an encounter with toxic waste unenhanced, so he's also impervious and strong. Pathos comes naturally considering the traumatic existence of the title character, but Fred Schiller's consistently unconventional scripts reach beyond, making it a shame there's no artistic continuity. Inventive storytelling for its own sake does intrude, particularly when a climactic confrontation is related by talking heads in 9. Series one focuses as much on Baker's pre-teen niece Cheryl as on him, and 6-8 deal with her fears, with a surprising conclusion. Civilisation disintegrates in 13, leading into the appalling series two. Baker becomes a figure of redemption for the downtrodden in a series characterised by poor artwork and deliberately abstruse writing. The Adventure issues return to the beginning once again, and while not bad they're only noteworthy for the early pencilling of Philip Hester. A shot in *Calibrations* 4 prompted another half decent try, but diminishing returns finally killed *Rust* this time.~WJ

Jon SABLE Freelance

First: *Series one 56 issues 1983-1988, series two 27 issues 1988-1990*

Sable is a mercenary with a conscience who, as a cover for his day job, writes children's books. Despite this piece of whimsy writer/artist Mike Grell ensures the first incarnation of *Sable* is a thriller that lives up to the genre title. Never bogged down by continuity, the consistently well-plotted stories ensure that Grell's questionable grasp of bodily proportions isn't noticed after a while. The series is populated with engaging characters, particularly police captain Josh Winters, envious of Sable's ability to work outside the law. Septuagenarian stuntman Sonny Pratt provides a toned-down comic relief, while the relationship between Sable and his illustrator Myke Blackman simmers slowly, but eventually surely. Sable himself is a man torn between the thrill provided by putting his life on the line and the comforts available.

3-6 are an origin tale establishing Sable's background as an Olympic pentathlete who later ran African safari tours. When his family are murdered by poachers he has his revenge and becomes a soldier of fortune. The story provides a plausible (in context) reason for Sable's dual career, and has a sequel of sorts in 19. Any issue before 34 is worth a look and 2, 7 or 20 are good single-issue samplers, with the best being 11, with the introduction of enticing burglar Maggie the Cat (also in 16, 50 and later her own series). 33 is a Sergio Aragonés guest-shot starring the leprechauns from Sable's children's books, but from that point Grell obviously has other projects on hand. His artwork becomes sketchier and more distorted, and it loses backgrounds, while plots are spread very thin. The problem's rectified by engaging a succession of fill-in artists from 44, but none are able to emulate Grell's mood, Mike Manley coming closest in 46-49. 1-10 are reprinted as *Mike Grell's Sable* in 1989-1990, and a glimpse of an alternate Sable is seen in Grell's *Green Arrow* 15 and 16.

The title contracted to Sable when restarted to coincide with a brief TV series. The harrowing consequences of an AIDS victim returning to Iran in 1-2 has the subtlety of a kick in the teeth. With more issues under his belt writer Marv Wolfman improves, keeping the pages turning, although he's never convincing about Sable's mercenary missions and relies too heavily on loose ends from the previous series. In 6 Sable meets Myke's family, in 9-10 he must rescue his former father-in-law in Kenya, and 19 has the return of Maggie the Cat. Most issues to 19 are pencilled by Bill Jaaska, attempting to be Paul Gulacy but not quite pulling it off (and greatly benefiting when inked by E.R. Cruz). 25-27 provide a conclusion, with new writer Steven Kaye adeptly tying up most loose ends, but the impact of an otherwise excellent storyline is severely restricted by substandard art. Sable and Myke reappear in *Shaman's Tears* 5-8.~FP

SABRE

Eclipse: *Graphic Novel, 14 issues 1982-1985*

Freed from the constraints of mainstream companies, Don McGregor created a black freedom fighter (who looked suspiciously like Jimi Hendrix as drawn by Paul Gulacy) in a post-holocaust world of animal/human hybrids, nuclear spills and villains with extremely silly names. Sabre is peppered with scenes designed to upset the apple cart: gay sex, (lots of) straight sex, and childbirth. Sabre's one of the few serious comic characters shown changing nappies. 1-2 reprint the *Sabre* graphic novel, and, despite bursts of action, are really a protracted discussion between Sabre and his lover, test-tube creation Melissa Siren, about the nature of freedom and the importance of individuality. That said, the series swiftly turns into a story about couples (inter-racial, het, bi and gay, of course), as in 3 Sabre is captured and Melissa left to face pregnancy in a rebel hideaway. Rescued by his one-time enemy Blackstar Blood, Sabre sets out across an inhospitable landscape where certain states have been 'cancelled' due to nuclear contamination.

McGregor deals with important issues, albeit in a rather grandiose way, and makes you care about his somewhat sentimental characters despite saddling them with monikers like Deuces Wild and Midnight Storm. Paul Gulacy's art is stiff and detailed in its search for realism. Billy Graham's art on 3 is pretty awful, although it's getting slightly less so by 10, when José Ortiz takes over. Ortiz' art is much more confident but rather slapdash and clearly not inspired by the rather nauseating 'Sabre enjoys being a dad' storyline. When, instead of evil oppressors, Sabre's called upon to fight giant sand-bugs you know there's something wrong. Thankfully it was cancelled before McGregor could get any more mawkish.~FJ

SABRETOOTH

Marvel: *4 issue miniseries 1993*, 15 issues (Sabretooth Classics) 1994-1995, one-shot 1996, 4 issue miniseries (Sabretooth and Mystique) 1996-1997, one-shot ('Back to Nature') 1998, 4 issues miniseries ('Mary Shelley Overdrive') 2002*

In the first miniseries Sabretooth grunts his way through scratchy Mark Texeira artwork and a Larry Hama script so geared towards exorbitant violence and shock value that a thoroughly illogical story emerges. Some facets of Sabretooth, Mystique and Wolverine's pasts are revealed. Classics reprints Sabretooth's early appearances in chronological story order starting with his second appearance in *Power Man and Iron Fist* 66. His first (*Iron Fist* 14) is reprinted in a Marvel Milestone edition. The 1996 special is an *X-Men* issue guest-starring Sabretooth that escaped under the latter's title. This acceptable if overlong story imparts some empathy to his character and, under Gary Frank's admirable (if somewhat Byrnesque) pencils, Sabretooth has never looked more feral. *Sabretooth and Mystique* is a routine S.H.I.E.L.D. – A.I.M. – HYDRA – world-domination scenario as the two uneasy allies follow up a mission from their distant pasts. Jorge Gonzalez constructs a few too many unlikely coincidences merely to further the plot, and Psycho spends four issues doing what he does best. The shallow 'Back to Nature' sees Sabretooth and Wildchild track down a pair of ex-KGB serial killers. The most recent effort is another meaningless bloodbath as Sabretooth's healing factor is used as an excuse to mutilate him, yet still allow him to prowl around in pristine mint condition half an hour later.~APS

SABRINA THE TEENAGE WITCH

Archie: *Series one 77 issues 1971-1983, 3 'Spooktacular' Specials 1993-1995, one-shot 1996, series two 32 issues 1997-1999, series three 40 issues + 2000 to date*

Conceived as a short-run gag feature in *Archie's Madhouse* in 1962, Sabrina's popularity was such that this muddling-through, apprentice magic user made many appearances there, and in *Archie's TV Laugh-Out*. Her own title was launched on the strength of her segments in the animated *Archie* TV show of the late 1960s. Her supporting cast was limited to her Aunts Zelda and Hilda, her Cousin Ambrose, and her talking cat Salem, all of whom were better at magic than she, and her puny mortal boyfriend Harvey, but the Archie gang frequently dropped over. After a healthy run Sabrina's title quietly expired, but sporadic appearances in Archie anthologies kept her in the readers' consciousness. Her strip in the 1990's *Laugh* revival made the mistake of taking her out of Riverdale, giving her two new best friends – Cleara, an invisible girl, and Eyeda, a lady Cyclops – and sending her to Monster High. Realising that the fun in Sabrina was in seeing her interact with mortals, not other supernatural beings, the publishers rapidly recanted and put her back amongst humans. The 1996 live-action TV pilot, resulting in an ongoing show, led to a further one-shot comic bearing a photo cover of Melissa Joan Hart, Sabrina's TV avatar. This 'pilot' in turn, led to a regular series, largely illustrated by Dan DeCarlo, who co-created the character. In 1999, while the live-action show was still running, a Sabrina cartoon also debuted in which she was de-aged to 12, and the comic was quickly cancelled and relaunched to star the pre-teen version. Fortunately, with 38 (following the cancellation of the cartoon), our heroine is once again a teenage witch. Following DeCarlo's recent demise, *Sabrina*'s adventures are mostly written and drawn by the – presumably pseudonymous – Holly Golightly, one of the more talented of Archie's recent recruits. Sabrina will never produce any epoch-making classic comics, but it remains the pleasing, undemanding fun that its audience requires.~HS

SACHS AND VIOLENS

Marvel/Epic: *4 issue miniseries 1993-1994*

Peter David conducts a guided tour of the world of sleaze, starring soft-core porn model J.J. Sachs and Vietnam veteran Ernie 'Violens' Schultz. The lashings of sex and violence are thoroughly warranted and David's wit is not the only razor-sharp ingredient. George Pérez's gorgeously detailed artwork demands lingering attention. Regrettably, the momentum of the first two issues does not quite sustain to the climax, but the series is still a cut above the average. Not for the faint of heart.~APS

SACRED AND PROFANE

Last Gasp: *One-shot 1976*

Published at tabloid newspaper size, this is a peculiar hodge-podge of work from Justin Green. One of the first underground cartoonists to embrace the idea of his field being capable of more than smut and yocks, and smarter than the average bear to boot, Green's output cannot be categorised as a whole. The whimsical aspects of his work encourage a tendency to search for allegory where none exists, except in the broadest sense, such as the demented 'We Fellow Traveleers'. Originally serialised in *Comix Book*, it's a farce about charlatans appropriating religion, yet the incongruous elements monopolise the interest to the point where any meaning dissipates. In more familiar territory there's a fine cynical Binky Brown strip concerning the value of studying art, and a couple of throwaway one pagers featuring junior hooligan Rowdy Noody. The highlight, though, is a centrespread depiction of Purgatory, Bosch-like in its scathing fervour. Not everyone will like Green's comics, and this is probably best left until you've sampled him elsewhere.~WJ

SADDLE JUSTICE

EC: *6 issues (3-8) 1948-1949**

After the death of his father, Bill Gaines continued to publish titles that followed current genre expectations before he started EC's New Trend line. *Saddle Justice* (becoming *Saddle Romances* and then *Weird Science*) combines the hugely popular western genre with the interest in true crime. Most strips in these issues claim to be based on historical fact, but on the evidence of Belle Starr (2) and Pat Garrett (8) these are wildly romanticised versions of the truth. The quality of the scripts and artwork is patchy, but there are exceptions. Al Feldstein's first published EC work is in 3, 'The Treasure of Timberline Top', introducing the soon to be familiar theme of greedy gold miners coming to bad ends. There are three excellent, pencils only strips, two by Johnny Craig ('Colorado Rose' in 5 and 'The Lady Longrider' in 6) and one by Graham Ingels ('Guns Against the Law' in 5). Apart from Craig, Ingels and Feldstein, who have not yet reached their peaks, other, lesser, artists on the series are H. C. Kiefer, Ed Waldman and Stan Asch while the writers include Craig, Feldstein and Gardner Fox. Practically all of the stories concern themselves with criminals rather than with heroes as 'Poetic Justice' becomes a more regular plotting device. Then, strips like 'Desperado from Durango' (4, Ingels) do not shy away from the terrible and grisly deeds of the villain, foreshadowing the gruesome horror titles that helped make EC's reputation.~NF

SADDLE ROMANCES

EC: *3 issues (9-11) 1949-1950**

Odd cross-genre hybrid from the pre-horror EC, at a time when they were still groping for a successful formula. And 'groping' is certainly the order of the day, with lurid, come-on titles like 'I Became a Dance-Hall Hostess!', 'I Loved A Murderer!', 'Cheating Cowboy Lover!', and that old favourite, 'Romance Isn't for Tomboys!', covering the same old hackneyed love stories in (mostly modern-day) western drag. It's interesting to see some of the people who would move on to create EC's finest comics uneasily flexing their wings here. There's Graham Ingels in all, and Wally Wood in 10 and11, his earliest EC work, but not interesting enough to warrant the huge prices demanded for the originals. The collection is a hardback volume slipcased with *A Moon, A Girl, Romance* and *Modern Love*, and the title itself slipped into the far more successful *Weird Science*.~HS

THE SAFEST PLACE

Dark Horse: *One-shot 1993*

Steve Ditko, outside the mainstream of Marvel or DC, has never been afraid to be political. *The Safest Place* is a Cold-War thriller set in a totalitarian (probably Communist) country where secrets are being smuggled to the West, an activity in which an innocent woman is implicated. Ditko expertly captures the climate of fear among those searching for the traitors and those whose eagerness to support the status quo causes them to hate others who are still trying to think for themselves.~NF

SAFETY BELT MAN

Sirius: *6 issues 1994-1996, 6 issue miniseries ('All Hell') 1996-1997*

Safety Belt Man is a crash test dummy imbued with the spirit of a universe, sort of. He's also a sword and sorcery hero operating in a high-tech society, sort of. Furthermore he's a vehicle for the philosophical ramblings of his writer Robb Horan, sort of. If that all sounds confusing, try reading the comic! An area devoid of ambiguity is that the work of all the artists is horrible. If it matters, 'All Hell' is in colour. Full marks, though, to Horan for starting a company to publish this, and proving himself a far more successful publisher than writer.~FP

SAFFIRE

Image: *3 issue miniseries 2000*

Saffire is an Olympian descended from Zeus. She and her godling pals struggle to right the wrongs of their enemy Fiendus. The series is only just comprehensible after you've read 3's summary. What starts out as a standard Image babe with a sword and watermelons for breasts package devolves into an overpriced talking heads comic by the last issue. The writing is rubbish. The artwork is credited to Mat Broome but the vacillations from brilliant to amateur speak of diverse hands. Bracelets wander from arm to arm, complexions and hair colours change, and clothing varies so much it's almost impossible to tell some characters apart. The series' one concession is its beautiful colour work, particularly where texture and highlighting is concerned. Another Image triumph of technique over content.~SW

SAILOR MOON

Mixx: *10 issues 1998-1999**

Chixx/Tokyo Pop: *25 issues (11-35) 1999-2001**

A complex tale of five high school girls who are secretly superheroines. Naoko Takeuchi originally created the strip as Sailor V about a teenaged girl superhero, and the success of the feature gave her the chance to remodel the concept, "demoting" V to the subsidiary role of Sailor Venus, and concentrating on the presumably more sympathetic character Sailor Moon. Bunny is a whiny, weepy schoolgirl who finds a talking cat called Luna. Said moggy then reveals that Bunny is the reincarnation of the Moon Princess of a vanished ancient civilisation. She can transform into the warrior Sailor Moon (still whiny and a bit of a cry-baby though) and along with the other four Sailor warriors (Venus, Mars, Jupiter and Mercury, all also schoolgirls of her acquaintance) she must protect the world from all danger. They are reunited because a cosmic evil has returned, represented by a group called the Dark Kingdom, and the Sailors are the Earth's only hope. As it's a comic for girls, romance plays a major part and Darien, the boy Bunny secretly adores, is not only in reality her reincarnated true love Endymion, but also a superhero called the Tuxedo Mask.

All that taken aboard, the actual stories are almost totally identical, whether the ultimate evil of the moment is the Dark Kingdom, the Black Moon, subversive Androids, time travelling invaders threatening the 31st century or evil dimensions crashing into ours. There Will be a pretty battle and the power of love Will triumph, but that's actually unimportant as the narrative dynamic is more to do with failing at school, boyfriends and girlish embarrassment. Competent production, but not to everyone's taste. Macho men need not apply.~WW

SAINT ANGEL

Image: *5 issue miniseries (0-4) 2000-2001*

Fantasy adventure in which Prince Jonn of Utopia joins forces with the legendary warrior, Saint Angel against Bashar, King of Neamis, who's made a deal with the alien Markeen to conquer the world of Kei Nor. Co-written by Robert Napton and Karl Altstaetter, this tries to tell too much story in only four issues (0 contains a short prelude and background information about Kei Nor). Altstaetter's manga-influenced artwork provides some flashy set pieces, but there simply isn't the space to develop the story and characters. A short Deity strip runs as backup in 1-4.~NF

ST GEORGE

Marvel/Epic: *8 issues 1988-1989*

One of three linked titles (see *Powerline* and *Doctor Zero*) set in a world like ours except for the existence of a second, super-powered race of 'Shadow' people who have been manipulating society since the dawn of humanity. Troubled priest Michael Devlin is recruited by a mysterious sect to combat monsters that threaten civilisation, unaware that he is merely the latest pawn in a protracted civil war between rival Shadow Dwellers. Despite a good plot and cast plus strong art from Klaus Janson, Dan Spiegle (7), and Jim Lee (8), the pretentious ponderings of writers Dan Chichester and Margaret Clark on the nature of evil act as an almost irresistible soporific. The storylines were concluded in *Critical Mass*.~WW

SAINT GERMAINE

Caliber: *8 issues, one-shot ('Restoration') 1997-1998, one-shot ('Casanova's Lament') 1998, one-shot ('Man in the Iron Mask') 1999*

Germaine is immortal and has lived for hundreds of years, hob-nobbing with European royalty or artistic geniuses all the while, but lost track of his accompanying girlfriend, Lilith (who looks a bit like Sandra Bullock) in revolution era Russia. Now Germaine is worn out and fancies dictating his memoirs to an occult private detective. Meanwhile, Lilith is in town, mostly having sex with the shadow of Louis XVI of France. I think. Does any of that sound silly to you? To be fair, after a slow start, it's easy to get sucked into the story, even with all the jumping around in time. Gary Reed's script is competent, if pretentious, despite some questionable history, and Vincent Locke's slightly scratchy art is effective, although there's a lot of lazy backgrounding. Guest artists in the one-shots, and Andy Bennett in 7, are scarcely distinguishable from Locke, and woe betide the team in 8.~GK

Battle Pope Presents SAINT MICHAEL

Funk-o-Tron: *3 issue miniseries 2001*

There are some funny ideas in this miniseries, such as Saint Michael, heaven's defender, being cast as a career soldier, but overall they remain unexplored in favour of punch-ups with the demons who live on Earth. It's well drawn, though, by Terry Stevens, as is *Braun*, on the flipside. Unfortunately it's another case of interesting ideas never quite coming to fruition.~WJ

SAINT OF KILLERS

Vertigo: *4 issue miniseries 1996**

The Saint of Killers is a memorable member of *Preacher*'s cast, transparently based on Clint Eastwood's Western loners, a merciless and remorseless agent of celestial vengeance. As such he hardly required an origin, but we get it here anyway, stringing together familiar movie scenarios. The exception is the third issue's detour into Hell, which is sadly no improvement. Interior art from Steve Pugh and Carlos Ezquerra, and excellent Glenn Fabry covers, don't compensate for Garth Ennis scripting on autopilot. It's collected under the *Preacher* logo as 'Ancient History'.~FP

SAINT SINNER

Marvel/Razorline: *7 issues 1993-1994*

Naughty boy Philip Fetter dabbles where he shouldn't and is taken into the hellish Amen dimension where he is tortured for nine years before breaking free, possessed by both an angel and a devil. On Earth again, he is drawn to the torment of others in a succession of moody but insubstantial episodes. A batch of promising subplots hint at quality to come but the muddle is cancelled before it can conclude.~WW

SAINT TAIL

Chix/Tokyo Pop: *18 issues 2000-2002**

You have the nun, the transfer student, the super thief who's really the demure schoolgirl, and the cute but constantly frustrated guy on her trail. For an American comic this would be novel stuff, but as it's translated Japanese material it's par for the course: five from ten standard ingredients have been thrown into the pot and stirred. It should appeal to young girls, but is unlikely to spread any further.~WJ

ST SWITHIN'S DAY

Trident: *One-shot 1990*
Oni Press: *One-shot 1998*

Although comparatively early published work from Grant Morrison, this remains one of his most effective pieces. Adapting extracts from his own teenage diaries, Morrison makes his protagonist an alienated, introspective teenager who travels to London in order to assassinate then British Prime Minister Margaret Thatcher. Excellently drawn by Paul Grist, it's a fine study of teen angst, impotence and idealism. Previously serialised in *Trident*, the Oni issue is a reprint.~FP

SAKE JOCK

Fantagraphics: *One-shot 1995*

An attempt to show that the conformity of Japanese comics isn't universal, and some creators tackle subjects not involving big robots, wacky cute creatures and pre-pubescent sex. The creators on show have individual visions largely confined to mini-comics in the USA, but thanks to the popularity of comics in Japan there's a general publication specialises in such material. The diversity of styles is refreshing, with hardly a speed line in sight, and some strips are very funny, particularly Yasuji Tanioka's 'What a Mixed-Up World'. As with most anthologies running to more than three or four strips, though, the only person to whom everything will appeal is the editor.~WJ

SALIMBA

Blackthorne: *2 issue microseries 1986**

Between *Dazzler* and *Concrete* Paul Chadwick drew this strange fantasy comic about a jungle queen. Salimba falls in love with cursed pirates, and battles strange worms and dog women with lesbian inclinations. It's nonsense, but very nicely drawn by Chadwick. While he'd probably not consider himself the finished article here, there's more life and motion than in any comics he's drawn since. Initially released only in a 3-D format, the collection was printed in more traditional fashion.~FP

SALLY FORTH

Eros: *8 issues 1993**

Engagingly dumb teasing stories originally produced in newspaper strip format by Wally Wood, whose heart was certainly in it. Sally's a member of the Co-Ed Commandos and, like all good cheesecake heroines, she gets her kit off at every opportunity, running into characters like Rock Buggers as Wood works his way through parodies of *Flash Gordon* and *Buck Rogers*, *Tarzan*, *Barbarella* and *King Kong*, to name but a few. Wood luxuriates in drawing his buxom character in classic EC style, beautifully inked and toned; such is his skill at pacing that the re-pasted panels read smoothly as a comic book. The collection restores material omitted due to the complexities of re-sizing for the comics, and represents the entirety at the size for which it was drawn.~FJ

SALOME

Eclipse: *One-shot 1986*

Herod has a local prophet named Jokanaan (John the Baptist) in custody. The princess flirts with Narraboth, the hapless captain of the guard, so that she can speak with the prophet. Salome's mother is then disparaged by the holy man for marrying the killer of his own brother, who was also her father. After the princess has performed the dance of the seven veils for Herod she asks for the head of the prophet as payment. P. Craig Russell adapts Oscar Wilde's play with considerable aplomb and subtlety. The concern of the guardsman for his captain, the incestuous leering of the king, the dance itself and the princess's mental crisis are lit and stage-managed beautifully. Will run and run.~SW

May he earn riches beyond his wildest dreams. One Epic issue reprints the Fishwrap comic in colour with extra material, and the Marlowe book collection, *Sam & Max: Surfin' the Highway*, reprints everything, but in black and white, while containing nine new colour one-pagers. SAM AND TWITCH

Image: *23 issues + 1999 to date*

Introduced in *Spawn* 1, Sam Burke and Maximillian 'Twitch' Williams (to give them their full names) start the series as private investigators who return to the New York police at the behest of their former commander who suspects corruption. He doesn't suspect how deep it runs, though, and Sam and Twitch investigate murder scenes with odd body parts, such as four thumbs, seemingly all from the same person. Brian Michael Bendis constructs a suspenseful thriller in 1-8*, involving supernatural aspects, but rooting the story largely in the real world while giving the characters full play. Sam is unrefined, overweight and bullish, while Twitch, who's uncanilly similar to a character with the same name in the 1980s *Shadow* series, is an introspective man whose marriage is collapsing. Artist Angel Medina excellently delineates the grimy and sordid world, but be warned that the collection of the colour issues is in black and white. Publisher Todd McFarlane feels it looks better that way, and he has a fair point, but not everyone agreed. 10-13 involving 'real world' witches doesn't match the first story, although it's well drawn by Alberto Ponticelli. 15-19's conflict between bounty hunters, drawn by Alex Maleev, co-stars Bendis' Jinx character, offers twists and thrills, and starts with a shock. Bendis uses the single issues between longer stories to experiment with storytelling. 9 is viewed via the eyes of a card cheat as his life collpases, and 14 is split into two parts, the first the traditional police at the crime scene plot, the second a rooftop conversation explaining the crime. The strength of all Bendis' issues is in effect producing previously unseen Quentin Tarantino film scripts complete with witty dialogue that sounds natural (but is too clever), and cinematic pacing of what, when dissected, are relatively simple plots.

He might have created Sam and Twtich, but expectations can't have been high at the news Todd McFarlane was to write from 20. Quel surprise, though, as McFarlane turns in the most viscerally scary thriller to date. He lacks Bendis' facility for dialogue, but these issues stand well with the previous work on the title, McFarlane's major fault being not bothering his arse to actually write the comics. Four issues in two years, with almost a year since the last is hardly extending himself or playing fair with the readers. Luckily Maleev has *Daredevil* to put bread on his table.~FP

SAM SLADE Robohunter

Quality: *31 issues 1986-1989*

Following his series as Robo-Hunter, for some reason, Quality chose to reprint these stories out of sequence, opening with Sam Slade arriving in Britain, his robohunting trade having been outlawed in the USA. In the company of his assistant, the gormless Hoagy, and his talking Cuban robo-cigar he sets up as a private eye. The same creative team produce the lead strip throughout, writers John Wagner (under the alias of T. B. Grover) and Alan Grant, and artist Ian Gibson. Gibson's fluid and expressive cartooning perfectly matches the quirky nature of the writing, and he brings more life and character to robots than anyone might believe possible.

'The Day of the Droids'* starts in 5. Sequentially this predates 1-4, and is the peak of Slade's long career. Citizens all over the USA are replaced by robots, and Wagner and Grant created a lunatic population of droids including gangster robots complete with a godfather, a robot football team complete with maniac coach, and a Unionist cocktail- shaker robot. It's a hilarious story that tops all but the best Judge Dredd work by the same creators. Sadly it's downhill from there, due more than anything to a change of publisher (although the name and numbering remain intact). Whereas the artwork produced for British comic pages had been sympathetically resized and coloured for US publication, from 12 it's downright shoddy reproduction all the way, and readers are advised to seek out the stories in their original British editions or the British reprints in *The Best of 2000AD*.

12-13 have the return of Joe Kidd from *Robo-Hunter* 1-5, now a successful TV star as a baby, but there's someone out to kill him, and no shortage of candidates. 14 and 15 feature 'Football Crazy', many elements of which will make little sense to those unfamiliar with British football. It's certainly better than the all-singing, all-dancing 16-19, in which alternative lyrics are applied to familiar tunes. The musical aspects just don't work unless you sing along, and who's going to do that? 20-25 contain 'The Slaying of Slade', the weakest of the long Robo-Hunter serials, as Slade dies, returns as a ghost, occupies his clone and solves a robbery. Too many disparate elements are strung together, and the humour, previously natural, is often forced. 'Slade's Last Case' in 26 and 27 is only a little better, with Sam, retired and obese on the proceeds of the previous case. When he emerges from a health farm in 28 Slade's back to his old self, but it appears his assistants have run off with his fortune. Discovering why involves Slade in a story that's a return to form.

There are decent back-up strips in every issue. Ro-Busters is a thinly disguised version of *Thunderbirds*, with a team of robots as the first-response team to disaster areas. The heart of the strip is the relationship between the militarily correct Hammerstein and the coarse, and amusing, sewer droid Ro-Jaws, wittily scripted by Pat Mills. Wisely, the story reprinted is one of the last of the run, with excellent Dave Gibbons art in 1-6. ABC Warriors also feature before moving into their own title, and Ace Trucking Company take up occupancy in 20-25. Also humorously written by Wagner and Grant, they're a bunch of space truckers with a vast capacity for involving themselves in perilous situations.~FP

SAMURAI CRUSADER

Viz: *2 volumes 1996-1997*

Hiroi Oji conceived this story of a Japanese Samurai operating in the 1930s, travelling with Ernest Hemingway and encountering spies, deceitful Chinese, Nazis, ninjas and demons. Picking up a sacred sword, our man Kumomaru copes with them all. It's decent adventure material well drawn by Ryoichi Ikegami, but don't let the political context and historical figures lead to greater expectations. These were originally serialised in *Manga Vizion*, and continuing chapters also appeared there.~FP

SAMURAI JACK

A samurai, son of the Emperor, in exile after his father's defeat by the tyrant Aku, is trained in a multiplicity of martial techniques from around the world. Returning to his home to battle Aku, he's victorious, but succumbs to a spell that propels him into the far future, where Aku is nowmaster of the whole world and setting his sights on the stars. The Earth now has a large population of robots and aliens, and the samurai, taking the name Jack, becomes the defender of some oppressed talking dogs when they're attacked by Aku's robot drones. Based on his own Cartoon Network show, this is written by Genndy Tartatovsky, with artwork by Lynn Naylor and Bill Wray. There's nothing wrong with the (fine) cartooning, but Jack himself is too much of a blank slate, defined only by his high moral stance and his heroism.~NF

SAMURAI JAM

Slave Labor: *4 issues 1994*

In-line skating and all things Japanese obsess the characters in Andi Watson's quirky but likeable one-man title. Not a lot happens, and his insights aren't startling, but it's a pleasant read, drawn in a blocky, angular style that's very striking, although it can make for inexpressive faces.~FJ

SAMURAI PENGUIN

Slave Labor: *9 issues 1986-1988*

Samurai Penguin, written by Dan Vado and drawn by a different artist each issue, was a rather slack parody comic, part of the funny-animal boom that followed the success of the *Teenage Mutant Ninja Turtles*. Of his artistic strategy Vado said: "If it weren't for this inconsistency's effect on sales, it would almost be fun." Another "effect on sales" may well have been his tendency to parody other small independent creations that few of his readers had heard of. Nepotistic, with hindsight.~FJ

SAMUREE

Continuity: *Series one 9 issues 1987-1992, series two 4 issues 1993-1994*
Windjammer: *2 issues 1995*

As one would surmise from the title, this is a superhero comic with martial-arts overtones, and, as one would expect from the publishers, it marries beautiful artwork with nonsensical stories. 1-4 are particularly notable for the bottom-obsessed pencils of Mark Beachum that are as near pornographic as they are accomplished. As ever with a Continuity title, the hand of Neal Adams is rarely far away, and the other artists, S. Clarke Hawbaker (5, 6), Rodney Ramos (7) and Dave Hoover (8 and 9) all benefit from his touch.

The second series is four chapters of 'The Rise of Magic' crossover; it's less superhero-oriented, aiming instead for a supernatural theme and ending up even more impenetrable than before. Rudy Nebres inks some very poor pencils in 1, 2 and 4, and future star Mike Deodato enlivens things in 3. Another great Adams discovery, Rodolpho Damaggio, drew both Windjammer issues with some aplomb, rounding off a series that offers the occasional treat for the eyes, if not the brain.~DAR

SAN FRANCISCO COMIC BOOK

Print Mint: *4 issues 1969-1973*
Last Gasp: *3 issues (5-7) 1975-1983*

A rather aimless underground title specialising in minor pieces by well-known artists (possibly rejected elsewhere), and consequently of great interest to dedicated collectors but of little to more casual readers. Later issues were also something of a showcase for new artists, with Melinda Gebbie (6, 7) and the talented but obscure John Burnham (5-7) particularly shining. By far the series' best strip was from the established Bill Griffith with 5's brief but poignant tribute to the legendary (if unbalanced) artist Rory Hayes.~DAR

Sanctuary is an extremely right-wing political comic, Libertarian almost, written by Sho Fumimura whose previous work is full of pro-Capitalist messages. At times it's ponderous, and every character has an agenda, frequently addressing sloganistic messages to camera. Politicians pontificate on the state of the Japanese spirit mid-shag, and characters are depicted as either politically aware or dumb. It appears to be the exciting story of a mysterious young yakuza and his power struggle to take over his gang, while flirting with the local deputy police chief, who's fallen desperately in love with him despite his reputation. And throughout there are periodic bouts of gang violence and brutal sex to keep that notion alive. Actually it's the unlikely and highly symbolic story of two ex-pat Japanese who survive the Cambodian killing fields and return to their homeland after a huge struggle to find it full of aged politicians, corporate fat cats and visionless salarymen. So the two teens decide to take over the country and rejuvenate it into the sanctuary they dreamed of during their long years in Cambodia.

Akira Hojo drops out of high school early and insinuates himself in the local Yakuza, gaining a reputation for fierce eagerness under psychotic gang lord Mr Tokai because as a gangster "You can do in a single day what it takes an ordinary man 30 years to do." His friend, Chiaki Asami, graduates and enters the slippery world of politics, becoming secretary to the local congressman. Part one starts when they've both risen sufficiently to begin a power struggle to take over the government and re-interest the disillusioned Japanese youth in the joy of politics and ends with Hojo taking over his gang. There follows over a hundred twenty to twenty-five page episodes, which, while dotted with illegal activities and flirtations, are for the most part about men sitting round tables confronting each other. And it's gripping.

Fumimura creates a large and varied cast within a very narrow limit. Most are power hungry politicians, bankers or gangsters, and the differences in their outlooks and aims are few, as Fumimura underlines time and again. His brilliance, as far as his original audience is concerned, is to present a scenario where the basic message is that they all count, that it's important to be a cog in the big machine, but that each cog has power... even though you need a few romantic, dynamic figures to head it up. The key character is neither of the unrealistically pristine 'heroes' Hojo and Asami, who time and again look like they'll get their hands dirty, but are never seen actually carrying out their worst threats, but Mr Tokai, Hojo's old mentor whom he soon surpasses. Tokai is street scum, and at first resists all change, but develops gradually, with a few relapses, into someone looking to the future rather than being a fatalistic killer. He's still prone to saying things like "The quickest way to straighten out a woman is to give her a big thick one," though.

The world of *Sanctuary* is a very male and very narrow. Women barely feature except as recreation or victims, and are always kept on the periphery. Even when one of the major characters dies, he chooses to spend his last moments with male friends, not his girlfriend, talking about politics. As such it indulges in a lot of butch mythmaking in order to make political manoeuvring sexy. Gripping episodes include Part Two 1 where the incredibly machiavellian current leader of the Diet dissolves the Japanese government and calls a general election during which he hopes to ruin the young upstarts threatening his power base, or the end of Part Three where Asami tells his fledgling independent MPs that they must rejoin the dinosaur-like conservatives to get to the heart of real power.

If the idea that individual responsibility should be the primary ethical concern of men (and maybe a few women) appeals then you won't have any trouble with the message. Liberals will have problems, not least because it makes all these unsavoury fascists look so damned good. Ryoichi Ikegami does a splendid job of distinguishing between numerous groups of men in suits (although he does for some reason make several of the major characters midgets) and using line weight and body posture to express surprise, anger, consternation, bewilderment and the many other emotions necessary to keep pictures of meetings exciting. It's flawed, but immensely engrossing if you knee doesn't start jerking half way through.~FJ

SANDMAN

DC: *6 issues 1974-1976*

The true claims to fame of *Sandman* 1 are that it enjoyed phenomenally high sales and marked the last collaboration between Jack Kirby and Joe Simon. It was also monumentally silly. From his Dream Dome, the Sandman monitors dreams, ready to spring into action with the help of his repulsive assistants Brute and Glob. From 2 onwards, Michael Fleisher took over the scripting with no discernible difference and, after a couple of Ernie Chua outings, Kirby returned for 4-6. With villains like General Electric, Zombie Gorillas and Dr Spider, the intrepid reader should tread carefully, but the last issue, with its gorgeous Wally Wood inks, is a much tastier morsel. The unpublished 7 finally saw print in 1982's *Christmas with the Super-Heroes* digest, and this character returns in 11 and 12 of DC's next *Sandman* title.~DAR

SANDMAN

DC: *46 issues 1989-1993**

DC/Vertigo: *29 issues (47-75), 1 Special 1993-1996**

Sandman is Morpheus, the Lord of Dreams. He is a member of the family of the Endless, along with Desire, Despair, Destiny and others. This provides a very broad setting for the telling of fantasy stories, and the comic makes good use of it. The seventy-five-issue run mixes single-issue short stories and longer storylines of six issues and more, covering horror, humour, family drama, metaphysics... you name it – as long as you name horror twice, since it was particularly dominant in the beginning, frequently to scorching effect. It's a comic crammed with ideas and a large cast of memorable characters, who are given some great dialogue (particularly Delirium), and Neil Gaiman writes with an impressive command of styles and techniques. Add to this the artwork to match and amplify, and at its best it is a startling, invigorating read.

1-9 begin with Morpheus imprisoned on Earth for nearly a century, causing disturbances in human dreams and in his realm, and there's considerable work required to restore order. 1-4 are mediocre, with the writing barely compensating for Sam Kieth's shambolic artwork, but with 6 original inker Mike Dringenberg begins pencilling and the writing and art start working together. The result is some genuinely dreamlike sequences (5, 7), a horrific hostage story (6), and a poignant introduction to the first of Morpheus' siblings in 8. Although they're connected, no story lasts longer than two issues.

'The Doll's House' is the first really lengthy continued sequence, concentrating on Rose Walker, a young woman whose family was affected by the disturbances during Morpheus' imprisonment. In 10-16 this involves her, unwittingly, in some dangerous Dreamworld politics. It's a weak story, but introduces more of Morpheus' siblings and human characters, who later become important: Lyta Hall and her son Daniel; and Hob Gadling, who meets Morpheus in a tavern also frequented by Marlowe and Shakespeare in 13, independent of the main storyline. 14 is possibly the best of the entire series – the sickest, funniest parody of a fan convention you'll ever read.

One-issue stories under the collective title of 'Dream Country' occupy 17-20, generally with little involvement from Morpheus. The strongest is 17's 'Calliope', with art by Kelley Jones, which has much to say about creativity and maturity, and some dazzling verbal fireworks. 'A Midsummer Night's Dream' (19), illustrated by Charles Vess, depicts a unique performance of Shakespeare's play and won a World Fantasy Award. 'A Dream of a Thousand Cats' (18) makes good points about fantasies of a Golden Age, though some find it too cutesy, and 'Façade' in 20 returns the obscure DC character Element Girl under tragic circumstances. Another collective title, 'Distant Mirrors' (29-31), encompasses another sequence of short stories. 29's 'Thermidor' is set during the French Revolution and introduces Orpheus, of Greek myth (told in the 1991 Special), and his relationship to Morpheus, which will become very important later. 'August' (30) features the Roman Emperor Augustus and events leading him to make an unusual decision in a strong and thought-provoking story. 'Three Septembers and a January' (31) is a nice piece about the protective properties of fantasy, but worrying for its signs that the Endless are never going to rise above their soap-opera behaviour. 'Convergences' (38-40) is another sequence of short stories. None are particularly strong, though 40 is significant in the Grand Scheme, with its focus on Lyta's son, Daniel.

Morpheus is forced to accept an unwanted responsibility in 'Season of Mists' (21-28), and deputations arrive from several supernatural realms with the purpose of persuading him, by threats or bribes, to hand it over. There are many lively and inventive scenes with the various ambassadors (Norse gods, Egyptian gods, representatives of Order, of Chaos, etc.), and hints are dropped about a missing member of the Endless. However, the story sprawls, and it's difficult to pick any outstanding issues, other than 25. Drawn by Matt Wagner, it's a detour from the main storyline: a ghost story, set in an English public school, introducing characters who later return in *The Children's Crusade*. 'A Dream of You' (32-37) focuses on Barbara (a character introduced in 'The Doll's House') and the rich Narnia-style fantasies she had as a child, with artwork mostly by Shawn McManus. The scenes set in the fantasy world (32 and 35, particularly) are excellent, aching with betrayal and failure and a loss of childhood faith, but the scenes involving humans are a test of patience. The story touches on issues of gender and identity, but only in passing and from a safe distance.

The earlier hint about a missing member of the Endless is picked up for 'Brief Lives', and in 41-49 Morpheus and Delirium indulge in an eccentric search. There's some terrific dialogue from Delirium, especially in 47, and appropriate artwork from Jill Thompson, but the story is twice the necessary length. The essence is imparted in 47-49, which are also the most critical to the Grand Scheme. Another of the 'Distant Mirrors' sequence is in the oversize 50. 'Ramadan' is a short story with an Arabian Nights feel. It's pretty, with artwork by P. Craig Russell, but not outstanding.

'World's End' (51-56) involves travellers from various realms who have taken refuge in an inn during a strange storm, and pass the time by telling stories. Bryan Talbot and Mark Buckingham draw the framing sequences set in the inn each issue, and every story told has a different artist. The most striking are 51, an atmospheric story about a strange city, with very effective art by Alec Stevens, and 53, an interesting Hob Gadling story with art by Michael Zulli.

The culmination of the Grand Scheme occurs in 'The Kindly Ones' (57-69), with nifty artwork, principally by Mark Hempel. The boy Daniel is missing in ominous circumstances, and his mother, Lyta, embarks on a delirious mission to find him or seek vengeance. Tons of ideas and clever sequences, but it seems to go on forever. Still, you probably have to read it just to say you have, and to put your mind at rest. After this point nothing further needs to be said, but unfortunately we have an almost entirely self-indulgent and pointless coda in 'The Wake' (71-74). Michael Zulli's artwork in 71-73 looks pretty at first, but the characters become more and more wooden. Jon J. Muth's Chinese style artwork in 74 is worth a look, and there's a moment that has a genuine feeling of dream logic, but the story has little reason to exist. 'The Tempest' (75) revisits 19's Shakespearean theme, including the return of Charles Vess as artist, and has Shakespeare back in Stratford at the end of his career, working on his last play. There is no sign here of the imagination that fired the early issues – if there's an obvious way of tackling a character or a conversation, that's what Gaiman chooses, every time. One to keep by your bed in case of insomnia.

As you will have gathered from the list above, the comic has its weaknesses, and they become more apparent and frustrating on each re-reading. Most obvious is the tendency towards self-indulgence, which by the end is a full-blown lifestyle. Anyone able to read the last few issues without muttering, "Oh, get on with it!" every two pages is definitely a hardened fan. Then there's the persistent weakness of plot in longer storylines, which may either kick off with a threat that is sheer fantasybabble ("There's a new Dream Vortex!" – you have to take Morpheus' word that this is A Bad Thing), or end on any tension-destroying pretext up to and including the direct intervention of God. *Sandman* contains treasures along the way, but you'd best be warned not to read for plot. Finally, there's Gaiman's reluctance to clarify the relationship the Endless have with the mortal world, or to make a distinction between the different ideas for which the English language uses the word 'dream'. Are the Endless simply ambulatory ideas or are they personalities in their own right? Sometimes they talk as if it's the former (in 8, one calls another an "anthropomorphic personification"), but they always behave as if it's the latter, and the interactions between them have everything of soap opera, and almost nothing of commentary on the nature of human desire or despair or madness. As for the different meanings of the word 'dream', surely there's no real connection between the images our brains generate during sleep and our waking wishes and ambitions (the 'Dream House' or the 'Dream Vacation'). Both, though, come under Morpheus' jurisdiction, and the distinction is never made. These last objections may seem like nitpicking, but they must count against any claim that *Sandman* is a classic piece of fantasy literature. Unusually clever and entertaining by the standards of comics, yes, but the standards in prose have been set by writers who will make the effort to clarify and to make those important distinctions; let's not rush to forget how high those standards can be.~FC

SANDMAN MIDNIGHT THEATRE

DC/Vertigo: *One-shot 1995*

This features the unlikely meeting of Wesley Dodds, from *Sandman Mystery Theatre*, and Morpheus, Lord of Dreams from *Sandman*. Morpheus spent decades trapped until the 1980s, making any real team-up impossible. What plotter Matt Wagner and scripter Neil Gaiman have done is produce a case for Dodds' Sandman that involves him accidentally meeting the captured Morpheus for 2 pages. Dodds is investigating the suicide of a friend, and arrives in late 1930s London, meeting an unsavoury group of occultists and his fugitive girlfriend Dian Belmont, who has conveniently become entangled in their intrigues. The period feel and dialogue are handled with Gaiman's usual aplomb but the script becomes grindingly expository in places. The painted artwork by Teddy Kristiansen is impressive and suitably subtle to match the period, but too approximate when it comes to facial expressions, many of which don't compliment Gaiman's detail at all. The silent pages with the Sandman in action remain the best-written ones. A curate's egg for the Wesley Dodds fans.~SW

SANDMAN MYSTERY THEATRE

DC/Vertigo: *70 issues, 1 Annual 1993-1999*

This series has nothing to do with Neil Gaiman's popular Sandman, but the 1940s character with the same name. Sleuth Wesley Dodds stars in new, noirish tales written by Matt Wagner (1-12), Wagner and Steven T. Seagle (13-60) and then just Seagle. There's a strong pulp feel to these dark stories, with hate (racial, sexual or otherwise) playing a large part in the motivation of some extremely nasty villains. Most stories occupy four issues, but running throughout, to give a strong sense of continuity, is Dodds' increasingly intimate relationship with Dian Belmont, his (and her) development as a crime fighter, and his battles of will with the police department.

Episodes are usually named after characters, including, 'The Tarantula' (1-4*), 'The Scorpion' (17-20), 'Dr Death' (21-24), 'The Hourman' (29-32, introducing the two characters to each other), 'The Python' (33-36), 'The Mist' (37-40, the *Starman* villain), 'The Blackhawk' (45-48), a pre-war version of the famous character) and 'The Goblin' (65-68). There's a good balance in the stories of traditional 'super' characters and 'ordinary' criminals, since the Sandman's a better detective than he is a fighter. 'The City' (61-64), rather than a single story, shows Wesley, Dian, the butler, Humphries and Detective Burke all solving their own cases.

It's mostly drawn by Guy Davis in his scratchy, many-lined but effective style, but there have been guest artists, including John Watkiss (5-8), R. G. Taylor (9-12), Warren Pleece (33-36), Matthew Smith (45-48) and Michael Lark (57-60). One annual (1994) contains a story about a search for a Central Park mugger. Written by Seagle and Wagner, it's illustrated over nine chapters by Guy Davis, David Lloyd, John Bolton, Stefano Gaudiano, George Pratt, Alex Ross, Peter Snejbjerg and Dean Ormston. *Sandman Mystery Theatre* was a brave series for Vertigo, and remains a critical, if not commercial, success. Wagner and Seagle crafted some fine mysteries, dealt with some difficult issues (war, religion, abortion), and in Wesley and Dian created an adult, compelling couple.~NF

Tom Hart's THE SANDS

Black Eye: *3 issue miniseries 1996, Graphic Novel*

Reflecting the title, this series is constantly shifting as Little Hawk wanders into the desert, encountering strange people for no good reason. The narrative is dreamlike, and for many the lack of any real resolution in either the comics or the collection, which adds over a hundred extra pages, will be a major stumbling block. If you like Tom Hart's work give it a try. If you've never come across his material previously this is not the place to start.~WJ

Mythologising of very ordinary moments makes for dull comics, particularly when prime contributor Granger Davis can't be bothered to enliven his largely conversational pieces with any background art.~FP

SAPPHIRE

Ariel: *6 issues 1997*

Sapphire owes a lot to *X-Files*: a special team of British operatives formed to deal with cases with supernatural overtones, it's a paranoid fantasy with innumerable wheels within wheels. Vincent Danks' script is more reminiscent of the down to earth British TV thrillers like *Callan*, although fantasy trappings abound with several characters having visions of the past, psychic wars and demons. These issues deal with the fledgling team's first case, a series of murders that, despite their satanic ritualistic overtones, appear to link into a secret government research project to create mutated humans. Like *X-Files* there's a feeling that there are some questions that will never be answered as layer after layer of plot is excavated.

Danks' art suffers from the stiffness of too much photo-referencing, with some panels tightly and realistically drawn and others betraying wonky perspective or poorly drawn faces. There is some very fine inking (as you'd expect from an ex-inker) but overall it needs to loosen up. The story remains interesting enough, however, to get you past the occasional art problems.~FJ

SARAI

ComicsOne: *8 volumes + 2001 to date*

It's 2041 and humans develop into hideous mutations after they reach the age of sixteen. In this world, Sarai Kannagi is a Battle Maid, a member of the Guard Maid Association, which hires her out to those who need protection. Sarai's adventures encompass a castle of cannibals, villagers turning to stone, hostile telepathic animals, the Sultan Pazoculver's harem, human sacrifices to the God of the Sea and a maid amok. Masahiro Shibata's scripts are designed to keep Sarai and her friends in as few clothes as possible whilst facing some pretty gruesome experiences, obviously tempered by his insightful social commentary. Though unsolicited, a ninth volume, at least, is promised.~NF

SARGE STEEL

Charlton: *10 issues 1964-1967*

There was a moment in the film *Stargate* when Kurt Russell makes his entrance, his head filling the screen. As one the audience rose and shouted "That's a Sarge Steel haircut!", and how right they were. Few characters in comics have been blessed with a haircut to match the good sergeant: short, rigid, and sharp enough to strike a match on. There was more to the comic than a haircut, of course, but not that much more. Sarge Steel was a private eye, a mix of equal parts Sam Spade and James Bond, complete with an ever present entourage of willing (or deadly) dolls and hoods round every corner. The first few issues saw him alternate between fighting Nazis and Commies before going totally over the top from 7. 8 introduced a plethora of U.N.C.L.E. style gadgets from a hypno-chair to exploding shoes. It would be overstating the mark to claim Joe Gill's scripts were significantly better than his usual production-line fare, but he was having fun. Visually the comic was split between Dick Giordano (1-4, 7, 10) and Bill Montes and Ernie Bache, with Giordano being far better, particularly on the final issue. For no obvious reason 9 and 10 were retitled *Secret Agent*, though the contents remain much the same. A year passed between 9 and 10, during which Sarge was the back-up in *Judomaster* 91-98. Steve Skeates wrote the final issue and made it eminently more readable by playing it straight. As an aside it's commonly assumed that he got his name from his steel hand (grafted on following an explosion in Vietnam), but not so. At one point in 1 he's referred to as 'Captain Sergeant Steel', so clearly Sergeant is his first name. They don't make them like that anymore.~DAR

SATAN'S SIX

Topps: *4 issue miniseries 1993*

Based on characters and concepts created by Jack Kirby, the first issue also featured a number of pages drawn by 'The King' and inked by such luminaries as Frank Miller, Todd McFarlane, Steve Ditko, Mike Royer and Joe Sinnott. Neither Jack nor his inkers are working at the height of their powers, and the thinly conceived characters are frankly laughable. Writer Tony Isabella obviously thought so, deciding to fashion a hopelessly jokey storyline around the completed, basically incomprehensible Kirby pages. Every issue is introduced and interrupted by Pristine, Angel of the comic book, who exists solely to make editorial comments like "Don't let the occasional style change confuse you. This place was never big on consistency."

So, we have Satan's Six – Brian Bluedragon, Hard Luck Harrigan, Doctor Mordius, Kuga The Lion-Killer, Dezira of Babylon and Frightful – escaping from the tedium of Limbo and causing havoc on Earth, after striking a deal with the Devil to recruit human souls for Hell. Penciller Jon Cleary is clearly a worshipper at the altar of McFarlane, his grotesquely distorted figures unable to hide a lack of drawing skills. To make this title even more of a ghastly cash-in, 4 features a horrendously inappropriate appearance from *Friday the 13th* psycho Jason, also being published by Topps. All in all, a tacky rip-off.~AL.

SATANIKA

Verotik: *3 issue miniseries 1995*, 8 issues 1996-1998*

Mindless, exploitative drivel from Glenn Danzig and some of the biggest names in comics, who really should know better. Frank Frazetta and Simon Bisley are followed by Duke Mighten as bare, busty, bat-winged Satanika jiggles about posturing and slaughtering an uninspired selection of vampire bimbos and himbos. Why are the terms "adult" and "mature" applied to this kind of storyless nonsense, as it's neither. Banned in lots of places, but for all the wrong reasons.~WW

The SATURDAY MORNING Comic

Marvel: *One-shot 1996*

Utterly mad promotional effort to tie in with an album on which a bunch of slightly left-of- mainstream artists record versions of old Saturday-morning-cartoon theme tunes. For the comic's purposes it seems the future needs saving, and this can only be done by providing the kids with some decent music, inspiring them to rise up against The Suits. Slipshod likenesses of rock musicians from otherwise decent artists vie with an inane script and the bizarre concept for the silliest aspect of the comic. Just say "no".~WJ

SATURDAY NITE

Anson Jew: *2 issues 1998-1999*

Excellent self-published comics. 1 has a possibly autobiographical fable concerning one man being too polite to say 'no' to either a stray cat or a local down and out. Brilliantly drawn in cartoon style by Anson Jew, the short back-up strips complement the lead. In 2 there's a gloomy dissection of a slacker loner's Saturday night, and a strip about a doomed flight. Throughout Jew employs various styles of cartooning, all loose, and all excellent. It's rare that a new talent emerges fully rounded and the finished article, but it occurs here. The only downside is an editorial admission of procrastination meaning future work will probably be slow to emerge.~FP

His Name Is SAVAGE

Adventure House: *1 issue 1968*
Fantagraphics: *One-shot 1984*

Boiled so hard he's stuck to the bottom of the pan, Savage is Gil Kane's brutal government covert agent. This was issued as a black and white magazine during a period of popularity for spy fiction and TV; Kane's contribution is certainly a little more sophisticated than contemporary mainstream comics, but has dated badly. The saving grace is the excellent artwork. Freed from the constraints of monthly superhero comics, the fluidity and expression is amazing, and certainly beyond anything he'd produced to that point. The Fantagraphics edition is a reprint on better-quality paper.~WJ

SAVAGE DRAGON

Image: *5 issue miniseries (0-4) 1992-1993, 103 issues + 1993 to date*

The Savage Dragon begins with police lieutenant Frank Darling questioning a green-skinned, fin-headed amnesiac recently found in a burning parking lot. While Dragon, as he is soon nicknamed by hospital staff, is recovering, reports come in of superheroes being maimed and murdered. Darling asks Dragon to help the police, but he refuses until the warehouse where he is working is blown up by the superpowered villains who are terrorising the city. Provoked into action, Dragon joins the police force as a regular cop, albeit an unusual-looking one, waging war on the city's seemingly endless supply of bizarre and freakish ne'er-do-wells. From here on you never lose the feeling that, first and foremost, writer/artist Erik Larsen is having a great deal of fun. The fights are spectacular, the action unrelenting and yet in the middle of it all there's still plenty of time for characterisation. This is both with Dragon and his police colleagues, who become valuable members of the strong supporting cast, and with the members of Freak Force, the other superpowered operatives the cops get onto the payroll, but who eventually quit for their own short-lived title. Some of the best storylines revolve around the relationship between Dragon and his possessive, jealous, ex-hooker girlfriend Rapture – always full of surprises and never afraid to challenge comic conventions. The humour is strong, the stories entertaining and the characterisation top-notch, making *The Savage Dragon* a hugely entertaining title, marred only by the fact that guests turn up a little too regularly. 13, by Jim Lee, was part of Image's crossover week which saw creators swapping titles and Larsen later printed what he originally planned for 13, explaining the two versions of that issue.

The superhero fun and games continue apace in the 20s and 30s, and the first of several major redirections comes with 40, in which Dragon is approached by the government to lead a new superteam. Though the loss of the police precinct setting is a shame, Dragon's cynicism and annoyance at the lycra brigade brings welcome comic relief and the action is as fast and furious as ever. The change also allows the action to be played out on a larger stage including everything from Gods to alternate dimension doubles to alien invasions through the most bizarre supervillains you're likely to see this side of Kirby on acid. Larsen doesn't let up, pause for breath or let the series grow stale right up until the controversial issue 75. Having seen his wife murdered and his life turned upside down, Dragon decides to murder the evil child mastermind Damien Darklord even though he knows this will change history, as many recent events are the result of machinations by the future Darklord who travelled back in time. Dragon doesn't care, does the deed anyway and …

76 kicks of the 'Savage World', as Larsen wipes out in a single blow the supporting cast, situations and world he has carefully crafted over the previous 75 issues. It leaves Dragon in a vastly changed world in which not only is everything different, but significantly worse than the one Darklord had influenced. Over the next few issues, we follow Dragon as he finds his feet in this changed reality, rediscovering characters who may look familiar but don't necessarily act the way he, or the reader, would expect. Larsen always promises that this change is permanent, but in an industry that has rarely had the guts to tinker with successful concepts to such a degree, it takes a few issues to sink in that he really does mean it. Accepting that the pitiful state of this reality is to some extent his fault, Dragon makes it his mission to put things right, which he has accomplished admirably by the next significant anniversary issue, 100. As Dragon faces the opportunity to make a one way trip to his 'real' home, it's a testament to the freshness and originality of Larsen's writing that the outcome genuinely could go either way, leaving readers guessing right up until the final moment. What comes next is as likely to be as different and as changeable as what has come before and just as much fun.

As well as the usual reasons to praise *Savage Dragon*, the accomplishment of more than 100 consecutive issues of a mainstream title by a single creator deserves a special mention. This is particularly noteworthy as Larsen has additionally often turned out a second comic a month for Marvel, DC or Image. What shines through every issue of his work is a genuine love of the comics medium (perhaps more than the comics themselves) and a desire to write for new generations the kind of comics he loved to read as a child. Though he owes an unmissable (and always acknowledged) debt to Kirby, there is nothing backward-looking or navel gazing about Larsen's work. *Savage Dragon* deserves to be remembered as one of the most impressive accomplishments of the 1990s and hopefully beyond. The original miniseries is available as both reprints, called simply *The Dragon*, on lower-grade paper or in a collected edition, as are all issues to 33, although for some reason 34 and 35 were reissued as a slimmer volume titled *Savage Dragon Hellboy*. To celebrate 100 Larsen issued *The Savage Dragon Companion*, offering synopses and background information on all stories to date.~JC

Mirage: *One-shot (Savage Dragon and the Teenage Mutant Ninja Turtles) 1993*

Erik Larsen's most popular character was created years before he saw professional publication, and much of the work produced for fanzines and comics at the lower end of the quality threshold is available in 'Archives'. It showcases Larsen's plotting strengths, but is otherwise best sampled only by the dedicated.

Larsen collaborates with Don Simpson for the *Megaton Man* comic, but the most successful teaming is when the Dragon is handed over to Pat Mills and Kev O'Neill for a darkly humourous romp through Marshal Law's world. Steve Gerber's satire in the *Destroyer Duck* team-up, which continues in part from *Spider-Man Team-Up* 5, makes for one of the more satisfying one-shots, and it also stars Howard the Duck.

Red Horizon and 'Blood and Guts' have no involvement from Larsen, with the first not very good at all. Jason Pearson is responsible for 'Blood and Guts', involving both elements of the Dragon's police career and a mobster with a mission. It's set just after the original *Savage Dragon* miniseries, so there's much hand clenching and emotional angst about events in that. *Sex and Violence* is of note for the introduction of Jennifer Wilson, who would play a large part in the regular series, and it reads very much like two issues of that. Perhaps Larsen didn't want the topic of domestic violence included there. Don't be fooled by references to Adam Hughes with regard to this series. He just provides layouts for Rick Mays, although there are a few sketch pages in the back.

SAVAGE DRAGONBERT Full Frontal Nerdity

Image: *One-shot 2002*

These three panel cartoon gags quickly wore out their welcome in the rear of *Savage Dragon*, and this collects everything along with extra material. Erik Larsen thought these were funny enough to publish for over forty issues (57-99), and God knows why, but millions enjoy *Dilbert*. Enjoying *Savage Dragon* is more understandable, so if you like both, try this.~FP

SAVAGE HENRY

Vortex: *13 issues 1987-1990*
Rip-Off: *17 issues (14-30) 1991-1993*
Iconografix: *3 issues 1994, 3 issue miniseries ('Headstrong') 1994*

A spin-off from *Those Annoying Post Bros*, this is really a series about The Bulldaggers, a group of musicians that includes Savage Henry as well as Monsieur Boche (Samoan synthesist), Caroline (a clone), the Lord C'thulu (Elder God) and Conrad Schnitzler (German synthesist). The latter is in fact a 'real' musician, much beloved of creator Matt Howarth, who uses this title both to plug all sorts of brilliant music (in comic strip reviews after the main story) and also to pay homage to any musicians he happens to like. The Residents turn up a couple of times, Nash the Slash, Wire, Dieter Meier, Clint Ruin and others all share adventures in Bugtown with the Bulldaggers.

Hiroshima kills everyone in the first major story (2-7) but our heroes persevere, except that there's only one Caroline left at the end. 14-16 is a history of the band while 17-22 is a dreamtime adventure inside Ayers Rock, where the city of Harmony has been invaded by Headbangers. Harmony, by the way, is a Xanadu for experimental musicians. Caroline is kidnapped (24-25) and Hawkwind guest-star in 26. 'The Blue Bunker Ruse' (28-30) features the Post Bros themselves and concludes with Hiroshima ruling a world devoted to the music of the Bulldaggers, which she hates despite once being a member herself.

After moving to Iconografix, the series comes in shorter bursts but is otherwise unchanged and unchanging. Musicians continue to guest (Moby, Richard Pinhas) and the stories continue to revolve around music and the activities of the band. For those who find the violent anti-social antics of the Post Bros unamusing, this title is easier on the conscience but it's still seriously weird (in the nicest possible way).~NF

SAVAGE LOVE

Bear Bones: *2 issues 1994*

Dan Savage, gay advice columnist for the *Seattle Stranger* newspaper, has various bits of his biography, philosophy and outright Things He Made Up illustrated by various cartoonists. Hilarious, poignant, sarcastic and almost certainly libellous. The best pieces are 'Ken Comes Out To Barbie' in 1 and 'You're A Gay Man Danny Brown' in 2, but there isn't a dud in either issue.~HS

SAVAGE PLANET

Basement: *2 issues + 2002 to date*

We're very much in *Xenozoic Tales* territory here, with humanity colonising a world originally shred by dinosaurs and humans who're not as technically advanced. Artists Dan Parsons and Kevin Rasel certainly show promise, and there's definitely a place for a good fantasy comic, but at the moment this is more the sum of its influences rather than anything special.~FP

The SAVAGE SWORD OF CONAN the Barbarian

Marvel: *235 issues, 1 Annual 1974-1995*

Marvel's longest-running black and white magazine owed its success to two things. Firstly, a series of stable creative teams, particularly the enthusiastic meeting of Roy Thomas, John Buscema and a number of talented inkers, most frequently Tony De Zuniga. Secondly, the magazine moved with the times, and spiced up the stories with extra sex and violence in the later years while sticking close to the spirit of Howard's original *Conan* stories, more so than the colour comic.

Conan is a barbarian warrior from freezing Cimmeria, the product of a savage and brutish tribe who live for killing and hope for nothing more than to die in battle. Created by Robert E. Howard, a depressive loner who eventually shot himself because he couldn't cope with his mother's death, Conan was everything an arrested personality wished to be: ruthless but honourable, deadly in battle, indomitable of will and a pussy magnet to boot. *Savage Sword*, like the original stories, covers his whole career from teenager to middle-aged king, mixing short, 'see-monster-kill-monster' stories with longer quests. Initially, like most 1970s black and white magazines, it used a wide range of artists. In the first ten issues you get several Neal Adams stories, Barry Windsor-Smith reprints, Howard Chaykin, Jim Starlin and Alex Niño even. However, once John Buscema settled in he made the world of Conan his own, giving the surly barbarian his familiar beetle-browed look and shaggy knickers, while Thomas adapted his way through pretty much the whole Robert E. Howard canon, introducing figures from other stories and filling in the bits Howard and his many editors had missed out. Since Howard's natural man vs the decadence of civilisation philosophy was common to most of the genres he wrote in, not just the fantasy stories, Thomas was able to plunder widely.

Also worth reading, even if you aren't a particular fan of heroic fantasy, are Michael Fleisher's irreverent and politically incorrect scripts, starting with 88, which, when he took over from Thomas for a brief period, were a breath of fresh air, and rather funny with it. Despite its lengthy run, *Savage Sword of Conan*'s appeal didn't really waver. Sampling half a dozen issues will tell you whether it's for you or not. *Marvel Super Special* 9 was an all-Conan issue, most notable for Howard Chaykin's intelligent take on Red Sonja, Conan's occasional partner/girlfriend. Unfortunately it has some of the most hideous colouring you'll see in a comic, which all but obscures the art.~FJ

SAVAGE TALES

Marvel: *Series one 11 issues, 1 Annual 1971-1975, series two 9 issues 1985-1987*

The flagship of Marvel's black and white magazine line, the first series of *Savage Tales* featured consistently fine strips starring Conan, Ka-Zar and a lot of lesser sword-and-sorcery characters. Its first issue boasted the first Man-Thing by Gerry Conway and Gray Morrow, and the début of Stan Lee and John Romita's Femizons as well as a rather brutal Ka-Zar tale by Lee and John Buscema. Its highspot, though, was the Conan strip 'The Frost Giant's Daughter', by Roy Thomas and the ever-improving Barry Windsor-Smith. In the eighteen months between 1 and 2, Smith had grown enormously in stature, and his art on the epic 'Red Nails' (fifty-eight pages spread between 2 and 3) was quite breathtaking. Writer Roy Thomas clearly relished the rather more mature audience afforded him by the magazine format, and the Conan tales in 4, drawn by Gil Kane, and 5, by Jim Starlin, were equally fine.

After five issues Conan graduated to his own magazine and Ka-Zar was promoted to the lead position. Gerry Conway's stories were efficient enough, but the feature lacked enough distinction from others of its kind, although 9's 'Dark Island of Doom', with its emphasis on sabre-toothed sidekick Zabu, was excellent. The strip was unusually well blessed artistically, with John Buscema, inked by Tony De Zuniga in 6-8, and Steve Gan in 9 and 11, producing nice work, although the Russ Heath effort in 10 was clearly a rushed job.

The magazine's back-up strips drew widely from Marvel's roster of sword-and-sorcery characters, accompanied by the occasional article. Notable strips included Brak The Barbarian in 5 and 7-9, and Shanna The She-Devil in 9 and 10, while 2 and 11 contained a couple of nice shorts drawn by Gray Morrow and Russ Heath respectively. A couple of choice Joe Maneely Black Knight reprints in 2 and 4 rounded out a thoroughly satisfying package, with each issue having something of interest. The annual collected Barry Smith's Ka-Zar stories from *Astonishing Tales*, among other things.

The 1980s revival was quite a different proposition, eschewing more established characters, preferring instead short and contrived men's adventure stories (for want of a better phrase). The whole tone was disappointingly heartless and brutal, aiming squarely at the Punisher's core audience, and not even the likes of John Severin, Gray Morrow and a surprisingly on-form Herb Trimpe could make it at all palatable. The sole exceptions to this were a pair of Vietnam shorts by Doug Murray, particularly well drawn by Michael Golden, very much a forerunner of their later 'Nam series.~DAR

SAVANT GARDE

Image/WildStorm: *7 issues 1997*

Savant Garde is a spin-off team from WildC.A.T.s led by Savant, sister of Zealot. Barbara Kesel plays up the light-hearted side of superheroics as Savant's curiosity and acquisitive instincts keep leading her into trouble requiring the rest of the team to get her out of it. Her long friendship with assistant Mabel is well depicted, Majestic's presence adds some dignity to the proceedings (he hopes), Cybernary's recuperating from her own short-lived series while Disperse, Sheba and Met-L are new to the WildStorm Universe. With Ryan Odagawa's artwork it all adds up to a pleasant if unchallenging read. There are also three 'Fan Editions' containing eight-page strips that make up an introductory story. They were given away with *Overstreet's Fan Magazine* 22-24 and appeared before the regular series.~NF

SAVIOUR

Trident: *5 issues 1989-1990**

Everyone thinks the superbeing known as Saviour is the new Messiah. Unfortunately for them the real Son of God has returned as a feckless down-and-out with a fat whore as a disciple, and Saviour is actually Satan. Or is he? Mark Millar churns guts in this unsubtle but powerful exploration of Christianity as superheroic myth. Although it tries to shock a bit too hard with scenes of child abuse and *Exorcist*-like priest-battering, blasphemy adds a certain sharpness to the story, excellently illustrated throughout, by Daniel Vallely (1 – a bit of a find who promptly disappeared off the face of the earth) and Nige Kitching (2-5). Sadly unconcluded.~FJ

SAY WHAT?!

Gettosake: *2 issues 2000*

SCAN by Matt Howarth

Iconografix: *2 issues 1992*

Strange science fiction story told from numerous viewpoints, the focus being a sand-covered planet that transports beings from around the galaxy for precisely thirty-seven seconds before transporting them back. Howarth isn't to all tastes, but this is more accessible than some of his work.~FP

SCARAB

DC/Vertigo: *8 issue limited series 1993-1994*

This was previously announced as a *Dr Fate* miniseries. John Smith's premise has a former mystic hero of the 1940s rejuvenated and setting out to rescue his long-missing wife and former partner. DC had cold feet about the story and insisted on a taste-alike version being substituted for Fate. Just as well, since the ensuing mélange of Hippyshit 101 stream-of-consciousness drivel wouldn't have done Fate any credit. Best read under the influence of illegal substances.~HS

SCARAMOUCH

Innovation: *2 issues 1990-1991*

Scaramouch is a hip young dude who has to travel the world eating magical energy to survive. He's usually accompanied by his girlfriend Tescile Le Fevre, supermodel and arms manufacturer. Vacuous nonsense.~WW

SCARE TACTICS

DC: *10 issues 1996-1997*

Strangely likeable, if simplistic, comic about a bunch of ghouls. Well, a gothy vampiress, a hillbilly werewolf, a shambling lump and a venom-spitting lizard boy from the hood, who form a rock band to explain their strange appearance and keep one step ahead of the powers that be in their hi-tech monster-mobile. Len Kaminski's script is lively even if his characters are fairly by the book, and each is showcased in individual issues as the series progresses. Anthony Williams and Andy Lanning's art is suitably cartoony and bold; from one issue to the next it does tend to change inking style, and the art is at its worst when they attempt freeform spreads rather than sticking to ordinary layouts. None of it stands up to much examination but it's perfectly harmless for younger readers. Note that there's a four month hiatus between issues 9 and 10 when various characters teamed up in Specials with more established characters.~FJ

SCARLET CRUSH

Awesome: *1 issue 1998*

John Stinsman is a big *Star Wars* fan, and almost the entire issue consists of scenes from the films with the characters replaced by thinly veiled simulacrums. The source should be with you if you're a fan, so you won't need this. It's also worth mentioning that there are five alternative covers, each featuring a woman with her breasts hanging out who doesn't appear in the comic. Derivative exploitation? Awesome? Surely not.~WJ

SCARLET IN GASLIGHT

Eternity: *4 issue miniseries 1987-1988**

Fascinatingly conceived but poorly realised story of a meeting between Sherlock Holmes and Count Dracula. After initially experiencing a nervous breakdown, Holmes, along with Dr Watson and Abraham Van Helsing, must join forces with Dracula to prevent Professor Moriarty using Vampire blood to turn London's criminals into a zombie army. Flawed but readable.~WW

SCARLET KISS

All-American: *One-shot 1990*

B-Movie return of the 18th century vampire plot with hints of lesbianism for the lads. Too poorly drawn for titillation, so just crap.~FP

SCARLET SCORPION/DARKSHADE

AC: *1 issue 1995*

Flip-book with the *Scarlet Scorpion* on one side and *Shade* on the other, which is only interesting because there are a couple of plot threads leaking from *FemForce*. To be fair, the Scarlet Scorpion story has at least the makings of an average superhero strip, but the artwork on both characters is very unappealing.~NF

SCARLET THUNDER

Amaze Ink: *4 issue miniseries 1995-1996*

High-speed sprint down memory lane as Dan Vado and Rick Forgus bring us the story of two super-speedsters created to help the USA win World War II. A delightful tribute to Golden Age superheroics that stylishly manages to combine 1940s optimism with 1990s hard edge.~WW

SCARLET WITCH

Marvel: *4 issue miniseries 1994*

Ostensibly an exploration of the former Avenger's status as a "nexus being", this is in fact a tired exercise in shopworn demonic cliché-baiting. "The end of the old Scarlet Witch", the conclusion boasts. So, is this gormless bint with her head stuck through a tablecloth supposed to be an improvement?~HS

SCARLETT

DC: *14 issues 1993-1994*

It seems the legends about vampires are true after all. They've been around since time immemorial, integrating with society, yet with their own hierarchy and several groups within it. Seventeen-year-old redhead Bly Pharis, the Scarlett of the title, becomes involved with these unsavoury creatures when her parents are murdered. She conveniently discovers abilities she was previously unaware of, and that she's mentioned in ancient prophesies. 1-4 have mystery, action, violence, an appealing lead character and adequate if not spectacular art, and are fun in a B-movie fashion. Gray Morrow's art in 5-9 improves matters, but the downside is massive and often unrequired exposition infodumps for new introductions, and too many characters whose sole reason for being part of the comic is wacky diversity for an issue or two. A brave failure pre-empting the mood of *Buffy the Vampire Slayer*, cancelled way before the ideas had expired, the final three issues are a premature and rushed conclusion.~FP

Magnificent whimsy from Jill Thompson based on her own children's book series. Cute little Hannah Marie has a mean trick played on her by spiteful older kid during her first Halloween, but is rescued by the exotic and peculiar Scary Godmother. The comic adventures pick up with Hannah Marie more or less living with her in the magical place called the Fright Side with a coterie of fantastic horror icons such as Ruby and Max, the Vampire couple who are having relationship problems, and their young son Orson, who always wants to bite Hannah Marie ('Bloody Valentine'). There's also Mr. Boogeylegs, the scary spirit of Christmas ('Holiday Spooktacular'), and Harry the Fanboy-geek werewolf, finally kicked out by his gypsy mom in 'Wild about Harry'. 'Activity Book' is just that, with strips detailing creative pastimes, and puzzles as well. The longer miniseries tells of Hannah-Marie tribulations at summer camp in the real world whilst Scary Godmother is attending an old School reunion-cum-Witches convention. Although aimed ostensibly at a young audience Thompson's blend of bizarre humour and insightful knowledge of what kids perceive of the adult world makes for an absolute triumph of storytelling. Damned good art too. Get them for the kids and keep them for yourself.~WW

Mary is born into a family of magicians, her father being a knife thrower. Edward is a doll that she creates from socks and yarn in an attempt to be accepted by her classmates, who don't understand her innocent fascination with knives and sharp objects. Jill Friemark's animation style, with big anime eyes, adds to the sense of fun and cuteness contrasted with the almost heartbreaking purity of Mary. The origin and few short pieces here serve only to whet the appetite for more adventures, but, published as a marketing tool for Fine clothing (it comes with a set of stickers), this may be all that there is.~NF

SCARY TALES

Charlton: *46 issues 1975-1979 (1-20), 1980-1984 (21-46)*

Horror anthology that's entertaining in small doses, featuring the work of all of the usual 1970s Charlton suspects including Joe Staton, Don Newton, Steve Ditko, Tom Sutton, Charles Nicholas and Vince Alascia and Wayne Howard. Of note are a Man-Thing rip-off in 4 and early work by Mike Zeck in 10. The stories, by Joe Gill and Nick Cuti amongst others, are usually sting-in-the-tail, randomly introduced by Countess Von Bludd. From 12, most issues are actually reprints from earlier Charlton horror series.~NF

SCATTERBRAIN

Dark Horse: *4 issue miniseries 1998**

A humour anthology with high production values and a host of top creators. 'Tom', a light-hearted dinosaur strip by Spanish artist Daniel Torres runs in 2-4, and Steve Parkhouse's 'Red Erchie' written by Keith Young runs in 1 and 2. Other highlights in 1 include 'Abu Gung' by Mike Mignola and 'Cluck of Fear' by Chris Garbutt. We meet Tommy X, the school-aged tyrannosaur, drawn by Brian McDonald and written by Brian O'Connell, in 2. There's a page density resembling Floyd Gottfredson's 1930s Mickey Mouse strips in 3's 'Bronco Teddy' by Jim Woodring. 4 includes 'Bugged' by Sergio Aragonés and Mark Evanier as well as Jay Stephen's' 'Oddette' and the delights of Craig Thompson's 'Musical Lump Wagon'. All 4 issues feature Dave Cooper's Pip and Norton, scripted by Gavin McInnes. Patchy but consistently entertaining.~SW

SCAVENGERS

Quality: *26 issues 1987-1989*

Catchall title for reprints from Britain's *2000AD*. Dinosaurs and giant animals are the theme, and it doesn't get better than the early issues, featuring 'Flesh'. When mankind has exterminated all animals, there's no longer any meat. The solution? Go back in time, farm dinosaurs and send the meat back to the future. Of course, the dinosaurs begin to take exception to the intrusion, particularly a battle-hardened tyrannosaur called Old One Eye. Gloriously and gruesomely violent, if your sense of humour extends that way it's a barrel of laughs, and the first two issues also have a good Judge Dredd dinosaur strip. The follow-up from 20 is basically the same plot, except it's sea-dwelling dinosaurs to be harvested. Beyond that, things go wrong. Once you've seen dinosaurs rampaging through 23rd-century factories you're not going to settle for the likes of the C-movie style 'Ant Wars', 'Shako' and 'Helltrekkers'. The former has giant ants rampaging through South America, Shako is a rampaging polar bear, and 'Helltrekkers' is a future version of the 19th-century wagon trails, beset by danger all the way, but pedestrian throughout.~FP

SCHIZO

Fantagraphics: *3 issues 1995-1998*

Loveable Ivan Brunetti depicts himself in a Charlie Brown shirt urinating and defecating all over his sorry-ass self. On a typical page, Ivan plays football with the Earth, stabs it and fucks the wound, then shoots it and shits in the hole before setting it alight. Drug addiction is good because it condenses all of life's many worries into a single problem, he says. The closest comparison is probably Despair, but Brunetti consistently trumps Crumb with spite, invention, and outrage. "Dang me", God complains, after sodomising the baby Jesus in the form of Swee'pea, while his pederast friends Wimpy and Popeye look on, "I didn't even come...". If you are old-fashioned enough to take offence at any work of art, you probably will at *Schizo*. Each issue leavens the long self-abusing episodes of Brunetti's self-caricature with clumps of daily format strips made as dirtily funny as possible. 'Grandpa Needs Dildos' and 'Dr. Prick' are among the printable titles. You have to see these to believe them. 1, unlike the others, also includes strips about a couple of things Ivan likes: "Girls" and the photographer Man Ray!

2 shows a leap in his already considerable technical skills, particularly the clever use of dot tones and panel rhythms. Examples are the zooming sequence of him popping a zit or the page of nine panels of Ivan swearing in the shower followed by an identical layout in which he ages from a sperm to a skeleton, then a splash page of his giant ugly head trailing its little pudgy body with tiny penis and another of sixty-seven Ivans assaulting and maiming each other. 3, which appeared after a two year gap, has only twenty-eight pages, half as many as 1 and 2, but what pages! The first twenty are chapter 4 of 'Self-Caricature': 'Work Equals Degradation', and it's even more relentlessly funny than before. 320 uniform panels, most of them portraying a full-length Ivan, perfectly convey the nightmare of a thinking person working in an office, all brilliantly cartooned.

Some comics retailers, justifiably afraid of police raids, won't stock *Schizo*. It's the most pathetically hopeful, powerfully motivating (the 'secret' agenda of the negative mental attitudinist), and funniest by far comic ever published, and somebody, who's probably right, thinks somebody doesn't want you to read it!~GK

Californian schoolgirl Shelly deals with a death in her family and the unwanted attentions of a boy and his bullying girlfriend. She sounds more like a forty-year old social worker as she resolves her life problems. Nicely drawn in a western style but with the reliance on facials, letratone effects and the low panels-per-page counts that typify Japanese girls comics. Penciller Mark Dos Santos and writer/inker Leyland Myrick's take on the shojo-manga comic is well-realised but ultimately too anodyne for a revisit.~SW

S.C.I. SPY

DC/Vertigo: *6 issue miniseries 2002*

One thousand years after the devastation of Earth, humanity thrives on the seventeen worlds of the Arcturus System. However, the twelve outer worlds are in growing conflict with the terraformed inner planets. Sebastian is a human agent (of SCI Spy), raised by the artificial intelligence, Motherbank after being found floating in space as a baby. He begins to question what he's been led to believe about the end of Earth and Motherbank's part in it when he meets fellow agent, Isis Nile and they begin to uncover the alliances behind a recent wave of terrorist activity. With its intrigue, gadgets, world-threatening villains and beautiful women, this is very much *James Bond* in space, and there's nothing particularly revelatory about the experience. On the other hand, being by Doug Moench and Paul Gulacy, it's well-produced, well-thought out and well-drawn. And a lot of fun, if you like this kind of thing.~NF

WildStorm: *4 issue miniseries 1999*

Amusing crossover between various characters from *Gold Digger* and *Ninja High School*, in which two separate sets of villains want to capture or kill Zetra-Three, who's on his way to a science fair. Cheetah, Gold Digger and several girls from the Ninja High School are drawn into a huge fight with monsters, giant robots and aliens. Somehow, Fred Perry also squeezes in the bizarre Super Science Ninja Team Treat Man (whose weapons include giant spoons and Pez dispensers). The scion of the title is Ethan, younger prince of the western Heron Dynasty. He wins a coming of age ritual through the unconscious use of recently bestowed special abilities, of which he was previously unaware. This is considered illegal by the opposing prince, Bron of the eastern Raven Dynasty, with whom a fragile truce is maintained. The price of Ethan's victory is to become a Raven prisoner for a year. He is spirited away, though, by the attractive Asheligh, coincidentally a Raven princess, who is fighting her own war to achieve equality for the non-humanoid races on the planet. The issue of state condoned prejudice is rather skimmed over in passing, mind, although prompts some very nice vistas in 26 from artist Jim Cheung during the story of a slave's flight to freedom. Members of The First intervene, Bron is also powered up, and Ethan becomes a man. Ron Marz plots an ongoing fantasy soap opera that meanders like a country bus, taking until 25 to provide a few resolutions. If this appeals rather than repels, it's all produced to professional standards, although Cheung's emaciated women could do with a good meal. Marvel's short-lived attempt to do Hanna Barbera's *Scooby Doo* at least keeps the talents of Mark Evanier and Dan Spiegle. The scripts are a little less fresh and Spiegle's artwork bears more of his own stamp, but overall these are still good comics that capture the spirit and flavour of the cartoon series. Archie did at least try to appease long-time fans by hiring Evanier and Spiegle for a few issues (10, 14, 17). Otherwise, quite apart from having Scrappy Doo in some of them, the tiresome stories by Henry Vallely, Bill Matheny and, mostly, Michael Kirschenbaum make too many references to current culture or politics. DC: *67 issues +, 4 Specials 1997 to date*

Part of DC's Cartoon Network line, *Scooby Doo* retains the plots and characters of the earliest cartoons (no Scrappy etc) without being too repetitive. Initially, it helps that the main story often contains a fact to be explained in a features page (e.g. Golems, Druids, Islam, Cowgirls, Reincarnation), while the need to tell a funny story isn't sacrificed to the editorial, but this feature is dropped after 13. Most issues contain two self-contained, short stories, exceptions being a Roswell story (26-27) and the more ambitious 'The Dragon's Eye' (60-66), which tells separate adventures each issue as the gang go globetrotting after a mysterious thief, who's gathering the fragments of a larger jewel. Plots largely manage to stay within the confines of the original concept, though one or two do dabble with 'real' unexplained characters (a ghost in 25 and real aliens in 27). The four annual specials (two *Spooky Spectaculars*, a *Spooky Summer Special* and a *Super Scarefest!*) all contain reprints from the previous year's issues. The most frequent writers are Terrance Griep Jr (throughout) and John Rozum (from 17) with additional stories from at least a dozen others. A few other writers of note have appeared only occasionally, such as Barbara Slate (3), Sam Henderson (4), Paul S. Newman (17, 24) and Bob Fingerman (35, 38, 39, 45, 46). The artwork has been standardised, in keeping with the cartoon appearances of the characters, despite there being over fifteen artists on the series. Joe Staton remains the regular penciler, having strips in most issues since 3. Others of note are Ivan Brunetti (1), Ernie Colón (to 8), Don Perlin (a brief run between 24 and 33), Dan DeCarlo (46 and 51, though unsympathetically inked in the latter) and Karen Matchette (45, 47, 51, 55, 57).~NF

Swing With SCOOTER

DC: *36 issues 1966-1972*

Joe Orlando turns in some nice art in the first issues of this 1960s up-to-the-minute version of *Archie*. Considering it's basically a school and teen life strip there are transformations more bizarre than any superhero title as Scooter and crew are turned into vegetables in 7 and shrunk in 8. After Orlando's departure with 11 attempts to disguise the Archie style lapsed completely, with artists Stan Goldberg, Win Mortimer, and Henry Scarpelli obviously under instructions to copy. No better or worse than its inspiration, the concentration on being hip is always amusing in retrospect.~WJ

SCORCHED BIRTH

Pig Run Press: *One-shot 1999*

Recollections of strange or disturbing events during younger years that starts very strongly with Marie Javins' remembrances of her family and Don Hudson dredging up a particularly traumatic childhood incident. Thereafter there are too many "so what?" stories, although writer Joey Cavalieri reveals a hitherto unsuspected talent for cartooning, and the one page by Jessica Wolk-Stanley is honest and a laugh.~FP

SCORCHED EARTH

Tundra: *4 issues 1991*

In a future Earth destroyed by pollution, scientist Elliot Godwin has the power to heal the environmental damage and is pursued by various factions, from the (predictably) evil government to Hopi Indians who want to make him the god of an ancient messiah prophecy. Michael Gaydos and John Gentile's tale is glossily presented, with shiny paper and painted artwork, but there's little original in here to make it worth the effort.~JC

THE SCORE

Piranha Press: *4 issue miniseries 1990*

Major rock star Philip Sand loses his memory while writing a movie soundtrack. As parts fall back into place he's caught between two moguls, each of whom believes he has information that would enable him to wrest control of the other's influence. The phrase "The Score" keeps recurring, both as a motif and a possible threat. Unfortunately Sand has no idea what it refers to. This is a taut and surprisingly gritty mystery from Gerard Jones, ably illustrated by Mark Badger. There are plenty of surprises, not least the constant uncertainty of who's working with whom, but a major failing is that there's not a single likeable character, deadening any emotional impact. If you can live with that give *The Score* a try.~WJ

SCORPIO ROSE

Eclipse: *2 issues 1983*

With her leg-warmers, pink hair and leotard Scorpio Rose comes on like the Witch from *Fame*. Rushing to embrace the opportunities afforded by independent publishers, Steve Englehart reprised Madame Xanadu for Eclipse as a flame-haired gypsy whose mystic powers and immortality emerged when her lover, who was possessed by a demon during a knife fight, raped her. The story never really got going. Lots of people are after her Book of Fleshe, and the lover turns up after it along with the gypsy he killed in the original fight. Marshall Rogers provided shadowy, beautifully composed art, and also drew the back-up, Dr Orient, written by Frank Lauria.~FJ

THE SCORPION

Atlas: *3 issues 1975*

Howard Chaykin turns in pulp-style adventures of a 1930s mercenary in the first two issues, arguably the best comics published by Atlas. The third issue inexplicably concentrates on a contemporary costumed character with the same name, and is terrible. Chaykin later transferred his version of The Scorpion to Marvel, calling the character Dominic Fortune.~FP

THE SCORPION KING

Dark Horse: *2 issue microseries 2002*

The adaptation of a movie vehicle for wrestler The Rock. If this is anything to go by it gives him plenty of chances to ripple his muscles, and relies on spectacle rather than plot. Cliff Richards and Will Conrad produce nice artwork, gloomily coloured by Dave Stewart, but otherwise there's not much to recommend this.~WJ

SCOUT

Eclipse: *Series one 24 issues 1985-1987, series two ('War Shaman') 16 issues 1988-1989*

In Tim Truman's futuristic Western, Scout is an Apache summoned by the supernatural Gahn to defeat Four Monsters who are currently in positions of power in the USA (including the presidency). Forewarned by Scout's killing of the first monster, the President sends two of Scout's army-training friends (Rosanna Winter and Raymond Vaughan) to kill him. Operating in a world of ecological disaster and social disintegration, Scout has killed the monsters by the end of 6. He goes on to become a rallying point for the hungry and discontented people, accompanied by a spiritual leader, Doody, whose bible is *The Lord of the Rings*. By 14 Doody is dead and Scout has been wounded and captured by Winter, but her allegiances have been shaken by contact with an Israeli secret agent who tells her about the real effects of the US policies she's supporting. Teamed up with Monday the Eliminator (after they've fought each other through the 3-D Special, issue 16), Scout winds up in the middle of a global war (20-24). 1-14 are reprinted in two collections.

'War Shaman' picks up the story ten years later as Scout descends from a mountain retreat following the death of his wife. The America he returns to is still torn by civil war; the series depicts his search for a new home as he crosses paths with old acquaintances Vaughan and Winter. Arguably Truman's finest hour, Scout features mature scripts and artwork. Its main fault is a tendency to lose the plot and meander, but overall it's a very enjoyable read. Two further Scout series were discussed but haven't yet appeared. Notable back-ups include 'Fashion in Action' (1-8) and 'Monday the Eliminator' (11-14, before becoming part of the main storyline). There was also Beau Smith's 'Beau Le Duke' ('War Shaman' 13-16), centred around a supporting character from the first series.~NF

SCREAM

Skywald: *11 issues 1973-1975*

Following the success of *Nightmare* and *Psycho*, this was the last of Skywald's black and white horror magazines. Like its companions it was edited, and for the most part written, by the eccentric Al Hewetson, and typically the stories were overblown, lurid and downright strange. Titles like 'Are You Dead Yet?' in 5 and 'Satan's Third Reich' in 7 should give an idea of the material the unsuspecting reader can stumble across here. Scream mixed serials with copious adaptations of Poe and Lovecraft. 'Nosferatu' ran from 1, drawn by Zeser, 'Lady Satan' debuted in 2, drawn by the stylish Ricardo Villamonte, and there was Frankenstein from 6 by Cesar Lopez. The most notable serial, though, was 'The Victims' in most issues from 6, a bizarre mix of Perils of Pauline cliffhangers, horror clichés and gratuitous cheesecake art. That said, if you're looking for brainless fun and are prepared to leave your critical faculties at home this could be the strip for you, and in any case Suso's art is a joy to behold. It was reprinted in five issues by Eternity in the late 1980s.~DAR

SCREAM COMICS

Current Books: *19 issues 1944-1948*

The title notwithstanding, this offers simple gag humour strips for and starring children; a type of comic extinct in the USA, yet thriving in the UK. They're nicely produced to a generic house style, and, surprisingly, black characters have their own strips, enlightenment compromised by big-lipped caricatures. 11 draws flak for it's Native American strip, which is no worse than Little Plum, but the depiction of island inhabitants in that issue's 'Andy and his Airplane' strip is something to be ashamed about.~FP

SCREAMING KITTY

Slave Labor: *3 issues 2001*

Genuinely whacko, almost stream-of-consciousness gag cartooning from Dan Gregory with the eponymous Cat acting as an introducer for a bizarre procession of weird characters. Short, sharp and furious in the thematic style of Ren and Stimpy or Cow and Chicken, but sadly missing the mark as often as it tickles the funny bone. The pastiche of The Monkey's Paw in 3 is a highpoint. One of those truly rare times when the reader's sensibilities are as important as the work for a successful read.~WW

SCREEN PLAY

Slave Labor: *1 issue 1989*

A major movie is in production, reviving Major Nebula, an old space-hero TV series. The show underwent a complete transformation for its second run, progressing from pure corn to thoughtful terror under the hand of mysterious new writer I.M. Thorgon, except that all was not happy on set. Intriguing, well plotted and paced, and sadly incomplete, it's a very promising début from writer and artist Ashley Holt. Whatever happened to him?~FP

SCREWBALL SQUIRREL

Dark Horse: *3 issues 1995*

Yet another attempt to bring *Tom and Jerry*-style violent slapstick to comics. And yet another failure to capture the humour, energy and inventiveness of the cartoons. Written by Bob Fingerman and drawn by Greg Hyland, these Screwball Squirrel stories are madcap but terribly uninspired, with endlessly repeated jokes. Back-ups featuring other Tex Avery characters are not much better, with the Droopy story in 2 so knowing it's unbearable.~NF

SCROOGE McDUCK IN THE YUKON

Gladstone: *One-shot 1995*

For reasons best known to themselves, Gladstone published this Don Rosa Uncle Scrooge story as a special rather than allocating space in the regular *Uncle Scrooge* titles. It's good stuff, a continuity implant set in the Yukon before Scrooge hit the vein that made his fortune, with a fine supporting cast, good gags and the poignancy of Scrooge's failed romance with Glittering Goldie. As the lead features a Mountie, the Three Little Pigs back-up concentrates on them as Mounties, but it's filler and you should be getting this for Scrooge and Rosa.~WJ

SCUD: the Disposable Assassin

Fireman Press: *19 issues 1994-1997*, 5 issue miniseries ('Tales from the Vending Machine') 1998*

In a future where robots, aliens and bionic augmentation are commonplace and where crime and injustice run rampant Scuds are artificial hitmen that you can hire simply by putting coins in a vending machine. Once they accomplish their assignment they're supposed to self-destruct, but one day…

Creator Rob Schrab and writer Dan Harmon tell the tale of the weapon that learns how to make friends and ensure his enemies stay dead. Excessively violent, fast-paced and played mostly for laughs with a storyline that is practically non-existent, it is nonetheless a stylish exercise in action that almost transcends its insubstantial, one-trick-pony nature. Sadly as the series progresses it becomes so much more about the ancillary characters such as the gangsters of the Future Mafia that the later issues are actually inextricable from the spin-off *La Cosa Nostroid*, thereby losing a lot of the early spontaneity. 'Tales from the Vending Machine' is a loosely connected string of contributions from guest creators such as Trent Kaniuga, Doug TenNapel and Josh Mason and Jorge Pacheco, featuring concepts from the original run. The best of these is Scud: No Name series from 2, a tribute to the Clint Eastwood westerns by Ruben Martinez and Teddy Tenenbaum. High quality storytelling but if you've read one it feels like you've read them all.~WW

THE SCYTHE

Caliber: *One-shot 1996*

Pretentious writing disguises that this is the same ordinary-man-turns-vigilante-after-his-family-are-killed story that you've read dozens of time elsewhere. There are some gruesome touches thrown in, and the main character is well designed, but the ponderous whole reduces any chance of a return appearance.~FP

SEA DEVILS

DC: *35 issues 1961-1967*

Ahh...nostalgia. Why does no one produce undersea-adventure comics anymore? Graduating from *Showcase* 27-29, we have four Sea Devils, the cerebral leader, his blonde girlfriend, her kid brother and a loveable hunk of meat, surely the prototypes of the Fantastic Four. Elegantly illustrated by Russ Heath for the first ten issues, and featuring beautifully toned covers, the Sea Devils' stories are ephemeral light entertainment, as much a period piece as *I Love Lucy* and *Rock Around the Clock*.~FP

SEA HUNT

Dell: *13 issues 1958-1962*

Diving expert Mike Nelson's international adventures are based on the TV series that had some of the highest audience ratings at the start of the 1960s, inspiring all sorts of underwater comics with its popularity. 1-3 were part of Dell's *Four Color* umbrella title with the independent numbering commencing with 4. The scripts are uncredited but the artwork is mostly identifiable and noteworthy. Dan Spiegle adds his usual dash of character to the first issue, Alex Toth pencils 3 with Russ Manning drawing 4-6, 8-11 and 13.~SW

The SEARCHERS

Caliber: *4 issues 1996, 2 issues ('Apostle of Mercy') 1997*

By virtue of mystical happenstance the characters from the most prominent turn-of-the-century science-fiction novels emerge from the books to procreate. In the present day their descendants are gathered to prevent another mystical event with potentially catastrophic consequences. Very enjoyable in the manner of the 1960s films made from the turn-of-the-century novels, although one might wish for more subtly inserted exposition dumps.~FP

SEBASTIAN

Disney: *2 issue microseries 1992*

Ugly Sebastian the lobster is one of the strangest ever choices for the cute companion role in a Disney cartoon, and here he leaves the Little Mermaid to see the wider world. It's competently produced, but strictly average material with the only surprises among the contributors: Peter David, Jackson Guice, and Pat McGreal.~WJ

SEBASTIAN O

DC/Vertigo: *3 issue miniseries 1993*

Victorian England with 21st-century technology à la Captain Nemo is the setting for the exploits of a psychotic renegade dandy. Imprisoned for his bohemian behaviour, Sebastian O escapes to cause havoc among the somewhat seedy establishment. Surprisingly unpretentious writing from Grant Morrison and excellent period art from Steve Yeowell. "One must commit acts of the highest treason only when dressed in the most resplendent finery..." How true. Marvellous.~HY

SECOND CITY

Harrier: *4 issue miniseries 1986-1987**

Confused mystery script from Paul Duncan throws in the kitchen sink and produces a story complicated but far from complex. With most other Phil Elliott artwork you at least get a story that's interesting, so there's little reason to seek this out.~FJ

Jack Kirby's SECRET CITY SAGA

Topps: *5 issues (0-4) 1993*

The prolific Jack Kirby's sketch pages were purchased by Topps, who developed *Secret City Saga* from his character designs. They managed an entertaining series, with an accompanying nostalgic glow harking back to the early days of Marvel, not least by employing Roy Thomas and Steve Ditko to write and draw. That being so, the themes are 100% Kirby. A millennia-old race exists beneath the Earth, perpetuating themselves during times of disaster by suspended animation. Three warriors, mutated to give them extra abilities, awake in the 1990s and make their way to the surface. This is detailed in individual issues titled *Bombast*, *Captain Glory* and *Nightglider*, which introduce the cast. While also imbued with the spirit of early Marvel comics, they're not as skilfully written, although there is a small thrill to be had in seeing the odd art combination of Dick Ayers and John Severin once again. The ending of each solo issue leads into *Secret City Saga* 1. Some less reputable types also survive the cataclysm and are bent on enforcing their will on Earth. The zero issue is a largely superfluous trade promotion giving a little background to the series (explained in 1 anyway), but has some nice Walt Simonson art and also introduces *Satan's Six*. Ditko's not on top form, but certainly adequate, and, denied previous continuity reference points, Roy Thomas remembers how to tell a story again. This thrilled few when originally published, but is deserving of another glance.~FP

THE SECRET DEFENDERS

Marvel: *25 issues 1993-1995*

The title apart, this has little to do with the first version of *The Defenders*, initially presenting off-beat combinations of Marvel superheroes pitted against mystical menaces they wouldn't usually encounter. The constant factor is Doctor Strange, who selects the necessary participants by consulting his tarot deck. It's all reasonable superhero stuff. Credit then to Ron Marz, Tom Grindberg and Don Hudson for experimenting with a team of villains under the direction of Thanos in 12-14, the best story in the run. With 15 the creative team changes and emphasis shifts to a regular team of Druid, Shadowoman and Cadaver plus guest stars. The resulting dull formula material lasts longer than any other period of the title, and cancellation was creative mercy killing.~WJ

SECRET HEARTS

DC: *153 issues 1949-1973*

Second of the major DC romance launches, *Secret Hearts* was second to none in quality, with top-notch art (Alex Toth, Mike Sekowsky / Bernard Sachs, Gray Morrow, John Romita, J. Scott Pike, Gene Colan) and stories that, while every bit as silly as those in its sisters, at least showed some imagination. Covers, in keeping with the 'Secret' motif, frequently showed the heroine in some romantic dilemma, either self-inflicted (she'd made up a boyfriend so as not to be left out of girl talk...so what does she do when her girlfriends tell her 'new' boy-friend she's going steady?), or external (her declared- dead fiancé returns from the war...but what can she tell her new boy-friend?). Two serials ran in the book 'Search for Happiness', 110-138, a perfunctory and unsatisfactory saga of a young girl's quest for the perfect partner and her perpetual disappointments, and chapters 2 and 3 of the shorter but higher-voltage '20 Miles to Heartbreak', a drama of riches, deception and as much passion as the Comics Code would allow, which crossed over into *Young Love*.~HS

SECRET MESSAGES

Caliber: *1 issue ('Abductions') 1998*

NBM: *5 issue miniseries 2001-2002*

Larry Hancock and Michael Cherkas continue *Silent Invasion* with another slice of 1950s paranoia. It's now 1965 and ex-FBI agent Phil Housley is a down-at-heel private detective who's supporting his secretary (or vice versa) and ex-wife. His fortunes appear to have changed for the better when he's hired to find a missing husband, but he regrets taking the case when it appears that his quarry may have been abducted by aliens and he finds evidence that Matt Sinkage may be involved. With its hard-boiled approach, this is an enjoyable strip, but dilutes the impact somewhat of the previous episodes because most of the moves have been seen before. 'Abductions' is reprinted (with some reworking) in issues 1 and 2 of the miniseries.~NF

THE SECRET OF THE SALAMANDER

Dark Horse: *One-shot 1992*

The Secret of the Salamander, by Jacques Tardi, starring his female investigator Adele Blanc-Sec, is a particularly convoluted, self-referential mystery that starts out in World War I trenches and involves secret world organisations (a sort of Bildenberg Committee) and the Mafia. Humorous, cynical, toying with story-telling conventions, this is Tardi at his most disrespectful and intriguing.~NF

SECRET ORIGINS

DC: *Series one 7 issues 1973-1974, series two 50 issues, 3 Annuals, 1 Special 1986-1990, one-shot (80-Page Giant) 1998, one-shot (80-Page Giant) 1999, one-shot (Secret Files & Origins: DC Villains) 2000*

The first DC comic with titled *Secret Origins* was actually an issue of *80-Page Giant*, and dealt with under that title. The 1970s series reprints various superhero origin stories, ranging from 1938 (Superman in 1) to 1968 (Legion of Super-Heroes in 6). They're worth a look, since the stories are usually entertaining, and each issue has a discussion of the way a character's origin story has changed over the years. Of course, they're also a cheap way of seeing now rather rare stories. 3's reprinting of Wonder Woman's origin from 1942 stands above the rest. William Moulton Marston's story is fresh and original, and the artwork from Harry S. Peter is utterly individual and charming. When you consider that people producing comics in 1942 thought that their work would be read once and thrown away, it is humbling to see how much care and effort Marston and Peter still chose to pour into this story. Others covered are Batman and Flash (1), Supergirl, Atom and Green Lantern (2), Wildcat (3), Vigilante and Kid Eternity (4), The Spectre (5), Blackhawk (6) and Robin and Aquaman in 7.

The second series contains new stories (for the most part closely based on older versions), and the characters covered become steadily more obscure as the series progresses. It was never a particularly strong series, though most issues have some entertainment value. The list of those worth tracking down is short: 10, for Alan Moore's take on the Phantom Stranger, with art by Joe Orlando, and useful comments on the problems faced by someone who refuses to pick a side on a particular issue; 24, for Gary Cohn and Dan Mishkin on the Blue Devil, with art by Ty Templeton and some hilarious moments, although it comes adrift at the end; 37 for Templeton again, on the Legion of Substitute Heroes (flawless, this one); and 46 for the origin of their clubhouse and an introduction to Arm-Fall-Off Boy, written by Gerard Jones with art by Curt Swan and Ty Templeton (again).

Artist Murphy Anderson's love of the old Quality characters shines through on Doll Man (8), Uncle Sam (19) and the ludicrous Black Condor (21), where he faithfully updates Lou Fine's art for the original story. Also of interest are Michael Gilbert's Spectre (15), the bizarre Creeper (18), Gil Kane's artwork on Midnight (28), Sheldon Mayer's short, humorous Red Tornado (29), Neil Gaiman on Poison Ivy (36), Detective Chimp (40) and Ambush Bug (48). The final issue was ninety-six pages covering six characters. Alan Brennert and Joe Staton's Black Canary is the standout, but Al Weiss' art for Johnny Thunder, influenced by Kane is also noteworthy.

The 1989 Special devoted itself to "Gotham City's vilest villains", using a framing sequence featuring a TV crew making a documentary (writer Neil Gaiman, artists Mike Hoffman and Kevin Nowlan), and taking in the Penguin, the Riddler, and Two-Face. The Riddler story is particularly appealing, written by Neil Gaiman, with artwork by Bernie Mireault and Matt Wagner. The 1990s 80pg Giants are confusingly both numbered 1. The 1998 edition concentrates on Young Justice, and in 1999 Vandal Savage is gathering villains to attack the Titans in their own title. They're well produced, and should appeal to readers of the titles they concern. Of lesser quality is the *Secret Files* issue, again with Vandal Savage at the forefront. Only four pages drawn by Phil Winslade are in any way a treat.~FC

SECRET SIX

DC: *7 issues 1968-1969*

Six people with different backgrounds and abilities were brought together by the mysterious Mockingbird to combat evil-doers beyond the reach of the law. Mockingbird had helped each of the six in the past and still controlled their fates. This was a fine espionage series written by the very versatile E. Nelson Bridwell, and would have made a great TV series. There was an intriguing twist: one of the six was Mockingbird, but who? Well, all was revealed almost twenty years on in *Action Comics* 601, when the feature was revived. Apparently the identity revealed wasn't who Bridwell intended the character to be.~HY

SECRET SOCIETY OF SUPER-VILLAINS

DC: *15 issues, 1 Special 1976-1978*

Despite the ludicrous title there's much to enjoy here in a light-hearted fashion. Plagued throughout by shoddy art, and constantly shifting creative staff, no one really settles until writer Gerry Conway takes control with 8. The best issues are 1-5, instituting the Society (complete with clubhouse) funded by a mysterious benefactor, and mixing in concepts from two classic DC runs, Jack Kirby's *New Gods* and the Manhunter strip from *Detective.* Publicist Funky Flashman (Kirby's thinly veiled Stan Lee jibe from *Mister Miracle)* is thrown into the mix to good effect from 4, but from 6 the title loses its way, with revived 1950s superhero Captain Comet teaming with assorted DC superheroes to bring the villains to justice. By the time Conway has begun to set matters right again, cancellation has struck, with plots being concluded in *JLA* 166-168.~FP

Marvel Super Heroes SECRET WARS

Marvel: *12 issue limited series 1984-1985*, 9 issue limited series 1985-1986*

Marvel's grand event of 1984 materialised as a grand fiasco. The Beyonder, an omnipotent being, discovers the Marvel Universe. His dubious method of investigation comprises transporting most major Marvel heroes and villains to an artificially constructed planet. Cue twelve issues of mindless mayhem where most sub-plots manifest as petty bickering amongst allies, unaided by Jim Shooter's artless dialogue and Mike Zeck's unusually lacklustre pencils. A new Spider-Woman is introduced in 7, and Spider-Man's black costume makes its début in 8. Otherwise all developments, including character deaths, are reinstated to issue 1's status quo by the wish fulfilment powers abounding in the final issues. What was the point?

Barely three months after the first series Marvel tried again. The Beyonder still considers the human race to be worthy of study, so manifests on earth as a Michael Jackson lookalike in order to experience every facet of human existence. The inherent fatal flaw is that no human writer can convincingly portray utterly omnipotent characters, as Jim Shooter proceeds to demonstrate. The resulting escapade depicts a spoilt two-year-old brat with limitless power flitting around the globe as multitudes of heroes chase mindlessly. That said, the diversity afforded by the premise results in an improvement on the first series, and the ending is creditable. Be warned that the relentless tie-ins to over thirty issues of other titles give an incomplete feel to this series if read in isolation.~APS

SECRET WEAPONS

Valiant: *21 issues 1993-1995*

Built around a core of two characters introduced in *Harbinger, Livewire* and *Stronghold,* and the pre-pubescent Geomancer, Secret Weapons begins as Valiant's answer to The Defenders, with other superheroes augmenting the trio for each particular mission. Joe St Pierre writes and draws most of 1-10, and with the exception of 6 and 7 (involving the dull spider aliens that proliferate in Valiant titles) they're solid superhero stories. Power suits acquired by British intelligence services in 10 are distributed in 11, as the title changes direction to focus on a quartet of new characters. It transpires, though, that there are problems associated with the power suits, and most of the remaining issues are devoted to sorting them out. While okay, they don't match the earlier material, and 20 and 21, with Bloodshot on the rampage and crossing over into other titles, are very poor.~FP

SECRETS OF SINISTER HOUSE

DC: *14 issues (5-18) 1972-1974*

Continuing the numbering from Gothic romance comic *Sinister House of Secret Love*, 5, nicely crafted by Michael Fleisher and Dick Giordano, was originally intended for that comic. From 6 it reverted to DC's more typical collections of twist-in-the-tale mysteries, and was a somewhat hit- or-miss affair. Writers like Robert Kanigher, Steve Skeates and Jack Oleck were at the very least competent, if often uninspired, but the occasional inventive story by Sheldon Mayer brightened things up a bit (particularly 7, which he wrote in its entirety). Artistically it was also a mixed bag, with the likes of Mike Sekowsky and Bill Draut rubbing shoulders with the rather more exciting likes of Sam Glanzman (7), and the team of Larry Hama and Neal Adams in 10. The title's most consistent quality was supplied by its Filipino contingent, notably Alfredo Alcala (6, 10, 12-14), Rico Rival (9), Gerry Talaoc (10) and the ever-reliable Nestor Redondo (7, 15). Alex Niño also produced some feverishly imaginative work (8, 11, 13), which occasionally approached psychedelic surreality.

What was really required was an individual identity, and towards the end of the run the title experimented with a number of new directions. In one example E. Nelson Bridwell supplied a couple of nice literary adaptations of William Fryer Harvey (12) and Ambrose Bierce (14) short stories. The final few issues contained a number of inventory and reprint stories, most enjoyably a Johnny Peril story in 16, beautifully drawn by Frank Giacoia and Sy Barry, though it was Vincente Alcazar's moody drawing in 16 that most impressed. Overall, *Secrets of Sinister House* is a comic for art fans or those after an unchallenging read.~DAR

SECRETS OF THE HAUNTED HOUSE

DC: *48 issues, 1 Special 1975-1978*

Nothing here to give your spine a chill, but you can always find the occasional nicely drawn story. Mike Golden's effort in 10 comes to mind. A fairly interesting series starring the blind Mr E, who would later play a major role in the *Books of Magic* miniseries, appeared in 31-41.~HY

SECRETS OF THE LEGION OF SUPER-HEROES

DC: *3 issue miniseries 1981*

You know those sit-com episodes where time or money has clearly run out and the regulars gather round a set and say "Remember when..." and flashbacks ensue? Well, this is like that. Legion father-figure R.J. Brande is fatally ill and being visited by all twenty-seven Legionnaires at once, which surely violates hospital regulations regarding maximum room occupancy. He can only be saved by genetic material from his hitherto unknown child, who is – gasp – one of the Legion. Cue the flashbacks, as every member has their origin reviewed. Ploddingly narrated by E. Nelson Bridwell and execrably illustrated by Jimmy Janes, this is probably the single most pointless *LSH* spin-off, and it's had stiff competition.~HS

SECRETS OF THE VALIANT UNIVERSE

Valiant: *3 issues, 1994-1995*

Not a series, but three unconnected specials published sporadically several months apart. 1, a giveaway with the *Wizard* magazine's *Valiant Special*, showcased all of the Valiant heroes in two-page stories, a couple of which had major repercussions in their regular series. 2 featured Master Darque, and was part of the 'Chaos Effect' crossover, and 3 was an untold story of the Rai who perished in the 'Unity' crossover.~HS

Marvel: *8 issues 1985-1986*

"Somewhere in space spins a planet known to its insect-evolved inhabitants as... Symbion." Well, who are we to judge what form insect evolution would take on another planet, but it seems odd that it should produce an intelligent life-form exactly like homo sapiens apart from little antennae and compound eyes (which have a pupil-like dot in the middle so you can see where the characters are looking). What you have here is a standard sword-and-sorcery story with a few gimmicks such as giant insects instead of horses and the aforementioned eyes. The heroes are on a quest to find the centre of forbidden technology that dates from before the Great Cataclysm – a quest which is also a race against the baddies of the Dark Dominion. It's not painfully bad, but neither is it rewarding. Bill Mantlo's writing has minimal imagination, confused storytelling, a flat ending, and no signs of humour or characterisation. The artwork does keep a consistent alien feel, despite several changes of art team, but it's not an attractive feel. Don't bother.~FC

SECTION ZERO

Image/Gorilla: *3 issues 2000*

Good fun from writer Karl Kesel in this *Fantastic Four* meets *The X-Files* super-adventure comic. Tom Grummett also helps to push things along at a healthy pace with his excellent storytelling and easy-on-the-eye artwork.~DB

SEDUCTION

Eternity: *One-shot 1991*

Anthology of maudlin, inept and rushed looking short love stories from Eternity's B-list creators. A thinly disguised attempt to capitalise on the unexpected success of their 1950s romance reprints. For only the lonely and probably not even them.~WW

THE SEDUCTION OF MIKE

Fantagraphics: *One-shot 1998*

One man's life as told through comics in a slim paperback. Each page is a loving pastiche of an old comic cover drawn in the style of the time. So we have 'Mid-Level Action' a-la Joe Shuster, 'Bizarre Fears', which looks like Wally Wood, and 'Luv and Mufflers' as if drawn by Jaime Hernandez. R. Sikoryak and Michael Smith just about make it last the entire book, although to enliven things there is a comic strip in the middle drawn in the style of *Little Lulu*. Fun.~DAR

SEDUCTION OF THE INNOCENT

Eclipse: *6 issues 1985-1986*

Seduction of the Innocent reprints pre-Comics Code horror stories, mostly from Standard titles, but oh! what a collection of the great and the good. There's an Alex Toth strip in every issue which would, on its own, make this title worth buying, but over the six issues we also get work by Jerry Grandenetti, Jack Katz (of *First Kingdom* fame), Murphy Anderson, Ruben Moreira, Mort Meskin and Nick Cardy. These are not the stories that Fredric Wertham's infamous book used as examples, but by their nature they stood to be condemned along with the more disreputable stories then published. Two 3-D issues were also produced. The first contained the previously unpublished *Adventure into Darkness* 15. Frankly, the 3-D process is a waste of time, obscuring the quality of the artwork.~NF

SEEKER

Caliber: *3 issues 1998, one-shot ('Dawn of Armageddon') 1999*

Seeker was a popular costumed vigilante who was institutionalised when she claimed to be a reincarnated Atlantean warrior. The FBI decide to co-opt the concept with their own agent and achieve some degree of success when the original escapes. Solid action drama with the right amount of supernatural overtones by writer Gary Reed with various artists, but the series was cancelled short of its natural conclusion. The final two episodes were later gathered as a one-shot, but it's just a strung out fight between the original and the replacement.~WW

SEEKER 3000

Marvel: *One-shot 1998, 4 issue miniseries 1998*

Back in 1978 *Marvel Premiere* 41 ran an enjoyable space strip called 'Seeker 3000', set in a future where the Earth is about to be swallowed by the sun. It was reprinted as the one-shot. Two decades later writers Dan Abnett and Ian Edginton picked up the story twenty five years after we left it. The cast from the original, Captain Jordan Shaw, science officer Valida Payton and telepath Phaedra are still there, albeit briefly in Shaw's case. What's missing is the ship's computer infested with the personality of Shaw's enemy, Jason, which has been cleansed and is now called Censys. Shame. After 25 years there's also a 'next generation' of crewmembers including Shaw and Payton's son Carter, Shaw's clone Jericho and a cute young telepath called Cyrene. The set-ups of TV shows like *Star Trek* and the more recent *Space: Above and Beyond* inform just about every aspect of this project. The scripts are solid and entertaining if a little mannered and Andrew Currie's artwork looks great under a good inker like Art Nichols. This remains a cynical, derivative package aimed at *Star Trek fans*.~SW

SEEKERS into the Mystery

DC/Vertigo: *15 issues 1996-1997*

J.M. DeMatteis is a writer attempting to transcend the mundanity clogging the shelves of the comic store, which is commendable. He tends, however, to retread the same ground in his 'serious' works, much in the manner of a dog following a scent. There'll be a few idiosyncratic foibles as diversions, some family trauma, and woolly symbolism, but short of a yank on the neck there's nothing that'll stop his pontifications meandering on to the same ineffable conclusion that there must be more to life. It's hardly a startling revelation, and DeMatteis has no insight unavailable to the remainder of humanity. This, coupled with occasionally poetic, but often verbose, prose, has given DeMatteis a status and reputation inconsistent with his work.

Given the titular premise of *Seekers* was once again to present a quest for enlightenment, the signs were dire. Which makes the quality of the early issues shocking. Instead of forcing superheroes into awkward plots or hiding behind twee counterparts, DeMatteis largely dispensed with fantasy trappings to present real characters. His initial lead, Lucas Hart, tormented, struggling writer, is autobiographically based to a degree, and other cast members also have a resonance beyond the dictates of plot. DeMatteis finally combined his marginalised flair for humour with his preoccupations to produce a fully rounded story, referring to his past work in the first issue. He also tapped into a growing fascination with all matters unexplained as the millennium approached. This is very much the writer's title, but artists Glenn Barr (1-4), Jon J. Muth (drawing, not smearing blobs of paint across a page, in 5 and 10), Jill Thompson (11 on), and particularly Michael Zulli (6-9) are sympathetic collaborators. Hart discovers why he's been plagued by an inner demon in 1-4 and takes a step on the road forward in 5. The best story arc is 6-9, in which Hart, accompanied by his daughter, meets two old ladies who've been conversing with angels since childhood, and Streiberesque aliens. It gave the series a greater purpose and hinges the mysteries with some possible answers. *Seekers* had some annoying aspects (and 10 is a horrendous lapse back, that almost serves as a catalogue of how bad DeMatteis can be), particularly the implicit call for a leap of faith, but it stood head and shoulders over DeMatteis' previous work. If you've found his other comics pretentious or irritating, give *Seekers* a try.~WJ

SELF-LOATHING COMICS

Fantagraphics: *2 issues 1995-1997*

Autobiographical comic strips by Robert and Aline Kominsky-Crumb about life in France. In 1, each takes one half of the comic to explore their daily routine with the usual rationalisations, daydreams and introspection. This is not comfortable reading and is barely storytelling in any conventional sense but both, in different ways, pull you in so that the centrespread (and end of each story) comes as an unwelcome interruption. The themes remain the same but 2 has a more straightforward narrative and some interesting guest creators: daughter Sophie, Art Spiegelman, Charles Burns and Pete Poplaski.~NF

SEMPER FI'

Marvel: *9 issues 1988-1989*

'Semper Fidelis' is the motto of the US Marine Corps; this series is one long tribute to the Marines. It appears that since its foundation in 1775, the Marine Corps has never been without a member of the Whittier family, and with two stories in each issue, we see the Whittiers in action across the globe and the centuries. The writing is pure propaganda, with almost no imagination. There is the occasional hint that not every male Whittier is overjoyed at the anticipation or remembrance of war, but these hints are never allowed to develop. Andy Kubert and John Severin contribute some fine artwork, but it's not enough to bring any of the story up to 'good'.~FC

SENSATION COMICS

DC: *116 issues 1942-1953*

William Moulton Marston's creation, Wonder Woman, was so popular with readers (or at least with DC staff) following her début in *All-Star Comics* 8 that she was chosen to headline this new anthology book. Her proto-feminist adventures, illustrated in H.G. Peter's curiously blocky, woodcut style, gave the title a mood and atmosphere unlike everything else the industry had to offer. Unfortunately, Wonder Woman was the only star in *Sensation*'s early years, with stories collected in DC's lavish *Wonder Woman Archives* series. Her back-up strips were the most motley collection of costumed athletes and rip-offs of popular movies of the time ever assembled in a comic book. Mr. Terrific (1-63) was prodigy Terry Sloane. About to commit suicide because everything comes too easy, he discovers a new mission when he rescues a young boy from a life of crime. Throwing together a costume, the most remarkable aspect of which is a sweater with 'Fair Play' knitted on the belly, he sets out as the modestly named avenger of justice. Wildcat (1-90) was boxing champ Ted Grant, who became inspired by a Green Lantern comic (!) to fight crime with his bare knuckles while dressed in black fur. Many fine artists worked on the strip in its later days, including Kurtzman, Krigstein (81, 84) and Kubert (65, 66). The Gay Ghost (1-42) was a deceased nobleman who, possessing the body of his dead descendant after the latter's criminal lifestyle has led to an untimely end, sets out to atone for the man's misdeeds – and score with the latter's girl-friend, handily the reincarnation of the Ghost's own dead love! And then there was Little Boy Blue and the Blue Boys (1-93), three tough slum kids who put on powder-blue long underwear and get laughed out of the neighbourhood... well, no, they should have been, but instead they wage war on crime. Towards the end of the series they were occasionally joined by Little Miss Redhead, a crusading Lolita who clearly already knew more than she should about Life. Finally, The Black Pirate (1-51) was a Fairbanksesque period swashbuckler, later joined by his son on tame aquatic adventures. Art originally by Hawkman illustrator Sheldon Moldoff, tracing harder than ever. Despite the, to be polite, unoriginal nature of most of these strips, they all had respectable runs, the only significant addition after issue 1 being the visiting mystic gem wielder, Sargon the Sorcerer (34-36, 52-83).

By virtue of sheer longevity and persistence, most of these series improved as the years rolled on, but it almost didn't matter what was in the back of the book, as Wonder Woman's heady mix of sado-masochism and suffrage kept pulling in the readers anyway. By the late 1940s, however, sales were falling, and the DC editors decided to try a new tactic. Since Wonder Woman's presence gave *Sensation* a large female readership, they ditched all the, by then, tired back-ups and relaunched *Sensation* as an all-girl comic. The first oestrogen-heavy issue was 94, and Wonder Woman received a makeover for the new look. Still the cover feature, she found herself being carried over stepping stones by her doll-like boyfriend, seated at a desk as "Wonder Woman, Romance Editor"answering letters from the lovelorn, and modelling fashions, all on dismaying pink and lavender covers that must have made the old girl quite bewildered. New back-ups included Dr Pat, a young and, of course, beautiful female MD who struggled to be taken seriously; Valerie Vaughn, aka Lady Danger, dilettante débutante adventuress; and 'Astra, Girl of the Future', an outer-space telecaster. Unsurprisingly, the 'girlie' phase was a catastrophic failure. Despite some nice art (Infantino on Dr Pat, Oksner on Lady Danger), no more girls bought the title than had always done so, and male readers, unnerved by the pastel colours and soppy covers, deserted in droves. With 107, all the features – even Wonder Woman – were ousted, and the title reworked again with supernatural adventurer Johnny Peril as the lead, superbly illustrated by Alex Toth. Infantino, Sy Barry, and other top-line DC artists filled out the rest of the book with haunting and evocative tales of the uncanny. The new formula was a sufficient hit that the title was fleetingly rechristened *Sensation Mystery* from 110, but a lack of decisive sales figures, and the increasingly serious concern by parents and politicians about the – spurious – connections between comics and juvenile delinquency, caused DC to cancel the series with issue 116.~HS

SENSEI

First: *4 issue miniseries 1989*

Despising the complexity of modern society, Tadashi Natori uses a time machine to travel to the nineteenth century. In the best tradition of time-travel stories, things go wrong. Half of him ends up in nineteenth-century USA, the other half is trapped in a post-World War III future, a future he himself determined in the nineteenth century. Wandering two strands of time, Tadashi discovers that the past holds its own perils. Roger Salick and Val Mayerik's *Sensei* is better than most time-travel stories, and they leave you wanting to see more of the character.~FP

SENTINEL

Harrier: *4 issue miniseries 1987*

Based on the format of the British weekly *TV21* in it's earliest incarnation, this series blends newspaper pages with comics to relate adventures of the reporters who are the stars of the strip. When the owner of the eponymous *Sentinel* dies in mysterious circumstances his wastrel son seems unable to escape his father's job and his fate. Turgid and amateurish in places, it is notable for some of the earliest work of Mark Buckingham in 3.~WW

SENTRY

Innovation: *1 Special 1991*

This spin-off from *Hero Alliance* is the Sentry versus Sepulchre, a genius supervillain and serial killer, with a showdown at the opera. Ted Naifeh's stylish, heavily cross-hatched artwork adds interest to an otherwise straightforward superhero story.~NF

THE SENTRY

Marvel: *5 issue miniseries 2000-2001*, 5 One-shots 2001**

Paul Jenkins conceives a decent plot involving the return of Marvel's oldest superhero and why no-one had heard of him for all these years. The mystery is played out down to faked snippets of 1960s comics. Unfortunately, it's also strung out to about triple the length the plot requires. This might not have been noticeable had artist Jae Lee not coasted throughout. His figurework and designs are lovely, but he rarely bothers with any background, giving the entire series an empty look. Beyond the miniseries the Sentry has one-shot encounters drawn by other artists, all the time revealing more of the mystery. The best of them is Phil Winslade's Jack Kirby pastiche on *The Sentry/Fantastic Four*, although *The Sentry/Hulk* has a rare full art job from Bill Sienkiewicz. Lee returns for an all too-predictable conclusion in *The Sentry vs The Void*.~WJ

SERAPHIM

Innovation: *1 issue 1990*

Writer Chris Todd may or may not have an idea of what's going on here, but certainly doesn't bother with the triviality of explaining anything to readers. Just in case someone might be on the verge of figuring it out, though, there's the horrible painted artwork of Doug Talalla to contend with as well. He turns out a series of images depicting, often not very well, whatever he damn well feels like, whether or not it has any relevance to the story. At least Innovation ensured the proposed concluding issues were never seen.~WW

SERGIO ARAGONÉS...

DC: *One-shot (Destroys DC) 1996*

Marvel: *One-shot (Massacres Marvel) 1996*

In *Destroys DC*, Mark Evanier and Sergio Aragonés try for a job at DC, but Sergio worries he'll be ignored unless he can do superheroes, so he has a go at DC's mainstays Superman, Batman and Wonder Woman. In the end, most of DC's heroes have become involved in a plot by the company's old mascot, Johnny DC to get revenge for having been forgotten. For *Massacres Marvel*, they discover the Marvel Bullpen is at lunch, so while Mark has a nap, Sergio draws all the titles that are behind schedule. Aragonés' cartooning is always awe-inspiring and his gags are tremendous fun. There aren't many better parodies of the Marvel and DC universes.~NF

SERINA

Antarctic: *3 issue miniseries 1996, one-shot ('Blade of the Pharaoh') 2000*

Serina is an agent for a covert society of Ancient Egyptians, who, in full regalia, influence world events to their benefit. The miniseries is every bit as ridiculous as it sounds. Between the miniseries and one-shot Serina has starred in *Scenario A*, and by the one-shot David Hahn's art and writing has improved immeasurably. He adroitly sidesteps the previous premise, while remaining true to it, and presents two good stories with a conspiracy and cover-up theme. This is the one to try.~FP

SETH THROB: UNDERGROUND ARTIST

Slave Labor: *7 issues 1993-1995*

By Andy Garcia. A freakish snowstorm has descended on Oblivion City, and Seth, four friends and a demon are trapped in the apartment for days, having a succession of personal and interpersonal crises. Seth's crises as a tortured artist get wearing very quickly, though that's probably exactly the point, especially since the rest of the story is lively and funny and original.~FC

Wood Jr. and Henry VIII (for feet, angora and breasts respectively) in a matter-of-fact manner that belies the scripts' attempts to make something perverted of the whole thing. Amongst contributions about 'real' people by J.R. Williams, Mike Kazaleh and Dennis Eichhorn, Donna Barr's Desert Peach tale and a fictitious account of Hitler's snot fetish seem merely misplaced. There's no way of knowing why these stories are being told in one place. Only in the story of Rick James (by Dan Gregory) is the kink harmful to others and not all of the rich and famous are real. An oddity.~NF

SEX WARRIOR

Dark Horse: *2 issue microseries 1993*

SEXCAPADES

Eros: *9 issue limited series 1996-1997**

Accident prone, make-up artist Hotaru is having an affair with scriptwriter Mitsunari Tobe. Her dog Yukijiro, dead for ten years, is allowed back to look out for her, but only Tobe can see him. Other characters include Tobe's wife, Shiiko, and daughter, Kisato and a young actress, Tamaki Ando, who fancies Tobe. Creator, Jiro Chiba does provide some lighter moments, but this is a quite serious drama about relationships, love and pain, with, nevertheless, plenty of sex in a clean, unexaggerated manga style.~NF

SEXHIBITON

Eros: *8 issues 1995-1996*

Well drawn sex comics by Gari Suehiro, largely exploring themes of domination and public nudity, although there's plenty of straightforward sex as well. Where this scores over many other sex-related titles is in the inventive nature of the stories. There's a sense of laying the table before the dinner is served, with the sex being an (integral) part of the tale being told, not the sole reason for it. There is a concern about some stories featuring characters bordering the age of consent, seemingly a common obsession of Japanese sex comics, particularly in 7, coincidentally the best story.~FP

SEXY SYMPHONIES

Eros: *6 issue miniseries 2001-2002*

Provided you like the collagen-lipped beauties drawn by F. Solano-Lopez, this is about as good as you're going to get from a sex comic. Using the slim thread of an erotic comic being passed around a school permits Lopez to showcase the variety of his art styles whilst indulging himself with a number of sexual fantasies. A protracted session with mythical creatures in a woodland glade extends over 3 and 4, but otherwise it's generally two vignettes per issue. They're witty, arousing, and, unlike most Eros material, in colour.~WJ

SGT FURY and his HOWLING COMMANDOS

Marvel:*167 issues, 7 Annuals 1963-1981*

The antithesis of realistic war comics and one of the most static of Marvel's long-run titles. Set in World War II, the plot for any issue picked at random involves Nick Fury and his team of crack soldiers parachuting into Nazi-occupied territory to rescue a captured Allied commander, destroy a missile base or free a town from Nazi domination. Once the fantasy premise has been swallowed, enjoy the jocular dialogue, initiated by Stan Lee and the well-established (if completely two-dimensional) personalities of Fury and his Howlers.

Roy Thomas took over as writer from 29 and Gary Friedrich from 42, but any changes in scripting style are barely noticeable. Dick Ayers deserves a mention for drawing almost every issue. From 80, every odd-numbered issue reprints earlier stories. Full reprint status is achieved in 121, with the last issue reprinting the first. Noteworthy issues are 13, guest-starring Captain America, the only superhero influence on the title, 18, with the death of Nick Fury's girlfriend, Pamela Hawley, 22's wonderfully humorous dialogue, 27, giving the origin of Fury's eyepatch, and 72, with an unusually thoughtful plot.~APS

SGT ROCK

DC: *Series one 121 issues (302-422), 4 Annuals, 1 Spectacular 1977-1988, series two 21 issues 1977 (1), 1988-1992 (2-21), 2 issue microseries 1992-1994*

In 1977 DC finally changed the title of *Our Army at War* to what it had been for almost twenty years in all but name, *Sgt Rock*, but otherwise it was largely business as usual. Joe Kubert was still editing, Robert Kanigher was still writing, Sgt Rock was still fighting World War II and various artists were still trying out to replace Russ Heath. The job eventually fell to Frank Redondo from 310, who proved a worthy successor. *Sgt Rock* opens with a three-parter, 302-304, locating Rock's platoon, Easy Co, in Italy. One of Easy's troop finds his fascist brother, now the town mayor and married to his sweetheart. Lots of personal rivalry and mixed loyalties here, and to compound things, the village is expecting a visit from Benito Mussolini himself. These sagas were a rarity for Kanigher, whose preference was for single-issue stories with an occasional twist. Take for instance 317, 'Comics Books Win a Purple Heart'. The cover has Rock standing in front of some classic 1940s DC comics. Inside we find that reading comics is good for the morale of the soldiers, and stuffed down your jacket they can help deflect that all-important bullet from your body.

Although scripting largely reality-based stories, Kanigher quite often introduced a fantasy theme, in two cases time travel. In 318 Rock pontificates on what war would've meant to humans in the Stone Age, and in 326 he imagines he's in the year 2994, battling robot Nazis. These aren't as corny as they may sound, but in a way quite poignant. The same could be said for 349, 'The Dummy', where Easy Co has a new ventriloquist recruit. The war is seen through the dummy's eye, which even sheds a tear at the end of the story when its owner is killed. He returns in 376, now with complete thought patterns. Of course Kanigher doesn't want us to believe the dummy is actually real, but through it makes us view war from all angles, showing how it affects all involved parties. He was also one for championing the rights of African-Americans. In 355 Easy comes across a group of black soldiers dressed in World War I uniforms. They were part of a large black battalion that fought in France during the 1914-1918 conflict, after which they stayed in Europe and were now offering their services to fight for the new cause. The black soldier theme is also taken up in 405-406, 'Angels With Black Wings'. The story begins in the 1960s, where a middle-aged black civil rights demonstrator recalls how he fought for the USA as a pilot during World War II; Kanigher uses the opportunity to spotlight real-life black American war heroes. These stories may seem a bit contrived, but Kanigher certainly had his heart in the right place and spotlighted the injustice of segregation between black and white soldiers during this era.

368 is a thirtieth-anniversary issue where Rock recalls the past through a number of dog-tags belonging to fallen soldiers. Rock in fact dreams of the dead Easy Co soldiers in 375, while 400 highlights the four hundred days that Easy Co have been involved in the war. There are a few issues of note around this time. 395 is an all-Kubert issue with art by Joe, Adam and Andy. 396 offers good reprints depicting children caught up in the conflict, and 404 features the once-regular nemesis of Rock, the Iron Major. The 1984 annual (4) depicts the realities a German major has to face, showing his side of the conflict, portraying a man of principle doing his job for his country. Everyone's a victim in war. 408 offers a tribute to artist Shelly Mayer. A soldier called Scribbly joins Easy Co and illustrates some of scenes he has witnessed. Mayer, of course, invented the 1940s character, the cartoonist called Scribbly.

412 has guest appearances by Mlle Marie and the Haunted Tank, while 413 is a Jews and Gentiles tale, where the Judaic and Christian faiths are explored in relationship to one another. 417 and 418 are illustrated by Andy Kubert and deal with a possible future featuring the offspring of the Easy Co

soldiers. Sam Glanzman draws the lead story in 420, while the three Kuberts contribute to the final issue.

On the whole the series is extremely well produced, and it never glorifies war. Of course, there's the occasional bout of Ramboism, but that only serves to accentuate the day-to-day heroics performed by ordinary humans living under a pressure we can't comprehend. The constant high quality of Kanigher's scripts is amazing, and it extends to the back-ups, among which there are many gems. Alex Toth illustrates a tale set in Ancient Egypt in 385, but on the whole the back-ups were reserved as a training-ground for students of Joe Kubert's School of Cartoon Art such as Tom Yeates, Jan Duursema, Tom Mandrake and Ron Randall. And look out for early work by Steve Bissette (323, 346), Rick Veitch (332-334) and Tim Truman (357, 363, 367, 371, 376). Sam Glanzman's 'USS Stevens' can be found in 304, 308 and 384.

Almost immediately after cancellation *Sgt Rock* returned for a reprint run, initially titled *Sgt Rock Special;* it later became plain *Sgt Rock.* It continued the numbering from the 1977 *Sgt Rock Special* and offered many choice items. Illustrators included the likes of Alex Toth (2, 8, 11), Wally Wood (4), Frank Miller (6), Krigstein (4, 8), Howard Chaykin (9), Jack Kirby (7) and Neal Adams (8); and of course there were many classics from Joe Kubert and Heath. There were two more specials in 1992 and 1994. This time they feature new stories illustrated by a stellar line-up. Kubert, P. Craig Russell, Matt Wagner, George Pratt, Mike Golden and Tim Truman draw the first issue, and in 2 you have Eduardo Barreto, Howard Chaykin, Russ Heath and Graham Nolan. With the exception of a previously unused story in 1, none are by Kanigher, so the subtlety usually associated with Rock is missed, replaced by more action-oriented scripts from the likes of Chuck Dixon. All in all, though, they're not bad efforts, and the Heath story in 2 was marvellous to look at.

For more classic Sgt Rock tales, plus many other DC war heroes, look no further than *Sgt Rock's Prize Battle Tales* in 1964 and the digest-sized 1979 edition, the early 1970s 100- Page Super Spectacular, and a *Sgt Rock Spectacular* in 1978. Despite any views you may have on war and violence, they are a fact of history. In *Sgt Rock,* these experiences aren't glorified, and you might be surprised how much you enjoy them. The high standard of artwork throughout is undeniable.~HY

Savage Combat Tales Featuring SGT STRYKER'S DEATH SQUAD

Atlas: *3 issues 1975*

It's a shame that ten years after writing one of the best war comics ever in *Blazing Combat,* Archie Goodwin was turning out this formula material, which took its cue from *The Dirty Dozen.* A bunch of convicts are welded into an élite strike force by Sgt Stryker, who isn't ranked at all, but has a strong personality. To Goodwin's credit he also focuses on the Germans, and there's decent art from Al McWilliams throughout, but the highlight is 2's back-up strip, drawn by Alex Toth.~WJ

The SHADE

DC: *4 issue miniseries 1997*

The occasionally-reformed villain from the pages of *Starman* reminisces about incidents from his exceedingly long life, focussing on vignettes from his decades-long feud with the Ludlow family. All issues are worth a look (particularly the exquisite Gene Ha artwork on 1), but the best is 3, with a genuinely inventive revelation about a 1940's super-hero, and very nice Lee Elias-pastiche art from Bret Blevins. The Shade also appears solo in *Showcase* 95 12.~HS

THE SHADE SPECIAL

AC: *1 issue 1984*

The Shade meets FemForce's Tara on Jungle Island in a tale of voodoo and zombies. A second story, also by Rik Levins, features a super-evolved ape. The final strip is The Latigo Kid by Bill Black. All are competent but really nothing more than that.~NF

SHADE THE CHANGING MAN

DC: *Series one 8 issues 1977-1978, series two 32 issues 1990-1993*
DC/Vertigo: *38 issues (33-70) 1993-1996*

It's a rare comic that can be labelled 'unique', yet in both incarnations *Shade* earns the distinction. It began as a downright weird concept and became stranger. As introduced by Steve Ditko in particularly capricious mode, Rac Shade is an other-dimensional humanoid accused of crimes he didn't commit, who manifests gruesome distortions of himself by means of his M-vest. It's technobabble, of course, but works surprisingly well, with Ditko's contorted figures having a memorably disturbing quality and his art in general at a 1970s peak. Ditko created a complex scenario with a fully realised background that unfolds in stages, and Michael Fleisher's scripts add to the complicated and subtle plots. At every attempt to clear his name Shade is thwarted and manipulated into seeming ever more a criminal, and his former fiancée proves a merciless tracker. The origin of Shade's miraculous M-vest is detailed in 7 and 8, but regretfully the series is prematurely cancelled without conclusion. Shade reappears over a decade later in the pages of *Suicide Squad,* but even among the misfits of that title he's distinctly out of place.

The revived *Shade* is a different experience, being primarily reality-based. He's still Rac Shade, on the run from Meta, merged with his M-vest (rechristened the 'madness vest') and able to manipulate atoms to change reality, but not fully in control. He's also the vehicle for a skewed road movie-style look at the USA through the eyes of British writer Peter Milligan. Although initially strained, and continued too long, Milligan's innovative approach, offbeat ideas and thoughtful prose more than compensate for weak plots and obvious pop-culture targets (Hollywood, psychedelia, Elvis Presley, serial killers etc). Ironically, it's only these weaker issues of a generally excellent series that have been made available in book form. The better issues of *Shade* drag one through a unique and thought-provoking journey. As evinced by later issues, Milligan's ideas require an adaptable artist, and for 1-50 the work of Chris Bachalo, inked by Mark Pennington or Rick Bryant, is astounding. Bachalo's layouts, characters and scenarios have an admirable fluid consistency, and he's able to switch from tenderness to horror with ease.

More than Shade's escapades, though, the appeal of the title concerns the excellently drawn cast and their interaction. The body Shade originally inhabits is that of the man who murdered Cathy George's parents, Shade having transferred at the moment of his execution. Disturbed and vulnerable, Cathy grows during the series, and certainly not in predictable fashion. This is due in no small part to the influence of the worldly-wise Lenny and her distinctly individual outlook, seemingly based on Madonna's character in *Desperately Seeking Susan.* She's a deliberate contrast to the self-absorbed and self-doubting Shade, plagued by aspects of his personality and unconsciously manifesting his abilities at awkward times.

Having purged America from his system, Milligan rather thrashes around for a while. In between the disjointed character explorations of 'The Road' in 20-25, and the idea of *Shade the Changing Woman,* which isn't nearly as interesting as it sounds, there's the marvellous 26, giving further insight into Lenny. Everything pulls together again in the mid-30s, with Shade switching to the Vertigo imprint with 33. Therein Shade, Kathy and Lenny occupy a deserted hotel that's a magnet for weirdness, inheriting the odd inhabitants and odd problems. These include angels given human form, the reincarnation of Pandora, Milligan's self-parody, and a visit to the Salem witch trials accompanied by John Constantine in 42-44. Between 36 and 50 there's not a bad issue, and the guest pencillers who help Bachalo maintain a monthly schedule, notably Philip Bond, Glyn Dillon and Steve Yeowell, merge seamlessly.

50 is a turning point. It's Bachalo's final issue, and concludes the six-part 'A Season In Hell', the highlight of the run. Kathy is pregnant and determined to have the child, while Shade is being blackmailed into killing it. Lenny entertains two vastly different new guests while the hotel is collapsing around everyone. Reducing the plot to soap-opera

précis does it no favours. Milligan has created a dense and squirming character study, putting his cast through the emotional wringer to a far greater degree than previously, leaving them shell-shocked and, to use the comic cliché, forever changed. It's a masterpiece. A selection of new characters is introduced in following issues, initially Shade's son George, growing at an accelerated rate until 57, a burning angel given human form, a nutty inventor and a single-minded and ambitious journalist investigating Shade. They're mixed, and swap bodies after an experiment gone wrong, in the most effective story arc for the remainder of the run, 'Nasty Infections' in 58-63, wherein five polaroid photographs lead into the most viscerally horrific tale offered here. Mark Buckingham pencils most issues to 60 (with 51-53 by the underrated Sean Phillips), but 'Nasty Infections' introduces the dreadful pencils of Richard Case. His poor foreshortening, figurework and proportions are deficiencies that constantly draw attention away from otherwise excellent stories. Milligan sets up an effective plot leading to the final story arc in 68-70, in which Shade attempts to rectify the events of 50. By that point, though, the shoddy art is so at odds with the story it's no wonder the series was cancelled.

Overall both runs of *Shade* bring a stream of new ideas to comics, stretching conventions and toying with preconceptions. While not everything gels perfectly, and the series certainly won't be to all tastes, the innovation and experimentation are a joy to see in a medium where adult content rarely refers to anything other than gratuitous nudity and violence.~FP

SHADES OF BLUE

Amp Comics: *9 issues + 1999 to date*

Having recently moved to small town, Harrington, from Chicago, Heidi Paige wakes up one morning with blue hair and electrical powers, quickly gaining a sidekick in the lovelorn Marcus (whose comic version of Heidi causes some embarrassment in 6). With help as well from her friend K. T. O'Hara, Heidi battles a diamond-hard villain (1-2), stand-in teacher, Ms. White, a.k.a. Silence, who tries to recruit her against some future problem (3-5), and Ilsa Daniel, an ice skater with freezing powers (7-9). Written by James S. Harris and Rachel Nacion, this is an undemanding, fun, comedy superhero series, with some intelligent comments about growing up thrown in for good measure. The simple, animation-based artwork is by Greg Grucel (1-2), Scott Story for the comic book pages in 6 and Cal Slayton.~NF

SHADES OF GREY

Lady Luck: *12 issues 1993-1996**

Tapestry: *4 issues 1996-1997**

This a high school buddy comic about changing relationships as friends grow older and realise the problems life throws up. As entries in this genre go it's near the upper end, with creator Jimmy Gownley an artist with a likeable naturalistic style, although there are some very shaky figures and faces in earlier issues. As a writer he's able to stay the right side of saccharine while keeping his cast appealing. The strip has the feel of autobiographical recollection in places, but creating believable and sympathetic adult characters, in one case a pensioner, marks superior insight. He also makes blocks of text and illustration work within a comic format, a surprisingly rare talent. That said, there are elements of mythologising the mundane, and with five main characters in the Lady Luck series, attention is spread a little thin on occasion. Most issues can be read individually, although 1-4 are most easily found collected. With 10 Gownley pulls together threads that began with 1, and, a decent character study of a secondary cast member in 12 apart, the comic never quite has the same focus again. There's a distinct feeling of treading water in the Tapestry issues, and when the move didn't work Gownley directed his attentions elsewhere.~WJ

SHADO: Song of the Dragon

DC: *4 issue miniseries 1991-1992*

Although not everyone's idea of a dream team, the creative forces behind *Shado* seem curiously suited to each other. Mike Grell writes an exceptionally terse script, which keeps the tension levels high, beginning with a well-handled, almost wordless attack on Shado and her child by a group of masked commandos. Michael Davis Lawrence is not the most detailed colourist, but his rough use of simple tones, without much concern for whether he's within the boundary of his own huge panels, and light pencils works, except where the whole page is drenched with a single colour for atmosphere. Gray Morrow inks his pencils with the lightest of touches, alternating between heavy blacks and spatter effects, and large panels bisected by a few, carefully weighted lines. There are few new ideas, but the prose is carefully modulated and the art striking.~FJ

The SHADOW

Archie: *8 issues 1964-1965*

This travesty of a superhero comic was concocted due to publisher Louis Silberkleit having the licence for *Shadow* paperbacks in the mid-1960s. The Shadow is businessman Lamont Cranston whose secretary, Margo Lane, is in love with him. When he's not battling evil in his blue and green longjohns, which we don't see until 3, admittedly, the stories devolve into the farce of Cranston battling to keep his secret identity from Margo. Jerry Siegel writes, and the art is by Paul Reinman, apart from 1 where John Rosenberger interprets this Shadow in a more sober fashion. The stories are so ridiculous that this could be considered a parody if it wasn't such utter rubbish.~SW

THE SHADOW

DC: *Series one 12 issues 1973-1975, 4 issue miniseries 1986*, series two 19 issues, 2 Annuals 1987-1988*

For the 1970s series Denny O'Neil's writing apes the pulp style that introduced the Shadow in the 1930s, with basic mystery plots and terse dialogue. There's a galaxy of difference between the artists, but all offer a legitimate take on the 1930s setting. Mike Kaluta (1-4, 6*) opts for moody and atmospheric scenes, and is most fondly remembered by fans, while Frank Robbins (5, 7-9) has an all-action cinematic style. E.R. Cruz (10-12) manages a successful amalgam of the two approaches as another pulp hero, The Avenger, stops by in 11. O'Neil and Kaluta later reprised on a Marvel graphic novel.

As the 1986 miniseries opens it's been thirty-five years since the Shadow was last seen, yet someone's murdering his former agents. When the Shadow returns he's not aged since the 1940s, although he is a little more verbose. Howard Chaykin's mixture of sex and violence didn't sit well with older fans, but he clarifies the Shadow's origin, talents and longevity in 2 and reworks the character for a contemporary audience while remaining faithful to the essence of the Shadow. The major supporting players from the novels are present, and Chaykin's new characters are engaging. Harry Vincent's daughter Mavis is a reluctant 1980s foil to the Shadow, deploring his methods, and the Shadow's two sons, Chang and Hsu, revel in New York after a lifetime spent in a remote Himalayan settlement.

The second ongoing title is a continuing series of individual stories (labelled as chapters on the cover). 'Shadows and Light' (1-6) is initially impenetrable, but rewards careful reading. Artist Bill Sienkiewicz is on top form, but Kyle Baker's simpler and more expressive artwork (8-19) better conveys the broad streak of humour underscoring the feature. That's well exemplified by the only single issue story of the run (7), with Marshall Rogers illustrating the tale of a ghastly child on the loose in Washington. Andy Helfer's scripts concentrate on the rich supporting cast and their eccentricities more than the Shadow, who is an unpleasant manipulative figure. The assorted villains also get their share of the spotlight in very dense scripts. 'Seven Deadly Finns' (8-13) is a masterpiece, named after the Finn brothers who control New York's crime without having accumulated a criminal record. In addition to using all the Shadow's agents seen in the series to date and the well-characterised Finns, Helfer adds an Arab terrorist, five deadly lunatics, Dick Magnet and Private Eye; he even throws gorillas in the mix, without the story ever seeming crowded. The second annual is better than the first, bridging 13 and 14, taking its cue from *Citizen Kane* and revealing how the primary agents first met the Shadow.

For 'Body and Soul' (14-19) the Shadow is largely a background presence as the New York agents operate without him, and Chang and Hsu work their way back to Shamballa. Although not quite matching the previous story, it still contains more wit and entertainment than almost any other title you'd care to name. The tragic premature cancellation of *The Shadow* was apparently due to objections from the licensers, borne out by the rapid launch of the more conventional *The Shadow Strikes*. It's a shame, as the highlights of this series rank alongside the best comics of the 1980s.~FP

The SHADOW

Dark Horse: *4 issue miniseries ('In The Coils of the Leviathan') 1993-1994*, 2 issue microseries 1994, 3 issue miniseries ('Hell's Heat Wave') 1995**

This Shadow is very reminiscent of the 1970s DC version and the Marvel graphic novel, which isn't surprising, as Mike Kaluta has a heavy hand in the series for all publishers. He writes 'In The Coils of the Leviathan' with Joel Goss and it's illustrated by Gary Gianni, which if Kaluta couldn't illustrate is the next best thing. He certainly does an excellent job setting up the mood and atmosphere required for these period pieces. The story is intricate, with the occasional twist, involving ritual slayings, strange rings, evangelists and a new war weapon. The second series adapts the *Shadow* movie. Again written by Kaluta and Goss, but this time illustrated by Kaluta himself. The result is, of course, beautiful. Shame about the story, which really didn't have that much going for it. Gianni once more joins Kaluta and Goss for 'Hell's Heat Wave'. This time there's a severed finger found in a dead man's mouth, gangland wars involving the Chinese and the Irish, and a strange spectre, to say the least. It's another good effort. If you like a mystery then look no further than the first and third series.~HY

THE SHADOW AND DOC SAVAGE

Dark Horse: *2 issue microseries 1995*

Though the plot about Nazis kidnapping a scientist's daughter in order to persuade him to return to Germany and continue work on his supersoldier serum is rather predictable, there are enough twists and turns to keep the action coming. The comparison of Savage's humanitarian ideals with the Shadow's bloodthirsty attitude is nicely handled by writer Steve Vance. Artists Stan Manoukian and Vince Roucher use some odd angles that seem to be repeated more than necessary but overall it's not unattractive.~NF

SHADOW AND LIGHT

Amerotica: *4 volumes 1998-2002*

In realistic and detailed, grey-toned artwork, Parris Quinn has produced some highly charged erotic stories. Each volume contains several short stories dealing with a variety of sexual situations, but usually involving some form of submission. 1 has a man as slave to his girlfriend, a woman who dares her boyfriend to watch her with a group of men and a woman on a leash for her boyfriend's camera – the start of 'The Arrangement', which runs to 3. A woman gives in to submission, while another spies on and then blackmails her female neighbour into a sexual relationship (2). In 3, a mature woman gives herself to a bike-riding stranger and his friends, and in 4, there are two stories of female dominance over male submissives and one dealing with a married woman's encounters with multiple partners.~NF

SHADOW CABINET

DC/Milestone: *18 issues (0-17) 1994-1995*

Under the guidance of the mysterious Dharma, teams of superhuman operatives are sent out on missions to serve a political agenda, in a cross between *Mission Impossible* and *The Secret Six*. Needless to say, it's not long before several of the 'core team' – the agents we see most frequently – start questioning Dharma's actions, and striking out on their own initiative. Robert L. Washington and John Paul Leon start the comic, with Matt Wayne taking over the writing from 5. The action is kept brisk and entertaining enough that it takes a while for the obvious questions to occur. Questions like, "Why haven't people as smart and conscientious as these folks asserted themselves before now?", or "What sort of hold does Dharma have over them?" Unfortunately, the cancellation of the series meant none of these questions were adequately answered, but several of the more likeable protagonists – Iota, Donner and Blitzen – went on to form part of the Heroes team, in the miniseries of the same name. Despite the inevitable nagging questions, the series was generally enjoyable.~HS

SHADOW EMPIRES: Faith Conquers

Dark Horse: *4 issue miniseries 1994*

A complex saga mixing religious and political manoeuvring and space war. Christopher Moeller's plot hinges on alien worms that can possess humans, with the result that one is never sure of the allegiances of any of the cast members at any given time. He's also constructed a working theocratic empire and spent a long time laying out battle sequences. This would work magnificently in a film, but sadly the extraneous detail only serves to render an already difficult-to-follow story even more awkward. In some ways Moeller draws his inspiration from Masamune Shirow's similarly detailed works, and like Shirow he sometimes loses the wood for the trees. Overall, though it's an admirable effort.~FP

SHADOW HOUSE

Shadow House Press: *5 issues 1997-1998*

Intelligent horror anthology with two regular strips, introduced by a third, 'Autumn' in two-page segments written by James Chambers and drawn by Kirk Van Wormer. 'The Revenant', by Chambers and Pat Broderick, features a zombie-like creature summoned to wreak vengeance on various miscreants in a small town near the Everglades. In 'Nightmark', by Christopher Mills and Fred Harper, Gideon King is a hard-boiled private eye mixed up with a demonic cult. With covers by Dan Brereton (1, 2), John Estes (3, 4) and Harper (5), it's a well-produced title but with its premature cancellation, the stories remain unfinished.~NF

Masakazu Katsura's SHADOW LADY

Dark Horse: *7 issue limited series ('Dangerous Love') 1998-1999*, 5 issue miniseries ('The Eyes of a Stranger') 1999*, 12 issues (13-24) 1999-2000* 1 Special 2000*

By day eighteen year old Aimi is an extremely shy teenager, but when she applies her magical make-up at night she's transformed into perky cat burglar Shadow Lady, complete with an all purpose set of talents according to which eye shadow she applies. As Aimi she loves Bright, the policeman who lives in the apartment above her, but Bright loves Shadow Lady and is determined to capture and reform her. Matters are complicated by a rival for Bright's love and a superheroine in the second series. *Shadow Lady* is initially the comics equivalent of cotton candy, well drawn light and fluffy stuff, which was originally aimed at young teenage girls. With the third storyline ('The Awakening') Dark Horse start cover numbering the series as a whole as well as story arcs, and from this point there's a marginally darker tone. Other-worldly demons threaten both Shadow Lady and humanity, and in 'Sudden Death' (20-24) Aimi's make-up is running out. The special features an alternative version of the cast and stands alone.~WJ

SHADOW OF THE BAT

DC: *96 issues (1-95, 0), 5 Annuals 1992-2000*

Written mainly by Alan Grant, this series focuses on the darker, psychological side of Batman's adventures, starting with 'The Last Arkham' (1-4), in which he is committed as part of a plan to catch a serial killer, Zsasz. Leavened with a characteristic black humour, Grant's stories stay just the right side of too tongue-in-cheek, as in 'The Misfits' (7-9), in which Catman, Killer Moth and Calendar Man team up to break their losing streak. 'The Nobody' (13) deals with Batman's motivations when his secret identity is threatened, and 'The God Of Fear' (16-18) is a 'Knightfall' tie-in featuring The Scarecrow. 19-25 are 'Knightquest' tie-ins while 29 and 30 are part of 'Knightsend' in which Azrael is Batman and Bruce Wayne must recover his confidence. 31 is a comedy *Zero Hour* issue in which an alternate-world Alfred (the fat one with a desire to be a detective) turns up to keep house, which eloquently expresses Grant's feelings about such tie-ins.

35 is part two of 'Troika' (the return of the KGBeast, featuring Batman's new costume) and then Black Canary (36), The Joker (37-38) and Solomon Grundy (39) guest before Grant brings back his favourite anarchist Anarky, a disillusioned, bored youth whose motives seem pure but whose actions are criminal. 43 and 44 crossover with Catwoman 26 as the pair face Catman in 'The Secret of the Universe'. The pace changes for 45, a murder mystery set in Wayne Manor after a skeleton is found in the cellar and proves to belong to Joshua Wayne, who was involved in helping slaves escape from the South during the American Civil War. For a while, the series is characterised by the variety of Grant's scripts. There are appearances by regular villains like Poison Ivy and the Fluoronic Man (56-58), Scarface (59-60), Two-Face (62-63), Mr. Freeze and Clayface (75), the Mad-Hatter (78-79) and the Joker (80-82). One-shots like 71's whodunit and supernatural tales (of which Grant seems too fond) like 69-70, guest-staring Fate, are mixed with the introduction of new villains – Narcosis (50-52) and the two small-time conmen who almost succeed in making Gotham's authorities turn on themselves (65-67). The 'Contagion' crossover takes up 48 and 49, and its sequel, 'Legacy', is covered in 53 and 54. 73-74 are crossovers with 'Cataclysm', 75-79 cover the 'Aftershock' of that series and 80-82 begin the 'No Man's Land' crossover (note that 80 is a flip-comic with Azrael 47).

Artwork started well with Norm Breyfogle (1-5,13, 65-67, 75) but swiftly became inconsistent as different artists guested. Exceptions include Tim Sale (7-9), Kevin Walker (39), John Paul Leon (40-41), Barry Kitson (43-44 in a departure from his normal style) and Jim Aparo (61, 68). Other issues were drawn by Vince Giarrano or Bret Blevins until, from 51, a semi-regular was finally introduced, giving the title the consistency it had lacked. Dave Taylor's supple figures and detailed backgrounds are sometimes let down by his stiff faces, but his work counterpoints Grant's edgy scripts well. An artistic high point is reached with 69 when Mark Buckingham became the new regular penciller, inked by Wayne Faucher (Robert Campanella's inks in 80-82 are fussier and less attractive).

82 is Grant's finale, after which individual issues are usually episodes of the many crossover stories comprising the better than expected 'No Man's Land'. Writers of note include Bob Gale (83), Ian Edginton (85, 89), Devin Grayson (84, 92), Lisa Klink (86) and Greg Rucka (87, 88, 93, 94) and there's good artwork from Alex Maleev (83), D'Israeli (85), Guy Davis (86) and Paul Gulacy (90). An issue 0 (1994) follows *Zero Hour*, and all annuals were written by Grant. 1993's is part of the 'Bloodlines' crossover, introducing Joe Public, not seen since, and the 1994 annual is an Elseworlds story where Bruce Wayne controls Gotham and Anarky helps free the city from his tyranny. An excellent recap of Poison Ivy's first year as a criminal is drawn by Brian Apthorp for the 1995 annual, 1996's is one of the 'Legends of the Dead Earth', featuring the legacy of Batman again by Apthorp while 1997's Annual is a 'Pulp Heroes' story starring private eye, Joe Potato joining Batman against Poison Ivy.~NF

Unfortunately, when Claire is killed by werebeasts, Jesse must rely for help on her sister's ghost and the mysterious Helen, Exile and Golem (the Shadow Reavers). This routine, end-of-the-world, supernatural thriller is gorily written, though the effects are lessened by the polished artwork of Nelson (similar in style to John Byrne). Ending on a cliffhanger, the next chapter has not yet been scheduled.~NF

Horus SHADOW REIGNS

AIX.C.C.: *One-shot ('Renegade Soul') 1997, 3 issues ('Interregnum') 1998*

An ambitious and well-crafted fantasy devoid of the cloying constituents characterising most fantasy in comics. There are elements of *Highlander*'s urban settings, and, seemingly of Roger Zelazny's *Amber* series, as an innocent is caught in events beyond his control, discovers he has a destiny, and has to learn to cope pretty damn quick. It's occasionally over-written, which is understandable since German creator Horus isn't working in his first language, and there's a stiffness to the art (reminiscent in its detail to Glenn Fabry), although these are both minor concerns. The series remained unfinished, at least in English. In Germany it was completed as *Schattenreich* to considerable acclaim and awards.~WJ

THE SHADOW STRIKES

DC: *31 issues, 1 Annual 1989-1992*

This was DC's third and longest-running attempt at presenting the Shadow. Gerard Jones and Eduardo Barreto put together a coherent cast and authentic pulp atmosphere without making the whole thing seem dated. Jones quickly established the Shadow's best-known supporting cast members (Margo Lane, Harry Vincent, Shrevvie and Inspector Cardona) as central to the plot and used known Shadow history as a basis for adventures, without rewriting it. He sets the series firmly in the 1930s, and also does much to establish Margo and Harry as interesting and important parts of the storylines, rather than just being foot-soldiers following orders. Barreto's artwork, though still developing, is suitably dark, reminiscent of Kubert or Toth, giving the scripts the period feel required.

The first story-line (1-4) involves Anastasia, Rasputin and a series of headless murders, hinting again at secrets in the Shadow's past. 5 and 6 were part of a Doc Savage crossover, the first time these two heroes had met, and 7 features a plot revolving around a Shadow radio show with a young entrepreneur not dissimilar to Orson Welles. 8-10 feature Shiwan Khan, the Shadow's arch enemy, followed by a four-parter involving butchers and Chicago's underworld. It provides a look both at the semi-mystical nature of the Shadow's powers and at the often dark and seedy side of his adversaries. Unfortunately, 15 was the last by Barreto, and though Rod Whigham worked hard to maintain the style already established, the artwork is too hard-edged.

16 and 17 'introduce' the real Lamont Cranston as guest penciller Mark Badger drew the Shadow involved in union activity. The epic seven-part 21-27 pits him against Shiwan Khan again, in China, preceding the series' final storyline, a

retelling of the Shadow's origin. Jones tells a good story; in concentrating on the supporting cast, he enables the Shadow to be used effectively but mysteriously while hinting rather than coming right out with revelations about the character. The annual has the Shadow visiting Hollywood, written by Jones and drawn by Dan Spiegle (another artist with a good period feel), plus a short story about Margo Lane chunkily and unattractively drawn by Luke McDonnell.~NF

Although a commercial success when released it's hard to see why, as the mysterious vigilante called Shadowhawk prowls the big city breaking the spines of any nasty old thugs he finds. The big gimmick was that the reader was not privy to the identity of the protagonist. As with all such stunts, it's only effective for as long as it lasts, then it has to be followed up, preferably with some quality writing, but usually by another gimmick. In this case we find that Shadowhawk is dying of aids, but in a move that can only be called exploitative, creator Jim Valentino didn't have the guts to have him contract it in an honest way. Our hero was deliberately injected by a nasty street punk wielding a syringe, which lead him to revenge himself on the dregs of society. After the *Images of Shadowhawk* by Alan Grant and Keith Giffen and featuring Trencher, the latter run of the series outlines a quest for a cure, guest starring a bunch of Image superheroes, before Shadowhawk finally dies. A couple of specials with contributions from the likes of Alan Moore and Stan Sakai, try to incorporate some form of Shadowhawk into the entire Image continuity before the new series begins. Although it's confused and repetitious it's not as tasteless as its predecessor.~WW

New Orleans jazz saxophonist Jack Boniface takes home a woman who turns out to be a vampire, and once the bite's been put on him he's compelled to go out and fight crime at night. There's a little more to it, but it's a slim and illogical premise that doesn't gel in the first few issues, despite some atmospheric art from David Lapham (1, 2, 4, 5). All-purpose Valiant evil tattooed mystic Master Darque is introduced in 8 to beef things up considerably. Bob Hall writes from 6, and pencils from 10, and gradually develops *Shadowman* into a gloomy corner of the Valiant Universe. His plots are slim, but he instils a mood through pacing and characterisation, and while he's no stylist Hall's storytelling works. Not every issue is a success, but by 12 *Shadowman* is a decent adventure title. 14's story of a hick town with its share of secrets and bully boys is okay, and in 17-18 Jack learns more about what he's become in the company of Archer and Armstrong, who're well worked into the story, with a purpose beyond simple sales boosting. The same can't be said of 19's Aerosmith appearance. Hall's other strength is the design skill he brings into play on the covers. Almost every one after 10 is striking and imaginative, with little repetition occurring. These wordless illustrations are excellent attention-grabbers, but Valiant's redesigned cover template from 30 reduces their effectiveness.

21-23 send Jack back in time to meet a previous incarnation, and lead into the zero issue, which clarifies once and for all what Shadowman is, who his predecessor was, and throws in the early days of Master Darque to boot. It's the best of the run to that point and propels Hall to step up a gear. Several previously introduced characters return, along with a deadly new foe, the assassin Ishmael in 26, and Shadowman and Jack begin to diverge into separate personalities. 'The Chaos Effect' crossover (29) has the effect of powering up Shadowman to the point where he's a match for Master Darque, but from then on he's not nearly as interesting. The human-interest stories that had fired the book disappeared into a welter of less than absorbing fights, with Hall modifying his style to include more pin-up action pages. Anyone who finds Ann Rice's vampire writing tiresome should check out 40. The series ends with the police and crimelords uniting to bust Jack.

For a new incarnation the title is split into two words, and the opening four issues from Garth Ennis and Ashley Wood set the tone for the series, being relentlessly unpleasant and remorselessly downbeat. The old Shadowman is replaced by a grittier version, but it's Ennis on autopilot. Jamie Delano and Charlie Adlard continue the depressing tone, until 16, with Adlard's art the highlight of the run. The final creative team of Serge Clermont and Klayton Krain diminish the voodoo theme, and mix what's left with technology for an uneasy concoction that was enough to kill the title. Revived for a video game, everyone involved with the accompanying miniseries should have been ashamed at cashing their pay cheques.~FP

SHADOWMASTERS

Marvel: *4 issue miniseries 1989-1990*

Carl Potts, Dan Lawlis, Russ Heath and Todd Smith relate the history of a Ninja who teams up with a US soldier during the American Occupation of Japan to frustrate the plans of Imperialists dedicated to the reconquest of Japan and, eventually, the World. However their success drives their foes underground, with tragic repercussions, for themselves and their Ninja trained children. Spanning forty years, this taut thriller is a prequel to events in *Punisher* 24-25.~WW

SHADOWMEN

Trident: *2 issues 1990*

Originally intended as a six-issue miniseries but never completed, this is early work from Mark Millar. Some men in black beat up a woman to prevent her repeating her story about a supernatural experience. The artwork by Andrew Hope is very atmospheric – lots and lots of black ink – but there's not a lot to get excited about.~NF

SHADOWS AND LIGHT

Marvel: *3 issues 1998*

In the wake of DC's successful *Batman: Black & White* this is a similarly monochromatic anthology with much to commend it. With stories drawn from any period in Marvel's

history, the title's creative teams are freed from the restrictions of current continuity, resulting in stories that by and large strike to the heart of what made Marvel great in the past. Each issue so far has at least one great strip: Black Widow by Gerard Jones and Gene Ha in 1, The Thing by Lee Weeks in 2 and The Hulk by Roger Stern and John Buscema in 3. With beautiful covers and nice pin-ups rounding out each issue this is a lovely package that is very much Marvel's best title in years.~DAR

SHADOWS FALL

DC/Vertigo: *6 issue miniseries 1994-1995*

Separated from his soul by instigating an act of violence costing an innocent life, Warren Gale wanders the world an empty shell while his soul is the cause of innumerable suicides. Confronted by incidents from his past, Gale realises he must deal with his inhuman predator. Ludicrously pretentious twaddle, further compromised by ridiculous cut-and-paste art.~FP

SHADOWS FROM BEYOND

Charlton: *1 issue (50) 1966*

An anthology comic with horror and supernatural stories, usually involving the operation of cosmic justice. No masterpieces maybe, but they all make their point, and the artwork is usually very effective. Worth a look, if not a systematic hunt. In the peculiarly unique Charlton fashion, the numbering continued from *Unusual Tales*.~FC

SHADOWS FROM THE GRAVE

Renegade: *2 issues 1987-1988*

Horror series, written by Kevin McConnell and illustrated by David and Dan Day. Worth looking at for the detailed rendering, reminiscent of Steranko and Gulacy. The stories pale by comparison.~NF

Star Wars SHADOWS OF THE EMPIRE

Dark Horse: *6 issue miniseries 1996*, 5 issues miniseries ('Evolution') 1998**

Shadows of the Empire was released in every format but film as 1996's big Star Wars event and is set between *The Empire Strikes Back* and *Return of the Jedi*. This placing renders Han Solo off limits, and the remainder of the primary heroes are sparsely used, turning the title over to Boba Fett, escaping from one fellow bounty hunter after another, and the machinations of Darth Vader and a new foe. As a film it may well have worked, but the lack of plot is very evident, writer John Wagner is on autopilot, and the art team of Kilian Plunkett and P. Craig Russell is ill matched. 'Evolution' promotes some of the previous series' secondary cast, weighs in more heavily with the big guns and is written by Steve Perry, who wrote the 1996 *Shadows* novel. It's altogether more enjoyable, if similarly light on plot, and Ron Randall provides far better cast likenesses.~WJ

SHADOWTOWN

Iconografix: *1 issue 1992*

Poor artwork and one-dimensional characters ensure that this well-intentioned attempt to produce a story about an independent Afro-American nation within the USA fails.~WJ

SHAMAN

Continuity: *1 issue (0) 1994*

A by-the-numbers sword-and-sorcery title, intended as a comic-dealers-only incentive, and lifted from the mundane by quite extraordinary artwork by Alex Niño. A comic best read by not reading the dialogue or captions. Trust me.~DAR

SHAMAN'S TEARS

Image: *13 issues (0-12) 1994-1996*

Joshua Brand is empowered to assume the attributes of the animal kingdom in a Native American ceremony. Stories take place over four issues, and Brand initially becomes involved with corporate, genetically engineered, human/animal hybrids, later to star in *Bar Sinister*. While never bad, Mike Grell's spartan storytelling and illustrative page composition disappoint in comparison with previous work, such as that of 5-8's guest star Jon Sable, and trivialities such as stupid names (Regus Patoff and Pat Pending) detract from what's occurring.~WJ

SHANNA THE SHE-DEVIL

Marvel: *5 issues 1972-1973*

One of Marvel's several ill-fated attempts to produce Women's Lib comics written by women. Better than its counterparts. But not much. Shanna O'Hara, a normal American woman disillusioned with man's cruelty to man and beast, divorced herself from the trappings of civilisation (apart from make-up and an offstage hair salon) and did her Tarzan thing in the African jungle. Carole Seuling only lasted for three stereotyped issues. Steve Gerber effected a partial rescue from 4, launching the Mandrill/Nekra storyline that blossomed into full glory in *Daredevil* 108-112. Shanna later became a major supporting character in *Ka-Zar*.~APS

SHAR-PEI

Caliber: *3 issue miniseries (Swords of Shar-Pei) 1991, 3 issue miniseries (Guns of Shar-Pei) 1991*

Muddled and confusing mixture of monster comic and oriental musings as a dog in human form seeks some truths. Tom Sniegoski, or Thomas E. Sniegoski as he is here, would go on to write *Vampirella* and *Buffy*, but there's no evidence of writing talent here.~FP

SHARKY

Image: *4 issues 1998*

This one's a little complicated, perhaps, but there's enough fun that it doesn't matter. The opening few pages of each issue are painted, and feature our hero Sharky fighting guest stars such as The Mask and Savage Dragon. These represent pages from fictitious comics being read by characters in the rest of the strip. The witty story, by Dave Elliott, features kids, purple people eaters, manipulative Norse and Greek gods, and a great many ladies more than half-naked, which leads one to believe that it might be aimed more, on the whole, at boys than girls. Alberto Ponticelli and Alex Horley's slick art is superbly computer coloured by BAD@$$!.~GK

SHATTER

First: *Special 1985, 14 issues 1985-1988*

"The First Computerised Comic!" it says on the cover of the first issue. It looks so grainy you can count the pixels, especially in the lettering, and you think, "Oh no, a gimmick." Or "Another sad case who wants to marry his Apple Mac. This is going to be hideous." Well...no, and then yes for a while, and then no-ish. The Special was written by Peter Gillis, with art by Michael Saenz, and they make magic with the story of an independent tough-guy (Shatter) on a freelance project for the police in a Blade Runner setting. It's a strong story with some truly clever plotting, and Saenz' storytelling is so effective that you're absorbed within pages, with no time to count pixels. After this, Shatter had eight pages in *Jon Sable, Freelance* 25-31, and when he came back with his own title, he no longer had Gillis as writer, and it certainly showed. It's yet another corporate conspiracy yarn, and it's hard for Saenz to demonstrate his story-telling skills when there is no story. By 3, Saenz had left, and any craftsmanship in the artwork left with him. Gillis returned as writer with 5, and the story instantly improved, although with perfunctory artwork there was never any danger of recapturing the excitement of that first special.~FC

SHATTERED IMAGE

Image: *4 issue miniseries 1996*

Image crossover that sees Savant (from *WildC.A.T.S*) trying to put together a cross-section of heroes to prevent the splitting of the Image Universe into six separate ones. Only Spawn seems content to let the crisis continue to its logical conclusion (on the basis that his murderer won't exist if the split takes place). In any case, the real world has made this whole plot redundant. Since it's written by Kurt Busiek and Barbara Kesel there's some good characterisation, but it's an utterly contrived crossover that barely holds the reader's interest. Michael Ryan's artwork is from the Manga-influenced school of big eyes and the Liefeld school of overly muscled anatomy but it's not that bad in context.~NF

SHAZAM!

DC: *35 issues 1973-1978, 4 issue miniseries ('The New Beginning') 1987, Graphic novel (Power of Shazam!) 1994, 47 issues (Power of Shazam!), 1 Annual 1995-1999, one-shot ('Power of Hope') 2000, one-shot ('Shazam! and the Shazam Family! Annual') 2002*

Originally published by Fawcett from 1940, most prominently *Whiz Comics* and *Captain Marvel Adventures*, and a once universally known character, Captain Marvel was the subject of a lawsuit over his supposed similarities to Superman that eventually forcing publication to cease in 1953. It's ironic, then, that by the time of the DC revival Marvel were publishing a different Captain Marvel, meaning the more famous character had to appear in *Shazam!* For the same reason DC's hardbound reprint editions of 1940s material are titled *The Shazam! Archives*, three volumes of which are now available.

When young Billy Batson speaks the name of the wizard, Shazam, he becomes the adult superhero, Captain Marvel, the World's Mightiest Mortal. This aspect of the character was ignored when his 'family' expanded, as neither Mary Marvel, nor Captain Marvel Jr are adults in their superhero identities. DC's first series begins well, by returning original artist C.C. Beck to the character, with a re-telling of the origin and a reprint from the Fawcett comics. From the start, favourite characters reappeared, whether villains like Dr Sivana and Mr Mind (an alien worm) or friends like Tawky Tawny (a talking Tiger) and Uncle Dudley. Denny O'Neil, Elliot Maggin and E. Nelson Bridwell (from 10) provide one or two new short stories in each issue until Bridwell becomes sole writer of full-length stories in 26. Some issues were all (8, 21-24), or mostly reprint (12-17, one-hundred page issues, as was 8). Unsatisfied with the scripts not conforming to his idea of Captain Marvel stories, Beck's last issue was 10, after which Bob Oksner and Kurt Schaffenberger alternated on the new stories. One-off artists included Dave Cockrum (on a Captain Marvel Jr strip in 9), Dick Giordano (introducing Isis in 25, when both Captain Marvel and Isis had TV shows) and Alan Weiss (34). Bridwell's issues sent Captain Marvel on a tour of America, defeating agents of Sivana in each location. Highlights include the return of Kid Eternity (27), Minute Man (31), Captain Nazi (34) and King Kull (35). This last issue was significant in introducing the artwork of Don Newton to the series and subplots other than whether the villain would return in the next issue (in this case the sale of the radio station where Billy works as a broadcaster). After cancellation this creative team followed the strip into *World's Finest*. Beck's artwork is wonderfully simple and effective, and his clean-line style was perpetuated by Schaffenberger (who also worked on the original series). Giordano and Weiss' more realistic style seems unsuitable to the character, but Newton, though much less cartoony than Beck, nevertheless offered a modern interpretation that showed an understanding of Beck's original vision.

'The New Beginning', by Roy and Dann Thomas and Tom Mandrake, introduces Captain Marvel to the main DC Universe after the *Crisis on Infinite Earths* series. It provides character tweaks, like increasing Billy's age and establishing more past, but much of the sense of fun and wonder is lost in this clash with Sivana and Black Adam. Mandrake's artwork is in a realistic style that lacks clarity in its definition.

The Power of Shazam! hardback is another new start, attempting to combine the best of a modern approach with some of the look of the past. Writing and drawing, Jerry Ordway re-tells Captain Marvel's origin, explaining how Billy's parents were killed in Egypt by his father's assistant who would become Black Adam, leaving Billy as an orphan with his sister being brought up by Black Adam's sister. The regular series picks up from this in Fawcett City, with Mary Marvel (4) and then Captain Marvel Jr being re-introduced (6-7, a re-telling of his origin with Captain Nazi). Billy has problems at school because he lives without an adult and keeps disappearing, and villainous uncle, Ebenezer Batson lurks in the background. 1-12 effectively tell a single story as Superman villain, Blaze, attempts to capture Captain Marvel's soul, while 15-18 feature one of Mr Mind's plots to conquer the Earth. In keeping with its closer integration into the DC Universe, 20 is a *Final Night* and 31 a *Genesis* crossover, whilst guest appearances include Plastic Man (21), Batman (22) and Starman (35-36). The original series is not forgotten, as many other characters are reintroduced, including Ibis the Invincible, Bulletman and, thankfully, Hoppy the Marvel Bunny (in 29, though it might be a dream). The Mr Mind-led Monster Society of Evil start an atomic war (38-41), whilst Black Adam's attempt to clear himself of murder dominates 42-47 with appearances from the JLA and the Three Faces of Evil. Jerry Ordway's scripts respect the source material, whilst still providing a fresh view of the Marvel Family, though some elements are more successful than others (Captain Marvel Jr's decision to rename himself 'CM3' to name one). The main pencil artist is Peter Krause (to 41), who largely avoids negative comparisons with the past through his own, clear storytelling. Ordway himself completes the series with inks from Giordano, who is also responsible for a Mary Marvel solo story in 28. Of note also is Gil Kane's issue length Captain Marvel Jr clash with Captain Nazi (14). The 1996 Annual is a 'Legends of Dead Earth' story by Ordway and Mike Manley. Paul Dini and Alex Ross' 'Power of Hope' is one of several treasury-sized comics with painted artwork and morally uplifting tales. Here, Captain Marvel offers inspiration to children suffering in a hospital by spending time with them and telling tales of his exploits. *The Shazam Family* one-shot is also reprints (as if in an annual from 1953), but well selected. With all stories written by Otto Binder, it features the introduction of Mary Marvel, drawn by Marc Swayze, a Captain Marvel Jr battle with Captain Nazi, by Mac Raboy, the first appearance of Black Adam, and the Marvel Family versus the Sivana Family, both by C. C. Beck.~NF

SHE-CAT

AC: *One-shot ('Curse of the She-Cat') 1989, 5 issues 1990-1994, 1 "alternate edition" (5) 1995*

In 1937, Jessica White is assisting her archaeologist father in Egypt when a cave-in traps her in the tomb of Sehkmet, the Cat Goddess. To save her father from the inevitable tomb-robbers she merges with the spirit of Sehkmet and becomes an immortal, savage, punisher of the wicked. The series continues in the same clichéd manner as She-Cat finds herself framed for murder and on the run from her Fem Force team mates. Due to a clerical mix-up most copies of issue 5 were destroyed before distribution, necessitating the production of an alternate edition with the same interiors (part of a crossover with *Fem Force* 78-84) but a different cover. Derivative, but not without charm.~WW

SHE-HULK

Marvel: *Series one 25 issues 1980-1982, Graphic Novel 1985, series two 60 issues 1989-1994, 2 issue microseries ('Ceremony') 1990*

Mild-mannered lawyer Jennifer Walters, injured in an attack by criminals, is brought back from the brink of death by a transfusion of blood from her cousin, the only candidate on the scene at the time. Unfortunately, her cousin is Bruce Banner, aka the Incredible Hulk, and his gamma-irradiated blood causes her to swell up and turn green from time to time. No doubt to the disappointment of horny pubescent readers, she never quite burst out of her shirt the way her cousin was noted for doing. The first issue, written by Stan Lee and drawn by John Buscema, is competent, but after that, David Anthony Kraft and Mike Vosburg take over, and it becomes clear that nobody cares what they're doing on this. Our monosyllabic heroine fights villains like the Man-Elephant, meets Hellcat, Man-Thing and Morbius as her title rapidly becomes a halfway house for homeless heroes, and is romanced by the ludicrous Zapper. The series stumbled on for longer than logic and reason would have us believe, before finally collapsing. This series was titled *Savage She-Hulk*, as opposed to the second series, by which time she'd become "Sensational".

She-Hulk herself became a popular and established supporting player in *Avengers* and *Fantastic Four*, which led to a graphic novel, written and drawn by John Byrne. Lightweight, fun and cheesecakey (rather too much so in one offensive sequence that enables Byrne to explicitly condemn sexist attitudes while displaying them), it ushers in a significant development. It's confirmed that Jennifer Walters' physiology has adjusted to her gamma-irradiated state to the extent that she can no longer return to human form. Refreshingly, this isn't a cue for the usual overplayed angst. She enjoys the hell out of her seven-foot-tall green persona, and is happy to stay that way!

"Okay, this is your second chance. If you don't buy my book this time, I'm gonna have to come to your house and rip up all your *X-Men*." Writer/artist John Byrne thus establishes, on the cover of the second series' first issue, that the She-Hulk knows that she's in a comic, and exploits that knowledge. She crosses panel borders to get around faster, uses the break between pictures to change outfits, and breaks the fourth wall to address the readers on the idiocy of her villains, and so on. This comedy routine is subverted to poignant effect when a supporting character, Louise Mason, is introduced in 4. As Louise Grant, she was the Blonde Phantom, a crimefighter of the 1940s, and possessed the same awareness as She-Hulk. Long retired, she discovers – at the cost of her husband's life, in a movingly told sequence – that the ageing process is suspended when you're in a currently published comic. This supporting-character gig is her way of fending off the ravages of time. 1-7* are quirky and imaginative, a highly enjoyable read, with She-Hulk triumphing in her own insouciant style over such insidious villains as the Terrible Toad Men, the Headmen, Stilt-Man and Dr. Bong. The eighth issue, co-starring Father Christmas, is a bit over-sentimental, but still readable. Following 'creative disagreements', Byrne quit after 8, and fill-ins along the same lines, but less entertaining and imaginative, were the order of the day. Even though big names like Peter David and Steve Gerber worked on She Hulk, it never quite gelled. Better than the average was 21-23's 'Return of the Blonde Phantom', involving a time-trip to the 1940s, a guest appearance by the All-Winners Squad, and a new second-generation superheroine.

Byrne returned with 31, on good form initially with the return of Spragg the Living Hill, leading into a confrontation with the Mole Man and the rejuvenation of Louise. A parade of third-rate bad guys swaggered through the pages, and were despatched with fine style, including the zombie master Black Talon, the Living Eraser and the malevolent Mahkizmo, excellent in 38-39. Sadly, Byrne's attention began to wander, and more space was given to gimmicks than to story. 40 had Shulkie spend seven pages purportedly nude rope-jumping, and 45 scattered the main storytelling in tiny panels around (admittedly well-executed) pin-up shots. 50 had several artists auditioning to replace Byrne. Dave Gibbons, Walt Simonson, Howard Chaykin, Terry Austin, Wendy Pini and Adam Hughes drew their interpretations of the Emerald Amazon. Together with a coherent, if low-key, story, and a foil-enhanced cover that was actually attractive, this was an enjoyable and memorable send-off for Byrne. The 'regular' new artist, Todd Britton, lasted all of an issue and a half, but writer Michael Eury struggled on until the end of the run with a succession of less and less interested illustrators.~HS

SHEILA'S DIARY

RedLight Manga: *3 Volumes 2002*

Sheila is a dominatrix witch from the spirit world, who, tired of her slave, Chacha, decides to find a virgin on Earth to enslave. Unluckily for Ayaka, she bumps into Sheila on the street and is forced into an ever more submissive relationship with her. Things become complicated when Ayaka falls in love with new guy, Shinobu, who seems just as dominating as Sheila. SHERLOCK HOLMES

DC: *1 issue 1975*

Fresh from their excellent work on the recently revived *Shadow*, Denny O'Neil and E.R. Cruz produced this interesting curio. It had the same look and feel as the *Shadow*, and is suitably reverential to the Arthur Conan-Doyle writing, but it somehow just doesn't convince. The decision to base the story on Holmes' final battle with his nemesis Moriarty means we are left with the feeling of being in the middle of something. The whole enterprise would have worked better as an ongoing series, but that, sadly, was not to be.~DAR

SHERLOCK HOLMES

Eternity: *23 issues 1988-1990*

Collecting the *Sherlock Holmes* newspaper strips of the 1950s. Never heard of them, you say? And your parents or grandparents don't remember them? That's because they're resolutely mundane, although Frank Giacoia's art, while never poor, sometimes transcends the material he's given. The landscape presentation permits larger, but muddier reproduction of the daily tiers, and the inclusion of Sunday re-cap pages consistently breaks up the story.~WJ

SHERLOCK HOLMES

Caliber: *2 issue microseries ('Adventure of the Opera Ghost') 1994, one-shot ('The Sussex Vampire') 1995*

The 'Opera Ghost' by Steven Jones and Aldin Baroza is an original adventure that gives the usually sidelined Dr. John Watson a chance to shine when the detectives are called abroad to investigate a Phantom that is terrorising the Paris Opera house, seemingly causing a rash of suicides. Although Watson works well as protagonist the dubious addition of his own dead wife muddles the intriguing combination of Holmes and the Phantom of the Opera. 'The Sussex Vampire' is a creditable adaptation by Warren Ellis and Craig Gilmore of one of Sir Arthur Conan-Doyle's more chilling tales. The consulting detective is called to the country to solve the mystery of a prominent businessman whose foreign wife seems to be sucking blood from the neck of their child. Holmes is a perennial favourite and fans won't be disappointed, but mainstream comics readers might find the proceedings a little slow and dry. Caliber also produced several text-based comics adapting *Holmes* stories, largely illustrated by Dan Day.~WW

Northstar: *5 issues (16-20) 1989-1990, one-shot 1992*

Something of an oddity in that each issue contains the text of one of Arthur Conan Doyle's original short stories with accompanying illustrations by Dan Day. His black-and-white drawings are in the same ornate style used by his brother Gene, with likenesses based on Basil Rathbone and Nigel Bruce. Overall, though sometimes stiff, the illustrations do add to the period atmosphere and enhance the reading experience.~NF

SHERLOCK HOLMES CASEBOOK

Eternity: *2 issue miniseries 1989*

One must concede that some readers will require a cheap reprint, reproduced in black, grey and white, of Dell's 1961 brace of colour *New Adventures of Sherlock Holmes*, especially as Mike Sekowsky is involved on the art side. 1 includes a story about a Professor Moriarty bankjob under cover of an England/France cross-channel tunnel, but the stories are otherwise rather too elementary: Plenty of violin, no trace of cocaine.~GK

SHERLOCK HOLMES In The Curious Case of the Vanishing Villain

Gordon Rennie and Woodrow Phoenix concoct an offbeat case for the classic detective and companion. SHERLOCK HOLMES:Tales of Mystery and Suspense

Northstar: *2 issues 1992*

Nonsensical and offensive adventure as Holmes and Watson become embroiled in a case of incest and child abuse. Tawdry, exploitative rubbish from Joe Gentile and Phil Rittenhouse delivered with a staggering lack of sensitivity to the characters and the issues.~WW

SHERLOCK JR.

Eternity: *3 issue miniseries 1989*

In the 1930s Sidney Smith became the first cartoonist awarded a contract for $1,000,000, the price paid to retain the creator of *The Gumps*, then the most popular newspaper strip in the USA. In 1912, however, his feature was the inept and unlucky detective Sherlock Jr. Smith was neither a great cartoonist nor a great writer, but with *The Gumps* he hit on the then original idea of portraying life as it actually was for millions of Americans, thus creating the first soap opera. Devoid of that extra level, *Sherlock Jr.* has dated very badly, and it's difficult to conceive that it was ever riotous stuff. Filling six panels to the strip, Smith rarely departs from a formula that has Sherlock discovering a reward for criminals in the first panel, adopting a disguise or secreting himself in the second, and fluffing the capture by the sixth. So bland and predictable, Sherlock Jr. doesn't even qualify as a historical footnote. Buster Keaton made a great film with the same title, mind.~FP

SHERMAN'S MARCH

The Heritage Collection: *One-shot 1995*

A telling of Major General Sherman's march through Atlanta during the second half of 1864. This account of one of the most destructive campaigns of the American Civil War is careful to date events and battles as well as providing historical detail. Woven into this is the fictional account of a slave named Luther and his woman Leah and their fortunes during the hostilities. Probably aimed at giving the reader a protagonist to follow, these unfortunate characters remain ciphers next to the carefully portrayed historical accuracy. Educational but amateurish work from writer Ethan Krash and artist/collaborator Wayne Vansant.~SW

SHEVA'S WAR

DC/Helix: *5 issue miniseries 1998-1999*

On the planet, Taramai, when Captain Ahmi Sheva and her militiamen discover a remote village destroyed by unknown creatures, she finds herself on the frontline of an invasion by the worms of the Vaylen Empire. An episode from writer and artist, Christopher Moeller's own Iron Empires saga, this is a well-written science fiction adventure with attractive painted artwork (reminiscent of a less-angular Howard Chaykin), though it's a little stiff in the action scenes.~NF

Hugely popular 'bad girl' comic featuring an oriental avenging angel killing various lowlifes while agonising over her Christian principles. When it first came out many a wag pondered "Is it pronounced Shi, as it shit, or Shi as in shite?" Because she's tough and slaughters rapists, few people seem to worry that God-fearing creator William Tucci (who actually thanks Jehovah in the first issue for inspiration!) slavers over his heroine. Sensible creators do not come to the conclusion that skimpy leather knickers are the best outfit for crime fighting although Tucci protests his innocence vigorously. He even goes so far as to create a manga-style version of the first story arc written from the point of view of a low-life observer and pontificates how from this narrator's point of view the story appears to be just fights, exactly like those critics who don't read his work properly before condemning it ('Shiseiji', the story's title, means bastard in Japanese). Of course, all the time he's pontificating he's able to draw a cut-down version of his own work with all the waffle gone and just the violence left for readers to buy...

The comic's a heady cocktail of blood-dripping swords, Eastern mysticism and crotch shots destined to delight adolescents of all ages for many years to come. As the franchise expands, there is a weird range of products available. As well as the manga version, Chris Golden and Caesar do twelve issues where Shi's ranged against the ancient demon Oni to save modern Japan while Tucci's taking care of business on the bewildering array of miniseries and crossovers. Almost every miniseries comes with variant covers, limited edition covers, ashcan editions and ½ editions distributed with *Wizard*. Half a dozen different covers and 'antiqued' versions at $100 a pop are not unusual. *The Cyblade*, *Daredevil* and *Vampirella* crossovers each start in issues with the titles reversed.

There's a Battlebook (with a gorgeous Alex Ross cover) where you can play at being Shi by choosing options and rolling dice, the *Warrior Gallery* which is designed to be taken apart and turned into posters, and even a Sept 11 tribute (1000 copies only) featuring a pencil story and reminiscences by various witnesses. For Tucci at his not terribly coherent best, try the *Shi vs Tomoe Special*, full of bright colours, bold design on the one figure per page panels without too much twiddly detail to get in the way, and a foil cover to boot.~FJ

SHIDIMA

Image: *5 issues (0-4) 2001**
Dreamwave: *3 issues (5-7) 2002*

In this spin-off from *Warlands*, Aldaran, remembering Kameko and their part in the rebellion of the Adashi Clan against the empire, visits the smuggler Minako, only to find himself once again opposing Emperor Gurakai. This is a straightforward enough story about vengeance and a struggle against tyranny, but the work of three separate artists over the seven issues is buried under some dreadful computer colouring.~NF

The Legend of the SHIELD

!mpact: *16 issues, 1 Annual 1991-1992*

One of the few !mpact titles that sticks closely to the premise of the character as previously established, and none the worse for it. As the title implies, the series deals with more than one wearer of the army-developed superpowered force-field costume, and explores concepts of patriotism and duty. Writer/artist Grant Miehm handled similar topics in *The American*, and the culmination of these plots in 15 is truly shocking in displaying the moral redundancy of decision-makers; and it's unimpaired by the subtlety necessarily employed because this was a comic aimed at the younger end of the market. There's not a dud issue, with the best samplers being 7's teaming with the Fly or 14's surprisingly suspenseful attempt to waylay the detonation of nuclear warheads. The annual, though, is to be avoided, with stupid Shield and Web stories barely redeemed by an atmospheric Black Hood tale.~WJ

The Original SHIELD

Red Circle: *2 issues 1984*

The Shield was the first of the patriotic superheroes, débuting in 1940 and phased out in 1947 – transformed into an iron statue, which meant he could be revived at any time and still be as young as before! In this brief revival, he spends most of his time reminiscing about his 1940s origins. The stories are convoluted and weak, and the artwork variable, but as a character the Shield is refreshingly gentle, and full of melancholy for his former life. He was then usurped in his own title by Steel Sterling and not seen again until the !mpact title.~FC

SHILOH The Devil's Own Day

The Heritage Collection: *One-shot 1996*

An admirable attempt to convey the intricacies of a decisive battle during the American Civil War. Wayne Vansant's research and art are excellent, but he's stymied by comics being a far from ideal medium for presenting the various facets of a battle. What should be action-packed and exciting is rendered dry. There are memorable moments, though, particularly a Confederate soldier being showered by peach flower petals loosened by flying bullets. This is part of a series; the next is *Covered In Glory*.~FP

SHINOBI

Dark Horse: *One-shot 2002*

Produced to promote a video game, it's competently turned out, but totally soul-less in every respect, as if reflecting the circumstances of its genesis.~WJ

SHIP OF FOOLS

Caliber: *5 issues, 1 Special ('Bon Voyage') 1996-1997**

Image: *4 issues (0-3) 1997-1998**

In this jolly and violent series by Bryan J. L. Glass and Michael Avon Oeming, Puerto Rican reform school girl Mala, her Chewbacca-like sidekick Shiro, a schizophrenic chainsaw-loving poetess called Atlanta, Darius the shrewd manipulator, and a damaged robot ship's captain make up Section Eight. This is a team of outlaws thrown together while escaping from a prison spaceship. They battle agents of ruthless rulers the Jet Black Illuminati, who in turn serve the mysterious Powers That Be, who appear as monoliths. Oeming's art is clear and vigorous. The dialogue is lively too, and sometimes witty, although the captions tend to be a bit purple.~GK

SHOCK SUSPENSTORIES

EC: *18 issues 1952-1954**

Gemstone: *18 issues 1992-1996**

Originally a sort of sampler for EC's other titles – each issue to have a crime, horror, war and science-fiction suspenstory – with the second issue it started to earn its title. 'The Patriots', drawn by Jack Davis, combined two elements that at once raised the series above 'kiddie stories' and caused a controversy amongst its readers: relevance and violence. It tells the tale of a man who attends a parade but seems to sneer at the troops in the parade and doesn't lift his hat as the flag goes by. The crowd around him get angry and beat him to death before discovering that he was a blind veteran with a paralysed face. While the rest of the stories in each issue are of the generally high quality that continues to bring people back to EC's titles, the Shock SuspenStories in this series helped consolidate the publisher's reputation. These stories of mob violence and social relevance were hard-hitting, and if they seem tame or unnecessary today, at the time they could provoke such reader reactions as "'Hate" is the worst example of a story I have ever read... I hope somebody does something about stories like that."

Al Feldstein wrote all the scripts until the last four issues. 'The Patriots' was followed by other classics like 'The Guilty' (3), 'Confession' (4 – a policeman gets away with murder by beating a confession out of an innocent man), Hate (5, about anti-Semitism), 'The Assault' (8), '...So Shall Ye Reap!' (10 – parents and their lack of understanding of their children), 'In Gratitude' (11, a superb tale about a Korean veteran who tries to bury the dead friend who saved his life in his home town, only to find that the townspeople's racism prevents it) and the later cynicism of 'A Kind of Justice' (16), as characters, more than before, are seen to be getting away with their crimes. Most of the Shock SuspenStories were drawn by Wally Wood (3-11,13-15) and they brought out the best in him. '...So Shall Ye Reap!' and 'In Gratitude' in particular are finely controlled, emotionally telling pieces.

Other strips of note include: 'The Neat Job' (by Jack Kamen) in 1, a famous tale of obsessive neatness that results in a murderous wife bottling her dismembered husband; 'The October Game' (9, by Kamen), an adaptation of the Ray Bradbury story that ends "Then...some idiot turned on the lights..."; 'The Monkey' (12, by Joe Orlando), another classic, detailing the disastrous (and supposedly inevitable) effects of drug-taking; 'The Small Assassin' (7, by George Evans), a Bradbury tale, like several others, that feeds on the idea that children are monsters (see also 'The Orphan' in 14); while 'Seep No More' (18, by Evans) and 'For Cryin' Out Loud!' (15, by Reed Crandall) both re-write Poe's *The Telltale Heart*. 'In the Bag' (18, by Bernie Krigstein) has seventy-seven panels in six pages, none of them wasted.

Jack Kamen is the only artist to be in every issue but Wood's in most (2-15) and others have good runs: Joe Orlando (1, 3-7, 9, 10, 12, 16, 17), mostly on science-fiction stories, George Evans (7, 8, 14-18) and Reed Crandall (9-13, 15-18), an excellent artist who set a high standard with his first story, 'Carrion Death', an atmospheric desert tale. Other artists drew odd stories. Al Williamson produced a funny-animal science-fiction story in 8, Johnny Craig worked on 'Tryst' in 11, Frank Frazetta on 'Squeeze Play' in 13 and Bernie Krigstein on 'You, Murderer' (14) and the aforementioned 'In the Bag'.

Just before the stringent terms of the Comics Code Authority were applied, new writers were introduced, including Jack Oleck, Carl Wessler and Gardner Fox. While not much is known about exactly who did what, Wessler definitely wrote some stories for this title, and in particular all of 18. The stories were a bit hit-and-miss but there are some notable high points, backed up by the customary high-quality artwork. The Gemstone issues are reprinted facsimiles, and a boxed set reprints the entire series in hardbound volumes.~NF

SHOCK THE MONKEY

Millennium/Expand: *2 issue microseries 1995-1996*

Each issue starts and ends with part of 'Shock the Monkey', in which an amnesiac suspect in a murder case is given shock treatment to try to stimulate his memories. The stories in between are meant to be these memories or, possibly, hallucinations. Franz Henkel and Omaha Perez provide this framing sequence. However, 1 is largely incoherent, despite contributions from Ted Naifeh and Reuben Rude. 2 has two good strips, an encounter on the subway by Leslie T. Parker and Brian Horton, which seems to be completely out of place, and an unhealthy obsession with books portrayed by Leif Jones.~NF

SHOCKROCKETS

Image/Gorilla: *6 issue miniseries 2000*

One of writer Kurt Busiek's less imaginative works. A poor Mexican-American boy by chance joins an elite squadron of smart aircraft defending the world from a renegade general after a foiled alien invasion. Both people and big machines are drawn to a high standard by Stuart Immonen, but this owes too much to *Star Wars*, *An Officer and a Gentleman*, and *Top Gun* to be anything but corny all the way to the surprise conspiracy ending. Each issue is narrated by a different member of the cast but the voices are hard to distinguish. Prequels to Gorilla titles *Empire* and *Superstar* are in 1 and 6 respectively.~GK

SHOGUN WARRIORS

Marvel: *20 issues 1979-1980*

SHORT ORDER Comix

Head Press: *1 issue 1973*
Family Feud: *1 issue (2) 1974*

The first anthology comic edited by Bill Griffith and Art Spiegelman, it was very much a dry run for the highly regarded *Arcade* and remains criminally overlooked. Griffith contributes his usual incise dissections of culture and society, but it's Spiegelman who particularly shines with the autobiographical 'Prisoner on Hell Planet' in 1 and the cubist 'Ace Hole, Midget Detective' in 2. Strips by Joe Schenkman, Jay Kinney and Rory Hayes amongst others only serve to make this an even more impressive title.~DAR

SHORT PROGRAM

Viz: *1 volume 2000*

This collects eight short stories that appeared in *Animerica Extra* Volume II, 2-11. These are primarily offbeat romantic tales with a bittersweet edge, each having a twist in the tail that turns on the characters' discovery of something. As an idea of the content, in 'Take Off', athlete Satori Nakata appears to be jumping the height of her tall, ever-growing friend Nagashima. 'Short Program' has a protective neighbour come to the rescue of Naomi, but he knows more about her than he should. In 'The Current State of Affairs', a high school reunion brings best friends Kasuhiko and the now successful, Toshio, together, but between them is their attraction to Asako. Creator, Mitsuru Adachi experiments with storytelling and narrative to maintain a sense of surprise and the artwork is simple yet captivating.~NF

Nea, boyfriend Philip, Willie and Christian have pulled of a successful heist, but Philip wants it all. Leaving the others for dead, he invests the proceeds in a club and the financial markets, but Nea isn't going to die easy, and sets off looking for vengeance. Another *Warrior Nun* spin-off this is one of the better ones. At least Mary has left the order, so it's a lot less heavy on the habits. Her swordplay is substandard, but she is a great shot with her trademark shotgun, so this is the techno end of the genre. Kelsey Shannon, who draws and co-colours the new ongoing series, is talented. He was wasted inking the hapless Neil Googe's pencils on the 'Blood Lore'.~GK

SHOWCASE

DC: *Series one 104 issues 1956-1970 (1-93), 1977-1978 (94-104), 12 issue limited series (Showcase '93) 1993, 12 issue limited series (Showcase '94) 1994, 12 issue limited series (Showcase '95) 1995, 12 issue limited series (Showcase '96) 1996*

This begins as an adventure title with tales of firefighters by Arnold Drake and John Prentice and frogmen; however, the fourth issue is one of the most important comics ever in terms of what it spawned, being the origin and first appearance of the new look Flash. Editor Julie Schwartz and writer Robert Kanigher took the concept of the 1940s DC hero The Flash, applied it to a new character with a new costume, and relaunched the idea with only the name the same. The dynamic art of Carmine Infantino and Joe Kubert completed a healthy package, and the comic was the starting-point for the revival of costumed superheroes. Flash reappeared in 8, 13 and 14, and superheroes have remained ever since.

Flash was the first to graduate from *Showcase* into his own title, but he began a run of similarly successful features. Next were Jack Kirby's adventurers The Challengers Of The Unknown (6, 7, 11, 12), Lois Lane, after years as a supporting character (9, 10), space adventurer Adam Strange (17-19), Rip Hunter, Time Master (20, 21, 23, 24). In fact it's not until Tommy Tomorrow in 41-42 that a *Showcase* presentation fails to graduate to lead strip status or their own title. Another 1940s character re-tooled for the new audience was Green Lantern (22-24), recreated by John Broome and Gil Kane, and the succeeding successes were underwater heroes the Sea Devils, beautifully drawn by Russ Heath in 27-29, with the underwater theme continued for Aquaman (30-33). The Atom, another 1940s name, was appropriated for a new character in 34-36, and the quirky Metal Men débuted in 37-40. Once the run stopped, though, the successes were few and far between, with only the Teen Titans (59), who'd already appeared in *The Brave and the Bold*, going on to anything approaching lasting success.

Still, despite the title's not generating any long-running new features, it did have short-term successes and plenty of worthwhile material. Russ Heath illustrates G. I. Joe in 51-53, and in 55 and 56 Gardner Fox and Murphy Anderson produced two nice stories teaming 1940s heroes Dr Fate and Hourman. Following that there was Enemy Ace, a World War I German fighter pilot, beautifully illustrated by Joe Kubert in 57 and 58. Another try at reviving a 1940s hero was in 60, 61 and 64, with the near-omnipotent supernatural Spectre, illustrated by Murphy Anderson. This did spawn a title, but it was a short run, as was the title of *Showcase*'s next characters, parody superhero group The Inferior Five in 62, 63 and 65, with the latter's X-Men parody a real treat. From 72, reprinting the Alex Toth-illustrated Western 'Top Gun', to 82, *Showcase* only gave new ideas a one-issue chance at stardom. Steve Ditko immediately launched two concepts destined for their own series, The Creeper (73) and The Hawk and the Dove (75), spliced by Howie Post's equally successful caveman Anthro, and followed by charming Western rogue Bat Lash (76) and oddball detective duo Angel and the Ape (77). The mysterious Phantom Stranger in 80 was the last successful graduate of the first run, although there's other noteworthy material, including romance artist J. Scott Pike's silent and enigmatic underwater heroine Dolphin in 79.

82-84 introduced sword-and-sorcery to comics in the form of Nightmaster, written and illustrated by Jerry Grandenetti in 82, with new young artists Howard Chaykin, Jeff Jones and Mike Kaluta illustrating thereafter. 85-87 featured the adventures of Joe Kubert's Firehair, a white child raised by Native Americans. The first run came to a close with Manhunter 2070, ironically set in the future, when there was no future for the title. Until, that is, 1977, when it was revived with a reworking of The Doom Patrol, with only one of the old cast remaining; but it failed to pull in an audience until these stories were long forgotten. Power Girl, an alternate version of Supergirl, appeared in 97-99, cleavage very much to the fore, and 100 was an action-packed epic starring every character ever to have appeared in *Showcase*. Given the diversity, it wasn't too successful, and obviously didn't impress the audience, as the title was cancelled four issues afterwards. The final run was a Hawkman story guest-starring Adam Strange, and the final issue highlighted World War II US agents operating behind enemy lines. The overall percentage of features progressing from *Showcase* into their own titles is astonishingly high, with the quality rarely slipping below decent.

The series was revived in 1993 for an annual run. Rather than showcasing new features, these oversize issues concentrate on existing characters, and the showcase aspect is more likely to refer to new creative staff. *Showcase '93* offers Catwoman, Blue Devil, The Creeper and The Huntress, but the highlight was in 7 and 8, as chapters of the *Batman* 'Knightfall' saga. These issues focus on old enemy Two-Face, written by Doug Moench and very nicely illustrated by Klaus Janson. *Showcase '94* was even more Batman-oriented, with every issue featuring solo appearances from his supporting cast or adversaries. Two-Face was back, along with The Joker and The Riddler, and 7 was again notable, spotlighting The Penguin, with Peter David writing and art by P. Craig Russell and Michael Gilbert. This run's highpoints are 8 and 9, with a solo for the best Batman villain to be created for many a year, the murderous ventriloquist's dummy Scarface. Scarface's creators Alan Grant and John Wagner chronicle his origin in the course of a gruesome tale, with art from Teddy Kristiansen.

1995 saw a new Supergirl strip, the Metal Men, continuing from their miniseries in 2, and the very welcome return of The Question in 3, by Denny O'Neil and Rick Burchett. 7 and 8 feature Mongul, catalyst for the downfall of Green Lantern, and *Showcase '96* kicks off with the new look Aqualad, while 8 is a prelude to the new Supergirl series. 11 and 12 are the most impressive issues, featuring 30th-century superteam The Legion of Super-Heroes battling it out with Superman's old foe Brainiac. The revived series has featured a fine diversity, and there's something in most issues for any reader to enjoy, but the short-story formats often hinder development. Nevertheless, pick and choose at your leisure.~HY

SHPILKES

Frederick Noland: *1 issue 2001*

Most people wouldn't put the title of their comic on the back cover, but then most people wouldn't call it *Shpilkes* either. And most of all, most people wouldn't fritter away a grant from the Xeric Foundation, presumably on the basis of promising cartooning, on these nonsensical snippets.~FP

THE SHROUD

Marvel: *4 issue miniseries 1994*

Created as a surrogate Batman in *Super-Villain Team-Up*, the Shroud had a longevity that surpassed the pastiche, guest-starring in assorted titles over fifteen years before his own miniseries. Even then Marvel weren't confident enough not to plaster Spider-Man all over the covers. The Shroud fights gangsters by masquerading as one of them and using money obtained from defunct criminal organisations to finance further exploits. This time a heist has unforeseen complications tying into the Shroud's origins. No masterpiece, but a solid enough superhero adventure.~WJ

SHUCK Comics

Rick Smith: *4 issues + 2002 to date*

Shuck is a benign demon of sorts who conceals his true face from the little girl next door by means of a mask that wouldn't fool anybody. It's all part of the charm of a series that mixes the wonderment of the unknown with pre-Christian sensibilities. It's funny and very nicely drawn by Rick Smith, but this is a comic where you have to float with the flow rather than pick at it logically. The phonetically spelled dialogue takes some getting used to, but it ensures the comic is read rather than skimmed, and that brings its own rewards. It's Halloween in 1, Shuck has to gather some lost souls in 2, the story of his birth is in 3 and 4 has Shuck attempting to reunite with his true love as he's hunted by a short-sighted cherub. This won't be for everybody, but its worth anyone with an interest in comics beyond superheroes trying an issue.~FP

SHUGGA

Eros: *2 issue microseries 1992*

Shugga is a well-hung barbarian looking for a little action from Princess Catamenia, but having to butcher his way through the Queen's guards on his way. The Queen tries to delay him with sex and an aged demon, but this doesn't work until the demon summons Ofuk the Slayer who gives Shugga a good beating. Just in time, Shugga is spirited out of harm's way, but for a task that needs performed. There's a surprising amount of plot to go with the liberal amounts of sex and violence in this irreverent parody by Bob Fingerman, whose Wolverton-esque distorted artwork adds to the fun. Not for the faint-hearted or politically correct, however.~NF

SHURIKEN

Victory: *8 issues 1985-1987*

An early attempt at bringing the sensibilities and themes of Japanese crime comics to a US audience, and as such it deserves some acknowledgement. Unfortunately, though, by and large Reggie Byers and his successors aren't the artists up to the job. There is an exception in the final issues with Michi Okamura's loose style a great improvement.~FP

SHUT UP AND DIE

Image: *3 issues 1998*

In each issue of this hard-boiled series, the lead character succumbs to fate, sometimes as a result of conscious but misguided decisions, at other times simply by being in the wrong place at the wrong time. In 1, a man appropriates some money from the mob but can't escape to enjoy it. In 2 a murderer is branded a racist by the media and in violently trying to correct this judgement just further condemns himself. In 3, the chief suspect in the disappearance of his wife is forced to investigate until he cements the case against himself. If there's a lesson being given it seems to be that some people are incapable of dealing with fortune, good or bad. James Hudnall's grim scripts are leavened somewhat by dashes of humour, but this isn't intended to be anything other than brutally ironic. Kevin Stokes' artwork is spare and functional, not detracting much from the script but not really enhancing it either. Still, it's worth a look.~NF

SHUTTERBUG FOLLIES

Doubleday: *Graphic Novel 2002*

Bee works developing photos, and when she processes some disturbing crime-scene images she investigates the photographer, at first suspecting him of manipulating the crime scene, then of murder. Along the way she sucks others into her speculations thus broadening her enclosed world. Jason Little provides some adult window dressing, but Tintin is very much the influence here, as he appropriates the theme of the tenacious investigator and the simple ligne claire art in bold colours. It's a clever pastiche, and certainly very readable, but it remains doggedly attached to its influences.~FP

SICK

Feature/Headline/Crestwood/Hewfred/Pyramid: *108 issues, 15 Annuals 1960-1976*

Charlton: *26 issues (109-134) 1976-1980*

This was a relatively late entry into the humour magazine market, but to its credit it always had an identity of its own. Editor Joe Simon had picked up on the success of Lenny Bruce and the burgeoning comedy record scene, and as a result Sick was more sophisticated and cutting edge than *Mad*, *Cracked* or any other competitors. Much of the credit must go to writers Dee Carusso and Bill Levine, who also produced material for New York stand-up comedians. Their preoccupations with politics, beatniks, and psychiatrists marked *Sick* out as something quite different.

Leo Morey and Jack Davis produced the covers for most of the first forty issues, while throughout the early 1960s Joe Simon, Bob Powell, Morey and Angelo Torres were the most prolific interior artists. They were joined as the decade progressed by workhorses Jack Sparling (from 35) and George Tuska. More notably Davis contributed interior strips to 16-27, 42, 72 and 87, while Gray Morrow can be found in 30 and 32. Nobody disgraced themselves, but there was a rough look to the art exacerbated by poor production values.

While never a massive seller, *Sick* was popular enough to inspire reprint spin-offs and even several records. The staff, including Paul Laikin and Jay Lynch, were sharper than their contemporaries at picking up on new trends, starting by repeatedly spotlighting JFK and Marilyn Monroe, then the likes of Richard Nixon (paper dolls in 88!), John Lennon and Yoko Ono and even Abbie Hoffman were spoofed. *Sick* also championed photo strips from early on, a notorious one featuring Hitler in 3, and ran profiles of their creators.

One issue of particular interest to comic fans is 42, which features a Simon and Kirby Fighting American cover and a lengthy superhero spoof section, occupying approximately half the comic with contributions from Davis, Simon, Sparling and Tuska, and 74 featured celebrities as superheroes. As the years went on, however, the title undeniably lost some of its bite. The assorted companies listed as publishers were all affiliations of the company best known to comic fans as Crestwood, but when acquired by Pyramid Books there was little idea of what to do with the comic, and it quickly passed to Charlton. Here Joe Simon's long association ended, although artists he'd brought to later issues like Dick Ayers and Jerry Grandenetti continued under the Charlton imprint. Don Heck even contributed a few strips, but by this point *Sick* had degenerated into just another humour mag, with extra nudity to disguise the poor content. Copies are now surprisingly thin on the ground, but sample a few early copies and stay away from anything from the 1970s on.~DAR

SIDEKICKS

Fanboy Entertainment: *3 issue miniseries 2000*
Oni Press: *One-shot ('The Substitute') 2002*

In the miniseries Terry is the new student at Shuster Academy where kids with superpowers are trained in their use. The story would work just as well, however, without the superpowers, which are just a hook writer J. Torres has used to draw in readers who might otherwise ignore the title. This is a well-plotted high school comic, with Terry the nervous outsider seeing through her first term over the course of the miniseries. After an accident at the start she has to face her demons, while trying to discover the identity of three teenage superheroes operating against school rules. Torres has created a diverse cast, well illustrated by Takeshi Miyazawa, and the series is most easily found as an Oni Press collection. The one-shot concerns a new teacher, formerly a super-villain, and the divisions that causes. There's a great charm throughout, and *Sidekicks* should have across the board appeal.~WJ

Pan Graphics: *8 issues 1989-1990*

Brave shot at a British underground/anthology title, unfortunately saddled with crap lead strip 'Hearts of Gold'. It's notable for bringing us Si Spencer, who would go on to edit *Deadline*, and for containing Nick Abadzis' first comic tales, in which the glimmerings of 'Hugo Tate' can be detected. Issue one has a justly obscure Bryan Talbot collaboration in it.~FJ

SIDNEY MELLON'S THUNDERSKULL

Slave Labor: *One-shot 1989*

Gerard Jones wrote a spoof column in *Amazing Heroes* using the persona of Sidney Mellon, a monumentally self-important fourteen-year-old. In the column, Mellon kept mentioning his own graphic novel 'Thunderskull' – naturally, the most important work in the history of the genre – and Jones was eventually persuaded to produce the beast. It stars Simon Medley, who appears to be a frail intellectual, with his time as a comics critic as his only experience of power, but see that retractable biro in his breast pocket? One click, and he transforms into Thunderskull, creature of myth. As a spoof, it gets steadily funnier. The fight scenes are classics: at least 50% speech-balloon, allowing room only for the odd glimpse of a heel or fist. The high-point, however, is Mellon's Afterword, where he frankly acknowledges his own genius and thanks his artists, "who helped me to the best of their abilities". Hilarious.~FC

SIEGE

Homage: *4 issue miniseries 1997*

The reptilian Zontarians are invading Earth and it's up to a secret 'black ops' team, The Omega Squad to stop them. Though the first skirmish ends in victory, the aliens have already managed to build a massive base under New York City from which to mastermind their invasion. Siege was meant to be published concurrently with an interactive computer game of the same name but when that didn't appear, the title was dropped. A pity, as this isn't bad. Jonathan Peterson introduces a disparate team of heroes with some convincing dialogue and injects some humour into their camaraderie while Robert Teranishi and Al Vey produce some polished artwork that's very easy on the eye, despite some similarities in places to Neal Adams.~NF

SIGHT UNSEEN

Fantagraphics: *One-shot 1997*

A surreal, dreamlike piece by James Sturm, with much to say about the experience of religious (or ideological) revelation and its possible side-effects: a need to evangelise, intolerance produced by an absolute certainty, a contempt for daily 'unenlightened' existence, and doubts and disillusion. The return-to-high-school sequence is puzzling, though – maybe it's a reminder of the disappointments and defeats in life that make any escape seem attractive.~FC

SIGIL

CrossGen: *30+ issues 2000 to date*

The Planetary Union is at war with Saurian forces from the planet Tcharun. Samdahl Rey and the beautiful Roiya Sintor come to the neutral planet of Tanipal looking for work as mercenaries. Sam's old Saurian enemy Tchlusarud ambushes him and in the ensuing battle Sam and Roiya pick up new allies in the shady JeMerik Meer and spy Zanniati who needs to escape the Sultan's hareem. Unfortunately Roiya is mortally wounded in 1 but her essence is uploaded by their ship's computer where she reappears in 7. JeMerik spends the entire series in love with a hologram, and a mysterious sigil is etched on Sam's chest by a saurian stranger, giving him unimaginable power. Barbara Kesel writes 1-11 and 20 handing over to Mark Waid for 12-19 before current scripter Chuck Dixon comes aboard with 21. Plenty of artists work on the series, but the most frequent from 10 onwards are Scot Eaton and inker Andrew Hennessy. This is a space war comic where the men wear leather and fatigues, whilst the chicks are well-endowed, perfectly made-up and wear as little as possible. If this sounds a little like *Conan* in space, Sam visits a barbarian world in 17-19 just to confirm what boneheaded macho cobblers this comic is. CrossGen are issuing collections as they go along.~SW

SIGMA

Image/WildStorm: *3 issues 1996*

Strictly speaking this isn't a series in its own right as it's actually three chapters of the 'Fire From Heaven' crossover. The title character's body contains the genetic information that was used to introduce the Gen-Factor into the WildStorm Universe, and though the issues concentrate on his introduction and background, they do not tell a self-contained story. Written by Brandon Choi, they each have separate artists of whom Kevin Lau in 3 is the most interesting, using manga effects and tight inking to give the issue a visual flair.~NF

Ikkou Sahara's SILBUSTER

Antarctic: *19 issues 1994-1997*

In common with much other translated Japanese comics, action scenes are lovingly rendered over several pages, leaving no space for trifles such as explanations. It boils down to cute chicks, often semi or completely naked, fighting monsters and aliens. If you need anything more, this isn't the comic for you.~WJ

SILENCERS

Canadian espionage title that's subtle, understated and stylised. The story sometimes slows to a plod, but there's a lot of thought behind *Silencers*, and careful reading pays off.~FP

THE SILENT INVASION

Renegade: *12 issue limited series 1986-1988*
Caliber: *6 issues 1996-1997*

Long before *X-Files*, Larry Hancock and Michael Cherkas plotted this complex tale of 1950s paranoia. Matt Sinkage encounters a UFO and his search for answers involves him with the FBI, aliens, Communist agents and The Council, a secret government organisation. How much of this is in his head or is really happening is something you have to decide for yourself. It's well written by Hancock and drawn in a European style by Cherkas, owing much to the clear line of, for instance, Serge Clerc. 'Suburban Nightmares' (5, 7-9), with John Van Bruggen, is a back-up in much the same vein, but concentrating on more domestic fears. It later spun off into its own series and collection. The Caliber series is reprinted from the modified pages used in four still in print NBM collections, though includes preparatory material and in 1, the little seen three page story originally published in *Quest For Dreams Lost*.~NF

A squad of eccentrically named psychic policewomen, the A.M.P., protect 21st-century Tokyo from supernatural beings intent on destroying the city in this series by Kia Asamiya. The backgrounds of all but one of the squad members are revealed over the first four series as the entities remain a constant threat. The best of them is the second. Katsumi Liquer discovers her mystical heritage and the youngest squad member, Yuki Saiko, is revealed to be something other than she assumed. The third series switches from colour to black and white, and in the fourth team leader Rally Cheyenne is revealed to have a past linked with the supernatural entities. Much championed by some as being among the best of Japanese girl-gang comics, it's not without charm, but not sufficient charm to have dragged the slim story over four series without concluding it. Neither is the peculiar title explained anywhere.

When Viz resume publication the entities are known as Lucifer Hawks (and retroactively named thus in collections), and the A.M.P. has an aggressive new second in command. The plot, though, remains the same with a new variety of Lucifer Hawk causing problems, and the A.M.P. pulling the fat out of the fire in the final issue. As the cast are almost interchangeable apart from powers and hairstyle, this doesn't make for a very satisfying read. 'Catastrophe' earns higher marks simply by virtue of a different plot, with the cyborg Kiddy Phenil under suspicion of murder. 'Advent' finally moves the plot forward slightly with Katsumi having disappeared and the lack of Lucifer Hawk activity resulting in the A.M.P. being disbanded. When Katsumi returns, she's a changed person, and there's a new team member introduced in 'Turnabout'.~FP

The SILENT PULSE

Bearded Baby Publications: 2 *issues + 2002 to date*

While her friends, Vivian and Jove are on honeymoon, the Apostle, Peter, shoots Elise Daventry dead for a ring. He is working for Guardians International, apparently some sort of Internet Service Provider, amongst other things, together with Umbra, an ex-lover of Elise's, who could be a man or a woman (it's difficult to tell). The mix of computer and hand-generated artwork is better in 2, and there's even a sense of narrative, but though creator, John Stephens clearly has something he wants to say about religion, the connection between text and drawing is often obscure.~NF

SILKE

Creator, Tony Daniel, tries hard, but lack of attention to character motivation causes some plot confusions. On the plus side, his artwork, still very angular, is less exaggerated than usual in depicting the human body.~NF

SILLY DADDY

Joe Chiappetta: *20 issues 1994-2000, one-shot (Silly Cat) 1998*

When Joe Chiappetta fathered a daughter he began detailing his apprehension and the changes to his life in minicomics. What most autobiographical comics do best is reveal the essentially selfish and self-obsessed nature of their creator, concerned with trivialities such as disagreements with friends, or locating indulgences like comics and music. From the start Chiapetta's over-riding concern is the responsibility for another life; that he'll not be a decent father. Discovering he's not compatible with Maria's mother is a further jolt. 1-7 are best located in collected form as 'The Long Goodbye'. Also collected is 'Death in the Family' (10-12 with a coda in 16), a road trip story set first in 2004 and concluded in 2014, as Chiappetta is accompanied by his now teenage daughter through a corporate controlled America. Thankfully, his paranoia isn't overwhelming, and the story is as much an idealised projection of how Maria will progress as anything else. Other issues reveal the horrible truth about what men want (13), comic conventions (19) and police ruining a family picnic (9). People who'd certainly enjoy these comics may at first be deterred by Chiappetta's chosen style of art, which has a solid foundation, but is drawn as if by a child, with elastic figures wrapped by words. Get over it. It's a correct part of Chiappetta's ethic that his work should primarily satisfy him, but the meandering and often bitty nature of the comics precludes wholehearted recommendation. 17 is a good single issue sample, as Joe mulls over where his friends went, offers his guide to living right, and provides plenty of amusing quotes from his daughter. Issue 8 and *Silly Cat* are fifty percent Chiappetta and fifty percent John Porcellino's quiet observations on life and surroundings.~FP

THE SILVER AGE

DC: *1 issue 2000, 10 one-shots 2000*

This homage to DC's past began in *Silver Age* 1, by Mark Waid and Terry Dodson. The members of the classic Justice League of America have their minds exchanged with those of their arch-enemies. It's a fine opening providing a dilemma such as Gardner Fox might have conceived. In an attempt to discredit the bogus heroes and get their own bodies back, the League involves other heroes from the period in the confusion, leading to a series of one-shots in which the title heroes confront the bad guys. The reading order for the series (all numbered 1) is: *Silver Age, Justice League of America, Challengers of the Unknown, Teen Titans, Dial H for Hero, Flash, Doom Patrol, The Brave and the Bold, Green Lantern, Showcase* and *80-Page Giant*, with *Secret Files* supplemental. In the Flash issue, Ty Templeton manages a nifty period tribute unrelated to the main plot, and the best one-shot is *The Brave and the Bold*. Writer Bob Haney turns in a Batman and Metal Men team-up redolent of his former looney masterpieces, ably assisted by Kevin Maguire's art. Otherwise the stories vary from merely dull to inept and inappropriate, with the normally skillful Mark Millar in the Justice League issue having the villains perform acts of sadism and mass murder way out of character for the era the project is supposed to evoke. The covers on most issues, by veteran artists such as Joe Kubert, Carmine Infantino, Ramona Fradon, Nick Cardy and Gil Kane (his last work), are a joy, but when the most entertainment is provided by three fake Silver Age stories in the back of the 80 Page Giant, you know the show's in trouble.~HS

Tying into the *Warrior Nun* series, the Silver Cross are a group of children in training to combat the world domination threat of the Nazis, still very active in this world. Ben Dunn's story has some fine moments, particularly the motivation for the Nazi leader starting the second issue, but they're undermined by too many characters whose only purpose is to pad out fight scenes, and the numerous fight scenes detracting from the story. A shame.~WJ

SILVER SABLE & The Wild Pack

Marvel: *35 issues 1992-1995*

Operating from embassy premises, glamorous, lethal Silver Sable was introduced as a mercenary in *Amazing Spider-Man* 265. The Wild Pack, most prominently, consist of former villain Sandman, sadistic hard man Crippler, trainee flag-waver Battlestar, and the racist Powell, with Paladin an additional regular throughout. What makes the title work is that few are likeable, but all are strong characters that interact well. Fast-paced and inventive writing from Greg Wright and slick action-oriented art from Steven Butler (1-22, 25), often inked by James Sanders, and then Gordon Purcell and Pam Eklund, mean that most issues are better than average adventure fare. A bonus is few sub-plots, making it easy for new readers to pick up. Astute marketing sense ensures that the team are augmented with a cover-featured guest star for most issues, but these appearances are well considered and rarely detract from the title squad. Best samplers are 3, a rare issue with no guest star, and 30, with Silver Sable incarcerated.~WJ

SILVER STAR

Pacific: *6 issues 1983-1984*
Topps: *4 issue miniseries 1993-1994*

Call yourself a comic fan? If you're a serious one then you probably don't need to be told about this comic. Silver Star is Morgan Miller of the new breed of humans, Homo Geneticus, who were born of mothers implanted by a cowboy scientist determined to preserve life after atomic war. Homo Geneticus "plays with atoms like we do with erector sets". Silver Star, for instance, builds himself a chair ten times bigger than he would seem to need!

Each issue introduces a new "super-normal" Homo Geneticus: Norma Richmond, a stuntwoman girl-friend for Silver Star, Big Masai, goliath of the ghetto, and Albie Rheinhart, who spins a fairground carousel on his chest. Best of all, twisted and evil Darius Drumm, first recipient of the genetic package, who wants to be king of the hill and sends atomic giants and monsters to threaten Silver Star and his pals. All this is told of with liberal use of Jack Kirby's trademark powerful high-contrast single- and double-page spreads of exploding machinery and his equally distinctive, indeed unique dialogue. Drumm, sucking bizarrely on a malt and a popsicle, describes his creator as a "builder of classic lives that tear up the brain – like vehicles of pain!" It's Kirby's last work at the top of his form so it's the last Golden Age comic as well as being the first and so far only satisfying "visual novel" (this seems to be Kirby's term. They're usually called graphic novels). The structure is epic, dragging the reader from a lengthy prologue set in Vietnam (featuring a song written by Susan Kirby and sung by a little girl with an acoustic guitar reminiscent of the Dilly Sisters from *The Banana Splits Show*) to the disturbing climax, featuring the Angel of Death and lakes of fire and evokes some racier biblical passages.

Beware the dismal formula back-up strips drawn by Kirby's regular late inkers D. Bruce Berry and Michael Thibodeaux, but make an exception for Steve Ditko's The Mocker (in 2). He's a suit-and-hat vigilante in the tradition of The Question and Mr A, drawn in 1981 and featuring some of Ditko's best late artwork, which rivals the standard of his classic Spider-Man stories. Old school madness all the way! There's no Jack anywhere near the Topps series. Stay away.~GK

SILVER SURFER

Marvel: *Series one 18 issues 1968-1970*, 2 issue microseries 1988*, series two 146 issues, 8 Annuals 1987-1998, 2 issue microseries (Higher than Mortals')*

Introduced in *Fantastic Four* 48-50 where the team met planet-eating god Galactus, The Silver Surfer's instant appeal allowed writer Stan Lee and his creator Jack Kirby to return Galactus' former herald in several further *Fantastic Four* plots. He also met the Hulk in *Tales to Astonish* 92-93. Formerly a citizen of the neutral planet Zenn-La, Norrin Radd's life changed forever when Galactus announced to the populace that he would be dining on their planet's life-energy. Leaving his beloved Shalla Bal behind and prostrating himself before the space god, Norrin Radd pleaded for his planet, offering to become his herald for eternity. Galactus agreed, transforming him into the Surfer complete with obedient floating surfboard as transport through space. Innumerable solar systems later, Galactus announced identical plans for another populated planet called Earth. His herald rebelled, standing with The Fantastic Four. Angry at his hunger being spurned, Galactus imprisoned The Surfer on Earth via an impenetrable barrier surrounding the planet.

Lee scripted the original series, which ran as sixty-eight pagers for 1-7, with the lead story length averaging thirty-eight to forty pages. The back-up was 'Tales of the Watcher' which re-used some of Lee's scripts from the early 1960s, most of which were reinterpreted by Howard Purcell. Under Lee every negative aspect of human nature is experienced by the beleaguered alien, but it was outsider angst being exploited as opposed to the sacrilege of a Christ-like figure as some claimed. The Surfer meets Mephisto in 3 in a 1960s classic and the prince of lies and temptation is his major recurrent foe, appearing in 8, 9, 16 and 17 too. Other adversaries include the lizard-like Badoon scout party in 2, Loki misleading the gods of Asgard once more in 4, The Stranger in 5, a latter-day Frankenstein in 7, The Abomination in 12, feeble meetings with Spider Man and The Human Torch in 14 and 15 respectively and The Inhumans in 18. John Buscema really lets go with his pencilling in 1-17, which has a suitably melodramatic flair, but his fling appears to have been flung by 12. There were good ink jobs from Joe Sinnott in 1-3, Sal Buscema in 4-7, great work from Dan Adkins in 8-15 with Chic Stone inking 16 and 17. The last issue, drawn by Kirby, is inked by Herb Trimpe, announced at the time as the next penciller on the series – as evidenced by the ugly cover to 17. The entire series has been collected in both two lavish *Marvel Masterworks* volumes, and the far more affordable black and white *Essential Silver Surfer*.

After a merciful cancellation in 1970 The Surfer became a member of the loose-knit superteam The Defenders as well as being occasional guest-star material. His appearance in *Tomb of Dracula* 50 in 1976 is a good example (reprinted in 1994 as *Silver Surfer Meets Dracula*), but despite calls for a revival Lee's determination that only he would write it, coupled with his lack of time ensured little solo Surfer material emerged. Lee and Kirby did produce the 1978 graphic novel (see below). The 1988 microseries is another retelling of Galactus' coming to Earth with the munchies. Drawn by Moebius with the aim of being printed on absorbent pulp paper, Marvel couldn't resist collecting and reprinting it as a graphic novel called 'Parable' in a deluxe, recoloured format. At Moebius' request the dialogue was written by Lee.

By 1987, though Lee had conceded he'd never find the time to write a regular series, and the Silver Surfer was relaunched by Steve Englehart with artist Marshall Rogers cruising somewhat in 1-10 and 21. Freed from Earth, the Surfer journeys for another meaningful interface with Shalla Bal on Zenn-La, from where he begins to search for Galactus, which involves him in the latest Kree-Skrull War. In 8 he becomes a prisoner inside the mind of a Kree amalgam of thousands of personalities, also their ruler: The Supreme Intelligence. What follows is a very entertaining series of dreamlike tableaux. Another aspect of this early story arc is The Elders, ancient spacegods who include The Stranger, Eternity, The Collector and the errant Galactus, revealed as the only soul in the universe from before the Big Bang. Englehart really excels on The Surfer and his stay is in many ways a defining one for the character. Joe Staton follows Rogers in 11-13 before Ron Lim and inker Tom Christopher become the regular art team, sticking with the title from 1989 to 1993. There are still notable fill-ins like Alan Grant and Jim Sherman's in 39 or Colleen Doran's in 89.

The increasingly gassy Englehart wraps up the war in 31 and Jim Starlin takes over the writing from 34. He immediately co-opts the title as a vehicle for Adam Warlock, Thanos and the cast of characters he developed in the 1970s *Warlock* series, with the earliest issues reprinted in a collection entitled 'The Return of Thanos'. Starlin's run culminates in a double-sized 50 in 1991 and seven more issues crossing over with *Infinity Gauntlet*. Starlin write-alike Ron Marz assumes the scripting chores with 51 showing a grueling propensity for recycled ideas during a period when several issues were semi-monthly (there are 16 issues in 1991 and 15 in 1992). The mundanity of Lim's artwork also makes the title eminently avoidable after Starlin has left for *Infinity Watch* and its tedious array of prequels, sequels and spinoffs. The Defenders attempt a comeback in 58 and 'The Collection Agency' arc then commences featuring The Collector, Captain Marvel and a "dark" Surfer in 64 thanks to an alien virus. We also hear from Reptyl and meet Princess Alaysa and the bizarre Mistress Love and Master Hate in 66. The following issues with Eros, The Magus, Khoon, Nebula and Doctor Strange lead into *The Infinity War*. We then experience 'The Herald Ordeal' in 70-75, which must have taken a good ten minutes to plot, starring all of Galactus' heralds to that point: Firelord, Air Walker, Terrax, Nebula and tragic earthgirl Nova battling the latest, Morg. In the aftermath Jack of Hearts, Firelord, Nebula and Morg are still around, as is the villainous Chancellor. Tyrant's return in 79-82 leads into Cosmic Powers and features Gladiator, Captain Atlas and Doctor Minerva as well as Beta Ray Bill; Terrax, Morg and the slinky Ganymede join the party too.

Cully Hamner draws 83, which crosses over with *Infinity Crusade* and we meet The Surfer's parents in 84. Andy Smith draws 86-88 and, as parts 2, 6 and 10 of 'Blood and Thunder', they cross over with *Warlock and the Infinity Watch* and *Thor*. New Warrior Avatar features in 90-92 before a guided tour through early Marvel continuity in 93-97. Towards the end of 1994, 98-99 build up to a big showdown with Mephisto in 100 and Marz's swansong. Many poor scripts and duff visualisers follow with 107 featuring Dr Doom and 110 making a cheesy visit to a pleasure planet. George Pérez scripts from 111 and is responsible for the unexpected dismantling of the Surfer as if he were a modular statue in 114 to be sold in bits in 115. After 120-121's round against Uni Lord, Perez takes The Surfer back to Zenn-La and hatches his revisionary concept of the planet being illusory and dead for centuries. New writer J. M. DeMatteis then steps in for Norrin Radd's new start back on Earth. The Surfer meets Kymaera of The New Warriors in 124 and battles The Hulk in 125. Puzzlingly, these issue are collected as 'Inner Demons'. Another evil double turns up in 127 who meets Daredevil and Spider-Man in 128. 'Destination 1942' in 129-131 features some plot-driven time travel and ushers in notable new artist Ron Garney. We then have a disturbing false echo of that 1960s concern that The Surfer was a suffering Christ turning the other cosmic cheek with Wrath of the Cosmic Messiah in 132, followed by a vision of Hell in 134. Mephisto's return in 136 is hardly a surprise and is followed by Resurrection in 137 where we also witness Agatha Harkness versus The Scrier. The Surfer then briefly moves in with Alicia Masters in 138. Artwise, after Garney leaves in 133 there's a succession of pedestrian triers before 140-142, 144 and 145, an interesting experiment by the usually highly rendered, illustrational John J. Muth who is then succeeded by Denys Cowan. This story again has The Surfer back yet again on Zenn-La completely untroubled by Galactus, but "is it all too good to be true?" a tired voice asks. The final issue, bashed out by Tom DeFalco, features Firelord and The Avengers.

Annual 1 by Englehart and Staton features The Super Skrull and Ikaris and the Eternals as it crosses over with the Evolutionary Wars theme in Marvel's 1988 Annuals. Annual 2 by Englehart and Lim has a cover swiped from the original first issue and The Surfer fights Ghaur and Llyra. Annual 3 from 1990 by Starlin, Marz and Lim guest stars Reed Richards, Captain America and Nick Fury. Annual 4 by Marz and Lim features a retelling of The Surfer's origin as well as a 26th Century meeting with The Guardians of the Galaxy where they face Korvac. 1992's Annual 5 features The Defenders and Annual 6 co-stars the latest cosmic guardian in the Captain Marvel/Quasar mold: Legacy. Annual 7 in 1994 has heralds Surfer and Morg in contention. 1997's unnumbered Annual by DeMatteis and Val Simeiks is a meeting with The True Scrier who bears no resemblance to the character the Surfer previously fought.

The 'Higher than Mortals' microseries is drawn superbly by Italian artist Sal Velluto with decent accompaniment from television writer Michael Jan Friedman. Velluto's lyricism, high finish and dynamic figurework are so thoroughly apropos that he must have been born to draw The Surfer. More's the pity, then, that these issues are yet another retelling of Galactus' first visit to Earth.

Like The Hulk, The Silver Surfer is a great visual concept that wasn't capitalised on editorially, perhaps because he was commandeered by Lee in 1968. The Surfer remained a misunderstood innocent for two decades before Englehart took on the task of making the character and his world make more than superficial sense. Sadly, very little consolidation has followed resulting in the title becoming a sandpit for everyone from the misguided to the downright untalented to play in.~SW

SILVER SURFER Graphic Novels and one-Shots

Firestone Books: *1 Graphic Novel 1978*

Marvel: *One-shot 1982, Graphic Novel ('Judgement Day') 1988, Graphic Novel ('Parable') 1988, Graphic Novel ('The Enslavers') 1990, Graphic Novel ('Homecoming') 1991, one-shot (Silver Surfer Rune) 1995, one-shot ('Dangerous Artefacts') 1996*

The Silver Surfer is the most irritatingly refined symbol of teenage pseudo-alienation in all superhero comics, but that can be blamed on Stan Lee's scripts as a rule. It's less of a problem than usual in the first graphic novel, which is a firmly Jack Kirby-run retelling of the introduction of the Surfer and his master Galactus' intention to eat an Earth populated by ordinary humans but no Fantastic Four etc. Kirby is on his best mature form in this most impressive version of the story. The art actually conveys a sense of the power that so much of the story is about, which scarcely happens with other Silver Surfer artists, and there is little room for Lee to spoil it. A recoloured version was reprinted at comic size in 1997.

The 1982 one-shot is cute hippy balls plotted and drawn by John Byrne, and scripted by Lee. Very nice. It's hard to understand why all the best artists want to draw this flop character again and again, but John Buscema's drawings, one panel to a page, in 1988's 'Judgement Day', make it worth looking at least once. Stan Lee just couldn't leave the Surfer alone, and in 1988 he penned the deluxe hardcover graphic novel 'Parable', also published in a more modest, less fancy two issue comic book format. This collaboration with the reputedly great French comics artist Moebius wasn't quite the labour of love that one might have hoped for from either creator. Lee's perfunctory script gave us yet another re-run of the eternal Surfer/Galactus battle, just with extra added agonising, moping, and theological speculation, while Moebius clearly had little feel for the characters, drawing a especially effete, extruded Surfer. Lee persisted with the feeble 'The Enslavers' in 1990, drawn by hopeless I-can't-copy-Kirbyist Keith Pollard.

Jim Starlin's 'Homecoming', in 1991, prompts thought on the difficulty of distinguishing madness from rank stupidity sometimes. A giant brain turns a planet into thought, and the

Surfer's poor girlfriend dies. Again. John Buscema adds undeserved dignity to the appalling teaming with Rune. Flip it over, and there's a Barry Smith cover to another story, but, oh dear, what a mistake it would be to open the comic. The 1996 one shot 'Dangerous Artefacts', written by Ron Marz and drawn by Claudio Castellini, teamed the Surfer and Galactus against the evil Thanos and his top heavy female bounty hunter White Raven. It's a very average comic, with exceptionally confusing artwork, and, like all these items, it added absolutely nothing of interest to the Surfer's cosmic career.~GK

Comico: *3 issue miniseries 1989*

Plotted by Matt Wagner and based on his character Argent (the wolf) from the original *Grendel* series, *Silverback* sees William Messner-Loebs return to the genre in which he began with *Journey*. It's a very different frontier, however, as the spirit of death, Maslun, empowers an Algonquin brave with inhuman savagery, turning him into an immortal wolf.

It's not a tale for the squeamish, and Loebs creates a tragic, downbeat atmosphere that leaves little room for humour, while the artwork by Loebs and John Peck is minimalist but effective.~NF

SILVERBLADE

DC: *12 issue limited series 1987-1988*

Former silver screen heartthrob Jonathan Lord lives an embittered and reclusive life until rejuvenated and given the ability to transform himself into characters from his years of celluloid glory. One was Silverblade, hence the title. Lord's Hollywood mansion is populated with a former child star employed as a butler, the talking bird responsible for his new state and a fellow actor's ghost. Writer Cary Bates obviously enjoyed himself stringing everyone along with a romp resembling the 1930s action films he cheerfully parodies throughout, and the art team of Gene Colan and Steve Mitchell is also having a good time. A stunning, yet simple, revelation occurs well into the series, and once you've come to terms with it you can almost hear Bates chuckling in the background as everything's up-ended. The final issue rather falls to pieces, with unconvincing mystical mumbo-jumbo the order of the day. That shouldn't put you off sampling the remainder, but start with issue 1.~FP

SILVERHEELS

Pacific: *3 issues 1983-1984**

Introducing Scott Hampton's generally fine art, and Bruce Jones' hacked-out story about a Native American in a dystopian future challenging for the position of Earth's representative to a galactic council alongside his Aryan counterparts. Beyond the natural antipathy the leads have for each other, the story is complicated by a fawning female and Hampton's inability to keep to even a bi-monthly schedule. By the third issue there's only nine pages of the title feature, leaving Ken Steacy's whimsical transforming-robot back-up itself needing a back-up (provided by Jaime Hernandez). The *Silverheels* collection reprints the portions previously published and concludes the story.~WJ

SILVERSTORM

Aircel: *4 issue miniseries 1990*

Woefully inadequate tale of a young millionaire who has just inherited a billion-dollar company and a suit of super-armour. He meets a supermodel who just happens to be a world-famous geologist with the power to control the weather. As they sit around drinking cocktails and being wonderful, an evil scientist decides to conquer the world but, of course, has reckoned without the determination of our sterling duo. The Welsh Publishing tryout and 1-4 written and laid out by James and Cindy Vance and pencilled by Bill Morrison are as close to the TV's animated dysfunctional family as can be attained in comics. Well plotted and illustrated, they're laugh-a-panel stuff collected as *Simpsons Comics Extravaganza*. Thereafter the comic never again consistently reaches this peak, and with an army of writers, the quality varies, although Ian Boothby's scripts, first in 36 and regularly from 60, are generally joke packed. Try his Shakespeare pastiches in 76. The art always captures the authentic look of the Simpsons, which isn't as easy it may seem. Most issues also feature a short back-up strip about one of the characters from the TV show, with standouts starring Police Chief Wiggum (6), Barney Gumble (9), and Cletus (51), while 19-22 feature Bill Morrison's 1950s movie pastiche Roswell, before it progressed to its own series. 26 (written by Rob Hammersley and Todd Greenwald) and 27 (written by Doug Tuber and Tim Maile) match the TV show for gag ratio, characterisation and even the visual asides that add to already fully rounded stories. 33's switching of personalities and occupations among Springfield's inhabitants, is among the better issues, and Chuck Dixon, better known for his action comics, adapts *The Truman Show* to the Simpsons in 42. It's the best of too many movie parodies between 40 and 49. 50 is an eighty page special also featuring Radioactive Man, Krusty, Bartman and Lisa solos and a wry look at how Bongo Comics are made. A more recent highlight is 69, in which Mr Burns buys Springfield's church. Whether in ironic fashion or otherwise, in the Disney manner, all *Simpsons* comics covers prominently feature the name of Matt Groening, who created the TV family. His actual contribution to the comics, though, doesn't extend beyond the odd editorial. Bongo in the USA and Titan in the UK have an ongoing series of collections reprinting all issues but 50.~FP

SIN

Tragedy Strikes: *5 issues 1992-1993*
Black Eye: *2 issues 1994*

Jason (later Jay) Stephens single-handedly produced a confusing but often amusing comic wherein many different kinds of characters read or dream about each other amid cranky cut-up old adverts and demented tributes to *Mad Magazine* tricks. There's Nod (from the land of Nod), who looks a bit like a devil-cat, the 'Young Violence' trio of Nice Kid, Knife Girl and Gun Boy, and the superhero-parodying Sinister Horde. It would probably hold most appeal for the habitual LSD user, but any switched-on reader should find something quirky to laugh at. Much of the material is reprinted in *The Land Of Nod Treasury*.~GK

SIN CITY

Cozmic: *1 issue 1973*

British underground whose most notable creator is Angus McKie. His early '2001 A Haze Odyssey' is an eco-warning in which London is an open sewer with the rich living at least two miles above the gas-masked majority. Wyndham Raine (!) has a similar style to *Zap*'s Moscoso, while Bill Sanderson's woodcut effects enhance another tale from the grim city. Subtitled "Tales of Urban Paranoia", the overall mix of satire and cruel humour doesn't quite give the title the coherence that it needs.~NF

SIN CITY

Dark Horse: *6 issue miniseries ('A Dame To Kill For') 1993-1994*, one-shot ('The Babe Wore Red and Other Stories') 1994, 5 issue miniseries ('The Big Fat Kill') 1994-1995*, one-shot ('Silent Night') 1995, 6 issue miniseries ('That Yellow Bastard') 1996*, one-shot ('Lost, Lonely and Lethal') 1996, one-shot ('Sex & Violence') 1997, one-shot ('Family Values') 1997, one-shot ('Just Another Saturday Night') 1998, 9 issue limited series ('Hell and Back') 1999-2000**

Frank Miller's *Sin City* first appeared in *Dark Horse Presents* 51-62* before these stories. Each series is intended to stand alone, published when ready rather than on a strict schedule. Sin City itself is the setting, unnamed but seemingly rotten to the core. The characters all converge on Old Town, a no-go area for cops where the law is the law of the fist, gun or, in some cases, arrow and sword. At the heart of Old Town is a bar where strippers dress as cowboys and money will buy you almost anything. The women of the bar are also the area's enforcers; if you cross them, you won't live to regret it. However, underlying all the tales is something like the Japanese code of Bushido, where honour means everything, especially if it's all you've got.

'A Dame To Kill For' is the story of Dwight and Ava, the latter an extremely manipulative woman who uses men to get what she wants and then dumps them, or at least tries to. Having set Dwight up for murder and seduced the investigating detective, it seems she's committed a perfect crime, but Dwight's still on the loose and wants revenge. 'The Babe Wore Red' sees Dwight investigating the death of a friend and running from a pair of hitmen with the lady of the title. It comes with two short stories, the first about a killer meeting his match in the Old Town 'girls', Miho and Gail, the second about a killer just doing his job. 'Lost, Lonely and Lethal' is a later collection of short stories, the longest tale introducing the colour blue to Miller's coded series with the deadly Blue Eyes.

'The Big Fat Kill' is the extremely violent story of a dead cop and the threat of a war in the Old Town if Dwight and the girls can't stop the cop's head from falling into the hands of a crime lord. 'Silent Night' is equally bloody, the story of a young girl's rescue from her kidnappers, told in single-page panels. The controversial, 'That Yellow Bastard', features a senator's son whose perverted desire for young girls almost gets him killed by policeman John Hartigan, who is betrayed and framed for the crimes. Only his correspondence with Nancy, the girl he rescued, keeps him alive in prison. When she's endangered as the senator's son recovers from Hartigan's bullet all hell breaks loose.

'Sex and Violence' features more blue as assassin Delia torments her prey before killing them. 'Just Another Saturday Night' sees Marv on the loose in the Projects. 'Family Values' is a slow-burning tale of revenge as Dwight and Miho take on a mafia family. Painter and ex-soldier, Wallace saves Esther from suicide in 'Hell and Back', and when she's kidnapped he determines to rescue her, but must first survive an encounter with Delia. *Sin City*'s only use of full colour appears in 7, when Wallace's hallucinations take some very familiar forms.

Miller's hard-boiled prose is perfectly matched by his brutal black and white artwork, where everything is defined by the shadow it casts. Miller uses gimmicks sparingly but effectively, such as spot colour red for the 'Babe Wore Red' and yellow for 'That Yellow Bastard' The series doesn't offer any great insights into the human condition but it's intense, absorbing storytelling that's constantly daring.~NF

SIN TUTULO

Horse Press: *One-shot 1993*

An untitled notebook, dated 1915, has brought Billy Rael to Mexico. He believes it to be the journal of Ambrose Bierce whose mysterious disappearance in 1913 has never been solved. Accompanied by girlfriend Lilac and her brother Fernando, he sets off to find Bierce's grave so that he can write a dissertation proving Bierce's Marxist beliefs. The tensions between Billy and Fernando and between Billy and Lilac finally split the party leaving Billy alone in a world he can't understand, not speaking Spanish. Paul Pope has written and drawn an intriguing tale that works on several levels. It's a road trip and a philosophical enquiry, a love story and an adventure, a dream and a bad trip. The elaborate rendering of his later work is not as much in evidence but there's a very European feel to the artwork.~NF

SINERGY

Caliber: *5 issue miniseries 1993-1994**

Writer Kyle Garrett reworks Dante's *Inferno* for comics with a traveller taken on a tour of the different levels of hell, with short pieces illustrating them by most Caliber mainstays of the early 1990s. So you've got art by Brian Michael Bendis (2), Dave Cooper (1), Guy Davis (2), Troy Nixey (5), Mark Ricketts (5), and Kevin Thomas (3) among others. Beyond updating the roster of the guilty and their crimes, Garrett has little original to bring to the project, which becomes a lecture rather than a story, and ultimately very boring. The last page revelation of the journey's purpose isn't worth the slog. Each issue comes in standard format and an expensive variant with shiny logo and a print by Galen Showman, who draws the framing sequences each issue.~FP

SINISTER HOUSE OF SECRET LOVE

DC: *4 issues 1971-1972*

Behind some of the finest covers ever to grace a comic, courtesy of Jeff Jones among others, this title offered up a number of lengthy Gothic-romance strips. The marriage of love and horror was an uneasy one, and despite the best attempts of Michael Fleisher and Len Wein, the attraction was its artwork. While Don Heck's efforts in 1 were far from inspired, Tony DeZuniga's 2 and 4 are quite gorgeous. The exception to the title's directionless feel was provided by 3's 'Bride of the Falcon', written by Frank Robbins, which brilliantly concentrated on psychological tension rather than the half-hearted haunted-house milieu found elsewhere. Better yet, the thirty-six-page story was drawn by Alex Toth, with inking from Doug Wildey and Frank Giacoia, who revelled in its Venetian setting and claustrophobic atmosphere.~DAR

SINISTER ROMANCE

Harrier: *4 issues 1988-1989*

By turns poignant, amusing and just plain silly, but never boring, as B-movie stories of superheroines, mermaids, aliens and gangsters abound. The different art styles of the contributors work well, with Trevs (later to be Woodrow) Phoenix's graphic Infantino-style dynamism contrasting with the sketchy impressionism of Glenn Dakin and the solid black and white work of Warren Pleece. Bob Lynch brings a more traditional cartoon approach to the final two issues. The artists are having a good time, and so should you.~FP

SINNER

Fantagraphics: *6 issues 1988-1990*

Depressing episodes from the life of Alack Sinner, an out-of-place P.I. in the slums of New York, created by Argentinian duo José Muñoz (artist) and Carlos Sampayo (writer). Over the years they've woven stories around all aspects of Sinner's life, using him as one of a cast of characters for their Joe's Bar series. This selects from the many *Sinner* stories, starting with some early pieces which, while you can see the seeds of greatness in them, stick quite firmly to a hard-boiled detective formula. 4 reprints a much later story, 'Viet Blues', an extraordinary piece of writing in which Alack keeps slipping into walking nightmares of his time in Vietnam, which are contrasted with the present. The shift from plot to characterisation is quite marked, as is the reduction of the Muñoz style from fine line to heavy black and white expressionism. 5 gives us the opportunity to read the first 'radical' *Sinner* story, created before 'Viet Blues', where the first breaks from noir tradition are being made. It's a great sadness that more *Sinner* strips have not been translated, as the sequence of stories adds up to a greater whole.~FJ

The machinations of Klarion the Witch Boy and the accidental discharge of a vagrant raygun combine to switch adults to children and vice-versa in this crossover. Effectively playing for laughs on the hoary theme of teen rebellion, Peter David and Todd Nauck don't add much to the debate, but do say it quite entertainingly. The one-shots are mostly unremarkable but Geoff Johns and Drew Johnson produce a good old fashioned romp as the geriatric JSA, new average age 5, fly to the planet Myrg to recover the raygun that partially caused all the fuss (*Starwoman and the Junior Justice Society of America* 1).~WW

SIREN

Malibu: *4 issue miniseries (∞, 1-3) 1995-1996, One-shot 1996*

Pasty-faced cute female alleged assassin seeks guest stars for putative miniseries. Only second-stringers like War Machine, Diamondback and Whizzer showed up. Numbering the first issue with an infinity symbol was a joke so hilarious that hospitals are still regularly visited by *Siren* readers requiring their sides to be stitched back up. The one-shot guest starred Shuriken and was a parsimonious twenty-eight pages.~WJ

SIREN

Image: *3 issue miniseries 1998*

An instantly likeable title combining a little of *Astro City*'s ambience with a soupcon of paranormal activities as private eye Zara Rush is hired to find a shapeshifter. Penciller Tim Levins maintains a fine cartoon style that nonetheless perfectly conveys the necessary dingy atmosphere. Writer J. Torres holds his end up with enough witty touches and surprises to ensure what might have been a run of the mill plot transcends its origins. Siren, by the way, is the city in which the above occurs.~WJ

SISTERHOOD OF STEEL

Marvel/Epic: *8 issues 1984-1986*
Eclipse: *Graphic Novel 1987*

The covers of 1 and 2 make it look like another babes-in-chainmail story, but they lie. Yes, it's the standard sword-and-fantasy setting, and yes, it's about a band of women warriors, but these women are startlingly different in that they fight with all their clothes on! The story centres on Böronwe, starting as she moves from Novice to Cadet, and following her through her first combat, her first night on the town, her first serious love affair... Not a babe-in-chainmail story at all, but a coming-of-age story about a young soldier who happens to be a woman. Christy Marx's writing gets more absorbing with each issue, and while Mike Vosburg's artwork is never appealing, it does differentiate the characters, and you soon get used to it. The storyline was cut short, to be concluded in the graphic novel. There should be more, though. Much more.~FC

SISTERS OF MERCY

No Mercy: *5 issue miniseries 1995-1996, 4 issue miniseries ('Paradise Lost') 1996*

Utterly dreadful 'Bad Girl' title set in a post-apocalyptic future. Sordid and poorly executed~WW

THE 6

In searching for Fyre, they come across another two youngsters (Psyanide and Axle), and after a battle with the anarchists known as The Disorder, become a team. It's written by Fabian Nicieza (1-2) and Louise Simonson (2-3), but this is hopelessly hackneyed, with uninspiring artwork to boot.~NF

SIX DEGREES

High Heels: *5 issues 1996-1997*

Very sensitive territory is staked out by *six degrees* (to use the correct lower case title), but thankfully it's responsibly handled. In 1994 the UK was shocked to hear the fate of missing toddler Jamie Bulger, abducted from a shopping mall and later found murdered. Tragic enough as it stood, it later transpired the killers were two pre-teenage boys. *Six degrees* examines a scarcely disguised version of the case, studying the circumstances of all involved parties, including the local police and journalists. The entire affair is then contrasted with similar events occurring in the 19th century. While writer Martin Shipp and artist Marc Laming – working in a very traditional British black and white style – have produced a distinctive and worthwhile title, there's a distancing emotional detachment throughout, and at times it's a very dry piece. There's a need for intelligent comics tackling adult topics, and those who read Vertigo titles are likely to enjoy this as well. The conclusion appears in *Gyre* from 2.~WJ

SIX FROM SIRIUS

Marvel/Epic: *4 issue miniseries 1984*, 4 issue miniseries 1986*

In the future humanity has spread across the stars to encounter numerous alien races, most of which are biped humanoids. SIX MILLION DOLLAR MAN

THE SIX MILLION DOLLAR MAN

Charlton: *7 issues 1976-1977*

Lovers of Proust or Becket, look away now! Inevitably, a TV character whose sole raison d'être is moving fast and breaking things is going to lose something in the more static pages of a comic, and it is no surprise that this black and white magazine companion to the colour comic is a tepid affair. Writers Joe Gill and Nicola Cuti line up all manner of spy networks and murderous backwoods hicks but never once press the button marked 'excitement'. On the plus side, there is art from Neal Adams, Dick Giordano and friends to various degrees in 1-3, although Jack Sparling's prescience is felt from 2 on and by 4 the comic is his to do with as he pleases. Heaven help us all!~DAR

666 The Mark Of The Beast

Fleetway/Quality: *21 issues 1990-1991*

1-18 are an exercise in barrel scraping; appalling strips with a vaguely demonic theme culled from Fleetway's British adventure comics. Matters improve with 19, when *Night Walker* becomes the prominent title, and the comic reprints Luke Kirby strips from *2000AD*. Pre-Harry Potter and Tim Hunter, Luke is a magician in training. It's a slow-paced story relying on mood and building tension, but the charming illustrations by John Ridgway are worth seeing.~FP

SIX STRING SAMURAI

Awesome: *1 issue 1998*

A project to promote a potential film that's so sloppily produced it probably killed any movie deal dead. An Elvis-obsessed loner stalks the badlands with his guitar and sword, seeking no trouble, but ready to handle it. It's an interesting twist on the road movie, but this does it no favours.~WJ

6.10 BY THE SCHOOLYARD

Aeon: *One shot 1995*

Graham Higgins' artwork portrays impressions of a past and present that involves war, implied espionage and a society that resembles a soviet version of our own. Susan Catherine's script is a carefully paced interview that begins in a very formal, untrusting way before reluctantly building to the moment of betrayal that's also the reason behind the interview. Higgins wears his influences on his sleeve, particularly Jose Muñoz and Ian Gibson, but this just adds to the foreign feel of the piece. Exquisite.~SW

SIZZLE

NBM: *16 issues + 1999 to date*

Sizzle is a showcase anthology for NBM's Eurotica and Amerotica, sex comic imprints. As such, many of the strips are reprinted as albums after serialisation and are usually better read in that form (if at all). Sometimes the strips only serve as teasers for albums, with gags from the *Grin and Bare It* albums, episodes (in 6) from Massimo Rotundo's *Ex Libris Eroticis* and Julius Zimmerman's *Blind Squirrel*, and photos from Eric Kroll (7 and 8). Apart from these, of the subsequent collections, the better examples include *Emily's Secret* by Marcus Gray (1-5), *Retreat* by Kiki Kjaer (2-4), Quinn's *Shadow and Light* (12), and Jack Munroe's *Ada Lee* (9, 11, 16). Generally more interesting are the short stories by creators like Petra Waldron and Jennifer Finch (1), Richard Moore (9) and Milo Manara (10). Moore also contributes text and pinups of his *Far West* character in 15. In later issues, Cornnell Clarke (12-16) and Nebular (14-16), suggest a more offbeat approach to the subject in hand. Prize for worst strip, however, must go to Kevin Taylor. His work is littered throughout the series, but he can't even be bothered finishing the early episodes of the *Girl* strip in 13-16, turning in just his thumbnail sketches instead – guess we're all meant to buy the album for the full effect.~NF

SIZZLE THEATRE

Slave Labor: *1 issue 1991*

The largely unsavoury characters who hang out at the *Sizzle Theatre* strip bar are deftly characterised in short strokes by Andy Garcia amid a very silly plot concerning a man attacking strippers, shaving them and painting them black. Funny in places, and done either so well or so poorly that one never knows if Garcia is being knowingly ironic or plain bad.~WJ

SKATEMAN

Pacific: *1 issue 1983*

What was Neal Adams thinking? Roller Derby star Billy Moon's best chum and girlfriend are murdered, so after a bout of self-pity he ties a bandanna round his face and gets his skates on to avenge them as Skateman. Without a hint of irony, it's laughter on wheels, with Neal Adams throwing in fads like roller discos and halter-neck tops willy-nilly, all of which were five years past their sell-by date in 1983. In the back is an even sillier character (although knowingly so), Paul Power's Rock Warrior, who destroys spaceships with power chords.~WJ

SKELETON KEY

Amaze Ink: *30 issues, 1 Special 1995-1998*, 4 issue miniseries 1999*

Written and drawn by Andi Watson. Tamsin is a high-school student, bored stupid by her Canadian hometown. One Halloween, she buys a skeleton costume from a mysterious shop, discovers she's also taken home a strange key, and soon finds out that any door opened with the key leads to other worlds. Her first journey liberates Kitsune, a Japanese fox spirit that takes the form of a teenage girl, and soon she's battling against witches and monsters in her closet and a possessed toy racoon, and also dealing with the usual high-school hassles. The first storyline (1-6) was messy, with action sequences that were almost incomprehensible, but the comic soon settled down and revealed its humour, intelligence, and charm. The characters become steadily more absorbing, especially as the friendship develops between Tamsin and Kitsune, and 28-30 is a fitting tribute to that friendship. The special collects short stories featuring the cast from minicomics and anthologies, and the miniseries shows the characters stepping towards adult responsibilities and the troubles that causes. The comic is cute in a funny-animal/feisty-kids style, and it may well show you that you have a larger appetite for cute than you realised.~FC

SKELETON KEY/ SUGAR KAT SK2 HALLOWEEN SPECIAL

Slave Labor: *One-shot 1998*

Tamsin Mary Cates, a high school student, accidentally obtains the Skeleton Key, a mystical artefact that opens doors to other dimension, and on her travels, befriends Kitsune, an ancient Japanese fox spirit who disguises herself as a teenage girl. Sugar Kat, media darling and the most popular girl in the world, teams up with her over-achieving and under-appreciated sister Rebecca to form a detective agency investigating supernatural hijinx and acrimonious divorces.

When the Kat sisters visit Tamsin's Canadian hometown of Garfield to look into a wave of hauntings, a hangover plotline from the *Skeleton Key* series precipitates all four girls into a bizarre (and funny) adventure which manages to showcase the best points of both series. Delicious.~HS

Roy and Simone are our eponymous shaven-headed sweethearts, too busy being 'cool' and 'tuff' to admit the tenderness of their feelings for each other, until a booze-fuelled three-way gone disastrously wrong prompts their reluctant admissions of their mutual affection. Artist/writer Bob Fingerman can't bring himself to let go of plot and personalities even in an ostensibly 'wanky' comic, so this comes across as an endearing, funny story only somewhat more explicit than the antics of his protagonists in *Minimum Wage*. Few recent Image comics have been as relentlessly awful as those sponsored or created by Rob Liefeld in the company's early days, so Mat Broome requires some recognition here. Had Broome concentrated more on providing a story rather than attempting to stiff the fans with a variety of covers this may have run to a second issue.~WJ

SKINWALKER

Oni Press: *4 issue miniseries 2002**

An ambitious FBI profiling agent is teamed with a Native American law enforcement officer as both investigate a Navajo thug who believes himself a Skinwalker. This is a local legend for a rogue practitioner of witchcraft, whose alleged talents include an ability to possess others, and to inherit the knowledge and abilities of any living thing whose skin they wear. Both officials are abrasive characters, and although some elements play out predictably, there are enough surprises and tension to mark this as a superior crime drama. The script by Nunzio DeFillipis and Christina Weir was originally conceived for film, but the attraction of it being seen through without compromise resulted in the comic. It's excellently illustrated by Brian Hurtt and Arthur Dela Cruz, who concentrate on telling the story and have the basics down well enough to disguise the fact that talking heads often predominate. They're also to be commended for a sensitive treatment of horrific events.~FP

SKIZZ

Fleetway/Quality: *2 issue microseries 1990**
Mandarin: *1 Graphic Novel ('Alien Cultures') 1993*

Given the brief of producing a British version of the movie *E.T.* for *2000AD*, Alan Moore had his wallaby-like alien interpreter Skizz land in Birmingham. He poked a bit of fun at the regional accents, incorporated a realistic attitude of official behaviour should an alien land, and made a few comments on the state of Britain under Margaret Thatcher. Otherwise this was a very traditional work from Moore, an impression heightened by the solid storytelling of Jim Baikie. Eight years later Skizz returned under the hands of Baikie alone, and it's a rare case of the sequel topping the original. Unrestricted by editorial dictates, Baikie deals with what happens once Skizz returns home, turning-in inventive elements of science-fiction such as the low fat yoghurt Skizz ate on Earth being considered a biological contaminant at home. He also follows up on the Earth cast amid a good suspenseful plot. He should try writing more often.~FP

SKREEMER

DC: *6 issue miniseries 1989**

In the days before their Vertigo imprint DC issued adult-oriented series on better quality paper, but otherwise marketed alongside their standard titles. It meant the like of *Skreemer* was foisted on a superhero audience, who scratched their heads at this complex fusion of James Joyce with *The Godfather* and didn't bother with any further issues. It was their loss. Pete Milligan produces an appalling, cruel story the subtlety of which is belied by the simple blocky art of Brett Ewins and Steve Dillon. Spanning forty years, on one level it's the story of gang boss Vito Skreemer, a man cursed with a terrible ability, making a major power play. As he literally stands on the precipice he broods on his past and his rise to power. His career is contrasted with that of the tragic Finnegan family, permanently downtrodden residents in poverty, struggling to survive and live a more honest life. *Skreemer* has allegorical references to *Finnegan's Wake*, both song and novel, and to the life of Jesus, alongside musings about the validity of predestination. It's a brutal masterpiece.~FP

SKRULL KILL KREW

Marvel: *5 issues 1995-1996*

Mad Cow Disease meets the *X-Files*, in this thinly disguised 'Reds under the bed' romp by Grant Morrison and Mark Millar, in the company of pencilling pal Steve Yeowell. Printed under the 'Marvel Edge' banner, which generally designated lots of gratuitous violence, no time is wasted in inaugurating a bloodbath.

Skrull Kill Krew hinges on a very old story (*Fantastic Four* 2) in which a small group of green alien shapeshifters, the Skrulls, attack Earth. Defeated, they're turned into cattle and left to graze happily, until, after an escape, they're executed by the US government and become part of the human food chain as hamburgers. The 'Skrullburgers' killed some people that ate them, but others got shapeshifting powers and the ability to see any Skrulls on Earth despite their disguises. This is just as well, since Skrulls have now successfully infiltrated all levels of society. To redress the balance a psychotic shapeshifter, Ryder, assembles the Skrull Kill Krew to execute all Skrulls they come across. What an unpleasant bunch the SKK are. Besides Ryder, you have an English fascist skinhead, a pseudo-punk lesbian, a spoilt superstar model and a whimpering beach bum. Quite honestly you find yourself rooting for the aliens.

Originally intended as an ongoing title, the truncated run splits awkwardly into two parts. 1-3 have the SKK on a recruiting drive at an airport while Captain America is there to greet the president of a Baltic state. Putative world ruler Baron Strucker, head of evil organisation Hydra, and the Baltic president being a Skrull complicate matters further. This plot is discarded for 4 and 5, in which the SKK stumble on a small town where everyone has been replaced by a Skrull. It's then gung-ho all the way as the aliens are slaughtered. This series didn't live up to expectations, being rather dry, considering the absurd scenario. Only 3 fulfils the humour quotient with an excellent portrayal of Baron Strucker ("Why should a neo-liberal like Victor Von Doom rule a country and not Baron Strucker? I demand our own Baltic state"). What would McDonald's and Burger King make of all this?~HY

Nick Ryan, THE SKULL

Antarctic: *3 issues 1994-1995*

This begins with the tale of a dead lawyer and District Attorney, and a judge due to be the next target of a visiting hitman, while Nick Ryan speeds to reach the potential victim first. David Watkins' pulp-style comedy about a masked crime fighter with a very surly butler/assistant, Jake, (who gets his own tale in 3) is fun but slight, the artwork never really achieving the right atmosphere.~NF

They Call Me THE SKULL

Virtual: *1 issue 1996*

Danny Fingeroth and Ron Lim are given the chance to create their own character, and turn out a teenage superhero that wouldn't even have passed the slack 1990s editorial standards at Marvel. With no hint of irony the first chapter is titled 'From the Depths'. Indeed.~FP

SKULL Comics

Rip Off: *1 issue 1970*
Last Gasp: *5 issues (2-6) 1970 -1972*

This was one of several underground comics conceived very much in the tradition of EC's horror line, and after a slightly slippery start it grew into one of the best. Jack Jaxon, Dave Sheridan and Spain all contributed good material, but it was Richard Corben (2, 3, 5, 6) and Greg Irons (1-3, 6) who best captured the EC spirit in a series of astonishingly shocking strips. Irons' frequent collaborator Tom Veitch was responsible, with Irons and Corben, for the run's best (and most stomach-churning) tale, the full length "A Gothic Tale" in 6. The Veitch/Irons gore-a-thon "The Clean-Up Crew" from 3 was later turned into a notorious German underground film, albeit without their permission.~DAR

SKULL & BONES

DC: *3 issue miniseries 1992*

Excellently constructed thriller set in the disintegrating Soviet Union of the early 1990s. Ed Hannigan's plot takes advantage of how technology has outdistanced the state's ability to control it. Three loose cannons combat the resigned remnants of the Politburo, but one KGB controller has a grim agenda of his own. The focal point of the series is Andrian, a grim, single-minded and resourceful former special soldier, who began his anti-state activities by switching sides to join the rebels in Afghanistan. Returning to Moscow to begin a one-man war on the home front, he reluctantly accepts allies in order to actuate a grander plan. Rarely for a prestige-format title, this is actually a long read. Hannigan's art is admirably dark and his plotting dense and diligent, with not a page wasted. A true graphic novel.~FP

The SKULL MAN

Tokyopop: *5 issue miniseries 2001-2002*, 4 volumes + 2002 to date*

This is Kazuhiko Shimamoto's re-invention of original creator, Shotaro Ishinomori's famous character, initially under his guidance. The Skull Man is Tatsuo, an agent from the land of the dead, an anti-hero seeking revenge for the death of his parents. They were responsible, with their genetic experiments, for giving Tatsuo's only friend, Garo, his powers of transformation, but were killed when Tatsuo's grandfather began to fear that they had become too dangerous. Now Tatsuo, in the identity of his father, Ryusei Chisato, is attempting to destroy the syndicate, apparently led by another survivor from his parents' laboratory, which is attempting to build an army of mutant warriors, including the Spider Man. Other supporting characters are assassin Maria, reporter Satsuki and police detective Hioka, all hunting Tatsuo for different reasons, and all coming to question whose side they should be taking. Shimamoto's artwork is dark and moody, but still exhibits a great deal of flair, and the script, while occasionally repetitive, works hard to keep the reader's attention. A total of seven volumes are planned.~NF

SKULL THE SLAYER

Marvel: *8 issues 1975-1976*

Bonkers example of Marvel at its hippy best. Marv 'equal opportunities' Wolfman starts off with a radical black physicist, a peace-loving young girl and an insecure teenager crash-landing while flying over the Bermuda Triangle, along with a ex-'Nam vet being taken home for trial for killing his brother. Cue ideological quarrels in the Land That Time Forgot. But, even better, Skully and friends discover a sort of Time Ziggurat with a different age on each step. Steve Englehart has them fight aliens in ancient Egypt, then Bill Mantlo whisks them away to the time of Arthurian legend, whenever that is. The series, drawn initially by Steve Gan and then by Sal Buscema with help from Gan and Sonny Trinidad, ended with Skull the Slayer about to be sacrificed to an Aztec god, unless the readers made their voice heard. The best they could do was request a conclusion in *Marvel Two-In-One* 35-36.~FJ

SKY APE (les aventures)

Slave Labor: *4 issue miniseries 1997-1998**
AIT/Planet Lar: *One-shot ('Waiting For Crime') 2001*

An intelligent millionaire crime-fighting gorilla, but played just straight enough to be funny. Written by Phil Amara and Tim McCarney, surreal elements obviously influenced by Grant Morrison's *Doom Patrol* seem uneasily shoehorned into this story, particularly dominating and padding 3. Sky Ape and his eccentric cast investigate his origin by means of the Suspense Jacket, an artefact permitting the wearer to see into the past. The writing is promising, but not yet fully realised, so it's the art of Richard Jenkins that's of note. Quite apart from knocking out the best gorilla seen in comics for some while, he proves very adaptable with a variety of scenarios. The stylish mixture of black and white ape on colour cover is also worthy of note. Plenty to praise, but all creators had improved by the time of the one-shot, which provides a more linear plot, and is funnier all round. The AIT/Planet Lar collection of the first series includes a few pages not found in the Slave Labor collection.~FP

SKY GAL

Americomics: *3 issues 1993-1994*

Selected reprints of the Sky Girl strip from Fiction Houses' *Jumbo Comics* anthology. Waitress Ginger MacGuire, known as Sky Girl nowhere except in the title, was an aviatrix and adventuress in World War II, and longs to get up in the air again, but is repeatedly forced to settle for her poorly-paid waitress job. Enjoyable slices of slapstick comedy, illustrated by the dean of 1940s Good Girl art, Matt Baker. New covers, and one new story per issue, are provided by Bradford Gorby, who does a creditable homage. Undemanding fun.~HS.

SKY WOLF

Eclipse: *3 issue miniseries 1988*

Spin-off from *Airboy*, where Sky Wolf had been a regular companion and back-up strip. Sky Wolf is a pilot (all right, no surprises there) whose brash attitude and recklessness involve him in various scrapes. In this case, having recently become estranged from his wife, in 1954, he goes treasure hunting with his friend Bald Eagle in Vietnam. It's forgettably told by Chuck Dixon and Tom Lyle.~NF

SKYE BLUE

SLACKER COMICS

Slave Labor: *18 issues 1994-1998*

Occupying the majority of all but 14, Randy is the festering, resentful high school outsider unable to get his life together in any fashion. Having zoned into the 1990s zeitgeist, Doug Slack exploited his name and turned out more and more Randy. Even at it's best, as in 11's well-worked comedy of Randy's radio show, this is never more than *Hate* lite, rarely avoiding the obvious, and Slack's sketchy cartooning is off-putting. The shorter back-ups, though, often autobiographical, are better. 14 reprints many of them, including a classic chicken and monkey conversation, with the Randy strips from 1-5 collected as *Randy Sells Out*.~FP

SLAINE the Berserker

Quality: *28 issues 1987-1989*

Slaine, the barbarian warrior strip he created for *2000AD*, was undoubtedly Pat Mills' finest hour. It's an ironic, knowing tale of a violent but enduringly cheeky warrior, set in a mythical Britain before cataclysms separated it from Continental Europe. The narration is by Slaine's companion on his adventures, a malevolent and malodorous dwarf, Ukko. In his old age Ukko is being alternatively cajoled and threatened into recording his memoirs.

Slaine is evicted from his tribe at an early age despite being a prodigious warrior when gripped by a berserker-like fury, the Warp Spasm. Contrary to his best intentions to look out for

himself, shag anything that moves and have fun, Slaine continually finds his destiny entwined with that of the decaying sorcerers who worship death and seek to destroy humanity. Many of the early episodes (written for a weekly comic and therefore requiring a climax every four or six pages) are little more than segments of protracted fights. But what fights. In the hands of Mike McMahon, one of the most underrated comic artists ever, Slaine is bloody, inventive and twisted. The artists who followed never captured the wildness of McMahon's drawing, until, in Simon Bisley, a maturer Mills found someone who could match the mellower, more humorous tone of the later stories. Before that Glen Fabry's ultra-detailed and relatively fluid artwork was the polar opposite to McMahon, but David Pugh flooded his pages with ink until, as Slaine was elected king, he looked like a Mattel toy ascending the sacred mound. From 21 the title is *Slaine the King*, referring to his new-found status.

As the strip evolves Slaine goes from simple battle-lover to Sun King who unites the rival Celtic tribes through cunning and diplomacy to fight their greatest battle against the dread Slough Fegg. In phantasmagorical sequences he meets the Goddess herself and finds her a gurning, lusty maiden with whom he can happily flirt. Mills' humour evolves too, moving from straightforward contrast between the events depicted and Ukko's account of them to a broad parody of political and religious ineptitude. It's not subtle, but the characters are rich and the plotting clever. The McMahon and Fabry stories were collected by Titan, and the Bisley along with those of copyist Dermot Power, by Mandarin, and the whole series is highly readable, but forget the dull Blackhawk back-ups.~FJ

SLAPSTICK

Marvel: *4 issue miniseries 1992-1993*

Good-hearted troublemaker Steve Harmon, out to spoil a carnival for a school rival, falls into Dimension X while wearing a clown outfit (it works in the story. Honestly). His choice of costume is fortuitous, as Dimension X is inhabited by evil clowns (okay, alien entities who coincidentally resemble clowns. Does that sound any better?), and he blends right in. Or he would, but interdimensional travel has taken its toll and reduced him to, well, a puddle of goo. Fortunately, a good clown scientist, trying to prevent the evil clowns' invasion of Earth, reconstructs Steve in a spiffy new form, giving him the indestructible properties of an animated cartoon and sending him back to Earth to wreak havoc on the Marvel Universe. Oh, yes, this is supposed to be a superhero comic, and it's a very funny, likeable one too, written with flair and wit by Len Kaminski, and drawn by James Fry, who is unequalled among his contemporaries in his ability to fuse comedy and drama. Needless to say, *Slapstick* was relentlessly panned by the legions of humourless Marvelites who wanted to see their heroes suffer, goddammit!~HS

SLASH MARAUD

DC: *6 issue miniseries 1987-1988*

Doug Moench does his best to incorporate scenes from every film genre into this story about an Earth occupied by aliens who are five years from making the planet uninhabitable for humans. Hero Slash and a small group of survivors are aided by one alien who's begun to regret what his fellows are doing. It's an interesting idea and Moench packs a lot of action and character into the six issues. As drawn by Paul Gulacy, Slash looks remarkably like Clint Eastwood and behaves as inscrutably as the Man With No Name. Moench provides a good script and the artwork's good, but overall the series is a little too clinical to get passionate about it.~NF

SLAUGHTERMAN

Comico: *2 issues 1983*

The protaganist's boyfriend, a costumed hero in a fantasy mediaeval setting, is killed by a bad king, so, naturally, herself puts on the costume because the little people need their hero/ine. This is 100% witless and your mum could do the art better.~GK

SLAVE GIRL COMICS

Avon: *2 issues 1949*
Eternity: *1 issue 1989*

Costumed adventure in Roman times, with the comely Malu in her alluring two-piece rescued from the harem of a cruel master and dedicating herself to her Roman rescuer, Garth. Although there's a modicum more thought than most 1940s comics, it's surely only rarity that has these commanding such high prices. If you're really desperate, the Eternity issue reprints 1 in black and white, probably taking its reproduction from a 1960s I.W. reprint titled *Malu in the Land of Adventure*.~FP

SLAVE LABOR Graphic Novels

Abel by William Harms and Mark Bloodworth tells of John, a boy growing up in the harsh, depression-era US farm belt. Abused by his psychopathic elder brother, and neglected by parents struggling to make ends meet. In the early days of World War II, the lonely boy strikes up a friendship with a old Chinese gardener, but injustice and tragedy force him to confront his own developing morality. It's a thought-provoking look at the nature of truth and how children really are, and has recently been reissued.

A Lot of Love is a lightweight, but engaging tale about a normal, successful guy, Jack Peoples, who is in fact a man with a shameful secret. He is overwhelmingly attracted to excessively obese women. And ever so gradually he is succumbing to his darkest desires.. *Awkward Universe* is a disappointing thematic sequel to Andy Garcia's Seth Throb character from *Nerve* and *Oblivion City*, featuring his brother Malcolm. Igor Baranko's *Pifitos* tells the story of a recluse turned into a hero by a blind boxer and an old man who dispatch him to ancient Greece. It's a bawdy tale of mythological creatures, very human Gods and the rescuing of maidens from evil witches at the very gates of Hades. *Spark Generators* is a compilation of strips from some of comics biggest alternative names relating whose work made them want to be comic artists too. Contributors include Jeff Smith, Trina Robbins, Donna Barr, Creig Flessel, Scott Morse and many others. All the proceeds from the book were to benefit the Cartoon Art Museum.

The Yearning is a lyrical, wordless (apart from a four line poem) 100 page novel. Starting magnificently, it deals with the inner world of a young chef, the thoughts, dreams and emotions that flash briefly through his head as he goes about his day. Beautifully drawn by Dean Chiang, it blows it at the last hurdle by descending into silly superhero and monster pastiches in lieu of a strong resolution. A real shame too.~WW

SLAVE LABOR Stories

Slave Labor: *4 issues 1992*

A sampler for the idiosyncratic Slave Labor, one of the few comic publishing companies that's still one man's vision. If Dan Vado likes your work and can afford to publish it, you're in. Sadly, Slave Labor titles don't reach the audience they should, despite Vado's taste being generally excellent. He's also a pretty good writer, as displayed in 1's *Hero Sandwich* tale. It's an excellent first issue throughout, with a Dr Radium feature and a tale of Catholic childhood completing the mix. Succeeding issues don't match the first, but with Milk and Cheese, Bill the Clown and Samurai Penguin there's enough to make them worthy of a glance.~WJ

SLAVE PIT FUNNIES FEATURING GWAR

Slave Pit Inc: *6 issues 1994-1998*

Always more about cartoon violence onstage, it's no surprise that the members of heavy metal band GWAR would want their own comic. What is surprising is that they would go to the effort of producing it themselves. Or, to be precise, having the folk who produce their costumes and sets turn out the comic strips about their stage personas. Predictably enough, the same adolescent sensibilities that characterise GWAR's music are on display here, with only basic artistic ability to back them.~FP

SLAYERS

CPM: *6 issue miniseries 1998-1999*, 6 issue miniseries ('Super-Explosive Demon Story') 2001-2002*, 6 issue miniseries ('Special') 2002*, 2 volumes + ('Super-Explosive Demon Story') 2002 to date*

Based on a popular anime, *Slayers* tells the adventures of young sorceress, Lina Inverse, and her travelling companion, the master swordsman, Gourry, who's not very bright. The first series sees the pair food and treasure hunting, preventing robberies by the Black Fox and battling werewolves amongst other things. 'Super-Explosive Demon Story' 1-6, depicts an early adventure as Lina tries to find the Book of Time Sorcery, allegedly guarded by a dragon. Collected in one volume, the second 'Super-Explosive Demon Story' continues with a quest to find the mysterious metal, Orihalcon, which might be the root of evil. Along the way, they gain an ally in Rezo the Red Priest and a foe in Zelgadis Graywords. Rival sorceress, Naga the White Serpent, joins Lina against foes including Galdin Luda in 'Special', which provides some insight into Lina's past. Writer, Hajime Kanzaka, plays up the comedy in this undemanding series. The best of the artwork comes from Tommy Ohtsuka on 'Special', but there's not a lot in it as Rui Araizumi and Shoko Yoshinaka are also accomplished, but work in a slightly more conventional, anime-based style.~NF

SLEAZE CASTLE

Gratuitous Bunny: *9 issues 1989-1993 (1-6*), 1996-1999 (7-9), 4 issue miniseries ('Tales From Sleaze Castle') 1992-1994*

Quirky and engaging tale of the surreal life of Jocasta Dribble, perpetual student (doing a master's in Watching Television) and unwilling traveller in time and space. Her friend Panda is ruler and owner of a colossal, extra-terrestrial, extra-dimensional edifice she calls Sleaze Castle. Due to a trans-dimensional cock-up she ends up adrift in the continuum, often approaching but never returning to where she started from. It sounds complex, but the plot is nothing more than a good excuse for loads of puns, spoofs and sight gags. Dave McKinnon and Terry Wiley produce a delightful blend of peculiarly British humour that will appeal to comic fans, cult TV fanatics, music lovers and even those chaps that read actual books. The 'Directors Cut' collections are nominally reprints, but with so much new and reworked material its best to consider them as separate issues, and it should be noted that the miniseries *Petra Etcetera* (featuring Jo's younger sister) continues the main series numbering as *Sleaze Castle* 9-11. Great Fun for people whose brains work.~WW

Cartoonists' Co-Op: *One-shot 1974*
Kitchen Sink: *One-shot 1978*

Hollywood Babylon comics by the cream of the underground cartoonists. Best is Art Spiegelman detailing the downfall of Fatty Arbuckle, with good art and inventive use of silent screen-style text captions. Kim Deitch, Bill Griffith and Spain Rodriguez are also on hand for a respectable package, and the obscure Jim Osbourne's Lupe Velez strip is also excellent. The Kitchen Sink reprint is printed in larger format.~FP

SLEEPING DRAGONS

Slave Labor: *4 issues 2001*

Competent but uninspired fantasy tale of Philip Escaladine, a young knight of the Order of Meggido, who almost saved civilisation from the Crough, invading zombie monsters before they were betrayed by the very princes they fought for. Two centuries later Philip, a wandering Paladin and peacekeeper, is the only hope as the Crough return.~WW

SLEEPWALKER

Marvel: *33 issues, 1 Special 1991©1994*

Laughably promoted as "*Sandman* done right", this pleasing series was ill-served by its advance publicity, which set most folks against it from the start. University student Rick

Sheridan is troubled by dreams of a tall, grotesque creature whom he senses is trying to break into the waking world. This creature is one of a group called the Sleepwalkers, whose task it is to patrol the Mindscape, another dimension, and prevent any of its more evil denizens from preying on innocent minds. Having become accidentally 'lodged' in Sheridan's mind, it can only access the outside world and fight evil while Sheridan sleeps. It's a refreshing idea to have a heroic protagonist who is ugly, rather than fashionably 'exotic', and Bob Budiansky creates a group of likeable supporting characters for our teenage hero. Bret Blevins illustrates most of the first dozen issues with appealingly soft-focus lines, giving a natural look to the admittedly unrealistic characters. Sadly, after Blevins' departure the replacement artists weren't up to snuff, and Budiansky seemed to have lost heart, turning in rote scripts with obligatory guest appearances by Marvel heavy-hitters to try to pad the sales figures. Not a mega-hit series, but the first dozen issues have a certain charm.~HS

The SLEEZE BROTHERS

Marvel/Epic: *6 issue miniseries 1989-1990*, one-shot 1991*

SLIDERS

Acclaim: *7 issues, 1 Special 1996*

This enjoyable series, based on the TV show in which three scientists and an R&B singer are flung from one dimension to another, through contemporary but differently distorted Earths, comes in three-issues-per-story chunks and in one-off specials. D.G. Chichester's scripts capture the flavour of the programme and the clear art by Dennis Calero, Kevin Kobasic and Val Mayerik makes it an easy read. The comics are able to cover subjects too expensive or risqué for television. The exciting *Sliders Special* 1, written by Jerry O'Connell, who plays Quinn Mallory, the show's youthful genius, is set on an Earth where the US government encourages citizens to take drugs.~GK

SLIME

Fantagraphics: *One-shot 1995*

Ostensibly, this is the secret sex-life of J. Edgar Hoover. Drawn in a very rough and ready style by Eric Reynolds from a script by himself and Robert Peters, it's disturbing to say the least. We are treated to the graphic (and scatological) abuse of Hoover by his Grandmother, Mother, Father and a male servant. Quite where we're being led is open to question, though sympathy for the Hoover character is clearly part of it. Not for the squeamish or politically correct, at any rate.~NF

SLINGERS

Marvel: *12 issues 1998-1999*

Slingers follows the adventures of a group of teenagers who acquire, from a mysterious benefactor, superhero costumes that once belonged to Spider-Man. There's nothing especially clever or original about the series, written by Joseph Harris and pencilled (mostly) by Chris Cross, but it's a gem of gentle superhero soap. The characters' silver age-style angst and insecurities make it easy to read this as an unintentional comedy or plodding Marvel-by-numbers; they don't make comics like this any more because it's all been done before, but so what, if that's what you like?

The Slingers spend many a scene practising their powers with largely incompetent results, struggle with the moral dilemmas their new roles throw at them, their troubled relationship with their controlling and probably psychotic mentor, their own weaknesses (arrogance-hiding-insecurity, disability, alcoholic parents, mutant self-loathing, being dead... all the usual things that teens in the Marvel Universe worry about) and whether the world really needs more superheroes. Of course it doesn't, especially not ones who aren't very good at it, and this is the conclusion the team eventually reach for themselves, walking into the sunset and leaving the hero stuff to the people who know what they're doing. There is a *Wizard* preview that predates 1, and four variants of the first issue, each featuring a different member of the team in a back-up solo story.~JC

SLOW DEATH

Last Gasp: *11 issues 1970-1979 (1-10), 1992 (11)*

Taking their shock-endings from EC, *Slow Death* 1-5* are mostly science fiction stories concerned in one way or another with the end of humanity or the World – whichever comes soonest. Grim and very black, the scripts are twisted and thoroughly anti-authoritarian. The humour and artwork, which includes Richard Corben, Dave Sheridan, Jim Osbourne, Greg Irons and Jack Jackson, just about keeps it the right side of preaching-to-the-converted. 6 illustrates a move towards a broader vision with stories attacking/satirising attitudes to race, animals and women.

From 7, issues are themed, starting with War and moving through Greenpeace, Atomic Power, Cancer and Energy. These take a more militant stance, mixing didactic stories, documentary-style strips and information pages but lack much of the humour and bite of the early issues. Exceptions to note are Guy Colwell's 'Herpes is a Virus' in 10 (don't read it if you're squeamish) and Alan Moore and Bryan Talbot's 'Cold Snap', reprinted from *Food for Thought*, in 11. The final issue pays tribute to the late Greg Irons, who worked consistently on the title, printing his last work for the first time, including a Darnold Duck strip based on the Kurtzman/Elder Disney parody *from Mad Magazine*. Always boasting strong covers, particularly those by Rand Holmes (5, 6) and William Stout (7, 8), *Slow Death* delights in the extreme, attempting to reach by shocking rather than simply shocking for its own sake.~NF

SLOWPOKE

Alternative Comics: *1 issue 1998, 1 Collection 2001*

Jen Sorensen's initial comic is ill-served by a strange cover that may feature her cast and topics, but doesn't come close to representing the innovative whimsy and comment within. The uptight Mr Perkins shares space with M.I.D.I. Minnie, never without her electronic keyboard, and Drooly Jooly the under-sexed and always randy woman. Peter Bagge and Jim Woodring are the most recognisable influences, so the cartooning is fine. The collection is more focused, consisting of humourous commentary strips produced for a Virginia newspaper using the same cast, but lacking the sometimes manic energy of the comic, which is funnier. Many of these strips are available online at www.people.virginia.edu/~jls6c/aboutslowpoke.html.~FP

In this one, corrupt copper Frank Hoag is transformed into a mass of gray gloop after his dying body interacts with a DNA-transforming chemical. Hoag retreats to the New York sewers, where he either battles a series of bizarre mobsters (including the mysterious Lord Pumpkin), sits around working out ways to commit suicide or else talks to himself in irritating spoonerisms. Most of Mary Fleener's autobiographical strips revolve around music in some way, especially her adventures as a bass player over the years. She's a sharp, funny woman and her observations are diverting if not earth-shattering. Unlike many other female cartoonists her style is very polished, mixing in Cubism at every possibility. When people get stoned they start looking like black and white versions of Picasso paintings. When they get angry they start looking like Picasso paintings. And sometimes it's just because. This is a not entirely successful technique because Cubism is about more than drawing boxes, and the better strips are the short, surreal ones drawn entirely in a simplified style.~FJ

SMITH BROWN JONES

Kiwi Studios: *5 issue miniseries 1997**
Slave Labor: *4 issue miniseries, 2 Specials 1998-1999*

Smith Brown Jones is an alien accountant placed on Earth to gather data about human society. Naturally, he works on a newspaper investigating alien activities. In the first series this includes the takeover of the planet, and in the second encounters with supposedly mythical creatures in a quiet corner of England. Meanwhile his brother Jeff Chester Chuck turns up in the USA. Jon 'Bean' Hastings has an offbeat sense of humour, but otherwise delivers a very structured comedy in both cases, and the jibes at the administrative mind diminish as Jones develops into the traditional innocent abroad. The specials have other creators write material for Hastings to draw, but it's not as funny as his, so somewhat ill-advised. Not as ill-advised, however, as printing his wedding photos in the Halloween special.~WJ

SMITH'S ADVENTURES IN THE SUPERMUNDANE

Cryptic Press: *One-shot 1999*

Living up to the name of the publisher, on one level this is the story of Smith, a young boy in an institution, bullied and misunderstood. On another level, it's art or nonsense, depending on your willingness to interpret the largely incoherent events that substitute for a plot. Farel Dalrymple provides simple drawings with the hint of a Bill Sienkiewicz inking style.~NF

SMOKEHOUSE FIVE

Platinum Editions: *1 volume 1991*

A collection of silent, single page gag strips about a bumbling fire crew, full of Sergio Aragonés' signature detail, with lots of background jokes and manic running around. Well done, but not as developed as much of his work. In forty-eight pages you don't get the patterning of events and incidents that make up much of the humour in more sophisticated projects like *Groo the Wanderer*.~FJ

SMOOT

Fantagraphics: *1 issue 1995*

Skip Williamson's Snappy Sammy Smoot was a staple of late 1960s and early 1970s underground comics. He's an innocent who's that vital tinnie short of the barbie and used by Williamson as an obtuse commentator on all around him. This collection mixes one new strip with material culled over twenty years, some not previously seen in comics. As social commentary Smoot and his counterpart, the right-wing Radical Billy, are hardly subtle vehicles. While they raise a wry grin in small doses when they're part of anthologies, they haven't enough depth to sustain a solo run, so this only comes recommended to completists.~WJ

SNAKE EYES

Fantagraphics: *3 issues 1990-1993*

A short-lived attempt to find a successor to *Raw* and *Weirdo*, *Snake Eyes* maintained a feel for the underground while looking forward with a host of new talents. The best contributions to the first issue include David Mazzucchelli's inside-front-cover illo, Bob Sikoryak's 'Action Camus' (a series of redrawn covers from *Action Comics*), Chris Ware's short Clyde The Rat and Quimby Mouse strips, Julie Doucet's 'Alcoholic Romance', an untitled two-pager by Alex Ross and 'Pixie Meat' by Tom De Haven, Gary Panter and Charles Burns. Glenn Head edited the first issue solo, but contributor Kaz co-edits 2 and 3, which are similarly varied issues featuring many of the same creators. Kaz's extended 'Sidetrack City' episode in 2 is a highlight but overall there's a feeling that all the energy went into issue 1. *Snake Eyes* attempts to experiment with the comic's page, using fold-outs and strange panel shapes, but only Ware really succeeds. If you like the creators, *Snake Eyes* will offer you solid examples of their work.~NF

SNAPDRAGONS

Dork Storm Press: *2 issues + 2002 to date*

This companion series of sorts to Dork Tower has child protagonists instead of that series' adults, but the emphasis is still on the games that the characters play. Jody finds pretending to be ill to stay off school doesn't always work out, when she tries to sneak a turn on her and her twin, Jake's birthday present before him. 2 sees them deciding what to wear for trick or treating with friends. Writer John Kovalic has a good feel for obsessive personalities, young or old, while Liz Rathke's simple, broad-brush artwork is joyful. Backup strips, PS238 and Patty Cake simply add to the pleasure.~NF

SNARF

Kitchen Sink: *15 issues 1972-1981 (1-9), 1987-1990 (10-15)*

This underground anthology was initially a rather tepid collection of counterculture humour and knockabout funny-animal strips enlivened only by the beautiful art of publisher Denis Kitchen. 4, however, featured a short strip from Howard Cruse, who, from 5-9, would dominate the comic, growing in stature and sophistication from issue to issue. Other top-flight contributors attracted to the revitalised title included Justin Green (6-8) and Kim Deitch (7-9), although lesser-known talents like Robert Armstrong (6), Steve Stiles and Sharon Rudahl all contributed work of note.

Snarf's second run drew upon a different generation of cartoonists for its material, though again Howard Cruse weighed in with several superb strips in 10-12. To its credit, the comic admirably promoted then unknown creators like Chester Brown (10), Dennis Worden (11, 12) and Mary Fleener (10), along with the still undeservedly obscure Mark Landman (11, 12, 14, 15). Established cartoonists Rand Holmes (11) and Foolbert Sturgeon (12-14) also contributed fine work, but the star of the comic was Joe Matt. Matt's hilarious, if tortured, autobiographical strips appeared in *Snarf*'s last five issues and still make riveting reading today. They're available collected as *Peep Show*, the title of his later solo comic. Some issues are inevitably a bit patchy, but there's at least some quality entertainment in every one.~DAR

SNARL

Caliber: *3 issue miniseries 1990*

Eccentric, dark humour comic featuring parallel stories set in the dismal metropolis of Plungetown. The lead strip 'Eaters' has vampire private eye Caleb Steel hunting down a mad scientist who is mutating fish into man-eating ghetto prowlers. 'Dog' has a Batman-like hero in a canine mask attempting to escape the nefarious plans of Victor Quasimodo, a multi-millionaire who needs man's best hero to advertise his dog food. Wacky but seldom entertaining comedy from Kevin Atkinson.~WW

SNOOKY FUDGE

Threshold: *One-shot 1993*

A compilation of newspaper-style strips by cartoonist Dave King. *Snooky Fudge* stars Hoo Hoo, the stupidest boy in the world, and his painfully intelligent cat Spap. The cat's disdainful thought balloons explain Hoo Hoo's mistaking of a cooker for a time-machine, for example ("Ouch! history hot!") and his scatological sense of humour. Very funny.~SW

SNOW QUEEN

Caliber: *One-shot 1997*

Stylish take on the classic Hans Christian Andersen tale of a young girl searching for a boy whose heart has been pierced by a splinter from the mirror of the Queen of Snowflakes. Insightful and very readable exploration of loss and redemption that remembers that in a too-saccharine world it's okay to be sad sometimes, skillfully adapted by Mitchell Perkins and George Broderick. A treat for all ages.~WW

THE SNOWMAN

Hamish Hamilton: *1 volume 1978*
Puffin Books: *1 volume 1978*

For two generations now British children have spent each Christmas glued to their television transfixed by *The Snowman* cartoon. It was adapted from this, which has also become something of an institution, remaining in print for twenty-five years. The story is simplicity itself: a young boy builds a snowman who comes to life during the night; the pair get up to all sorts of hijinks and end up flying through the sky. This being Raymond Briggs, the sentimentality is abruptly subverted by the ending, and it would take a hard heart indeed not to be affected by the poignancy of it all. Thankfully there is none of the mawkishness of the cartoon, although the sense of joy, wonder and innocence transferred successfully. Briggs illustrates in a beguiling combination of coloured pencils and crayons, and his storytelling is so masterful that words are not required. For children there can be no finer introduction to the comic medium, and for adults there's much to enjoy and appreciate even after the 100th time!~DAR

Avatar: *One-shot ('0') 1997*, 3 issue miniseries ('Dead and Dying') 1998*, 2 issue microseries ('2') 1998*, one-shot ('1944 Special') 1998, one-shot ('Horror Show') 1998, one-shot ('Flurries') 1999*

A snow demon exists in Silvercreek Colorado, the result of a Native American curse, and he emerges on killing sprees in the present (first series), and World War II ('1944'). Further series include guest stars Nira X, and the characters from Vortex, and the story continues in *Threshold*. Co-creator, Cameron Enders, joins Matt Martin to tell '1944', otherwise, it's all by Martin. His artwork is detailed, and there is plenty of violence (and some nudity in the Avatar issues), but there are gaps in the storytelling, and what might have been an interesting horror title is thrown away with the insertion of superheroes.~NF

SOBA

Drawn and Quarterly: *One-shot 1998*

Joe Sacco profiles the eccentric Soba, musician, artist and planter of landmines during the war in Bosnia. He's complex, seemingly depressive, and shaped both by artistic and physical conflict. While providing the effects of the war in Bosnia in microcosm this lacks the impact and gravitas of *Safe Area Goradze*, to which it's a prelude.~WJ

SOCK MONKEY

Dark Horse: *2 issue microseries 1998, 2 issue microseries 1999, 2 issue microseries 2000*

The product of Tony Millionaire's unique imagination, the Sock Monkey has become a left-field phenomenon, spawning toys, lighters, lunch boxes and children's books. Sock Monkey first appeared in Millionaire's alternative comic strip, 'Maakies', and this comic shares the same combination of elegant drawing, florid and antiquated language, and a genuinely troubling undertone. With hints of Windsor McCay's beautiful line drawing and the stilted formality of Victorian children's books, the comic is superficially a charming series of tales about the Sock Monkey, his friend Mr Crow and all manner of little creatures. Yet it also contains scenes of real terror and the sort of casual violence of childhood pranks gone wrong so that, while this title will not be for everyone (particularly children, despite appearance), it is undoubtedly the product of a genuinely inspired vision.~DAR

SOF'BOY AND FRIENDS

Drawn & Quarterly: *2 issues 1997-1998**

Our hero, a malleable blob of ectoplasm who somewhat resembles the Pillsbury Dough Boy, is an innocent abroad in the mean streets of Chicago. Sof'Boy constantly suffers verbal and physical abuse from the city's' mean-minded citizens, but literally bounces back by dispensing good cheer and kind thoughts, finding pleasure in the simple things in life, or hanging out with his cute animal pals Pidgy and Herbie. Creator Archer Prewitt is perhaps better known for his day job as a member of post-rock group The Sea and Cake, but on this showing he's an equally talented cartoonist. His clean, sharply detailed art style works well with a gift for sinister surrealism that subtly undermines and complicates the strip's smooth surfaces.~AL

SOJOURN

White Cliffs: *2 issues 1977*

Sojourn was an enormous tabloid-sized publication that featured a number of fine serials in three-page instalments, rather in the manner of British weekly comics. Publisher Joe Kubert revived his caveman feature Tor, and other contributors included Doug Wildey, Sergio Aragonés, Lee Elias and John Severin. The material was uniformly fine, but the format was obviously too different for readers of the time. While the bulk of the stories remained frustratingly unfinished, the Elias and Severin strips, respectively 'Kronos' and 'Eagle', were reprinted and concluded in Warren's *Rook*.~DAR

SOJOURN

CrossGen: *Prequel, 17 issues + 2001 to date*

Three centuries prior to the start of this meandering fantasy the evil Warlord Mordath that terrorised this psuedo-medieval land was slain. Oh dear, he's been resurrected and reclaimed his former position. The series starts when Mordath's trolls murder the husband and daughter of Arwyn, our busty blond heroine. Accompanied by her nice doggy and worldly-wise rogue Gareth she seeks revenge on Mordath via a quest for the scattered pieces of an antique arrow. This good-looking comic is pencilled by talented Greg Land and well produced all round. The effective blend of sword and sorcery clichés is only marred by the increasingly repetitious scripts by Ron Marz. It took a dozen issues to find the first of the five pieces of the arrow, so try tuning in at about 59 with hopes of a finale. In the meantime CrossGen are issuing collections every six issues or so.~GK

SOLAR, MAN OF THE ATOM

Valiant: *60 issues 1991-1996*

In the 1960s Gold Key published a comic called *Doctor Solar, Man of the Atom* about a physicist who was exposed to strange radiation and acquired powers over molecular structure along with a skintight red suit. It was all good clean fun. The Valiant story is rather more complicated. The protagonist is Doctor Philip Seleski, designer of a nuclear reactor about to start operating. A fault develops and in coming to the rescue, Seleski is exposed to radiation and develops powers over energy. As his abilities increase to god-like levels and he becomes distanced from humans, he makes an error of judgement that wipes out the planet. These are the events that take place in Timeline A, recounted in a gripping, vivid insert story called 'Alpha and Omega' in 1-10, written by Jim Shooter with artwork by Barry Windsor-Smith and Bob Layton.

Seleski survives the events in Timeline A and travels back in time to try to stop any of it happening. The events in the main comic, written by Jim Shooter and pencilled by Don Perlin, start with his arrival in Timeline B some time before the accident with the reactor. Soon after arrival he turns into Doctor Solar – or into his own idealised version of his hero from his favourite childhood comic – and he later switches between Seleski and Solar as appropriate. There's more to it than that, but strict accuracy would give too much away.

However, no sooner is Timeline B saved from his error of judgement than he discovers that Earth is under threat from alien spiders. He leaves Earth for a year to fight them in space, then returns and attempts to live a normal life as a physicist. That pretty much exhausts the initial supply of plot, and from 16 onwards, with Jim Shooter gone, it's like almost any other superhero comic, shambling from issue to issue. Somehow, though, it keeps you turning the pages, even after the third crossover with other Valiant titles, where the final episode occurs in the other title, and even after the seven-millionth (or so it seems) reappearance of the alien spiders. Why does it still work, at any level? It's probably the soap-opera aspects – will he and his girlfriend stay together? How will they get on in their new jobs? – and the fact that his power remains unsettling and distancing. The stories never follow through on any of the ideas, but at least the ideas are there.~FC

SOLAR, Man of the Atom: Hell on Earth

Acclaim: *4 issue miniseries 1998*

The conclusion to the first year of plotlines running through all the Acclaim universe titles. Frank and Helena Seleski, in their combined form of Solar, accidentally destroy Seoul as the mysterious Jimmy Six drops a jumbo jet on the Holy city of Mecca, throwing the world into chaos. Heroes gather at the behest of the Eternal Warriors, who have a weapon that will destroy Solar. As the Armageddon countdown continues, it becomes apparent that the End of the World is just a bonus in a revenge-plot that spans all of time and a pretty big portion of Space. Christopher Priest, Patrick Zircher and ChrissCross pull it all together quite well and it's great not to have to buy three dozen spin-offs to get the full story. Worth a look.~WW

SOLAR LORD

The hero Nickson is infused with the might of the god Zeus in order to become Solar Lord, champion of planet Earth. Calling in a debt of honour, Lord Tygarr gambles that a newly-minted demi-god can cope with the onslaught of the Emperor of Darkness' forces. The destructive open ending in 7 promises a further series. Legendary Hong Kong comic maker Khoo Fuk Lung is given full rein production-wise here, but his style, so suited to spectacular effects from cheap printing, palls after awhile. The translated script is rewritten by James Hudnall.~SW

SOLAR STELLA

Sirius: *One-shot 2000*

J. Bone writes and draws this humourous space opera, featuring Solar Stella as a clean-cut version of Barbarella. Though beautifully drawn in cartoony, slick brush-line, and with fun stuff such as cut-out Stella paper doll and clothes, the story is thin and the jokes somewhat lacking. Still, almost worth your money for the artwork alone.~DB

SOLARMAN

Marvel: *4 issues + 2002 to date*

Set two years after Cable was last seen in his own title, he's a soldier without a purpose until he's contacted by his old mentor Blaquesmith and given a new name and a mission to find an Armenian girl. That Cable required a change of focus isn't questioned, but this is merely refried *Punisher* material. Artist Igor Kordey's striking covers are the best aspect of the comic.~WJ

SOLITAIRE

Malibu: *12 issues 1993-1994*

After failing to commit suicide Nicholas Lone, son of evil businessman Anton Lone, is brought back to life with his father's nanotech engineering, microcomputers that "rebuild and replace traumatized tissue". Assuming the identity of Solitaire, a martial-arts expert able to survive shotgun blasts, Nicholas attempts to bring down Anton's corrupt empire. A late addition to the Ultraverse group of titles, *Solitaire* benefits from strong artwork by Jeffs Johnson and Parker. Writer Gerard Jones tries to spice things up with oddball villains (The Degenerate, Double Edge) and some purple prose. No amount of fancy rendering or garish computer colour, however, can disguise the fact that this is an extremely ordinary vigilante series. Nothing much is made of the potentially interesting father-and-son conflict, while towards the end the comic becomes unexpectedly hostile towards women.~AL

The Green Hornet SOLITARY SENTINEL

Now: *3 issue miniseries 1992-1993*

The 1990s Green Hornet combats City Hall corruption while all his allies are out of action. But wait, who's this mysterious Black Hornet fellow? There's a decent plot that isn't entirely diluted by slapdash artwork, although there's seemingly no reason it couldn't have been part of the regular series.~WJ

SOLO

Marvel: *4 issue miniseries 1994*

Described as a one-man anti-terrorist strikeforce, Solo is heavily armed, has teleporting capabilities, and, for those that care, his past unravels here. The early appearance of the acronymical A.R.E.S. As if in implicit acknowledgement of *Solo* being a poor premise and of poor quality, Spider-Man is an equal participant throughout.~FP

SOLO AVENGERS Starring HAWKEYE

Marvel: *20 issues 1987-1989*

Hawkeye is the title feature, but the comic also includes back-ups spotlighting another Avenger. 1 sets the tone for this schizophrenic title, featuring some of Jim Lee's earliest Marvel art, inked by Al Williamson, on the Mockingbird back-up, and having Hawkeye fight a bunch of clowns at the circus in the lead. It's an introduction to his origin and sequel thereto in 2-5, rectifying a twenty-year-old continuity conundrum. Under Tom DeFalco and Mark Bright in 1-12 the Hawkeye feature is an undemanding superhero strip. He fights villains, he cracks jokes, and he's duffed up by the wife. DeFalco loses the plot somewhat from 14, with a particularly stupid A.I.M. appearance in 16, but after he leaves things become rapidly worse.

The back-ups are one-shot stories, and a largely uninspirational bunch. Females come in for the best treatment. John Ridgway draws a nice Scarlet Witch (5), in a silly tale returning Jon Kowalski from *War Is Hell*, and Bob Layton produces a touching Black Widow story in 7. J.M. DeMatteis and June Brigman deliver the best of the run with Hellcat, in 9, and there's a fun Chris Claremont and Alan Davis She-Hulk in 14. That's under a stunning Sandy Plunkett cover, and Plunkett, with Scott Hampton, provides a Black Panther story in 19 that, while not entirely successful, is at least well considered and drawn. The other decent male solo outing stars Hercules (again by Layton) in 12. There's a break with formula in 16, 18 and 20, which have a poor continuing story returning Moondragon. The title became *Avengers Spotlight* with 21.~WJ

The Sword of SOLOMON KANE

Marvel: *6 issues 1985-1986*

Ralph Macchio's writing isn't particularly stupid, but it is in no way outstanding. Unless one's just read it, one generally has a problem recalling a single moment from one of his comics. Go on, give it try. There's never the nice crafting of a line, a clever plot twist, or even an anachronistic curse to stick in the memory. And *The Sword of Solomon Kane* is no exception. Robert E. Howard's globe-trotting Puritan is

SOLSTICE

Watermark: *2 issues 1995*

Russell Waterhouse is a man possessed by the idea of attaining eternal life, and follows any leads to the legendary fountain of youth, accompanied by his son Hugh, about whom he's particularly scathing. Riddled with cancer, Russell plans a final expedition to Chile, and it costs him his life. *Solstice* is Hugh's story, yet despite dying on the second page of the first issue Russell looms over the story, as Hugh recalls incidents from his past. Russell is brutal, arrogant and single-minded, dominating his son and inculcating feelings of inferiority. He's the equal of any costumed villain to be found in comics – a masterful creation from writer Stephen Seagle. The Grail aspect of the story is secondary to Hugh's development, free of his father and able to become master of his own destiny, yet there's enough incident and horror to ensure a compelling read. Justin Norman's art is oddly misproportioned and static, yet conveys the necessary emotion when called upon to do so. The third and concluding issue never appeared, but should the planned collected edition ever be published *Solstice* ought to be a compulsory purchase for anyone interested in adult comics.~FP

THE SOLUTION

Malibu: *18 issues (0-17) 1993-1995*

The scripts for this were seemingly phoned in by James Hudnall to be drawn by such second-rate pencillers as Darick Robertson (1-4) and John Statema (most issues thereafter until the series finally ground to a halt). Part of the Ultraverse, The Solution are a by-the-numbers superteam who undertake covert operations against all kinds of villainy. Their chief enemies are the evil Dragon Fang, the world's largest Triad, who have taken over the company that once belonged to Lela Cho, aka Tech, leader of *The Solution*. Most of the background to this dull feud is explained in 6, but only partially resolved by 17, making The Solution a painfully protracted read. If you do want to sample, 6 is the best place, detailing the origin of Tech. She pays $5 million for implanted enhancements that enable her to control electronic machinery, and discovers hitherto unrevealed unarmed-combat expertise when faced with a room full of gangsters. Yes, it's all that good.~AL

SOME TROUBLE OF A SERRIOUS NATURE

Crusade: *One-shot 2001*

No, that's not a spelling mistake in the title. Well, it is, but creator Bill Tucci has taken it directly from the hoax letter that prompted this comic. It was sent by a pilot after World War II ended, written as if an Arkansas yokel, allegedly accounting for their wrecking an air force plane. The letter is reprinted in the back of the comic, is hilarious, and worth the price of the comic alone. Tucci attempts to adapt it, isn't satisfied, and promises instead to dramatise the letter for DVD release. Good luck to him.~WJ

SOMERSET HOLMES

Pacific: *4 issues 1983-1984**

Eclipse: *2 issues (5-6) 1984**

Psychological thriller with more twists and turns than a rollercoaster, and a similar idea of pacing, co-plotted by Bruce Jones and April Campbell and gorgeously illustrated by Brent Anderson. A woman comes to on a quiet country road after a hit-and-run accident, unable to remember how she got there or who she is. Her only clue is the label sewn into her skirt, and a key. All she knows is that people keep trying to capture or kill her, and very few of those who befriend her can be trusted. Jones and Campbell unfold shock after shock – a real Hitchcockian puzzler. All six issues feature a Cliff Hanger back-up (by Jones alone). The plots, in homage to Republic-style serials, may be hoary but Al Williamson's artwork is excellent. The man was born to draw lean heroes, gutsy lady explorers and evil Nazis in lush jungle settings.~FJ

SON OF MUTANT WORLD

Fantagor: *5 issue limited series 1990*

Originally in colour (1, 2) but forced into black and white for financial reasons, Jan Strnad and Richard Corben's sequel to *Mutant World* is much what you would expect: one girl and her grizzly bear, a man in a balloon with a bird, a father and son looking for food and a band of mutants out to destroy what little there is left of civilisation. It's good fun, told firmly tongue-in-cheek, but Corben's artwork suffers in 3-5, since it was clearly meant to be in colour and the printing is too dark or too light, obscuring the quality of line and removing much of the detail. There's a Bruce Jones back-up strip in each issue, the first four of which tell EC-style tales from a woman's perspective. Miscellaneous other Corben material fills out the rest of each issue.~NF

SON OF THE GUN

Humanoids: *4 Volumes 2001*

'Born in the Trash' introduces Juan, abandoned because he's born with a tail, and rescued from dogs by a dwarf, who suckles him on a stolen pistol. He grows up on the streets, eventually leading a small gang of petty criminals until he betrays them for a position with the Prime Minister's bodyguards. In 'The President's Dogs', Juan becomes leader of the bodyguards and, after the death of the Prime Minister's daughter, personal bodyguard to his wife, Laura, and son. 'Flesh and Filth' reveals secrets about Juan's parentage, leaving him on the run from the remaining bodyguards, and in 'Sinner and Saint', lost in the desert, Juan has a final chance for redemption. Written by Alexandro Jodorowsky and drawn by Georges Bess, this is a compelling exploration of the human condition, if not, at the end, entirely convincing in the characters of Laura and Juan, but beautifully drawn.~NF

SON OF VULCAN

Charlton: *2 issues (49, 50) 1965-1966*

Johnny Mann, reporter, is speaking aloud while contemplating a classical ruin on "Cyprete": "You, the gods of ancient Olympus – why do you permit man to wage stupid wars?" The gods are angry at being blamed for human faults, and transport him to their Council Hall for judgement. He stands up for himself, and Vulcan takes his side, and they end up giving him armour, superpowers, and a mission in the war against evil. It's an original start, but thereafter he behaves like any other superhero, and the only evil he seems to find is Dr Kong, the Meanest Man Alive (a Fu Manchu figure). On this level it's good, clean fun, with above-average humour and imagination. The series starts with 49, inheriting the numbering from *Mysteries of Unexplored Worlds*, and that issue is the comics writing début of Roy Thomas.~FC

SONAMBULO

9th Circle Studios: *3 issue miniseries 1996-1999*, one-shot (Sonambulo's Strange Tales) 2000, one-shot ('Ghost of a Chance') 2002*

Taking almost four years to complete a miniseries won't win Rafael Navarro any plaudits for speed, but originality and talent are another matter. By slipping a masked Mexican wrestler into a film noir script Navarro concocted something new. Now a detective, Sonambulo is helped by being able to derive clues through reading people's dreams, and in the miniseries has to find a missing senator's daughter. The sombre mood is maintained to the end, but the plot rather falls apart in 3. The three stories in *Strange Tales*, one text and illustration, have a supernatural edge with Navarro showcasing a variety of approaches, after which the plodding 'Ghost of a Chance' is a great disappointment. Navarro is an excellent artist with a visually striking character, and a decent writer to boot, so crime comic fans can do far worse than seek out the first four issues.~FP

SONIC DISRUPTORS

DC: *7 issues 1988*

Destined to be a cult, but instead fizzled out. This concerns a future where rock music is banned in a puritan USA, and where musicians set up their own countries (the Republic of Rock); there are also orbiting radio stations, an Elvis Presley lookalike and a DJ called Sheik Rattle Enroll (you have to laugh). Plenty more interesting characters, both good and bad, come together for a convoluted plot. Just when things are starting to get interesting, the plug was pulled. Originally planned as a twelve-issue limited series, *Sonic Disruptors* was cancelled for "production reasons". Bit of a shame, really. Suggested for mature readers: sex, drugs and rock 'n' roll come to comics. Well, actually not much sex. Never mind, though, because this quirky series, written by Mike Baron and illustrated by Barry Crain and John Nyberg, still deserves some attention.~HY

Chilling Adventures in SORCERY

Red Circle: *5 issues 1972-1974*

After two issues bizarrely illustrated in the Archie house style this horror title featured some well drawn if overly wordy stories before changing title to *Red Circle Sorcery* with 6. Gray Morrow edited, wrote and drew all of issue 3, producing some of his finest work in the process. Morrow was also present in the final two issues, but they were dominated by the excellent Vincente Alcazar, who brought a moody sophistication to the title. Dick Giordano's characteristically fine work in 4 only adds to a delightful package that comes highly recommended.~DAR

Red Circle SORCERY

Red Circle: *6 issues (6-11) 1974-1975*

Previously *Chilling Adventures in Sorcery*, this comic also contained a succession of beautifully drawn, if sometimes overwritten, short mystery tales. Editor Gray Morrow had art in almost every issue, as did the talented Spanish artists Vincente Alcazar and Carlos Pino. Other talents included Howard Chaykin (6, 10), Frank Thorne (8, 10) and the little-known Ed Davis in 8. 7's 'The Rival' was a nice prohibition-era story enlivened by Bruce Jones' art, in which he was aided by friends Berni Wrighton, Mike Kaluta and Jeff Jones. Alex Toth drew a story for 8, and 9's 'If I Were King' was a typically quirky role-reversal story, written by Marv Channing, and was the highpoint of the run. The otherwise unknown Channing wrote most stories, although there were contributions from Steve Skeates and Don Glut. This was never particularly challenging, or frightening, but the art elevates it beyond just a good read.~DAR

S.O.S.

Fantagraphics: *One-shot 1992*

Chloe is adrift on a raft after her ship has sunk. She writes an S.O.S. message to her family, and despatches it in a bottle, but will the circling shark get to her before the rescue party? About independence and the growth of self-confidence one presumes, but mostly one suspects about a cute Chinese girl sunbathing in the nude and wrapping threads around her nipples. Maybe if the castaway had been Colin instead of Chloe, Mark Kalesniko would have given his nipples the thread-treatment too – and it would still be a pretty but pretentious story.~FC

SOUL QUEST

Innovation: *One-shot 1989*

This is a fantasy about Sketch, the Royal Artist, whose portrait of the villainous Blackshard is planned by the King and his wizard to be the weapon that will defeat him. When Blackshard learns of the plot, he steals Sketch's talent and threatens his wife and daughter, but Sketch has an unexpected ally in the form of Mirage, a guardian of the gateway in the form of a horse. This is competently drawn by Glen Johnson, but there's little characterisation in a plot-heavy script. It was published by Sirius in shorter form as the one-shot 'Against Blackshard 3-D' in 1986.~NF

SOUL SAGA

Image: *5 issues + 2000 to date*

When demons attack a royal transport, guardsman Aries saves Princess Persephone's life at the cost of his sister's. Persephone is suitably grateful, but has higher ambitions and if that means consorting with demons, so be it. Stephen Platt moves squarely into Frazetta territory and his fans won't care that this is cliché-ridden nonsense, the only purpose of which is to let Platt drawn pin-up pages of demons and under-dressed women. 1-2 were reissued in a single collected edition. There hasn't been an issue for some while, so maybe it's dead. We can hope.~FP

SOULSEARCHERS AND COMPANY

Claypool: *57 issues + 1993 to date*

In the sleepy Connecticut town of Mystic Grove, a band of fearless supernatural investigators has arisen to do battle with lurking eldritch menaces. This courageous team consists of a failed Olympic athlete with an enchanted vaulting pole, a horny Arabic fire demon, a flaky teenage apprentice witch, a monstrously shapeshifting gypsy youth, an accountant with a bottomless carpet bag, and the firm's proprietor, currently a rodent, due to complications from a previous case. As you may gather, *Soulsearchers* isn't an entirely straight-faced series. Peter David's scripts for 1-10, were both witty and articulate, and artists Amanda Conner and Jim Mooney perfectly complementary. Mooney's inks add depth to Conner's work while losing none of her trademark expression and vitality. Sadly, after 10 the title lost focus. Conner left, (though she continues to draw all the covers, which remain amongst the better designed and most appealing in the field) and David seemed to flounder, going for cheap and easy parody rather than the charismatic blend of character-driven stories and atrocious puns that had graced the comic.

Things began to pick up when Dave Cockrum joined as regular penciller, and the outstanding 17 put it right back on top form with a genuinely shocking revelation for one of the team. Cockrum remained until 45 (with a couple of stellar guest fill-ins by Dan Spiegle on 36 and Marie Severin on 31). Since then the series has been plagued by less competent replacements, which is a shame, as while never returning to its former standards, there is much to commend.

The title has inventive plots, a likeable cast, vivid comedy characterisation, and a romantic relationship between Bridget and Baraka (the aforementioned athlete and demon), which seems to be progressing and developing, rather than stagnating in the great comics tradition. If they can solve the artistic problem, *Soulsearchers* remains one to watch. ~HS

SOULWIND

Image: *8 issues 1997*

Oni Press: *5 volumes 1998-2001*

This enigmatic yet engrossing story by writer/artist C. Scott Morse lasted only two story arcs in its first run. In the first, an abducted Earth boy is erroneously hailed as the hero of a bunch of animals on a distant planet, where a malevolent exile lurks. In the second, a couple in 1938 run into supernatural events when on their way to seek an illegal abortion. *Soulwind* is difficult to describe; a summary makes it sound pedestrian, but the inventiveness of Morse's dialogue and the evocative, atmospheric quality of his art styles (different ones for both story arcs, and the framing sequences), make it a fascinating, yet frustrating, read. It's obscure, yes, but not just from a desire to drag things out. Fortunately, after the failure of the Image series, Oni Press took over, re-releasing the Image issues as digest-sized graphic novels, and following up with a further three volumes to conclude the series. A synopsis of the series would be difficult without giving too much away, and a reversion to fantasy-based 'easy options' mars the final two volumes, so unreserved approval is not possible, but it does reward attention.~HS

SOUTHERN KNIGHTS

Guild: *7 issues 1983-1985**
Comics Interview: *26 issues (8-33) 1985-1988*

Known for the first issue only as *The Crusaders*, Henry and Audrey Vogel's quartet of unlikely superbeings was slammed with a lawsuit from Archie, who had just revived their superheroic Mighty Crusaders. With Ms Vogel departing early on, Vogel retitled his comic more inventively *Southern Knights*, and wrote an amusing riposte to the lawsuit in 26, once *The Mighty Crusaders* had again ceased publication. Electrode (master of electricity), Dragon (a were-dragon who occasionally becomes human), Connie (wielder of a psychic sword) and Kristin, the strongest teenybopper in the world, had low-key but likeable adventures. Often the concerns were domestic rather than heroic, and the team would frequently explore and investigate, solving puzzles and mysteries rather than being content to break heads, though that they could do perfectly adequately. Beyond the core team there are odd supporting characters, such as a 17th-century teenage sorcerer attempting to adapt to life in the 1980s. There's a commendable variety to the stories, with Vogel throwing in other-dimensional fantasies, Cold War spy tales, straight superhero battles, aliens and parodies of how other companies would handle his heroes. Founding artist Jackson (then Butch) Guice left the series shortly after its début, leaving Henry to provide entertaining scripts with a variety of artists. The longest running was Mark Lamport, from 19 to the conclusion, but Chuck Wojtkiewicz (5-11, 26) and Mark Propst (12-18) also provided artwork very much in tune with the writing. Space fantasy back-up strip 'Missing Beings' from 7-9 was later collected as a one-shot.~HS

SOUTHERN SQUADRON

Aircel: *4 issue miniseries 1990*
Eternity: *4 issue miniseries ('The Freedom of Information Act') 1992*

Claimed to have outsold the *X-Men* in their original Australian incarnation, the Southern Squadron is a witty and irreverent superteam containing the ghastly, definitely non-PC Nightfighter. The first issue is little more than a set-up and elongated fight scene, albeit one with quite a few jokes, but beyond that writer David DeVries manages to turn in offbeat and unpredictable stuff every time. Artists Gary Chaloner (lead strip) and Glenn Lumsden (back-ups, with Paul Gulacy in Aircel 3) look to be enjoying the material as well. It's a great shame their American début was a small-circulation title, although one highly praised in introductions by pros in the know, and these are worth searching out. The Eternity series offers some short stories in 1 and 2, then presents the never previously published conclusion to the full-length tale in 3. Lumsden takes over as lead artist, now modelling his art very much on Gulacy, and continuing the tradition of casting celebrities as villains and supporting characters. The DeVries drawn stories are less satisfactory, with his style sometimes rising above some shaky foreshortening and anatomy and sometimes not. Thankfully his scripts are every bit as funny, and in 4 he proves he can write a horrific story without a joke.~WJ

SOVEREIGN SEVEN

DC: *36 issues, 2 Annuals, 1 Special (Plus The Legion of Superheroes) 1995-1998*

The Sovereign Seven are Cascade, Indigo, Rampart, Network, Finale, Cruiser and Reflex, refugees from different versions of Earth, fleeing the Rapture, which has consumed those worlds. The team lands in the town of Crossroads and an inn run by sisters, Pansy Smith and Violet Jones for an initial conflict with the Female Furies, before they discover that the inn contains portals to other worlds and Cascade is magically transformed into Nike and attempts to breach the doors that keep her mother, Maitresse, imprisoned (2-3). A super-powered serial killer, Skin Dance (4-5), an international paramilitary team, Force Majeure (6-8) and the demonic Dystopia, working for Neron (10-12), are all part of a fast-paced first year. Villain, Triage is introduced in 13-14, while 15-18 are a tie-in to *The Final Night*, with the title *S7* becoming more prominent on the cover. Cascade has a brief backup on her own in Metropolis, romancing Clark Kent (19-23) before the aid of Superman is needed to help the team against Siege, Snapshot and Triage (24). Power Girl is rescued from possession by Nike in 25, remaining with the team until the end of the series and Hitman makes his usual amusing appearance in 26. 27 is a Genesis crossover, with Cascade and her mother trading places and a return bout with the Female Furies. The loss of a team member (29-31) leads to Power Girl's formal acceptance within the team before the series draws to a close with a final battle against the Rapture (32-36). The first Annual includes guests, Lobo and Big Barda on a Year One theme, but the Legends of Dead Earth story in 2 is unremarkable. In the Special, Saturn Girl turns up from the future, hunting Network, who has been remembered as a terrorist. This is very much the story of these two telepaths, rather than a clash of teams, and all the better for it.

Creators, Chris Claremont and Dwayne Turner, start well, but never really flesh out these heroes, spending more effort on the supporting characters, like Sheriff Molly Savoy and her son, Conal. There's a lack of coherence in the storytelling with abrupt shifts of narrative and emphasis, and short cuts to a story's conclusion. Turner's dynamic artwork is pleasing enough (1-12, 15-16), but the work of his replacement, Ron Lim (13-14, 17-19, 21-36), lacks his fluidity and attention to detail.~NF

SOVIET SUPER SOLDIERS

Marvel: *One-shot 1992*

Poor teaming of all Marvel's Soviet superpowered characters, with the notable exception of the Black Widow, who presumably had more sense than to involve herself. Assorted factions bring their dispute to New York, while the Soviet mutants just want to be left in peace. This doesn't appear to be an option, as a baldy man with a big gun and cybernetic eye is killing them one by one. Curiously incomplete at the finish, this reads like a miniseries contracted to fill a one-shot. Don't bother unless Marvel's Soviet characters really push your buttons.~FP

SPACE: Above and Beyond

Topps: *3 issue miniseries 1996**

Well above average adaptation of the TV show pilot episode. The 21st-century equivalent of the Marines have to protect a planet colonised by Earth, but now under attack, and events develop from there. Roy Thomas has a good script to work with, and the art team of Yanick Paquette and Armando Gil convey a humanity whether dealing with battles or quieter moments.~WJ

SPACE ADVENTURES

Charlton: *Series one 59 issues 1952-1956 (1-21), 1958-1964 (23-59), 1967 (60), series two 12 issues 1968-1969 (2-8), 1978-1979 (9-13)*

1-14 issues are pre-comics code so a horror element occurs in many stories, while 10 and 11 feature some really early Steve Ditko art, his covers to 10 and 12 being classics of the time. 14 reprints Fox *Blue Beetle* stories. Post-code issues starred TV spaceman Rocky Jones in 15-18 and 'Destination Moon' in 20, originally drawn for Fawcett. The title changed to *War at Sea* for 22, and a year and a half later a relaunched *Space Adventures* picked up the numbering of *Nyoka* with 23 and joined Charlton's late 1950s boom with more 'Destination Moon'. Science fiction doesn't seem to have inspired many of Charlton's regulars, the artists in particular. Fortunately the scripts by Joe Gill, Ernie Hart, Carl Memling, Ralph Newman are occasionally drawn by an enthusiastic Steve Ditko. Stories of interest include 27's 'The Moon Snatchers' signed 'Space Mann' by Ditko and 'The Enchanted Planet' one of Gill and Ditko's space fantasies in 31. *Space Adventures*' main claim to fame is the debut of Captain Atom in 1960. As Captain Adam of the USAF he is accidentally blown up inside a nuclear missile. Upon re-integrating his body by force of will he discovers that he is immensely powerful... and radioactive! His adventures as a US secret weapon during the cold war of the 1960s are dated and a tad doctrinaire but Gill and Ditko do a terrific job on the 15 stories that appear in 33-40 and 42. When Captain Atom was given his own title his replacement was the feeble Mercury Man (44-45), an alien hero actually made of mercury. The run up to 59 is stultifyingly poor, but the revival in 60, with 'U.F.O' as the main logo, is a good read from Denny O'Neil and Jim Aparo among others.

The following year the title began new numbering with 2 and a new array of science fiction fare punctuated by the occasional decent story by Steve Skeates, O'Neil and Gill drawn by Ditko, Aparo and Pat Boyette. Denny O'Neil's serial 'Paul Mann and the Saucers of Tomorrow' drawn by Ditko, Boyette and Aparo in 2 is well worth reading. The title reappeared in 1978 providing welcome reprints of all the original Captain Atom stories in 9-12, 13 being a reprint of *Charlton Premiere* 4.~SW

SPACE BEAVER

Ten-Buck: *11 issues 1986-1988**

First thing, frat boy, Warren Ellis has made all the jokes better than you could in the introduction to the reprint collection. What we have here is your classic space adventure revenge fantasy populated by animals with human traits and created by Darick Robertson while still learning his craft. While his art was promising, the contrast between these issues and the conclusion completed for the second AIT published collection is immense. Don't let that deter you from sampling a well-crafted adventure romp owing a lot to *Star Wars* (although with a weaker female lead).~WJ

SPACE CIRCUS

Dark Horse: *4 issue miniseries 2000**

Teenager Todd Cooper sneaks aboard the space circus, which has landed on Earth for repairs, and at first appears fundamentally unsuited to the rigours of his new life, not least spotting space pirates. This never reaches the comedy heights of other collaborations between Sergio Aragonés and Mark Evanier, but even their off-form work is better than many creators working to the best of their ability. Buy every issue of *Groo* first, then come back for this.~FP

SPACE FAMILY ROBINSON

Gold Key: *36 issues 1962-1969*

The comic, loosely based on the film *Lost in Space*, was retitled to capitalise on the successful TV series from 37, although the stories remain unrelated. This features the interplanetary escapades of the Robinson family – June and Craig (Mom and Dad), Tim, Tam and the pets – in their space-station home. Some imaginative plotting and reliable artwork from Dan Spiegle make most issues readable, but much of a muchness.~SW

SPACE GHOST

Comico: *One-shot 1987*

Space Ghost is a costumed hero in outer space. He was first seen in 1966, in a Saturday morning cartoon, which was one of the first to allow superhero cartoons to take their action seriously, rather than playing mainly for laughs. Steve Rude's artwork is very clean and dynamic, certainly captures the feel of a well-crafted cartoon, and is worth the price alone. Unfortunately the story starts to sprawl quite early on, and in a way that makes the action in the main fight sequence seem almost random. A shame, since the art is so good it could have been a gem.~FC

SPACE 1999

Charlton: *6 issues 1975-1976*

Simultaneously launched as both a colour comic and a black and white magazine, this is one of Charlton's typically pedestrian TV adaptations. Nic Cuti produced acceptable stories, and Joe Staton (1, 2) and John Byrne (3-6) decent enough art, both in their attractive cartoony periods.~DAR

SPACE 1999

Charlton: *8 issues 1975-1976*

Companion title to the comic, this magazine was assembled by Gray Morrow, who produced all the covers and a vast amount of artwork, though he left the writing to Nic Cuti, Joe Gill and Mike Pellowski. Strangely enough, neither Morrow nor artists of the calibre of Vincente Alcazar (5-8), Pat Boyette (5) or Carl Potts (7) seemed able to make much of the strip's space setting, and the art often looked rushed. Ultimately neither comic fans nor the show's devotees are likely to be satisfied.~DAR

SPACE USAGI

Mirage: *3 issue miniseries 1992, 3 issue miniseries 1993-1994*
Dark Horse: *3 issue miniseries 1996*

Though, as the title suggests, this is little more in some respects than *Usagi Yojimbo* in space, Stan Sakai's anthropomorphic Japanese characters translate easily into science fiction. Rather than a ronin, Space Usagi is a loyal bodyguard to Prince Kiyoshi, heir and then Lord of the Shirohoshi Clan, which is under attack by the Kajitori Empire. The first miniseries tells the story of the betrayal of the Shirohoshi by Matabe and his attempt to learn the clan secrets from Kiyoshi. The second, in colour, continues the story and sees Usagi and his friends, Tomoeh and Rhogen, break into the Shirohoshi castle, now in enemy hands, to prevent the Kajitori from gaining the clan's secrets from its computers. Sakai makes more of future technology than in the first series, with heat-seeking shuriken, robot dinosaurs and ninjas with mind probes and invisibility cloaks. The Dark Horse series sees Kiyoshi kidnapped in a race to retrieve the Shirohoshi treasures, the introduction of Kiyoshi's uncle and some very dangerous shapeshifters. Sakai's distinctive artwork owes much to Japanese comics and Moebius, but that's no bad thing and his characters and storytelling are compelling if a little naïve.~NF

SPACEHAWK

Dark Horse: *5 issues 1989-1993**

Spacehawk seems to equate Earth with America and Uncle Sam when he's talking of his role as a defender of the Solar System, but he's incredibly strong and long-lived (in 4 he meets an old friend after 600 years). He also spends a lot of time battling space pirates and preventing war on various planets. By the end of the series he's even got a girlfriend from Neptune (well, almost). This reprint of Basil Wolverton's wonderfully detailed but simplistic strip is a delight, full of beautiful women, grotesque creatures and alien landscapes. Mike Allred and Lawrence Marvit collaborate on this sumptuously-illustrated adventure starring a character who debuted in Allred's *The Atomics* 10. Using many innovative visual techniques, it looks stunning, but to call the story flimsy and hackneyed would be being generous. SPANISH FLY

NBM: *6 Albums 1994-2001*

These collect mostly short stories by creator, Tobalina, which originally appeared in the Spanish *Kiss* magazine. The plots, such as they are, concern one-night stands and affairs, featuring lots of hardcore sex. Album 3, however, has a recurring female character, 4 contains a long story where the sex accompanies a financial scandal in the making, while 5 (with 4, one of the two albums in colour) contains a full-length story about a pregnant woman's affair with another woman whilst her policeman husband is working mysteriously long hours. The artwork's in a realistic, clean-line, animation-like style, that's pleasing on the eye, and there's a healthy dose of humour amid some provocative and occasionally insightful situations.~NF

SPANK THE MONKEY

It goes without saying that some pretty easy meat is beaten by author Randy Zimmerman in these odious pages. The covers have an advisory tag that reads "Warning: contains actual opinions – cranial stimulation may develop". Announcing that the innards were printed on absorbent paper might have been more helpful.~SW

SPANNER'S GALAXY

DC: *6 issue miniseries 1984-1985*

Nicola Cuti, creator of the faddish 1970s Charlton superhero E-Man, also overwrote this tedious space opera, stuffed full of laughably cosmic dialogue like "Daddy, can I have a Droog for a honey-pie?" On the run from the Space Authorities, lead character Polaris Spanner hops through the galaxy thanks to his ability to 'castle', which is matter transportation to you and me. He also has a magic sword called a Shek, a furry alien pal who speaks in a Southern accent, and a sexy friend called Andromeda Jones. SPARKS: an Urban Fairytale

Slave Labor: *5 issues 1999-2001, Graphic Novel 2002*

A surreal slice of life adventure of smart but plain Jo. Her life is one long stream of neglect and abuse from her family, friends… everyone in fact, but the slobs at the garage where she works and the little boy in the downstairs apartment. A frustrated romantic, she lives out her days waiting for her life to change. After a particularly horrendous date she finds herself back at the workshop and builds herself a "knight in armour" from scraps and junk, before despondently heading home. That's when an errant lightning bolt animates the junk man… As a different sort of relationship grows between Jo and her do-it-yourself perfect date they both learn more than they thought possible about what it means to be human. Engaging and entertaining fantasy from Lawrence Marvit that's not as predictable as it first seems. SPARTAN: WARRIOR SPIRIT

Image/WildStorm: *4 issue miniseries 1995*

The WildC.A.T.S android leader wakes up to find himself confronted by Dr Able, a scientist who claims that Spartan is Zachary Kreiger, imprinted with the memories of his dead son-in-law. Before he has a chance to argue, Spartan is under attack and lost in the battles he was programmed to fight, with little time to reflect on the memories Able and his daughter claim he should have. Although he doesn't believe what they tell him – that he's needed to safeguard a remote Tibetan monastery, in which his 'father-in-law' is conducting experiments, from marauding Daemonites – he does what's needed until the reasons behind the deceptions become clear. Spartan doesn't have the history on which writer Kurt Busiek usually hangs his limited creativity, leaving a story which is largely dull and not really worth the effort.~JC

Jackie Chan's SPARTAN X

Topps: *3 issues 1997*

Despite the title this is not a comic about Jackie Chan, it's a comic about one of his characters, the mercenary Spartan X. Confusingly, though, Spartan X has not appeared in any of Chan's films, only in this comic. The story is full of the sorts of stunts, fights and slapstick that characterise Chan's films, and like them is undemanding, but fun. Writer and artist Michael Golden manages an astonishing job of translating the feel of a Jackie Chan movie onto paper with exemplary draughtsmanship and an unparalleled ability to convey a sense of movement. The Image series reprints the Topps run, but in black and white rather than colour, which actually better suits Golden's art.~DAR

SPAWN

Image: *120 issues + 1 Annual 1992 to date*

Todd McFarlane's supernatural antihero was an instant success in terms of sales if not critical acclaim, combining many of the graphic elements that had made his runs on *Spider-Man*, and prior to that *Batman*, so popular. Soldier and government hitman Al Simmons is murdered by person or persons unknown and left to rot, which is where his story really begins. In a universe where Heaven and Hell are two sides of the same coin, someone with Simmons' abilities is a valuable asset. The soldier's dying wish to see his wife again is used by the Malabolgia, a highly ranked devil, to strike a bargain that ensures his return to Earth, albeit in the highly altered form of a Hellspawn, a demon warrior in training for the final battle with Heaven. After establishing this basic principle, the series flounders as Spawn takes up residence in an alley and fights cyborgs, perverts and his assigned mentor, a fat little clown, who can turn into an insectoid demon called the Violator. With momentum ebbing, McFarlane's answer was to hire four of the industry's top writers: Alan Moore scripts 8, Neil Gaiman 9, Dave Sim tackles 10 and Frank Miller scripts 11, between them creating enough back-story and character development to carry the series to date. Gaiman alone, with his creation of Angela, a Spawn hunter from Heaven and the whole concept of Hellspawn throughout history being co-opted and betrayed by the Malabolgia, created cornerstone concepts for many consequent episodes and spin-off miniseries. From this point, vaguely formed plot threads are followed up in an over-long but reasoned manner as Spawn becomes guardian of the New York City down and outs, the only people who accept him for what he is. He slowly unravels the mystery of who killed him and begins to gather allies such as the detectives Sam and Twitch and fights against his pre-ordained role in the cosmic scheme of things, seeking to protect his widow and her new husband from the repercussions of his past. It's all quite simple in plot and gratuitously overblown in delivery with artistic excess, firstly from McFarlane himself and his successors, artists Greg Capullo and latterly, Angel Medina, and scripter Brian Holguin. They're capable of destroying many potentially excellent character moments with the comics equivalent of using sledgehammers to crack nuts.

The major artistic theme seems to be one of slow degradation, as Spawn's physicality deteriorates and the sentient costume/parasite that comprises much of his power gains a stronger hold on his consciousness. This is augmented by the storytelling, which seems to indicate that you can't trust anybody. The major criticism would be the incredibly long time it takes for anything to happen, and the nagging certainty that, even if you only read every sixth issue, you would be unlikely to miss anything. Since 50 and the second redesign of the character (the first cosmetic change, for no apparent reason, being in 31), Simmons/Spawn moved closer to a resolution in his search for his murderers. This is despite many false trails, demon lies and a probable attempt to wrong-foot readers with a plot wherein the possibility of Spawn defecting to the side of the angels is floated.

From 75, and with Brian Holguin listed as co-writer, after a metaphysical journey Spawn turns his back on both Heaven and Hell in favour of a third way. He becomes the arbiter of right and wrong on Earth, dealing out punishment before (usually split seconds before) death, not after. The stories build towards an anti-climactic 100 with Spawn punishing the guilty whenever he finds them and then taking on Hell itself. Issues since have returned to aimless meandering, with Spawn taking on a ring of vampires, placating the distressed spirits of Japanese ghosts and once again becoming involved with abused children as another plot unfolds too slowly, this time the Hell he abandoned attempting to reclaim him. Once again there's a dependence on past ideas in the continuing search for a narrative drive to shape the series.

To his credit, McFarlane strives to keep the *Spawn* universe concise and self-contained, with few returning villains, a good balance between supernatural peril and human evil, and an overt decision that team-ups and guest shots be either cameos in the main storyline or in separate miniseries outside the flagship title. In many ways, *Spawn* is the perfect reading tool for the couch potato/soundbite MTV generation, with an almost deconstructed approach to storytelling. Hyperbolic and over-rendered, over-written whilst saying very little, it is a triumph of style over content. There are ongoing reprint collections, with Titan's UK schedule currently pre-empting US releases.~WW

Curse of the SPAWN

Image: *29 issues 1996-1999*

This was intended as a means of telling stories outside normal *Spawn* continuity about other, past and future, hellspawn. In fact, several stories don't feature a Spawn at all, including the best issues. These feature private detectives, Sam and Twitch and the case of Suture, both victim and hunter of serial killers (5-8, 26-28). Of the rest, there's a future Spawn in 1-4, Angela's origin in 9-11, mob boss, Antonio Twistelli (17-19), a hellspawn amongst the Greek gods (22), a very gory story in 25 about a boy's murderous day amongst his friends after being possessed by a spawn (or maybe not) and the closure of Purgatory in 29 (because, really, everything's so black and white now). Almost all written by Alan McElroy, and drawn by Dwayne Turner (1-23, 26) and Clayton Crain (24-25, 27-29), the storytelling is normally hard to follow in both narrative and artwork. In the end, it's all just too overwrought to make good comics.~NF

SPAWN:THE DARK AGES

Image: *28 issues 1999-2001*

Having established that Spawn was returned to Earth to enact vengeance after a pact with the devil, it stood to reason there may have been earlier incarnations. Here's one of them. While the fantasy styled art in 1-14 from Liam McCormick-Sharp is occasionally impressive (at its best in the sepia-toned 11-14) he's more inclined to supply pin-ups than tell a story. Not that there's much story to Brian Holguin's ludicrously overwrought scripts, although solitary adolescent readers probably thought them profound. From 15 Steve Niles ups the story content, transforming the Hellspawn into a sort of Dark Ages Conan, and pencil artist Nat Jones shines. While his storytelling is sloppy, the fluidity and grace is appealing and unusual for what is basically a horror title, and the mood he creates is well served by colourist Todd Broeker from 20. Yer actual eviscerations are sparingly placed, and while no masterpiece, it's better than many might expect from the *Spawn* franchise.~FP

SPAWN Miniseries

Image: *4 issue miniseries ('Blood Feud') 1995, 3 issue miniseries ('The Impaler') 1996*

Image/Top Cow: *3 issue miniseries (Medieval Spawn/ Witchblade) 1996*

Alan Moore's entertaining script just about saves the otherwise dull 'Blood Feud', and the stylised artwork by Tony Daniel and Kevin Conrad is best when following Moore's thumbnail breakdowns. 'The Impaler' is a clever story, written by Mike Grell, in which Vlad the Impaler woos the daughter of a couple of ex-satanic metal musicians, while the police search for a killer who drains victims of their blood. Unfortunately, both Grell's own pencil-only artwork for the flashbacks to Vlad's life, death and resurrection and Rob Prior's painted present day scenes provide only flat, static storytelling. For in-your-face butchery and good-taste-be-damned attitudes, look no further than the work of Garth Ennis on *Medieval Spawn/Witchblade*. The Darkness is introduced as a natural enemy of the Witchblade. Both grant their owners great power and, since they've been around since before mankind, there have been plenty of different wielders of these powers, hence the mediaeval setting. *Arcanum*'s Matthew Royale convinces the Darkness to destroy the Land of Faerie (cue lots of dead elves) with a view to gaining immortality for himself. However, he reckons without the intervention of a young Spawn and newly-Witchblade-empowered Katarina. Its humour is black and earthy, the artwork (mostly by Brandon Peterson) has its flourishes and overall this is an enjoyable romp despite reading a little like the scene setter for later series.~NF

SPAWN The Undead

Image: *9 issues 1999-2000*

In this series, written by Paul Jenkins, Al Simmons (Spawn) is largely peripheral to the story being told. Trying to act as a balance between Heaven and Hell, Spawn intervenes in people's lives to offer some truth that helps them understand what's happening and make their own decision about how to help themselves. Overall, Jenkins pulls this off, offering some good, human stories that provide the opportunity for philosophical discursion without falling back on easy answers. This might have been an above-average horror comic, then, if only Dwayne Turner's illustrative style had been up to the storytelling challenges of the scripts.~NF

SPECIAL HUGGING

Slave Labor: *One-shot 1989*

A collection of stories about childhood, from various creators and with various themes: the near-impossibility of getting a sensible explanation of puberty and sex; the dilemma of how to act when you see someone mistreating their children; and memorable moments from a happy childhood. It sounds fairly promising but none of it really rings true, and you put the comic down wondering why they bothered.~FC

SPECIAL MARVEL EDITION

Marvel: *16 issues 1971-1974*

Reprints of Lee and Kirby's *Thor* occupy 1-4, and Sgt Fury is reprinted in 5-14, so the only item of note is the début of Shang-Chi, Master of Kung-Fu, in 15. Although very different in tone from later strips, the Steve Englehart and Jim Starlin stories are moody and interesting. The title became *Master of Kung-Fu* with 17.~FP

SPECIES

Dark Horse: *4 issue miniseries 1995*, 4 issue miniseries ('Human Race') 1996**

The first series is a perfectly serviceable adaptation of the film in which a transforming alien hybrid woman is on the prowl for the perfect mate with whom to propagate her species. Enjoyable old tosh it was. But hey, it seems she wasn't the only hybrid about, which is where the second series takes off. Running through the scenario once was enough, so the repetition in 1-2 is unwelcome. 3 is the standout issue as Stephen Blue and Denys Cowan opt for minimal alien involvement, and 4 is dull despite Mark Nelson and George Pratt art.~FP

SPECTACLES

Alternative: *4 issues 1997-1998*

A variety of stories by Jon Lewis (with some written by Leo Geistler). They are usually strange, and frequently very funny. There's two series, 'The Frost Changes', full of Scandinavian folklore, false beards, reclusive rockstars, and musical hexes, and 'The Shell Men', a post-apocalypse story in which animals talk and humans don't, which is shaping up to be a major feat of the imagination. 'Springing (A Society Farce)' about a ill-assorted group of roommates is also notable, and there are other, shorter stories about possums and gators and getting up early. It's also worth reading for the letter column (outstanding in 1, with Lewis answering letters from himself, mostly abusive), and for the 'Things I Like' section, which has covered Glenn Gould, caddisfly larvae ("pretty amazing"), Thai soup, 1950s films, and sound-effects toys. This is an exhilarating read, on many levels.~FC

THE SPECTRE

DC: *Series one 10 issues 1967-1969, Series two 31 issues, 1 Annual 1987-1989, Series three 62 issues, 1 Annual 1992-1998*

Introduced in the 1940s (in *More Fun* 52, reprinted in *Secret Origins* 5), and created by Jerry Siegel and Bernard Baily, the Spectre evolved into the most powerful of DC's superheroes. God returns policeman Jim Corrigan to Earth after his murder, and he now hosts a ghostly alter ego in The Spectre. Operating as a ruthless agent of retribution and vengeful Angel of the Lord in the 1940s, he's in superhero mode to start the 1960s series, after tryouts in *Showcase* 60, 61 and 64. The standard DC gimmick plots of the time mean there's little of note in the early issues beyond art from a young Neal Adams in 2-5. The mid-period is more cosmic, but by the end of the series the Spectre is little more than another horror host. When he resurfaced in *Adventure Comics* 431, Michael Fleisher and Jim Aparo created a series of over-the-top, gruesome short strips prematurely cancelled due to their excessive violent content. Needless to say, they're great, and can be found along with stories that never saw print originally in the four issues of *Wrath of the Spectre*.

It was twelve years before DC were confident enough to give the Spectre another solo run. This time, though, he's powered down to more human levels, and bonded with Corrigan, now a private investigator. Corrigan, returned from the dead, is not happy with his lot, and the mixture of detection and mystical menaces is an uneasy one, with each aspect intruding into the other's domain. The idea of Corrigan and the Spectre in danger of dying when separated for longer than forty-eight hours is overworked in the early issues. That's a problem solved in 19, in which writer Doug Moench has the Spectre transform from Corrigan rather than manifest from within him. 21 is as good as the run gets, with both elements investigating a death from differing angles and perspectives. An expanded cast from 20 beefs up a dull series, but not by much, and there can have been few sad to see the comic cancelled. Those few can check 7 of the next series for what became of the cast.

Given its poor predecessor, the comparatively rapid revival of *The Spectre* just over two years later was surprising, but the character became more popular than in any previous incarnation. The startling glow-in-the-dark cover to the first issue (reprised on 8 and 13) surely enticed many people to sample, but those responsible for the success were John Ostrander and Tom Mandrake, who produce almost the entire run. A powerful retelling of the Spectre's origin in 3 and 4 sets the tone, affirming that the Spectre is the wrath of God fuelled by Corrigan, and assigning them the task of avenging the victims of murder until Corrigan comes to understand why evil exists. 1-4 are collected. The Spectre is back to his nigh-omnipotent self, but Ostrander's aptitude at setting ethical dilemmas negates this at a stroke, while permitting effective and imaginative scenes of retribution. These sequences echo the vindictive Spectre of Fleisher and Aparo (who draws the excellent 16), but constant questioning underscores the series. Mandrake's contribution is a succession of horrifically rendered nightmares blending effortlessly with modern urban settings. The series lasted long enough for Ostrander to rectify most anomalies of the Spectre's history, generally in fine fashion even when dealing with the likes of his 1940s comedy-relief partner Percival Popp, Super Cop in 24. His plots are unpredictable and don't shy from potentially uncomfortable topics such as the fragmentation of the American dream in 38-50, although that dragged more than a little, and the constant questioning of celestial motivation. The latter was well explored in the final issues. Continually thought-provoking, as much as anything *The Spectre* probes the many shades of grey. Best of all, though, for a title concerning the wrath of God manifested as man, there's an astounding humanity, personified by Father Cramer, introduced in *Suicide Squad*, but brought to fruition here as both conscience and adviser. This is an under-appreciated and consistently good series well worth sampling. Have a try at 20's sympathetic tour of the aged Justice Society, 51's peek into the Joker, or the Spectre's horrific courtroom manifestation in 55. Mention must also be made of the startling selection of seductive covers, using a different artist each issue to produce a symbolic rendering of the Spectre, already a strikingly visual character.~WJ

THE SPECTRE

DC: *27 issues 2001-2003*

When DC replaced its ageing icons with younger, more hip characters, the old stalwarts such as Hal (Green Lantern) Jordan were left out in the cold and then put through the wringer. Driven insane by the destruction of his home town and the death of his loved ones, Jordan committed mass murder and then set himself up as a god before eventually achieving a measure of redemption by sacrificing his life to save Earth in the miniseries *Final Night.* Luckily for Jordan, that wasn't the end of the road. In a stroke of genius DC provided a retraining programme that saw the errant one-time hero take over the Spectre identity in order to do his penance before entering the gates of Heaven. Jordan (or his ghost, if we're being pedantic) patrols the limbo between life and death, helping the newly deceased to pass over to the other side, and enabling souls in peril to see the error of their ways before it's too late. The idea received a dry run in *Legends of the DC Universe* 33-36. Ably drawn by Ryan Sook (1-13) and Norm Breyfogle from 15 onwards, J.M. DeMatteis' mix of cosmic philosophising and hippie morality isn't to everyone's tastes, but anyone who liked *Moonshadow* will probably enjoy this, and he does build a good supporting cast around the central hero. Jordan's tendency to spend long tranches of the plot wallowing in self-pity and regret can be trying, but lighter moments such as the Green Spectre Corps admonishing him for playing peeping tom on his ex-girlfriend stop it from getting too depressing. Mawkish and sentimental at times, some of the issues are nonetheless genuinely moving as DeMatteis tries – and often succeeds – in making some serious comments on the human condition. The self-contained issue 20 is a perfect sampler of the series' delights.~JC

SPEED FORCE

DC: *One-shot Special 1997*

The speed force is what gives DC's superfast heroes their powers, and this special features speedsters past, present and future. The best are a teaming of Barry Allen and Kid Flash written by Mark Waid, and John Byrne's golden-age Flash tale leading to an interesting plot in his *Wonder Woman* series.~HY

SPEED RACER

Now: *Series one 38 issues, 1 Annual 1987-1992, Series two 3 issues 1992*

Based on a 1960s Japanese cartoon series, issue 1 answers many questions posed by regular viewers and provides an origin for Speed. Lamarr Waldron writes most issues to 30, and they're simple but well crafted, as Speed and his Mach 5 car take on other drivers in an ever-continuing circuit of races in exotic locations, having adventures wherever he goes. A good sample is 14, in which Speed's girlfriend Trixie is believed to be the reincarnation of an Egyptian princess. Later issues inject a greater dose of realism and continuity, but it's to the detriment of the strip. A darker and more violent tale occupies the second series, again at odds with the original spirit. The first issue is also available as an expanded fifth-anniversary special containing text features about Mach 5 and cover galleries.~WJ

SPEED RACER

WildStorm: *3 issue miniseries 1999**

Speed continues the family trade as a racing driver, working alongside Sparky to get their car, The Mach 5, out on the track. Matters are complicated by sexy photojournalist Patricia 'Trixie' Shimura, policeman Inspector Detector, engine designer Bent Cranium, man of mystery Racer X, and the villain of the piece, race-fixer Buck Condor. As the emblematic names indicate, this is hardly gritty realism and functions more on the level of, say, *Tintin,* but with lots of mini-skirts. Tommy Yune writes and draws an action strip designed to have broad appeal. The jumps from humour to action to flashback are handled like smooth gear changes, with Matt Milla's colour work in 1 an incredible aid. His successor Guy Major does a good job too, but ruins a scene where the car's paintwork is a key factor in 3. Great fun even if you know nothing about motor racing.~SW

SPEED TRIBES

Nemicron: *1 issue 1998*

A stunner! So concerned were the publishers to implement every gimmick in their design program it completely escaped their minds that people might actually want to read the comic. So many overlays make following the story near impossible, and to make it harder the lettering is faded out and sometimes shrunk to a quarter size. It appears to be story about a rite of passage ritual in a dangerous future, but it's actually a template of how not to produce a comic.~WJ

SPEEDBALL The Masked Marvel

Marvel: *11 issues 1988-1989*

Steve Ditko returned to Marvel to create a teenage hero using the 1960s Marvel template, which, in essence, is the problem. Times had moved on, and despite Ditko's best art of the 1980s the entire project has a very dated feel (and a notoriously ill-advised title). The now traditional comics origin of an encounter with unknown energy bestowing powers transforms lab messenger Rob Baldwin into a costumed type able to bounce off any hard surface, an effect initially triggered by force, and given a nifty design effect by Ditko. Speedball later frequently appeared in *Marvel Super-Heroes* and went on to join the New Warriors.~FP

SPELLBINDERS

Quality: *12 issues 1986-1987*

Initiated to showcase some of *2000AD*'s second-level strips for an American audience, it would be a quality package but for the unsympathetic application of colour. Each issue opens with *Nemesis,* continuing the run from the Eagle comics miniseries, with Kevin O'Neill's final story in the first issue, and the Bryan Talbot-drawn 'Gothic Empire' thereafter. It's an alien world with a society based on Edwardian Britain, but with a greater level of technology, and incorporates Hammerstein, Ro-Jaws and the ABC Warriors into the *Nemesis* saga for the first time. The Celtic warrior Slaine was introduced to American audiences with 1, and there's stunning Mike McMahon art from 4 to 9. The final strip opening the anthology was the rather dull Amadeus Wolf, fat demon-hunter, given an early departure to expand the other features. These are best appreciated, though, in Titan reprint collections.~FP

SPELLBOUND

Marvel: *6 issue miniseries 1988*

Somewhere out there is a nasty spellbinder called Zxaxz who has two servants: Snugg, a fairy, and Snaarl, an ape. They are scared that Zxaxz is going to destroy the universe, so when they learn of another spellbinder in a different dimension, they pay a visit, attempting to recruit this spellbinder in the struggle against Zxaxz. The spellbinder is Erica Forture, an English teacher with no idea of her powers, and who overreacts at first after a lifetime of being ignored and taken for granted. It might have worked as a spin on the Cinderella theme if the writing had been better, but here it's doomed from the beginning. The writing has real problems with presenting information in a coherent way, with the four pages that set the story up impenetrable, and with making the characters believable or bearable. It does gradually improve, but the first issue is infuriating.~FC

SPELLJAMMERS

DC: *15 issues 1990-1991*

Part of the TSR *Dungeons and Dragons* franchise, this fantasy strip deals with the crew of a magic powered, inter-dimensional trading ship (although it looks more like a fish), and its trusty crew of stereotypes: Hard-assed captain, understanding doctor, jaunty thief and bold swashbuckler. 1-6 by Barbara Kesel and Mike Collins are good examples of the genre, but the quality rapidly drops after their departure and even the work of then neophyte artist Joe Quesada from 8 cannot restore it.~WW

SPICE CAPADES

Fantagraphics: *One-shot 1999*

The words 'sitting' and 'target' spring to mind. With contributions from the likes of Gilbert Hernandez, Kaz, Robert Crumb and Peter Bagge, it promises much, but ends up being a mix of the inconsequential and the indescribable (Ivan Brunetti, anybody?) and ultimately satisfies nobody. A major disappointment.~DAR

SPICY TALES

Eternity: *10 issues, 1 Special 1988-1991*

Subtitled "A Naughty Anthology"', *Spicy Tales* reprints strips from 1930s and 1940s pulp magazines. Publisher Frank Armer produced a series of disreputable pulps that dealt more blatantly with sex than was usual in that period. Alongside prose stories they also ran two to eight-page strips. *Spicy Detective*'s Sally Sleuth's first appearance, from November 1934, is in 1. She's an operative for an FBI-like organisation and predictably, most of her clothes fall off in the course of her assignments. 'Dan Turner, Hollywood Detective' is more restrained sexually but it's plenty hard-boiled and the character's colourful vocabulary, including neologisms like "butched" and "killery", is a wonder in itself. The series also includes reprints from *Spicy Western* and *Spicy Adventure*, such as 'Polly of the Plains', which chiefly sees the naked cowgirl being tortured by Mexican bandits, and Diana Daw, globe-trotting adventuress.

Despite a predilection for bondage, torture and racism, these pre-Code stories are not entirely without merit so long as they are considered within their context. The special contains three 'Lucky Dale, Girl Detective' strips and a Veiled Avenger story. Both strips' artwork is far superior to that in the ongoing title.~NF

THE SPIDER

Eclipse: *3 issue miniseries 1991, 3 issue miniseries ('Reign of the Vampire King') 1992*

Millionaire businessman Richard Wentworth is a costumed scourge of the underworld at night, complete with gimmicks, hide-out and butler. Despite the similarities, The Spider pre-dates Batman, and the character's 1930s pulp-fiction origins are well served here. Tim Truman concocts an entertaining tale incorporating exotic cults, Nazi revivals and deadly yet glamorous women, and Alcatena's finishes add a fluidity and warmth often absent from Truman's art elsewhere. Unintentional humour is derived from The Spider's distinctive dentistry, with every tooth filed to a point, rather a giveaway regarding his identity, you might think. Not so, as the civilian Wentworth communicates in the style of a ventriloquist, keeping his mouth tightly closed at all times. Sadly, the second series provides a prosaic explanation. Otherwise it's more of the same, this time with a supernatural feel.~ FP

Steve Bissette's SPIDERBABY

SpiderBaby: *2 issues 1996*

Reprints of Bissette's earlier work from his days at the Joe Kubert school, and covering, eventually, all the work he owns or co-owns. Although laudatory in intent, much of the work is really too embarrassing to be seen again. Masterpieces such as 'The 24 Hour Comic', 'A Life In Black & White' from 2 more than make up for such idiotically vulgar outings as 'The Telltale Fart', a nomination for the grossest comic strip of all time. The series also contains documentary material and articles by Bissette.~WW

SPIDER-GIRL

Marvel: *55 issues + (0-54), 1 Annual 1998 to date*

Spider-Girl is undoubtedly a comic for readers apt to moan "they don't make them like this anymore". Something about *What If?* 105 (reprinted as 0), dealing with a scenario in which Spider-Man's daughter had lived, captured the comic buyers' imagination enough to leave them clamouring for more. For the only time in its long history, a *What If?* scenario spawned an entire spin-off series, charting the continuing adventures of the teenage May 'Mayday' Parker as she continued her father's legacy. Exactly what it is about this unremarkable, resolutely Marvel house style title that makes it such a fan favourite is difficult to say, as there's nothing new, special or remotely challenging about Tom DeFalco and Pat Olliffe's gentle superhero soap. The alternate future in which it's set looks remarkably similar to the regular Marvel Universe. The characters act much like their younger counterparts, or fill the same roles as their parents do in the 'proper' Spider comics, and yet somehow, it's very, very difficult to put down. *Spider-Girl* represents good, old-fashioned storytelling and traditional Marvel values that are deeply rooted in the 1960s Marvel of Lee and Kirby, an odd anomaly for a comic that's meant to be set in the future, but this in itself gives it an endearing quality.

May's problems with High School and her parents; her place in the super-hero legacy; her battles with villains that are either the same, or the heirs of, her father's enemies; the love-triangle between her, Phil Urich and Normie Osborn; the strong supporting cast and even the remarkable consistency of its dedicated creative team make *Spider-Girl* seem like a haven from everything that the traditionalist would say went wrong with comics in the 1990s. Its cult following has been strong enough to change Marvel's mind about threatened cancellation, and while sales are not strong, the editors are sensible enough to realise that it's appealing to readers (including a well-above average female percentage) who won't go elsewhere if the plug is pulled. If you like your comics safe, clean, character-driven and entertaining, *Spider-Girl* won't let you down. 1-8 are collected.~JC

SPIDER-MAN

Marvel: *74 issues, 3 Annuals, 1 Super Special, 1990-1996*

Launched in a blaze of variant cover colourings, states of baggedness and a hot creator, Marvel's astute marketing rocketed the first issue of Spider-Man's fourth concurrent regular series to the number-one-selling comic book ever to that date. Fresh from his acclaimed artistic run on *Amazing Spider-Man*, Todd McFarlane was joined by unknown, untried writer, Todd McFarlane. He was honest enough to admit in the first issue text-page that he did not profess to be a writer, and proceeded to prove it in issues 1-14*. Lush artwork and thin stories evidence little development of McFarlane's plotting talents, and an over-use of staccato, monosyllabic scripting looks arty for half an issue and amateur over fourteen.

Déja vu struck as another hot *Amazing Spider-Man* artist, Erik Larsen, took over on plot and pencils in 18-23*, with a hopelessly muddled Sinister Six story guest-starring superheroes galore who materialise and disappear without reason. It took fill-in creators Don McGregor and Marshall Rogers to produce this series' highlight: 'Something about a Gun' in 27 and 28. With research assistance from the police, this mature, heartfelt story of juvenile crime, school bullying and the danger of guns scores a perfect ten. Single-minded obsession with the major themes is avoided as original displays of Spider-Man's web tricks complement a portrayal of his heroism that has rarely been surpassed. Ann Nocenti's 'Return to the Mad Dog Ward' in 29-31 improves on the original (in *Amazing Spider-Man* 295, *Spectacular Spider-Man* 133 and *Web of Spider-Man* 33) with a sub-plot focusing on Peter's pathological lying running out of control during his never-ending quest to hide his secret identity. Mainly routine fill-ins, all of them three parts, follow to 43. Avoid 35-37, the fourteen-issue 'Maximum Carnage' fiasco of a bloodbath crossing into all the regular *Spider-Man* titles, and concentrate instead on Marc DeMatteis' insightful Electro story in 38-40, with its amusing plot of a small-time crook who has been busted by Spider-Man countless times during his criminal career and is humiliated because the Web Man never recognises him.

Howard Mackie and Tom Lyle take charge from 44, and teasers for the 'Return of the Clone' saga begin in 48, followed by the full event in 51-63. It crosses over into all the major *Spider-Man* titles and is reviewed under *Amazing Spider-Man*. Publication halted whilst two issues of *Scarlet Spider* hit the stands, then 64 onwards concentrate on the Ben Reilly version, with John Romita Jr pencilling. Multi-part stories continue their weekly wrap around the four core Spider titles for six more months, and the clone thing still simmered until its culmination in the December 1996 cover-date titles with the double-size 75 dropping the final curtain. We can only hope. That was the issue with which the title changed to *Peter Parker, Spider-Man*.~APS

Amazing SPIDER-MAN

Marvel:*Series one 442 issues (-1, 1-441), 34 Annuals, 6 Giant-Size, 1 Super Special, 1963-1998, Sseries two 46 issues + 1999 to date*

"Bitten by a radioactive spider, student Peter Parker gained the proportionate strength and agility of an arachnid." Thus has Stan Lee presented hundreds of issues of Marvel's flagship solo character. Response to Spider-Man's intended one-shot appearance in the dying issue of *Amazing Fantasy* was so favourable that his own series followed seven months later. By today's standards, all early 1960s titles recount naïve, simplistic tales, but after the first dozen issues *Amazing Spider-Man* stands up better than its contemporaries.

Weak and fallible by superhero standards, Spider-Man functions best in down-to- earth surroundings, often pitted against the New York underworld. Stan Lee and Steve Ditko quickly settled down to these perfectly pitched plots of the superhero plagued by mundane problems. How many other superheroes had to stay at home because their aunt had confiscated their costume? The banter and camaraderie between Peter and his peers is hard to better. Supervillain spats resulted in few clear-cut victories, and even these usually involved some pyrrhic element. Ditko never could draw a pretty girl, but his angular, gangling figures were right for Spider-Man, and his exquisite use of shadow suited the book perfectly. All these components created thirty-eight issues deserving of their classic status. Their appeal remains today, so much so that Marvel launched *Untold Tales of Spider-Man* in 1995, setting new stories in that era. It proved popular and successful.

John Romita (Sr) launched his artistic stint with the revelation of the original Green Goblin's identity in 39-40, a tense story of the first villain to discover that Spider-Man is Peter Parker; his own identity had been a mystery since 14. After months of teasers, Mary Jane Watson finally shows her face in 42 and turns the dialogue seriously late sixties. Lee packs more soap opera and action in one issue than can be found in half a dozen modern comics; 47 is the best example. But Ditko took part of Lee with him, and after issue 50 gaps between the landmarks stretch longer. By 1968, more complex social issues supplanted much of Lee's superficiality. The first black character, Joe Robertson, *Daily Bugle* City Editor, is introduced in 52 and opens the generation gap with his son Randy as student riots infiltrate 68-70. Peter goes steady with Gwen Stacy and sub-plots tire as they run the gamut of options: 'She digs Spider-Man but hates Peter Parker' and its permutations. 96-98 are a noteworthy drugs-use story as Marvel deliberately defied the Comics Code and published these issues without its stamp of approval – an event de rigueur nowadays, but sacrilegious in 1971.

By 110 Lee had outstayed his shelf-life and Gerry Conway warmed up for a year before killing off Gwen Stacy and the Green Goblin (allegedly) in 121-122*. These issues acted as the catalyst for the superlative original Jackal War running intermittently through to 150. Conway introduces the Punisher in 129, eloquently portrays Peter's anguish, grief and guilt over Gwen's death and tantalisingly feeds the reader with scattered helpings of the Jackal's machinations rather than with a continuous bombardment. The resolution in 144-150* ushers in clones of Peter Parker and Gwen Stacy. The 'resurrection' of a non-superpowered supporting character was controversial at the time, but handling of the climax is first-rate, mainly because, as is evident, it's been properly planned. Little could Conway have guessed the terrible legacy this story would leave twenty years later. Despite the occasional absurd sub-plot and editing glitch, 121-150 is arguably Spider-Man's second finest hour after Lee and Ditko. Ross Andru's art is always adequate, never amazing, and a text page in 153 usefully ties up loose Jackal ends. 153 also holds its ground as a poignant one-shot, but Len Wein's stint (151-180) is generally mediocre. Marv Wolfman starts with a bang as Peter proposes to Mary Jane in his first issue, 182. Her rejection of him in the next issue effectively writes her out of the title for five years. The slide under Wolfman is slow, steady and inexorable. His only other mark is the first appearance of the Black Cat in 194-195, a supporting character developed more fully in *Spectacular Spider-Man*. Denny O'Neil effortlessly prolongs Wolfman's trend. His stories in 207-223 are not quite exciting enough to be described as poor.

Roger Stern's tenure from 224 coincided with the first period of artistic stability since Ross Andru's departure in 185, as John Romita Jr followed in his father's footsteps. The title was crying out for a scenario of tooth and intrigue, which Stern delivered courtesy of the Hobgoblin in 238. A shadowy figure discovers the Green Goblin's hideouts and adopts a similar persona. This move rescues all aspects of the book. Mary Jane's return in 242-243 is classic soap opera and 'The Kid Who Collects Spider-Man' half-issue tale in 248 is one of the most original and touching reappraisals of a superhero's origin you will see. Hobgoblin teasers permeate until Stern's grand finale in 251, with the mystery left unresolved.

Since her first appearance, Mary Jane had always been depicted as shallow, empty-headed and carefree: characterisation cleverly realised by a dearth of attached thought balloons. We learn the reason why in 257-259*, the first issue revealing her stunner two issues earlier that she has known that Peter Parker is Spider-Man for a long time (see also the 'Parallel Lives' graphic novel), and the last a sort of origin. It forms part of Tom DeFalco's best-ever work as 252-285 copiously feed the Hobgoblin enigma and integrate the *Secret Wars* black costume into mainstream Spider-Man mythology (from 252). The Rose, another mystery man in a mask, débuts in 253 and becomes Hobgoblin's conspirator. 269-270 form a heroic two-parter as Spider-Man outthinks Firelord, an adversary who, on paper, he stands no chance of defeating. The run is littered with fill-ins and guest creators but all issues by the regular team of DeFalco and Ron Frenz shine. Although they both take an early bath, Jim Owsley admirably concludes the Gang War story (284-288, revealing the Rose), as does Peter David on the Hobgoblin exposition in 289. *Web of Spider-Man* 29, 30 and the *Spider-Man versus Wolverine* one-shot are essential reading to these plotlines. Beware the slice of revisionist history, all the rave at Marvel nowadays, as the 1997 miniseries 'Hobgoblin Lives!' overturns the identity of the face beneath the Hobgoblin's mask.

David Michelinie steals a leaf from Marv Wolfman's portfolio as Peter proposes to Mary Jane in his first issue. 290-292 recount a fine modern-day follow-up to her origin, which concludes with her acceptance. Formal proceedings unfold in Annual 21. All are collected along with some new strips on the theme. Fill-in issues follow forthwith, but fill-ins as stunning as 293-294* are welcome any time, as Marc DeMatteis presents the newly-weds with a honeymoon to remember as Kraven buries Spider-Man alive for two weeks in *Amazing Spider-Man*'s two chapters of 'Kraven's Last Hunt'. Todd McFarlane joins as regular artist in 298 and Venom débuts in 300, but both of these two fine characters would later become victims of their own success as exploitation set in. McFarlane brings the best out of Michelinie as they paint another purple patch in the Webslinger's history. After McFarlane's departure on completing 'The Assassin Nation Plot' (320-325*), the art of Erik Larsen (to 350) and Marvel Try-Out Contest winner Mark Bagley (to 415) is unable to save the title from an excess of crossovers, superhero guest stars. Oh, and inane plotlines, such as the turbo-charged, superpowered Spider-Man in 327-329*. The last worthwhile appearances of Venom and offspring Carnage grace 361-363*. Subsequent outings reek of mass exploitation and gratuitous gore, exemplified by the egregious fourteen-part 'Maximum Carnage' bloodbath in 378-380* and other titles.

* Available in a collected edition

Since 1992, Spider-Man's record has been blighted by two appallingly ill-considered decisions by Marvel. To provide a blockbuster thirtieth anniversary plot (365), Peter Parker's parents are reintroduced, having been absent since 1968's Annual 5 recounted their deaths. Michelinie's absurdly shallow final issue (388) revelations are poorly considered and illogical. DeMatteis' scripting stint overdoses on the psychoanalysis. But before long Marvel unveiled a second poke in the eye. Jumping on the fashion trend for major character revamps, Marvel unleashed the 'Return of the Clone', a storyline they hoped no one would forget. In that respect they indisputably succeeded.

Peter Parker's clone and the Jackal did not die in 149. Adopting the name of Ben Reilly, the Parker clone returns after five years of self-imposed exile and confronts Spider-Man in *Spectacular Spider-Man* 216. Unable to beat the habit, Ben assumes a webslinging identity as the Scarlet Spider. The Jackal returns and we learn that he created multiple copies of clones of himself, Gwen Stacy and hundreds of Spider-Men, which all crawl out of the woodwork at a moment's whim. In the endgame (*Spectacular Spider-Man* 226) scientific tests 'prove' that Parker is the clone and Reilly the real McCoy. Parker packs his bags for Oregon with expectant wife in tow. This story is an unmitigated disaster. It weaves its weekly way through all Spider-Man titles from October 1995 to October 1996, although each title keeps its own creative team. Once all the associated one-shots, limited series and follow-ups are counted, the story clocks up close to a hundred issues of drivel. Its most serious fault is that the reader cannot believe anything any character says. All the bad guys are lying and all the good guys don't have a clue what's going on. Its most infuriating fault is that most characters are unable to maintain consistent attitudes for more than five pages, exemplified by Reilly agonising that he must quit New York and leave it as Parker's territory, only to decide moments later that he can't. This questionable technique allows the same themes to be recycled endlessly and pads a hundred issues better than polystyrene ever could. The sorry saga smells of "We'll make it up as we go along", as indeed they did. Marketing Dept. sticks its finger in the pie as all titles are suspended and replaced by *Scarlet Spider* versions, renumbered from 1, in November/ December 1995. But Reilly saves tradition with redesigned Spider-Man costume, lifestyle and hair colour as the established titles and numbering resume from January 1996. This issue (407) also features the Return of the DeFalco who writes through to 439 without ever recapturing the shine of his previous stint.

And thus could the clone story have ended, but it was so vilified from all quarters that Marvel finally realised They Had Made A Mistake. Further teasers culminated in the four-part 'Revelations'* storyline in the December 1996 issues. We now learn that the original Green Goblin did not die in 122. He has been manipulating all the major players behind the scenes, and rigged the scientific clone tests to read a false result. Re-enter Peter Parker as the one, true and only Spider-Man as Reilly disintegrates before his eyes. This story and its companion, the 1997 one-shot 'Osborn Journal', inevitably heap hundreds of further inconsistencies on the not inconsiderable pile. Nevertheless, it does as much as is humanly possible to fix an irredeemable shambles. In the midst of the chaos, 400 shines brightly. Marvel's most senior citizen passes away (temporarily at least) in a beautifully sentimental gem from Marc DeMatteis, bereft of histrionics, melodrama or superfights. Steve Skroce and Joe Bennett share an erratic pencilling schedule from 418-436. The main theme of these issues is the long running Black Tarantula plotline which comes to a showdown in 436 without ever causing raised heartbeats. Of this DeFalco stint, only the offbeat 420 guest starring X-Man offers any refreshment. Fill-ins and crossovers pad the first series, with John Byrne writing 440 and 441 as he warms up for the relaunch.

However, Byrne provides pencils only on series two as Howard Mackie takes over scripting, adding to his workload on *Peter Parker, Spider-Man*. Continuity between the two titles is inevitably tightened as they read like one bi-weekly comic. Scant originality surfaces as Peter Parker discards his Spider-Man identity for all of two issues and the third Spider-Woman debuts in 5 as a prelude to her own series. Mackie trots out an encore of all the familiar Peter Parker/ Spider-Man lifestyle problems already aired dozens of times before. The long running Senator Ward plot thread is resolved in 23-24's *Maximum Security* tie-in. 28, 29 and Annual 2001 (plus *Peter Parker, Spider-Man* 29 written by Paul Jenkins) showcase Mackie's swansong in which he resolves the mystery of Mary Jane – missing, presumed dead, since her aeroplane exploded in 13. Her return is delicately handled considering the overuse of clones and revived dead characters that has plagued so many previous stories.

J. Michael Straczynski's much anticipated writing debut in 30 raised the quality of the title to heights not seen in eons. 30-35* showed originality, patience to build plotlines slowly, a searching question concerning Spider-Man's origin, underlying motives for characters' actions and the truly terrifying new villain Morlun. Their conflict builds to a climax of unbearable tension in 35 and before breath can be drawn, that issue's cliffhanger heralds a story Marvel described as "40 years in the making". In truth it's a story Marvel has been procrastinating over for forty years, but is no less worthy for that. From 40 onwards stories mellow slightly but Straczynski maintains quality, particularly with his emphasis on character interplay.

There have been dozens of trade paperbacks reprinting assorted stories from the first run. The vast majority of 290-380 have been available in book form, and other collections are themed, picking battles with Green Goblin, Hobgoblin or Venom through the years, or the work of Frank Miller on *Spider-Man* (mostly from other titles). What would be considered the classic early stories are readily available. 1-50 of series one are reprinted in five volumes of the *Marvel Masterworks* series and the first ninety issues of series one are reprinted in four volumes of the black and white *Essential Spider-Man* collections.~APS

Peter Parker, SPIDER-MAN

Marvel: *Series one 24 issues (75-98), 2 Annuals 1996-1998, series two 49 issues + 1999 to date*

The title change from the adjectiveless *Spider-Man* slips through almost unnoticed. Howard Mackie's scripts improved almost imperceptibly throughout his run. He is lucky to have had John Romita Jr on pencils for all bar a couple of fill-ins to the first series finale. The latter's deliciously stylish artwork has more than compensated for plots hamstrung by too many clutching fingers from Spider-Man's past as hordes of never-previously-mentioned relatives of Gwen Stacy appear out of thin air. An additional problem is that the occasional offbeat issues Mackie has thrown in (such as 90, 93) are inferior to his regular fare. 88, topped by a stunning cover, is a rare gem and 95 has its moments. Crossovers dominate the final few issues and Aunt May confirms her immortality by reappearing in 97 to lay the foundations for the second series.

Romita Jr's post relaunch artwork drops a few standards, possibly owing to excessive workload which also results in pencilling fill-ins in 4 and 5. Early issues are carbon copies of *Amazing Spider-Man*'s second series, also written by Mackie. He exhibits his gift for stringing plotlines past the point where readers care about their resolution. Kraven versus Venom in 17 is probably his best effort. Paul Jenkins takes over from 20 and immediately introduces much needed sensitivity, feeling

and genuine humour. Although his initial efforts are somewhat erratic, 25's final chapter of an otherwise tired, multi-title crossover, Green Goblin retread is genuinely gripping. By complete contrast, 26's one-shot is a thoroughly original change of perspective. Mark Buckingham's clean pencils would benefit from a little finesse in the inking department. Thereafter Jenkins' work irritatingly promises greatness without ever managing to achieve it.~APS

Peter Parker the Spectacular SPIDER-MAN

Marvel: *Series one 2 issues 1968, Series two 264 issues, 14 Annuals, 1 Super Special 1976-1998*

Series one was Marvel's first experiment with magazine publication, an election story by Stan Lee, John Romita and Jim Mooney later re-jigged in *Amazing Spider-Man* 116-118. The colour second issue by the same creative team is better, featuring a psychological set-to between Spider-Man and the Green Goblin in their civilian identities before developing into a standard Spider-Man battle. Series two was the only Marvel comic introduced in the 1970s to survive into the 1990s, and was initially intended to focus more on the complex social life of his alter ego Peter Parker, hence the title. There's minimal recognition of this inside the comic, but Parker's name only disappeared from the masthead of Spider-Man's second ongoing solo comic with 134.

For a title that eventually turned out well, the only spectacular thing about 1-50 is the amount of villains that attack Empire State University (five between 37 and 43 alone). Cheap sniggers can be had from CB character Razorback in 11 and the disco Hypno-Hustler in 24, and the dozen die-hard *Champions* fans will require 17-18, featuring the team breaking up. Roger Stern shows the first glimmer of adequacy among writers and from 57, despite ever-changing artists, he's turning out reasonable stories.

It's the surprising team of Bill Mantlo and Ed Hannigan from 62 who begin the first run of good issues. Hitting form early with the moody introduction of Cloak and Dagger in 64, Hannigan's pencils, inked by Al Milgrom, are detailed, imaginative, and occasionally live up to the titular adjective. Mantlo's writing outshines his work elsewhere by light-years, deftly juggling Peter Parker's university supporting cast, and even the most ridiculous of returning foes (Boomerang in 67) is made interesting. Their finest issue is Hannigan's last, 72, in which Spider-Man encounters a very different Doctor Octopus. Al Milgrom and Jim Mooney are the artists by 74, pleasingly concluding a long-running subplot concerning timid secretary Debra Whitman in the midst of a multi-issue war between Dr Octopus and the Owl, also involving the Black Cat. 80 is a fine solo run for *Daily Bugle* proprietor J. Jonah Jameson, and 84 an excellent tale about a kidnapped child. Mantlo's scripts remain above average until Spider-Man's ridiculous romance with the Black Cat pushes everything but supervillains out of the title.

The black-costume era starts with 90, and Al Milgrom writes to 100, restoring Peter Parker and cast. The majority of 103-136 are written by Peter David, displaying his customary facility for witty dialogue and situations. The most acclaimed story of his run is 'The Death of Jean De Wolff' in 107-110*, a detective story tracing the killer of the *Marvel Team-Up* supporting character, but the sequel in 134-136 is better. 103, 113 (in May Parker's old folks home) and the *Rashomon* tribute in 121 are also good, and there's a clever surprise revelation in 129. By 130 there are three monthly Spider-Man titles, and stories begin to cross over, providing a shorter wait between instalments, but meaning that some long-running subplots are cleared up in the other titles, although usually referenced here. Chapters of J.M. DeMatteis and Mike Zeck's laudable Kraven six-part story occupy 131-132, and there's a very good sequel of sorts, founded on the repression of childhood abuse, in 178-183.

There'd been no regular penciller since Al Milgrom, but Sal Buscema returns with 134, and makes up for lost time by pencilling for the next decade. In 137 Gerry Conway returns as writer, reuniting the team responsible for the first issue (original inker Mike Esposito is back with 154). Most of their issues are entertaining superhero comics with effective subplots and page-turning twists – second nature to Conway – and crisp, solid art – second nature to Buscema. In 139-143 the Punisher's back and *Bugle* Editor Joe Robertson faces the consequences of an early career mistake, a plot kept on the boil until 157, a good sampler of the Conway/Buscema style. There are two dumb villains, the hasty resolution to Joe Robertson's problems, and plenty of the supporting cast. In 158-160 Spider-Man is cosmically powered, making him, in effect, Superman, a stupid device predicating stupid stories, but from 161 it's business as usual. Conway's swansong sees the return of Dr Octopus in 173-175, and J.M. DeMatteis is back with 178. His plots are slender, but he compensates with accomplished characterisation. Parker's Aunt May is transformed from the comic hindrance to Spider-Man's dual identity she'd been for twenty-five years to a sympathetic old lady and villains seen umpteen times previously are given believable motivation for their actions. A particular triumph is his unsettling depiction of the madness afflicting the Green Goblin (189, 200). While maintaining elements of continuity, DeMatteis' stories are generally complete in a set amount of issues. 'Funeral Arrangements' in 186-188 is a good sample of his style, as The Vulture has cancer and wants to tie up his life neatly before death. Sal Buscema, inking his own pencils, continues to be excellent throughout.

After DeMatteis concludes his first tenure with the 'Maximum Carnage' chapters (201-203), a variety of writers try their hand until the start of the infamous 'Spider-Clone' saga, none with particular distinction. Beginning in 216, the 'Spider-Clone' story runs as individual chapters through all *Spider-Man* titles until 229, and is dealt with in the review of *Amazing Spider-Man*. Sal Buscema remains as penciller but Bill Sienkiewicz's inks make for an uncomfortable mixture, much improved when he's replaced by John Stanisci. A dumb marketing move replaces the title for two months with The *Spectacular Scarlet Spider* (don't bother with it), and from the reinstatement with 230 Ben Reilly is Spider-Man for a short while, with an almost blank slate for writers – not that it seems to make a difference. With the mess of 'Spider-Clone' brought to a predictable conclusion the status quo is restored, and there's an immediate improvement. 241 is a decent stocktaking issue from DeMatteis, dynamically, if not always anatomically correctly, drawn by the team of Luke Ross and Stanisci, and from that point it's acceptable material all the way to the end. The return of several extremely stupid villains in 246 is handled with some panache, and DeMatteis crawls under the skin of Spider-Man's earliest villain the Chameleon in the issues prior to that. Then there's the return of Kraven and Norman Osborn, both previously believed deceased, and a new Jack O'Lantern manipulating events to destroy Jonah Jameson's family. It's all enthralling superhero soap opera, and adding a darker touch is a delve into the character of long-time cast member Flash Thompson, particularly a minus one issue (don't ask) contrasting his childhood with that of Peter Parker. Unfortunately, though, an oversize 250 merely keeps the pot boiling and resolves nothing. The final issues cross over with other Spider-Man titles for the story concluding their runs, resurrecting someone unexpected to the collective groan of Spider-Man fans everywhere.

Best of the annuals are the John Byrne-drawn battle with Dr Octopus in 1, and Peter David and Mark Beachum's stories of the mysterious Ace in 5 and 6.~WJ

Sensational SPIDER-MAN

Marvel: *34 issues (0-33), 1 Annual 1996-1998*

Seemingly replacing *Web of Spider-Man* only to trumpet the signing of writer and penciller Dan Jurgens, the cover of the zero issue is adorned with a nice multi-pose Spider-Man reflector. 1-7 exhibit the Jurgens trademarks of perfectly acceptable ideas, good art and woefully uninspired script. In his defence, he wasn't helped with the latter by plots intruding from other *Spider-Man* titles. Unfortunately, once the editorial decision to dispense with this had been made, Jurgens had gone. Todd Dezago writes the remaining issues and Mike Wieringo draws most in his appealing cartoon style, the pair providing readable stories throughout. The highlight of the run is the annual. Actually titled *Sensational Spider-Man '96*, it's a reworking of *Amazing Spider-Man* 15, by J.M. DeMatteis, the writer who's been most successful with the villain of the piece, Kraven. Unlike most reworkings of old stories, Kraven's début retreads familiar ground, but adds to the original in myriad subtle ways without either ruining or discounting it, and the art of Shawn McManus is delightful. A back-up strip returns the original Spider-Woman.~FP

Web of SPIDER-MAN

Marvel: *129 issues, 10 Annuals, 1 Super Special, 1985-1996*

This replaced *Marvel Team-Up* after the latter's cancellation. The main periods of creative stability centre around Alex Saviuk, who pencilled 35-116 apart from about a dozen fill-ins, and writers Gerry Conway (47-70), Howard Mackie (84-96) and Terry Kavanagh (97-120). Paradoxically, however, better issues cluster amongst the early numbers, even though most read as routine fill-ins between Spider-Man's adventures in his other titles.

11-12, written by Danny Fingeroth and Peter David, confront Peter Parker with a tricky moral dilemma when he's tempted to adopt a vigilante role in his civilian identity. 29-30, by Jim Owsley, oversee the finale of the first Hobgoblin plotline. Much more than just a recap, these excellent issues adroitly tie up all loose ends of a complex story and capture the despair of the Kingpin's son. 31-32, along with *Amazing Spider-Man* 293-294 and *Spectacular Spider-Man* 131-132, print the outstanding 'Kraven's Last Hunt' by Marc DeMatteis and Mike Zeck. Peter David entraps Betty Brant in a religious cult in 40-43, which also feature Mary Jane contemplating nude modelling and Aunt May chancing across the glossies.

Conway brought consistency – unfortunately of a second-rate nature – but Saviuk's barren pencils supplied little nourishment. Their best effort has Chameleon kidnapping and replacing J.J. Jameson (50-54). Conway's long-running sub-plot of Mary Jane's young cousin Kristy's bout of anorexia provides needed substance. The series slid further downhill after Conway's departure. Mackie's 'Name of the Rose' (84-89) instils a brief surge as a new character adopts the Rose identity, but the original Rose sequence in *Amazing Spider-Man* is far superior. 100, 104-109 contain short solo back-up strips of Spider-Man supporting characters Nightwatch, Cardiac and Calypso. 'The Return of the Clone' storyline starts in earnest in 117 and wraps around all the Spider-Man titles. It is discussed in the review of *Amazing Spider-Man*.

Like the other *Spider* titles, *Web of Spider-Man* was cancelled in October 1995 and replaced by Scarlet issues: *Web of Scarlet Spider* 1-4. Unlike its counterparts, it did not reappear and was replaced by *Sensational Spider-Man*.~APS

Untold Tales of SPIDER-MAN

Marvel: *25 issues, 2 Annuals 1995-1997, one-shot ('Strange Encounters') 1998*

By the 1990s keeping track of Spider-Man's life had become unenviably complex over the assorted titles he occupied, never mind factoring in specials and guest appearances. Those who yearned for the simpler self-contained stories of previous years found their solution here, with continuity implants set in the earliest days of Spider-Man's career. He'd already met a few of his regular foes, but they'd not yet become too familiar. Kurt Busiek manages a good impersonation of Stan Lee's original snappy dialogue for Spider-Man and Peter Parker's self-pity, and given that comics are now more character-driven than in Spider-Man's introductory years, he's able to provide a greater depth to the slimmer supporting cast. He's also wise enough to retrain from an excess of knowing captions or dialogue. Penciller Pat Olliffe's wisdom is in not imitating the Steve Ditko artwork from the period portrayed, providing more modern layouts and style. All issues are self-contained, and *Untold Tales* is a consistently involving and satisfactory read. Any issue sampled will provide better than average superhero entertainment. The annuals are labelled '96 and '97, with Mike Allred drawing the first and Tom Lyle the second, and both match the high standards of the series. The 1998 one-shot has an encounter between Spider-Man and Dr Strange, but is oddly disappointing. 1-8 are collected.~WJ

SPIDER-MAN ADVENTURES

Marvel *15 issues 1994-1996*

Tales of Spider-Man based on the Fox TV show. As with Marvel's other TV tie ins, the stories stand apart from the accepted universe, so the long run of guest-stars such as Venom, the Punisher and Nick Fury are somewhat out of character. It works as a series aimed at young, casual readers however, delivering simple, solid, old-fashioned superhero action.~WW

SPIDER-MAN; CHAPTER ONE

Marvel: *13 issues (0-12) 1998-1999*

John Byrne takes it upon himself to retell classic stories from Spider-Man's early years, adding extra material of his own creation, and providing 'new details' concerning Spidey's origin and his first meetings with most of his classic villains. It's all competently enough done, and an okay read if, by any bizarre mischance, you don't know all this stuff about Spidey's background already. To those of more mature vintage, the implicit smug attitude of, "Well, Lee & Ditko didn't tell these stories properly the first time round, so I'm doing it right..." will rankle more than somewhat.~HS

SPIDER-MAN Graphic Novels and One-shots

The expansive variety of Spider-Man one-shots ranges from special projects deserving of graphic-novel status to mundane offerings amounting to little more than big, thick comic books. All are independently produced by unrelated creators and quality varies accordingly.

It's old boys' reunion day in 'Fear Itself' as Lee, Conway and Andru concoct a routine tale of Spider-Man and Silver Sable sucked into a Baron Zemo scheme. When the plot involves a fear-provoking, hallucinogenic gas, you just know an overdose of padded pages will follow. *The Holiday Special* 1995 stuffs stockings with five tales of Spidey and his pals all baked to give you that cosy Yuletide feel. Spider-Man goes magical-dimension-hopping in 'Hooky', with Doctor Strange, unusually, nowhere in sight. With a child sorcerer in tow, this has all the ingredients of schmaltz overload. However, Susan Putney's charming story and Berni Wrightson's sumptuous, expansive artwork deliver one of Spider-Man's most off-beat adventures. 'Legacy of Evil' gives sophisticated treatment to the aftermath of the Green Goblin. It reads much like a Goblin biography but has enough substance to carry its own weight. 'Maximum Clonage' Alpha and Omega are crap tie-ins to the infamous clone saga, intertwining with Spider-Man's ongoing titles. Later Roger Stern attempts more retro engineering in 'Dead Man's Hand' to resolve inconsistencies in the clone saga. It doesn't work.

Published two years after the wedding issue, Parallel Lives' history class compares and contrasts Peter and Mary Jane. All script and artwork is new, despite reprising many panels from past issues. Background details are retrospectively fleshed out; most significantly that Mary Jane discovered that Peter Parker is Spider-Man during the events of *Amazing Fantasy* 15. One for Spider-Man connoisseurs only. Like most sequels, 'Soul of the Hunter' is inferior to its ancestor, the really outstanding 'Kraven's Last Hunt' storyline in *Amazing Spider-Man* 293, 294, *Spectacular Spider-Man* 131, 132 and *Web of Spider-Man* 31, 32. Unlike most sequels, it is excellent. Peter Parker must lay Kraven's soul to rest in this palpable portrayal of his haunting. DeMatteis' cultured, if intense, script unfolds fine Mary Jane characterisation as she assuages Peter's agony. The pencil/ink team of Mike Zeck and Bob McLeod displays its customary synergy as their chaste artwork comes to life on the page. Stan Lee's reunion with John Romita Sr. on *Spider-Man Kingpin*. 'To the Death' fails to rally any nostalgia as wooden prose chaperones Tom DeFalco's lifeless plot. The title is, of course, a complete misnomer.

Spider-Man and Batman is a Marvel/DC co-production written by DeMatteis, who plays it dead safe as he trots out the heroes' familiar character traits. Twin lunatics Joker and Carnage contribute to adequate superheroics. In *Spider-Man / Gen*^{13}, Peter David delivers one of his flatter efforts as he struggles to think of a reason for yet another cross company team-up.

'The Way To Dusty Death' has veterans Roy Thomas and Gerry Conway recycling a veteran plot as Spider-Man and Doctor Strange team up to fight their perennial nemesis Xandu. A bountiful premise is wasted by Terry Kavanagh in 'Designer Genes' as he produces a slugfest from the uneasy alliance formed by Spider-Man, Punisher and Sabretooth. Roxxon Corporation, their common enemy, manufactures chimeras to pad out the page count. Ugly, misproportioned artwork from Scott McDaniel does not assist. *Spider-Man versus Wolverine* pairs the twosome in Berlin and it's not for sightseeing. The dialogue is first-rate, a major character dies and Jim Owsley's depiction of Spider-Man losing his bottle is highly convincing. Further ramifications continue in *Amazing Spider-Man* 289. Charles Vess indulges his love of the Scottish Highlands in 'Spirits of the Earth' as Peter and Mary Jane take a vacation. The beautiful, mellow art does justice to the location and the domestic aspects are warm as the New Yorkers interact with the locals, but the main plot reeks of habitual megalomaniacs and predictable holographic Scottish ghosts. The vignette of Spider-Man impeded by a herd of cows sitting in the road is risible. In *Trial of Venom*, Spider-Man, Daredevil and Venom meet L.A.Law in the famous UNICEF donation special. Peter David injects just enough intrigue to rise above the gimmick. In 'The Venom Agenda', though, Larry Hama rehashes the same tired production already seen far too many times from Marvel's most overused villain.

After 1998's *Spider-Man* 'Made Men Marvel' called a temporary halt to the one-shots. That title is a gross misrepresentation as Spider-Man appears for a wordless two panel cameo. *Daily Bugle* reporter Ben Urich narrates a documentary of all out war amongst the New York City crime bosses with Kingpin as the focus. Howard Mackie delivers one of his marginally better efforts. The *Spider-Man* film prompted a restart, though, not least the adaptation. Of more recent efforts, the most unusual is *The Megalomaniacal Spider-Man*, in which Peter Bagge pens and draws the ultimate Spider-Man "what-if?". All of Peter Parker's neuroses are squeezed dry for maximum mileage in this ineffective parody. In the tiresome 'Sweet Charity', Ron Zimmerman drags a five page gag into a double sized sixty-four page one-shot, but Brett Matthews' low key plot and Vatche Mavlian's nocturnal artwork combine to sheer delight in the utterly unpretentious and heartwarming Marvel Knights *Spider-Man Daredevil* one-shot. *Spider-Man/Marrow* is a routine one-shot in which Scott Lobdell's attempts to evoke sympathy for Marrow fall flat. Do not take your anatomy lessons from Ale Garza. Despite a full forty-eight pages of story, The Official Movie Adaptation is too short. Although it is faithful to the film, all bridging material is stripped out to accommodate the required length resulting in a disjointed, episodic feel. Stan Lee's scripting is barely adequate but the fine Alan Davis and Mark Farmer artwork produces characters having a remarkable resemblance to the screen actors.

'Clone Journals', 'Jackal Files', *Spider-Man vs Dracula* and 'Parker Years' are reprints. The first two feature edited reprints of clone-related matters, *Spider-Man vs Dracula* reprints *Giant-Size Spider-Man* 1 and in 'Parker Years', Spider-Man or his clone (who knows or cares?) grapples with the validity of his past years unknowingly spent in clone form and fills an enormous number of pages with flashbacks in doing so.~APS

There is scant story reason for any of these titles to merit their own series. Each could quite comfortably have been accommodated as a continuing story in an ongoing *Spider-Man* title. But as limited series became increasingly viable in direct-market outlets, marketing fads demanded their presence to capitalise on a popular character and to maximise the number of titles on retailers' shelves having issue number 1 on the cover. These outings do afford irregular *Spider-Man* creators the opportunity to road-test the character, but results are generally below the standard of the continuing *Spider-Man* titles.

Arachnis Project serves up substandard superheroics as Spider-Man helps out an old college professor in time of need and excessive numbers of villains pile in. *Deadly Foes* looks at events from the point of view of six Spider-foes as Spider-Man grants little more than a token guest appearance. The villains are portrayed as bumbling incompetents in this verbose offering from Danny Fingeroth and Al Milgrom. *Lethal Foes* serves as its sequel and mixes a somewhat more concrete effort. Nevertheless, it is still feeble, as villains appear from nowhere and play pass-the-parcel with a nuclear blaster. 'Death and Destiny' is another continuity implant which attempts to fill some admittedly large holes in the events following Captain Stacy's death in *Amazing Spider-Man* 90. Lee Weeks' story fails to entirely satisfy although his art is beautifully bleak during the poignant moments. In Final Adventure, the one who thinks he is a clone leaves New York City to the other Spider-Man. His wife and unborn child move to Oregon with him. He works in a scientific research institution and vows never to don the costume again. She leaves him when he does. This touching, well-written and well-researched tale from Fabian Nicieza and Darick Robertson is the only silver lining on the dark, clouded clone saga. Darkhawk, Nova and Speedball team up in 'Friends and Enemies' to save six newly empowered teenagers from a variety of evil clutches. Spider-Man's appearance is a mere courtesy. Danny Fingeroth sprouts plot events without reason in a story that should appeal to a very juvenile audience. 'Funeral For An Octopus' is a clone-tied miniseries starring the Amazing and Scarlet Spider-Men as an undignified squabble breaks out over the Octopus arms following the Doctor's death in *Spectacular Spider-Man* 221. Tables are turned as Spider-Man wears the tentacles, but no events of consequence transpire. In 'Hobgoblin Lives', Roger Stern is awarded the opportunity to rewrite the Hobgoblin saga as he intended following his abrupt departure from *Amazing Spider-Man* with 251. His exemplary story admirably maintains continuity with all elements of the convoluted Hobgoblin plotline with no sacrifice to entertainment value as the mystery unfolds. Ron Frenz's pencils are undistinguished (is a different inker every issue essential?) although partly redeemed by a few lovely, single panel reverences to the 1960s Green Goblin legend. 'Lifeline' is a pedestrian slice of late 1960s Spider-Man as Fabian Nicieza pens a direct sequel to the Tablet of Eternal Youth story (which runs intermittently through *Amazing Spider-Man* 68-75) with all the associated second string villains and nostalgic ambience. Steve Rude's art disappoints.

'The Lost Years' is a clone spin-off in which a Parker body fills in his life during the five absent years between 1975 and 1995 (work that one out). Marc DeMatteis' thoughtful script is somewhat overloaded with character introspection. John Romita Jr/Klaus Janson turn out clean artwork, but the entire affair is incomprehensible without intimate knowledge of fifty other Spiderclone issues; it's also rendered meaningless by subsequent clone reversals. The posthumously released zero issue reprints clone stories barely a year old. 'Redemption' is an inferior sequel in which clone scenarios already recycled a thousand times are brought out for yet another airing. In 'The Mysterio Manifesto', Tom DeFalco attempts an entertaining story to clarify the mystery of Mysterio's death in the early issues of Daredevil (second series). He fails on both counts. In Mutant Agenda, Spider-Man and Beast confront Hobgoblin and Brand Corporation in an anti-mutant narrative. The zero issue is essentially a blank 'stamp album' to paste in the daily newspaper strips that simultaneously ran a version of the same story. 'Power of Terror' clashes heroes with villains in a cast of thousands as the Maggia battles for control of New York City in Gregory Wright's messy plot. The emotional angst Peter Parker suffers from the bloodbath and Darick Robertson's pencils are the plus points. 'Revenge of the Green Goblin' plots Norman Osborn's return to sanity in a story riddled with an over use of substance induced dream sequences. It concludes in *Amazing Spider-Man* 25 (second series) and *Peter Parker* 25 (second series). *Spider-Man/Punisher: Family* Affair has the co-stars thrashing out their usual stances on killing whilst up against the Mob in a standard story by Tom Lyle enhanced by a fine moral ending. 'Shadowgames' pits Spider-Man and X-Factor against designer supervillains courtesy of a shady military research project. Kurt Busiek and Pat Broderick conjure a rare event: meaningful contributions from Spider-Man supporting characters in a limited series. In '*Web of Doom*', a civilian suffocates to death, cocooned by Spider-Man's webbing. Jack C. Harris fails to capitalise on a favourable premise.

Try 'Quality of Life' for a taste of Spider-Man a little on the wild side. Greg Rucka produces an above par story with a dynamic new villain. Scott Sava's computer generated art may be all plasticine models and toy building bricks but the use of perspective and reflection is marvellous. In *Black Cat*, Kevin Smith's offering of a team-up against a drugs baron fails to meet expectations despite a neat superpower twist. Terry and Rachel Dodson's artwork has too much of a cosy, real home fire feeling and while the banter between Spider-Man and Black Cat just about saves the comic, even that strains. Following 3 there has been a long hiatus. In a similar vein to *Daredevil: Yellow*, Jeph Loeb and Tim Sale re-live Peter Parker's early years in *Spider-Man: Blue*. They do well to avoid the oft re-told Ditko era and focus instead on *Amazing Spider-Man* (series one) 40-48 when Gwen Stacy and Mary Jane Watson first hit centre stage together. Although plenty of liberties are taken with the continuity, it's a treat for nostalgia buffs and the dreamy artwork suits the mood perfectly, but rather too much has already been seen of Peter Parker's over-sentimental reminiscences of his lost love Gwen. An awful lot of people do an awful lot of talking in Spider-Man's *Get Kraven*. Ron Zimmerman's Hollywood send-up propels Kraven's jaded son, Al, to the West Coast to produce a movie whilst Spider-Man's contribution is strictly on the sidelines. John McCrea's pencils suit the lampoon perfectly and although Zimmerman's dialogue is slick and snappy, it is unfortunate that too many established characters are almost unrecognisable, having been infected with Zimmerman's sense of humour.

Megazine weighs in at ninety-six pages an issue and reprints selected issues from Spider-Man's ongoing titles, predominantly guest-starring hot characters. Saga chronicles a biography of Spider-Man using pasted panels from old issues linked by a new textual framing sequence. Each issue covers approximately seventy-five issues of *Amazing Spider-Man*, ending with 300, shortly after his marriage to Mary Jane.~APS

SPIDER-MAN TEAM-UP

Marvel: *7 issues 1995-1997*

Marvel Team-Up revived with a more obvious name in an oversize quarterly format. One wonders why. In 1-4 there's Spider-Man alongside the X-Men, Silver Surfer, the Fantastic Four and the Avengers, and the final two issues have Doctor Strange and the Thunderbolts. Despite the use of high-profile creators, they're all working on autopilot and there's nothing to justify the extended format or price. The best issue by a country mile is 5, containing a decent teaming with Gambit, and the far better Steve Gerber-written story reuniting both Gerber and Spider-Man with Howard the Duck. Gerber has a ball reviving the elf from his *Defenders* run and guest-starring the Savage Dragon (but hush, it's a secret), in the process subtly moving Howard to Image Comics. It's no classic, but far better than could be expected. In 1997 the illogical nature of the quarterly title finally percolated, and it was replaced with a revived *Marvel Team-Up*.~WJ

SPIDER-MAN:THE MANGA

Marvel: *31 issues 1997-1999**

Twice monthly for most of its run, this black and white series reprints the Japanese version of Spider-Man, drawn by Ryoichi Ikegami, the man who later became famous for his lush illustrative work on *Mai the Psychic Girl*, Sanctuary, and others. However, readers searching for Ikegami's characteristic rich texture and subtle facial expressions are in for disappointment, as this is crudely and cartoonishly drawn, either due to an immaturity in Ikegami's art at this stage in his career, or a deliberate choice because of the subject matter. The strip is mostly a straight transplant of the stock Spider-Man characters into a Nihongo setting; Peter Parker becomes mild-mannered student Yu Komori, Gwen/Mary Jane becomes his 'penpal' Rumiko Shirashi, his aged aunt becomes, well, his aged aunt, and so on. Komori gets a job working for the irascible publisher of the Joho newspaper, Japanized versions of villains such as Electro and the Kangaroo pop up, and it's all very familiar and diluted. Occasionally, an original villain appears such as the tragic Winter Woman in 23-24, whose heartbreak inadvertently causes disaster, and things break away from the rut, but even then, it's not really very good, just refreshing by comparison with the dumbed-down retreads that surround it.~HS

SPIDER-MAN 2099

Marvel: *46 issues, 1 Annual, 1 Special 1994-1996*

Most accessible of the 2099 titles, based in the Marvel Universe of 100 years hence, as Miguel O'Hara, hot-housed wunderkind of Alchemax, one of the mega-corporations that run the world, falls victim to his own genetic imprinting experiment, ably assisted by some timely sabotage by his assistant. In no time at all he's facing down a legion of superfoes and big-business evildoers in a world where the current obsession with corporate villainy reaches its ultimate extreme. It's good old fashioned fun from Peter David, Rick Leonardi and Al Williamson for the first two years, but eventually the stories run out of steam and Leonardi's replacement, Joe St Pierre whilst capable, lacks the easy flamboyance that typified the character.~WW

SPIDER-MAN UNLIMITED

Marvel: *Series one 22 issues 1993-1998, series two 5 issues 1999*

For the most part the first oversize quarterly series ran a long story not constrained by being connected with the regular *Spider-Man* comics. Unless, of course, money could be made by launching an expensive new comic with a protracted plot that runs through all Spider-Man titles before concluding in the second issue three months later, as was the case with

'Maximum Carnage' in 1-2. 10 also concludes a multi-part storyline. Sadly, given the opportunity, space, and no continuity restrictions, there's little more than average material throughout, with plenty of it downright shoddy. Tom DeFalco and Ron Lim's biography of Dr Octopus in 3 has moments, as does the reunion of Power Man and Iron Fist in 13. The best issues of the run are 16 and 19, decently plotted and written by Mark Bernado, but hindered by the unappealing stylised pencils of then regular artist Joe Bennett. Overall, stay well away unless you have an abiding fondness for Marvel's Z-list characters, who co-star regularly.

The second series ties into the animated TV show that had Spider-Man transported to Counter-Earth, an alternate Earth where humans are second class citizens, subordinate to sentient animals. Venom and Carnage come along for the ride, and a Green Goblin and a Wolverine soon show up, so one might ask "why bother?" That the comic only lasted five issues shows what readers thought, and they were right.~WJ

SPIDER-MAN'S TANGLED WEB

Marvel: *19 issues + 2001 to date*

An analogue to *Legends of the Dark Knight* permitting continuity-free self-contained stories of Spider-Man's world. Villains take the spotlight, some making debut performances. 'The Thousand' in 1-3 by Garth Ennis and artist John McCrea is a terrifying horror sequence where Spidey encounters someone who is definitely more spider than man. 'Severance Package' in 4 by Greg Rucka and Eduardo Risso gives Kingpin the *100 Bullets* treatment in a chilling story. 5-6 by Peter Milligan and Duncan Fegredo is a sad story of the Rhino inspired to escape his own stupidity for the illusion of love. All these issues are collected. 7-9 is a sentimental tale about a regular Joe who knows Spidey's secret identity written by Bruce Jones with Lee Weeks pencils inked by Joe Rubinstein. 'Ray of Light' in 10 uses Kaare Andrews' mixed media artwork to evoke the reality of TV heroes through a child's eyes. Darwyn Cooke's 11 is in entertaining retro cartoon-show style and placing it after 10's story is a stroke of either luck or expertise by the editor. Frog Man, now an ex-convict, is living with his son in 12 by Zeb Wells with crunchy artwork by Fegredo. Newcomer Ron Zimmerman has villains meeting for a drink and talk about chicks in 13, drawn by Sean Phillips, with Kraven particularly boorish. We meet the wrestler that Spidey defeats during his origin story in 14 by Brian Azzarello and Scott Levy. 15 features The Collaborator – the story of a super villain's daughter to match 12's boy. The slow, atmospheric build up by Paul Pope leads to a cramped and anticlimactic confrontation with the police. Heartbreaker in 16-17 is drawn by Leandro Fernandez whose caricaturish Risso style makes this seamy prison drama starring Tombstone seem humourous, which it isn't. Ted McKeever's 'Alphabet City' in 18 features squabbling losers Typeface and Spellcheck! Grizzly and Rhino's attempts at dating by Robbie Morrison and artist Jim Mahfood in 19 is a side-splitter! There's a curious mix of horror and violence with humour and sensitivity but instead of pushing the series apart these elements afford some excellent emotional counterpoint. Warning: you don't see much of Spider-Man after 1-3.~SW

SPIDER-WOMAN

Marvel: *50 issues 1978-1983*

With astonishing restraint, it took Marvel almost fifteen years to introduce a female counterpart to their most popular character, and then, rumour has it, only in order to copyright the name before anyone else did so. Having been introduced in *Marvel Spotlight* 32, she was either foolishly or admirably, depending on your point of view, designed to be as different as possible from Spider-Man. Initial issues, although featuring costumed villains, were set in a distinctly horror milieu, with stories emphasising Spider-Woman's macabre background. 9's 'Eye of the Needle' features as demented and bizarre a villain as you're ever likely to see in comics, but the majority of issues by Mark Gruenwald and Carmine Infantino, although passable, didn't really thrill. Neither did much else. Chris Claremont writes the best run between 34 and 45, which contain some nice art from Steve Leialoha, although it's muddied beyond belief by the appalling printing used by Marvel at the time. Their best issues are 42-44, wherein the Silver Samurai and the Viper, an incompatible pairing of villains for some reason very close to Claremont's heart, go through their paces, and Claremont surprises with a seemingly capricious revelation to end 44. The best sampler of their run is the daft Impossible Man story in 45. If you like that try more. Ann Nocenti and Brian Postman finish the series, restoring the dark mood and producing an unpredictable conclusion.~FP

SPIDER-WOMAN

Marvel: *4 issue miniseries 1993-1994*

This is new Spider-Woman, introduced in *Secret Wars*. She's strong and she psychically projects spider webs, prompting one to ask why she doesn't project psychic brick walls instead. Her other novelty is that she's bringing up a pre-teen daughter. This series tinkers with her origin while her parents come to visit, and while never less than competent it's never more than competent either. With the demise of *Force Works* she's been left in limbo, though she meets the original article in *Sensational Spider-Man* annual 1.~FP

SPIDER-WOMAN

Marvel: *18 issues 1999-2000*

Marvel's third attempt at Spider-Woman is teenage Mattie Franklin, who is the niece of J. Jonah Jameson, editor of the *Daily Bugle* and chief Spider-man hater. Mattie is your average modern teenage super-type: clever, feisty, full of one-liners and in trouble at school. John Byrne's writing is average here, with little of the flair which at one time made his name mean something. Mattie spends her time bumping into a whole list of second-rate villains, with Flesh and Bones her most recurring foes. The nicest touch is the way Mattie keeps changing her costume: something a teenage girl would quite possibly do. On the art front, Bart Sears' pencils look a little rushed, but are still a lot more fun than those by Graham Nolan, who fills in on 8 and 14, and Erik Larsen's efforts on 10. By 18, it's all over and we seem no further forward than when we started. Readable, but forgettable.~DB

SPIN WORLD

Amaze Ink: *4 issue miniseries 1997-1998*

Brent Anderson, with creative partner Eric Vinicoff, waited over two decades to bring his stories of an eight kilometer long city space station into print, first not considering himself a proficient enough artist to realise his imagination, then waylaid by work for hire assignments. It's a shame that by publication, the comic market had dwindled to almost nothing. These stories of a near future are imaginative, with the Spacing Dutchman an impressive backdrop, but succeed because they're about people. 1 profiles medical student Sharon's battles with the AMA over the healing powers of a dolphin, 2-3 have Agent Bergenholm investigating teenage delinquency and a spy, and in 4 Dr Obami Bassa is seconded to work on a transmutation device while naïve about the political consequences. Brent Anderson carried *Spin World* around for twenty years. The least you can do is read them.~FP

THE SPIRAL PATH

Eclipse: *2 issue microseries 1986*

Two-issue reprint of Steve Parkhouse's rather dull tale of shamanism and magical battles, originally printed in British anthology title *Warrior*. Parkhouse is a much more talented artist than he is a writer, but his artwork, while faultless in its detail, somehow bogged down the story. Overall the strip reads as though it belongs to a bygone age.~FJ

SPIRAL ZONE

Three careers, those of writer Michael Fleisher, penciller Carmine Infantino and inker Don Heck, reach their lowest ebb in this insipid, witless Tonka-toy spin-off. A must miss.~HS

SPIRE CHRISTIAN COMICS

Spire/Barbour: *50 one-shots 1972-1983*

Spire Christian Comics have a strange genesis and history, which remains incompletely documented. In the early 1970's, the Revell Company, publishers of inspirational Christian books, approached cartoonist Al Hartley to adapt some of their titles into comics form under the Spire imprint. Revell's output mostly consisted of 'true-life' stories of people whose lives had been touched by Christ, and included such books as *The Cross and the Switchblade* (preacher coverts Hispanic gang leader), *The Hiding Place* (sisters sustain each other through imprisonment and persecution), and the astonishing *Hansi, the Girl Who Loved the Swastika* (Hitler youth chick finds God). Al Hartley was a comics creator whose work had appeared since the 1940's on a regular basis. During the 1960's, he had worked at Marvel on Westerns, romance, the occasional superhero story and Patsy Walker, but by the mid-1960's he was at Archie, where he worked on their entire line. Hartley asked John Goldwater, the copyright holder for the Archie characters, for permission to use them in a series of one-off titles. Seeing it as good publicity, Goldwater gave approval on condition that sales were restricted to Christian bookstores, so as not to compete, or be confused with, the regular Archie series. Spire's product, undoubtedly bolstered by the Archie presence, soon grew to include autobiographies of famous contemporary Christians, bible stories (both classic and 'modern-dress' versions) and kiddie comics for the under-tens in the *Barney Bear* series.

There is no definitive list, but there have been at least fifty different Spire Christian Comics, of which twenty or so are Archie-based. The comics lack dates or issue numbers, as they were supposed to remain on bookshelves for a long time. They are not Comics Code approved due to tactful but clear references to sex, drugs, and other sins which the virtuous are supposed to eschew, and there are numerous printings, with price variations. Prices almost always ended, strangely, in 9c (39c-69c) apart from a brief period at 35c. Due to their peculiar distribution and frequent reprintings, release dates on the Spire titles, and even the precise number of titles published, remains unclear. They appear to have been issued over the course of a decade, with the earliest sighted being *The Cross and the Switchblade*, *God's Smuggler* and *Archie's One Way* in 1972, and the last, as far as present research can determine, being *Archie & Big Ethel* in 1982 and *Archie's Sports Scene* in 1983. Spire was jointly owned by the Barbour brothers, Hugh and Bill, and Hugh later started Barbour Christian Comics, which reprinted many of the Spires in the mid-1980's. These can often be found with either Spire or Barbour logo, further muddying the picture.

The known titles are listed below, categorised and starting with the Archie-related material. *Archie & Big Ethel, Archie & Mr. Wetherbee, Archie's Car, Archie's Circus, Archie's Clean Slate, Archie's Date Book, Archie's Family Album, Archie's Festival, Archie Gets A Job, Archie's Love Scene, Archie's One Way, Archie's Parables, Archie's Roller Coaster, Archie's Something Else, Archie's Sonshine, Archie's Sports Scene, Archie's World, Christmas With Archie, Jughead's Soul Food.* Known bible stories are *Adam & Eve, Alpha & Omega, Live It Up, My Brother's Keeper, Paul, There's A New World Coming. Noah's Ark* is also a bible story, but labelled a "kiddie christian comic", as are *God is...*, *Barney Bear* and other titles starring *Barney: Family Tree, Lost & Found, Out of the Woods, Sunday School Picnic, The Swamp Gang!*, and *Wakes Up*. The true life and witnessing category encompasses *Adventures With the Brothers, Attack!, The Cross and the Switchblade, Crossfire, God's Smuggler, the Gospel Blimp, Hansi the Girl Who Loved the Swastika, The Hiding Place, In His Steps, In The Presence of Mine Enemies, Through Gates of Splendour*, and *Time To Run*. Celebrity endorsements are *Hello I'm Johnny Cash, On the Road with Andrae Crouch, Tom Landry and the Dallas Cowboys*, and *Tom Skinner Up From Harlem*.

In terms of the content, they're earnest but unexceptional. The Archie-themed issues look just like the real thing, only less funny than usual and possessing the inevitable scene where the gang stops to think about what a groovy guy Jesus was, which brings on unintended hoots of laughter. Hartley draws the 'straight' action/autobiographical stories in a slick but generic style, with the only quirk being that no matter what the time period of the story, from the 1930's to the present, all the women wear hairdos and hemlines from 1971. The intent of the stories is benign, unlike more toxic evangelical comics such as Jack T. Chick's *Crusaders* series, and while it's doubtful they ever achieved much good, at least they endeavoured to guide, rather than terrify and intimidate, their readers. In later years, connoisseurs of the peculiar have discovered Spire Comics, and while there remains very little collectors' demand for most, *Hansi the Girl Who Loved the Swastika*, due solely to the bizarreness of its title, has become highly sought-after. Others pursued by aficionados of camp, though to a lesser extent, are *God's Smuggler, The Cross and the Switchblade*, and the *Gospel Blimp*.~HS

THE SPIRIT

Quality: *22 issues 1944-1950*
Fiction House: *5 issues 1952-1954*
Super: *2 issues 1964*
Harvey: *2 issues 1966-1967*
Warren: *16 issues 1974-1976*
Kitchen Sink: *Series one 2 issues 1973, series two 25 issues (17-41) 1977-1983, series three 87 issues 1983-1992, series four ('The Origin Years') 6 issues 1992-1993*

Will Eisner's *Spirit* has a longevity almost unequalled in comics. With few exceptions (noted below), the content of all Spirit comics is material originally published as seven-page Sunday newspaper inserts between 1940 and 1952. Unless otherwise indicated, all issue numbers refer to the third Kitchen Sink series, which reprints the post-1945 work in chronological order, mainly four stories to an issue. The stories work perfectly well in isolation, but there is an element of continuity giving an added level of enjoyment if they're read sequentially.

The Spirit is a whimsically portrayed (barely) masked and trenchcoated crimefighter. Central City police Commissioner Dolan, to whom Eisner bore an uncanny resemblance in later years, becomes a confidant, and his daughter Ellen a paramour. He also has an assistant, Ebony, considered by some to be racist comedy relief, but generally written with dignity. The supporting cast and parameters are so well drawn that it's possible to tell any type of tale. Ostensibly a detective strip populated by femmes fatales and exotic criminals, the Spirit often plays no more than a cameo role in stories bearing his name. A striking example is 'Heat' (72, written by Jules Feiffer), in which a battered Spirit lies barely conscious in an alleyway while life goes on in the streets and tenements around him. Eisner's not above resorting to gimmickry or re-working old material, but his brilliantly expressive cartooning compensates.

From its introduction in 1940 it took Eisner almost two years to hit a groove, and even then his work was of a lesser standard than his post-war material. 'The Origin Years' series didn't last long enough to reach that point. A shame it didn't reprint the daily strips of the time drawn by Jack Cole, or Sunday work by Lou Fine, then developing the illustrative style that would see him through years of advertising work. The first post-war tales see Eisner reclaiming his strip, instituting a quantum improvement over his successors and eclipsing his previous work. He'd refined his art, and within nine months he'd introduced additional characters who would recur for years: Carrion (6) and his buzzard, the mysterious crimelord The Octopus (8, only ever recognisable by his distinctive gloves), and, back again, the Spirit's pre-war nemesis Silk Satin. P'Gell, best defined of a number of female criminals who are alternately drawn to the Spirit yet turned by profit, débuts in 10. Her introduction is eclipsed in that issue, however, by the strange story of Artemus Peap, who assembles Central City's largest-ever gang.

By 26 (stories from early 1948) Eisner had hit peak form as both writer and artist, and there's at least one great story every issue. The inventive storytelling still inspires today. Poe and fairytales are adapted to modern settings, stories are written in rhyme, there are heart-shaped panels for a Valentine's Day tale, and increasingly imaginative ways of working a *Spirit* logo into the splash page. Above all, the amount packed into seven pages is a masterful lesson in economy. Eisner's broad streak of sentimentality underlies the feature, and many of the best have a little man caught in circumstances beyond his control. 'Gerhard Schnobble' in 35 is a typical example, often cited by Eisner as his favourite *Spirit* story. A night watchman recalls that he can fly, only to die in crossfire without anyone having noticed.

From 40 Jules Feiffer and Klaus Nordling contributed scripts, and from 47 Ebony disappears, replaced by the less controversial Sammy. Eisner turned to other projects with 73, leaving Feiffer as the main writer. His scripts match Eisner's but are invariably dragged down by a selection of inferior artists, with Eisner only returning for the final newspaper sections. This often-reprinted story sends the Spirit into space, and while Wally Wood's artwork is excellent, removing the Spirit from his environment doesn't really work.

Since 1952 there have been few new Spirit stories, although Eisner has drawn many new covers for reprinted material. The new stories can be found in the Harvey issues, giving the origins of the Spirit and the Octopus, and in the first Kitchen Sink series. The second Kitchen Sink series is magazine-format, continuing the numbering from Warren's magazines. Both had rather a haphazard approach to reprinting, although Warren issued some themed issues. 30 has many contemporary creators collaborating on a story featuring the Spirit, the result more a curiosity than anything else, but reprinted in 1998 as a one-shot titled *The Spirit Jam*. Most issues between 31 and 40 contain chapters from what would become the *New York* graphic novel. DC is now reprinting all stories chronologically in the hardbound *Spirit Archives*, and assorted stories appeared in Kitchen Sink albums.~FP

THE SPIRIT: The New Adventures

Kitchen Sink: *8 issues 1997-1998*

Will Eisner's best known creation got the luxury homage treatment with this highly inconsistent anthology. It began well, as the full length story in 1 saw Alan Moore and Dave Gibbons working together for the first time since their classic *Watchmen* series. They re-tell The Spirit's origin with obvious affection for Eisner's formal innovations in the marriage of words and pictures. Moore's second and equally fine contribution, the Daniel Torres illustrated 'Last Night I Dreamed of Dr Cobra' in 3, was another of his laments for anachronistic heroes. The writer took full advantage of Torres' flair for the architectural, weaving The Spirit logo into many of the story pages. Few of the other big name contributors – including Kurt Busiek, Mark Schultz, Mike Allred, Scott Hampton and John Ostrander – come close to matching Moore's level of inspiration and invention. Perhaps the biggest disappointment is the Neil Gaiman/Eddie Campbell offering in 2, which lacks any affinity at all for Eisner's nighttime, city-set farces, although Campbell redeemed himself with his nicely drawn contribution to 7. 5 and 8 also contained full length stories, by Paul Chadwick and Joe R. Lansdale respectively, but contained less peerless moments than virtually any post World War II Spirit original. On the whole, stick with the original and best.~AL

SPIRIT OF THE TAO

Image/Top Cow: *15 issues 1998-2000*

D-Tron (writer) and Billy Tan (penciller and co-plotter), present a treatise on the battle between good and evil. Couched in less overtly religious terms than similar efforts, the Tao is an elemental force that has decided to eliminate humanity and has spawned Jasmine and Lance, allegedly making them the most powerful beings on the planet. Whilst Jasmine seems intent on following the path of the Tao, Lance acts against her to protect mankind. Plotting against them both is an industrialist attempting to subvert the Tao to his own ends. Initially limited by a real sense of déjà vu, the series does develop its own identity, but the stylistic flourishes of the studio artwork do little to help distinguish it from other, similar Image titles.~NF

SPIRIT OF WONDER

Dark Horse: *5 issue miniseries 1996**

A beautifully drawn historical Manga series by Kenji Tsuratu in which a young woman, China, owner of a restaurant/rooming house, is host to a couple of very eccentric inventors. It's a love story, odd, humorous and touching.~NF

SPIRIT WORLD

DC: *1 issue 1971*

Jack Kirby's black and white companion magazine to *In the Days of the Mob*, this time concentrating on the supernatural. As you would expect from Kirby at his creative peak everything was marvellously imaginative and beautifully illustrated. Stories for the unpublished second issue appeared in *Weird Mystery Tales* 1-3 and *Forbidden Tales of Dark Mansion* 6.~HY

Ghost Rider and Blaze SPIRITS OF VENGEANCE

Marvel: *23 issues 1992-1994*

The 1970s Ghost Rider, Johnny Blaze, teams up with his skull-headed 1990s successor in a supernatural series that seems to serve little purpose other than to provide bridging chapters for crossovers into other titles. Of the twenty-three issues, no fewer than eight are direct crossovers with other titles, and several more are heavily referential to others in the 'Midnight Sons' series. This leaves little opportunity for developing characterisation for the leads, let alone any real supporting cast, and so the twosome lurch from one eldritch rumble to another, with little motivation or purpose.~HS

SPITFIRE and the Troubleshooters

Marvel: *13 issues 1986-1987*

Headless chicken of a series as luscious engineering Professor Jenny Swenson steals her murdered father's suit of super armour to stop it falling into the wrong hands. Every issue overwrites the previous as a rapid succession of writers and artists strive helplessly for a winning format and Swenson goes from avenger to hero to criminal to secret agent. Mindless, but art fans might want the Todd McFarlane (4) or Sandy Plunkett issues (13). The series title changed to *Codename Spitfire* with 10.~WW

SPLAT!

Mad Dog: *3 issues 1987*

Surely one of the best 'alternative' anthologies ever attempted. If each issue has its share of duff stories, each also has at least one strip that, on its own, is worth the price of admission. 1 has an early Peter Bagge strip from 1982, 'Just Like Pop', plus good stuff from Ron Wilber, J.R. Williams and Hunt Emerson, but is the weakest of the three issues overall. 2 has Eddie Campbell's 'Dead End Job', Marc Hempel's 'Cartoon Man's Best Friend', reprints of Alan Moore's Maxwell The Magic Cat and more Peter Bagge, J.R.Williams and Hunt Emerson. 3 has a sneak preview of Ted McKeever's *Eddy Current* and a *Calvin and Hobbes* parody by Scott Saavedra. In addition each issue had an interview with a humour cartoonist: S. Gross, P.S. Mueller and B. Kliban respectively.~NF

SPLATTER

Northstar: *8 issues, 1 Annual, 1 Special ('Holidays in Hell') 1991-1994*

Claiming to set "the new standard in shock horror", Splatter suffers from leaving strips incomplete (David Barbour and Tim Vigil's strip in 1 would eventually be finished in Gothic Nights), a tendency to believe that blood and gore is shocking in itself, and too few really good writers or artists. That said, Dave Cooper's three tales of cannibalism (1-3) are lovingly, if lumpily, delineated, and Rich Longmore's delicate pencils (5, Annual, Special) show promise. The 'best' strip is the unfinished 'Boots of the Oppressor', written by LaMorris Richmond and drawn by Dan and David Day, which deals unflinchingly with the terrible treatment of a runaway female slave (3).~NF

Star Wars: SPLINTER OF THE MIND'S EYE

Dark Horse: *4 issue miniseries 1995**

The first ever *Star Wars* novel is adapted by Terry Austin, who also inks the pencils of Chris Sprouse, thus ensuring this series looks very nice indeed. That's just as well since it's little more than one long chase sequence involving Luke, Leia and Darth Vader that would, in fact, be far better suited to Indiana Jones. Fine art, shame about the story.~FP

SPOOF

Marvel: *5 issues, 1970-1973*

SPOTLIGHT ON THE GENIUS THAT IS JOE SACCO

Fantagraphics: *One-shot 1994*

An anthology of short pieces by Sacco, mostly on the weak side. Worth a look, though, for 'Zachary Mindbiscuit', who nobly starves his cat in the name of his own principles, 'Johnny Sentence' (corporate power games), and Sacco's own scathing comments on each story.~FC

Hit Me With A SPUD

Spud Press: *1 issue 1996*

Catholic guilt and dream-driven strangeness merge in the work of Art Baxter, the disturbing subject matter rendered all the more potent through the use of an appealing kid's cartoon style. SPX

SPX: *6 issues + 1997 to date*

The Small Press Expo in Bethesda, Maryland ipromotes small press and self-produced comics ranging from minicomics to professional efforts, and leading to much debate about what constitutes 'small press'. Since 1997 there's also been an annual sampler, identified by year of publication, starting with a thick comic, but thereafter an ever thicker paperback book has been the format. For 2000 and 2001 it was titled Expo. Initially a percentage of creators would submit sample pages from their titles, but it quickly became the norm to produce a new strip specifically for *SPX*. Luckily, there are editorially enforced standards, but the broad range of self-produced material displays how far beyond superheroes comics can go. Here are very good anthologies, with the major fault being one of design requiring frequent reference to the contents pages to discover the creators of a particular strip. 2000 spotlights the French artists of L'Association, including David B. and Lewis Trondheim, but with such a legion of creators, listing names would be pointless, as almost every high-profile self-published comic of recent years is represented. How about a highlight from each year? In '97 Ivan Brunetti reads a poem from his high school yearbook, in '98 Megan Kelso highlights how a child perceives the adult world, and in '99 Bruce Mutard speculates about Hitler's application to art college. In 2000 Nick Bertozzi's 'Underpass' constantly squirms away from expectations, in 2001 Thomas Ott's dark scratchboard crime story is a treat, and in 2002 Ben Jones adapts an anecdote from P.T. Barnum's earlier years. 2002 is the first book with a theme, biography, and the first where vibrancy, talent and innovation is overwhelmed by material that's lustreless, mundane or plain poor. The fault is not with the theme, which prompts a modicum of very good material about unlikely subjects, and it's to be hoped this is an aberration rather than a prolonged dip in the small press talent pool. SPYBOY

Dark Horse: *16 issues (1-12*, 14-17*) 1999-2001, 3 issue miniseries (Spyboy/Young Justice) 2002*, 1 Special 2002*

Alex Fleming lives with his father and grandfather and is generally meek, mild and downtrodden at school. However, when his other personality is awakened, he's also an artificially enhanced, heartless super spy. With support from female spy, Bombshell and ex-bully, Butch, Spyboy is introduced in 1-4 to S.H.I.R.T.S. (Secret Headquarters International Reconnaissance, Tactics and Spies) and their enemies S.K.I.N.S. (Supreme Killing Institute). After a story in which his aunt appears as head of assassination bureau, Palindrome, Spygirl is introduced in an adventure (12-15) set in Japan, featuring a giant robot and M.A.N.G.A. (Middle Asian Network of Global Activities). Clearly, none of this is meant to be taken too seriously, and teaming Spyboy with Young Justice just adds to the humour quotient. They begin with a typical superhero fight amongst themselves before learning that their real enemies are miniature versions of themselves. Peter David's stories are good fun with plenty of irreverent wit, while Pop Mhan's dynamic artwork is a perfect complement, especially when using manga conventions on the comedy scenes. Carlos Meglia's two fill-ins (7-8) are also excellent, though Todd Nauck (*Spyboy/Young Justice*) isn't in the same league. For the curious, 13 does not exist.~NF

SPYKE

Marvel/Epic: *4 issue miniseries 1993*

It could be taken as editorial comment when the lead character concedes three issues in that the concept of the series is so crazy "'Oliver Stone wouldn't touch it with a bargepole". Having been transported to another dimension, Spyke Jones ("Just like the bandleader"!) learns that one can travel between further dimensions by killing selected individuals. This distasteful concept sets the tone for a predictable plot about humanoid extra-dimensionals taking over the planet. But hey... there's one man able to stop them.~WJ

SPYMAN

James Hudnall tells the story of the Squad, Hardcase's original team, which retrospectively inaugurated the Ultraverse. The Squad are four newly-superpowered beings who decide to try and help but are hindered by a lack of precedent for their kind and by having unknowingly been targeted for destruction by the immortal Rex Mundi. The series offers some insights into Hardcase's character and Ultraverse history but doesn't make for particularly interesting reading.~NF

SQUADRON SUPREME

Marvel: *12 issue limited series 1985-1986*, Graphic Novel 1989, one-shot ('New World Order') 1998*

Introduced as alternate Earth allies in *Avengers* 85 as a homage to DC's *Justice League of America* in the days when company team-ups were unthinkable, the similarities were far fewer when the limited series ended. It begins with the Squadron Supreme's Earth in considerable disarray after a period of totalitarian rule and the subsequent battle for freedom. The Squadron decide that, as the planet's most powerful individuals, they should impose, as the optimum solution, a twelve-month period of global authority to implement a "Utopia Program" aimed at solving the world's ills, after which they will step down.

Mark Gruenwald's plot examines the ethics of a dictatorial system, however benign, through qualms being voiced by Nighthawk. He resigns from the team, and then actively opposes it on discovering that the Squadron are using mind-altering devices to rehabilitate criminals. Unusually for a superhero series, there's considerable change over twelve issues (each spanning a month). The characterisation is excellent, with the thrust of the series permitting most team members a turn in the spotlight, and events are rarely predictable. Pencillers Bob Hall and Paul Ryan are adequate without flash, but this is Gruenwald's comic and it's a rare treat to see twelve issues (or thirteen if the crossover into *Captain America* 314 is included) so well conceived and executed. The series stands alone and makes its point, so the graphic novel, although following up on the characters (and continuing *Nth Man*), is okay but superfluous to requirements, particularly at the prices it commands these days.

The team are next seen in *Quasar* 13 and further issues of that title, then the third *Avengers* series before returning home, where the one-shot picks up. It extrapolates the world left at the conclusion of the limited series. While not up to the standard of that series, it is a decent superhero story acting as a re-affirmation of the Squadron in their JLA incarnation.~FP

Squalor is Harry Keller – gentle psychotic with two PhDs – who has stumbled on A-Time: "not just another dimension, but your own neighbourhood bereft of linear time". He meanders between A-Time and normal time, trying to help people and to save the world. In places, this works very well as a depiction of his psychosis, but writer Stefan Petrucha obviously thinks there's an actual story underway, and one that needs four issues to tell, and there isn't, there just isn't.~FC

SQUEAK THE MOUSE

NBM: *2 volumes 1988 and 1992*

Before Itchy and Scratchy there were Massimo Mattioli's ultra-violent cat-and-mouse "goretoons" in which a dumb but cruel feline is constantly outwitted by a resourceful and equally nasty mouse. Mattioli's short strips are a hilarious wordless mix of old *Tom & Jerry* plots and zombie slasher movies. No matter how deranged and decaying the two characters become, they keep coming back for more. Mattioli's simplistic drawings reach a peak of hilarity in the second volume, when Squeak and a zombie cat begin cutting each other up on the beach using crabs and lobsters as weapons.~FJ

Kelvin Gosnell adapts Harry Harrison's novels *The Stainless Steel Rat, The Stainless Steel Rat Saves The World* and *The Stainless Steel Rat For President*, each over two issues. Artist Carlos Ezquerra uses James Coburn as his template for the character of Slippery Jim DiGriz, suave intergalactic rogue. The stories romp along in fine comic fashion, although those who've read the novels will note there's a fair amount of material excised in order to cram them into the necessary length. Otherwise these are perfectly acceptable.~WJ

STALKER

DC: *4 issues 1975-1976*

Exchanging his soul for combat skills leaves Stalker devoid of any human emotion. Stalker would later play a large part in the Justice Society's 1990s revival.~FP

STALKERS

Marvel/Epic: *12 issues 1990-1991*

A series of mediocre covers and sketchy and uninspired interior artwork from – let's name the guilty – Mark Texeira and, primarily, Val Mayerik ruins consistently inventive plots from co-creators Mark Verheiden and Jan Strnad. Stalkers are a franchised private police force operating in the near future, and the series concentrates on both operatives and people whose lives are touched by them. Beginning with the nuclear destruction of Detroit, interesting characters abound, and the scripts continue to surprise and entertain. Most issues contain chapters of separate ongoing stories, one written by each co-creator. Issue 4 offers a good sample of the series.~WJ

STANLEY AND HIS MONSTER

DC: *4 issues (109-112) 1968, 4 issue miniseries 1993*

Arnold Drake's creation was introduced in 1965 as a back-up strip in *Fox and The Crow* 95. This feature introduced us to six-year-old Stanley and his parents, who won't allow Stanley to have a pet dog. Meanwhile, hiding in a local sewer is a monster, who desires only to live in peace and solitude, but who is constantly persecuted by unfeeling humans. Stanley, being a well-behaved brat, asks his parents if he can keep the twelve-foot shaggy red monster he found in the sewer. Laughing at Stanley's imagination, they say "sure". And that's your premise. It actually sounds a lot more fun than it was, since comics were firmly for children at this time: innocuous rather than entertaining was the order of the day. Artists on the strip included Bob Oksner and Winslow Mortimer. In 1993, Phil Foglio turned his attention to this strip, and ingeniously tied it in with the critically acclaimed *Sandman*, making the Monster a demon exiled from Hell for the crime of compassion. Hell, however, is under new management. And, not knowing the monster had been exiled, the new owners want him back. The Phantom Stranger and Ambrose Bierce get involved in the action, as does a voluptuous demoness named Nyx (closely modelled on a character from Foglio's *Xxxenophile*), a former lover of the monster. Bitingly funny, mildly salacious, and poking fun at the Vertigo line while plausibly meshing with it, this series is one to watch out for. A kind of prequel to the series, also by Foglio, is in *Secret Origins* 48.~HS

Spun off from Erik Larsen's *Savage Dragon*, this features rock-star-by-day, superhero-by- night Peter Klaptin (a cross between Peter Frampton and Eric Clapton, according to Larsen – what a thought). Quite why "the rogue prince of rock" should want to become wisecracking do-gooder Star is never fully explained, perhaps because scripters Tom and Mary Bierbaum spring a feeble 'surprise' in the final issue. The rest of the series is taken up with a series of plodding fight scenes between Star and sinister arms dealers Securitech, all quite slickly rendered by penciller Ben Herrera.~AL

STAR BRAND

Marvel: *19 issues, 1 Annual 1986-1989*

Flagship title of the 'New Universe' of Marvel Comics that posited a different Earth with all the superheroics stemming from a cosmic event that mutated 2% of the world's population. Ken Connell is an underachieving garage mechanic given the most powerful weapon in the universe (which looks like a tattoo of a star), in an origin drawing heavily on that of the 1960s Green Lantern. The early issues, particularly those written by Jim Shooter (on whom Connell is based), illustrated by John Romita Jr and Al Williamson (1, 2, 4-7), are excellent examples of the 'real world superhero' sub-genre, and an obvious template for Valiant Comics, Shooter's next project. With 11 John Byrne took over, and dismantled Shooter's concepts, making Connell a costumed superhero, a mass-murderer (as he destroys Pittsburgh, Shooter's home town), and finally a crazed degenerate. Connell's illegitimate child becomes the Star Brand and goes about doling out superpowers and being generally Cosmically Derivative. A sad end to a potentially strong series.~WW

STAR*REACH

Star*Reach: *18 issues 1974-1979*
Eclipse: *6 issues 1984*

Groundbreaking anthology title that attempted to create a middle ground between the extreme excesses of the underground and the superhero-obsessed dullness of Marvel and DC in the mid-1970s. The title featured many of the brightest stars of that period. Some of them went on to greater things, although most have retained a cultish approach in their work that continues to set them apart from the mainstream. Having said that, the title itself has dated badly, with only a few stories showing long-term quality. Others are interesting, especially early work by people such as Dave Sim and Steve Leialoha. *Star*Reach* was also noticeable for the predominance of writer/artists who proved to have lasting appeal.

Of particular note: Howard Chaykin's grown-up space opera *Cody Starbuck* in 4; 'I'm God', by Dave Sim and Fabio Gasbarri in issue 7; P. Craig Russell's early attempt at opera adaptation with *Parsifal* (8 and 10); 'The Sacred And The Profane', by Dean Motter and Ken Steacy (9- 13*); Gene Day's 'Divine Wind' in 9; Gray Morrow producing an impeccably drawn but rather 1960s looking interpretation of Roger Zelazny's science-fiction story 'The Doors of his Face, The Lamps of his Mouth', and 'Replay' by Michael T. Gilbert, both in 12. The Eclipse issues are titled *Star*Reach Classics* and reprint from *Star*Reach* itself, *Quack* and *Imagine*. Despite being on better paper with higher production values, the selection of strips does the company little credit and the colouring does the stories no favours, either. They're a taster, possibly, but the original anthologies, in context, are a better buy.~NF

STAR SPANGLED WAR STORIES

DC: *205 issues (131-133, 3-204) 1952-1977*

Originally a superhero comic titled *Star Spangled Comics*, in its later days it featured Western and mystery stories, hence the peculiar numbering system. This was amongst DC's earliest war comics, and, as was the case with the others, early issues contained one-off short stories. Initially these were drawn by the likes of Curt Swan, Leonard Starr, Carmine Infantino and Bernie Krigstein (34), and written by Ed Herron, Bill Finger and Bob Haney among others. By the time of Joe Kubert's début in 33 the regular line-up of artists Jerry Grandenetti, Russ Heath, Irv Novick, and Ross Andru and Mike Esposito, with editor and chief writer Robert Kanigher, was in place. With a pedigree like that pretty well any issue is a decent read, although as with other 1950s DC war comics their most exceptional artist was Mort Drucker (25, 26, 28, 38, 41, 59, 61, 64, 66-68, 73, 74, 76, 78, 83, 84). Drucker is closely associated with the comic's first series, 'Mlle Marie', although he only drew the first four instalments in 86-89.

While the title was always inventive, the short-story format was inevitably limiting and was prone to gimmickry. The lengthier 'Mlle Marie' stories allowed Kanigher the scope to stretch out as a writer. Mademoiselle (not Millie as a generation of readers have assumed) Marie was a French resistance fighter in World War II, but, although the milieu was fresh and the execution good, readers simply didn't warm to the feature. Unlike its successor.

With the basic premise of US soldiers fighting dinosaurs, 'The War That Time Forgot' (90, 92-138) was never going to be exactly high art, but the fans loved it, and today it has a certain whacked-out appeal. Again created by Robert Kanigher, the feature was drawn for the most part by Ross Andru and Mike Esposito, with great vigour but little regard for prehistorical accuracy. Later stories were illustrated by Russ Heath (124-126, 131-133), Gene Colan (123, 128), Neal Adams (134) and Joe Kubert (124-126, 137, 138), amongst others. The team of Kanigher and Kubert were reunited for the comic's next feature, the far more memorable Enemy Ace. It started in 139, though the character had earlier appeared in *Our Army At War* and *Showcase*.

Rittmeister Hans Von Hammer was the 'Enemy Ace', a Von Richtofenesque German World War I pilot with a crimson Fokker Triplane. A troubled, brooding character, Von Hammer's only friend was a wolf, and he was much given to calling himself 'a human killing machine'. Though occasionally marred by historical inaccuracy, particularly in the case of outlandish opponents like The Hangman and St George, the strip had an astonishing intensity, and its pensive, bleak tone was a far cry from the usual triumphalism of the era's war comics. With the exception of a couple of fill-ins (Adams in 144 and Heath in 152), the entire run was drawn by Joe Kubert, who excelled at the aerial battle scenes. 146 and 151 had already featured old material, and from 153 to the strip's demise it was all reprints, but by then Enemy Ace had long since lost the cover slot to its replacement. It was a strip both written and drawn by Kubert, The Unknown Soldier, which had débuted in 151 with an origin in 154.

The Unknown Soldier was both a skilful make-up artist and a consummate soldier, and each episode starred him in a different role, frequently behind enemy lines and often disguised as the enemy. Plagued by reprint stories introduced by Unknown and retroactively claimed to be previous missions (153, 157, 162), the feature's early episodes were a treat, and Kubert, joined by writer Bob Haney from 158, was on top form. Following a couple of fill-ins (Doug Wildey in 161 and Dan Spiegle in 163 and 164), Jack Sprang became the regular artist with 165, joined three issues later by new editor Archie Goodwin. Against all expectations, these, and later issues written by Frank Robbins (172-182), were every bit as good as Kubert's had been, and the strip remained both inventive and hard-hitting. Goodwin brought with him an adventurous approach to back-ups and utilised a wide variety of talent, including Howard Chaykin (167), Tom Sutton (168), Vincente Alcazar (178) and, most interestingly, a young Walt Simonson (170, 172, 180). The comic's finest back-up, though, and indeed its best-ever story, was Robert Kanigher's 'Yellow Devil', masterfully drawn by Alex Toth in 164. Frank Thorne also contributed a number of fine back-ups (173, 176, 178), including a lovely Enemy Ace three-parter in 181-183. Enemy Ace's last appearance here was to be in 200, by Kubert.

183 saw the installation of David Michelinie and Gerry Talaoc as the creative team, and their issues are, if anything, even more hard-hitting than those of their predecessors, particularly 183, in which we see the Unknown Soldier's hideously scarred face for the first time. Also notable during their tenure was a short back-up written by Archie Goodwin, with art from Steve Harper, and, surprisingly for a war comic, Mike Kaluta, in 197. With 205 the title changed to *Unknown Soldier*.~DAR

STAR TREK

Gold Key: *61 issues 1967-1979*

Well, here we see Kirk and company boldly exploring new planets and such in exactly the same manner as portrayed in the TV series. This adaptation was doomed from the first issue (drawn by Nevio Zeccarra, as was the second). The characters are so well established and defined in the TV series that there's no opportunity for any author to do anything interesting or innovative with them in a comic. Not that Paul S. Newman, writer of most early issues, tried. The situations the crew find themselves in are far less imaginative, and overall the run yields a very monotonous and wearisome read. Furthermore, the main artist until 37, Alberto Giolitti, had never seen the TV show and worked exclusively from character stills. *2000AD* completists might be interested to know that Massimo Belardinelli assisted Giolitti. Al McWilliams illustrated most issues from 37 on, and was a considerable improvement, but the plots he was given, largely from Arnold Drake and George Kashdan, were as uninspiring as those in previous issues. Most issues to 38 were reprinted in four *Enterprise Logs*.~APS

STAR TREK

Marvel: *1 Super-Special, 18 issues 1980-1982*

The first *Star Trek* movie is adapted in the Super Special and reprinted in 1-3. This generation was by far the poorest of the comics incarnations, and its third-rate plots and inferior art, surprisingly from the likes of Marv Wolfman, Gil Kane and Klaus Janson, proved that even a cash cow like the *Star Trek* franchise needed to exercise some form of quality control. Avoid at all costs.~WW

STAR TREK

DC: *Series one 56 issues, 3 Annuals 1984-1988, series two 80 issues, 6 Annuals, 3 specials, 2 Graphic Novels 1989-1996, 4 issue miniseries ('The Modala Imperative') 1991**

Given the poor quality of the previous attempts at adapting *Star Trek* for comics, Mike Barr, Tom Sutton and Ricardo Villagran didn't really have to exert themselves to produce better material, and they certainly didn't. It seemed to be considered enough to get the likenesses right, ensure that the characteristic quirks of the crew remain intact, and reprise ideas from the TV series every now and then. The one departure from expectation is Saavik replacing the temporarily deceased Spock in the early issues as the comic followed the events of the second *Star Trek* movie. A return for the evil Enterprise crew from the TV episode in 9-16 was selected for collection, but it's no better than the rest of Barr's run. He left with 16, with 19 badly written by Walter Koenig (Ensign Chekov), but well drawn by Dan Spiegle. It was one of a succession of one-shot stories written by a variety of folk, usually drawn by Sutton and Villagran (although Gray Morrow draws nice fillers in 28, 35 and 56). The best of them is by Diane Duane in 24 and 25, who provides some required light relief, pulling her plot from *The Mouse That Roared*.

Len Wein's short run as writer adds some needed continuity, but his plots are no better than Barr's. He celebrates his departure by running through almost every bridge-scene cliché in the first five pages of 39, yet another issue in which an internal surprise – in this case on the final page – is blown on the cover. Mike Carlin is a marginal improvement in 41-47, again taking his cue from old TV episodes. By simple virtue of a fine ear for dialogue, Peter David improves the scripting immensely from 48. If not exactly realistic dialogue, most people simply not being that witty off the cuff, and sometimes too glib, it combines well with the first really engaging plot for over twenty issues, to provide one of only two runs worth bothering with in the first series. Someone is attempting to engender war between The Federation and the Klingons, and counterpointing this in microcosm are the sudden doubts of Klingon Konom and his bride-to-be Nancy in 48-50. Thereafter 51 and 52 are merely average, and Kirk starts 53 by almost dying. That and the following two issues involve the mystery of who was trying to kill him. David's now confidently dealing with the characters, and while the ending is a little too contrived (although well set up) it's a decent story, with Gordon Purcell filling in as penciller for two issues.

* Available in a collected edition

Given his successful run on the previous series it's no surprise to see Peter David returning to write the new series, launched alongside the ongoing series starring the Next Generation crew. He starts well. 1 has the Klingons putting a price on Kirk's head, and issues to 10 see a gradual escalation in problems for Kirk until he flouts one regulation too many, leading to a trial occupying 10-12. Of course, as with his 'death' in the previous series, there's not going to be any significant change to the status quo, but David is adept at keeping the interest up, and he introduces some intriguing new characters along the way. The bounty-hunting Sweeney in 7-9 is David's idea of the stiff-upper-lip Englishman, and R. J. Blaise, appointed by Starfleet to supervise Kirk, is surely based on Katherine Hepburn's movie characters. 1-12 in their entirety are a decent story arc that should be enjoyable to any *Star Trek* fan, the only real fault being their concentration on Kirk to the neglect of the remaining crew. Gordon Purcell replaces James Fry as penciller on 11, and pencils or inks much of the series. Instead of relying on freehand drawing as he had during the first series, his lightbox works overtime in tracing likenesses, which gives his art a very static look overall.

David teams with Bill Mumy for 13-15, not his best work, and departs after a decent one-shot in 19. Howard Weinstein, who'd written *Star Trek* episodes and novels, débuts with 17 to pen most issues thereafter. His approach differs from David's, and isn't as appealing. Factors making David's scripts entertaining included his willingness to introduce new characters and incorporate them into an ongoing continuity interacting with the regulars, and short story arcs as part of a longer ongoing continuity. Weinstein is more focused on retaining the TV show formula, introducing new characters only for a particular story arc. The resulting familiarity dulls the comic to an extent, and Weinstein, although never less than professional, doesn't produce plots captivating enough to overcome this, although his stories are better than the majority of the first run. He also often runs plots over four to six issues at a time, providing fewer jumping-in points. 35-40*, largely a fable about arms escalation, provide a decent sample of Weinstein's run, with four of the six chapters pencilled by Rod Whigham, who goes on to draw more of the series than anyone else. It returns Saavik and gives McCoy and particularly Sulu, now promoted to Captain and on his first mission, a turn in the spotlight.

Steve Wilson writes a nice character episode involving Spock and Captain Christopher Pike in 61, and another story returning a TV series favourite is Weinstein's 'The Peacekeeper' in 49 and 50, with the enigmatic Gary Seven, who's back again in the sixth annual. Harry Mudd, rogue by trade, is a popular choice of recurring character from the TV series, returning in 22-24 as well as 39 and 40 of the first series. Later issues diverge from following the continuity of the movies to present untold stories from the "five year mission", i.e. the TV series era. This has the benefit of locating all the popular members of the crew back on the Enterprise, although to Weinstein's credit his plots generally united them anyway in a subtler fashion. Many of these later issues are written by Kevin Ryan, welcome for an ability to cram a plot into less than four issues, and drawn by Rachel Ketchum. She seems to trace the faces of the cast from photographs and stick them onto already drawn bodies, for a very odd, distorted look.

Of the assorted annuals and specials accompanying both series, by far and away the best is the first annual from the second series (1990). Written by Peter David and George Takei, the story naturally enough focuses on Takei's *Star Trek* character Mr Sulu. A number of late-twentieth-century concerns are transferred to the twenty-third century and combined with a story about lost love, all expressively drawn by Gray Morrow. The sixth annual teams the Enterprise crew with their twenty-fourth-century counterparts, but keep your expectations low. DC also adapt the third, fourth, fifth and sixth *Star Trek* movies as one-shot specials. They're all workmanlike, without being spectacular, the quality depending largely on the film script, thus making Star Trek IV the best of the bunch.

The graphic novel 'Debt of Honor' was much trumpeted. Writer Chris Claremont relates an unlikely incident from Kirk's past concerning a female Vulcan civilian named T'Cel (!) saving his life when they were attacked by Alien-like aliens. He was rescued, but she was captured by Romulans, eventually becoming one of their commanders. Their encounters since have all involved the mysterious aliens, who remain unknown except for rare attacks, and twenty years later, Kirk, T'Cel and a Klingon commander decide it's time to investigate. It's a decent plot, but Claremont undermines it by being unable to resist peppering the story with extraneous 'smart' references. It's not big, it's not that clever, and it's as distracting as hell. Artist Adam Hughes wore the freeze-frame button on his video remote down to nothing capturing those cast likenesses, and he's turned in some nice pages, but by and large they're swamped by excess verbiage. There's wads of expository dialogue, lacking any finesse where inserted, and several rambling character pieces, rendering this appallingly overwritten for a relatively simple plot. It's as if Claremont wanted to ensure that nothing he loves about *Star Trek* was omitted, which makes for an unsatisfying read. 'The Ashes Of Eden' adapts a *Star Trek* novel ostensibly authored by William Shatner, but which also credits Judith and Garfield Reeves-Stevens as writers. It's a decent romp that pushes feelgood buttons throughout, with Kirk, now apparently surplus to Starfleet requirements, offered the promise of eternal life, but unknowingly labelled a traitor, which requires his old crew to hunt him down. Considering Kirk was played by Shatner, he's surprisingly and effectively harsh on the character. Steve Erwin's art isn't as decorative as Hughes', but his storytelling is excellent, and of the two graphic novels this is the one *Star Trek* fans are more likely to enjoy. 'The Modala Imperative' precedes a *Next Gen* series with the same title. The Enterprise journeys to Modala on Ensign Chekov's first mission. The planet has applied for Federation membership, and Chekov accompanies Kirk to assess the merits of the application. What they find is a totalitarian regime possessing weapons far beyond the current level of technology. Then regular *Next Generation* writer Michael Jan Friedman proves as adept with the original crew, turning in an entertaining script dulled by poor Pablo Marcos art.~FP

STAR TREK

WildStorm: *One-shot ('All of Me') 2000*

An egomaniac science pal from Spock's past insists that the Enterprise protects his latest secret discovery. While remaining faithful to the series' story set-up, on the whole it's an unimpressive affair.~DB

STAR TREK: DEEP SPACE NINE

Malibu: *33 issues (0-32), 2 Annuals, 2 Specials, 2 miniseries ('Hearts and Minds'*, 'Maquis'*), 3 one-shots 1993-1996*

The first issue of Deep Space Nine comes in a bewildering array of covers, but what really matters is the story inside. Written by Mike Barr, as are all issues to 6, and continued into the following issue, it's very average, as are all issues to 6. The art by Gordon Purcell and Terry Pallot is good, though, dynamic and lively. The team would later return to DC's *Star Trek* titles. 6 begins a run of multiple short stories, and thereafter until 19 it seems as if everyone and their grandparents is given the chance to write an issue. The approach varies wildly, from Charles Marshall's overly comedic tales in 11-13 to Mark Altman's character studies; and his story in 8- 9 is the best of this run.

The experienced Dan Mishkin, who'd supplied 10, writes from 19, and is... average, but provides a baseline level of enjoyment each time. 23-25 is his epic, with the Bajoran sacred orb the subject of some to-ing and fro-ing. There are also three one-shots. 'Blood And Honor' is written by *Star Trek* actor Mark Lenard, and has a stupid twee twist to a story of the Romulan ambassador to Bajor and a mysterious artefact, while a more Ferengi-based story takes place in 'The Rules of

Diplomacy', in which Nog escorts a Klingon officer to his home planet. It's written by Aron Eisenberg, who plays Nog in the TV show, but there's no acting connection with the very ordinary 'Worf', which has two stories about the Klingon.

Both miniseries are written by Mark Altman and pencilled by Rob Davis. 'Hearts and Minds' has Sisko having to mediate between the Cardassians and the Klingons, and Dax and Bashir finding something very interesting. It's a suspenseful story that's leagues better than any of the regular series. The three-issue 'Maquis' has a weaker plot, and Davis's art not looking as good inked by Jack Snider as it did when inked by Terry Pallot. The freedom fighting Maquis capture Dr Bashir, and the entire group is then taken prisoner by some Cardassians, at which point Sisko takes a more direct hand.

Overall, only 'Hearts and Minds' shines, but the barrel isn't dredged very often. *Deep Space Nine* fans with a cash surplus might want to try a few issues, because the characters are well treated, but there's better *Star Trek* material elsewhere.~WJ

STAR TREK: DEEP SPACE NINE

Marvel: *15 issues 1996-1998*

Inferior spin-off from the TV series with Captain Sisko and his motley crew boldly staying put on the eponymous space station as conspiracies, traitors and alien invaders line up to cause trouble. Even the rare bright moments, such as Odo's renewed relationship with Lwaxana Troi (10-11) or the 'Origin of Tribbles' from 14, although entertaining, still fall prey to a confusing and annoying tendency to try to shoehorn the comic action into the bits between TV episodes. Pedestrian efforts of interest to die-hard Trekkies only.~WW

STAR TREK DEEP SPACE NINE

WildStorm: *4 issue miniseries ('N-Vector') 2000*

This follows directly from the last episode of the TV series, so some of the show's strongest characters, Odo, Worf and Sisko, are missing in action here. Science fiction author K.W. Jeter has a good grasp of the *Star Trek* universe, but turns in a routine story about a virus that infects every part of the Deep Space Nine space station. The highly stylised pencils of artist Toby Cypress don't help matters much; none of his humanoid characters look very much like their live action counterparts, and at times the murky storytelling is almost impossible to follow.~AL

STAR TREK: EARLY VOYAGES

Marvel: *17 issues 1997-1998*

The *Star Trek* franchise expands beyond the TV tie-ins with adventures of the Enterprise under Captain Kirk's predecessor Christopher Pike, star of the pilot episode, later recycled as 'The Menagerie'. With only one canonical appearance to draw from writers Dan Abnett and Ian Edginton were free to concentrate on producing solid action adventures without becoming trapped trying to reconcile the comic with the 'real' version. High points include Mr Spock's secondment in the first issue, yeoman Mia Colt's spin on the events in the aforementioned 'Menagerie' (4) and an alternate future story wherein James Kirk was kicked out of Starfleet and became a smuggler (12-15). Sadly, just as it was getting into its stride, the series ended abruptly, halfway through an intriguing espionage romp featuring the Klingons.~WW

STAR TREK NEW FRONTIER

WildStorm: *One-shot ('Double Time') 2000*

Writer Peter David co-created the *New Frontier Star Trek* franchise for a series of "non-canonical" paperback novels, based around the adventures of Captain Calhoun and the crew of the starship U.S.S. Excalibur. David's script for 'Double Time' is full of exactly the same kind of time travel gimmickry and overwrought moral 'philosophising' that can be found in many an episode of 'classic' Trek, but sadly the cast of characters here are bland even by the standards of the insipid *Voyager* TV series. Artists Michael Collins and David Roach do their best to enliven some rather preachy dialogue from the normally more light-hearted David.~AL

STAR TREK: THE NEXT GENERATION

DC: *6 issue miniseries 1988*, 80 issues, 6 Annuals, 3 Specials 1989-1996*

The introductory miniseries is the work of Mike Carlin and Pablo Marcos, with inkers Carlos Garzon and Arne Starr, and there are certainly teething problems. It was obviously produced with Carlin having seen very few of the TV episodes, and there's a stiffness in the dialogue and situations and an over-reliance on scenarios from those early episodes. Marcos, never the most dynamic or anatomically correct of pencillers, is adequate, but no more.

He returns to draw the ongoing series, now using more photo reference, and the new writer is Michael Jan Friedman, a wise choice. He's an adroit hand at maintaining the character interaction and the human interest stories that were so much the driving force of the TV series, and also turns in good plots and mysteries. While rarely stunning, his issues, which comprise almost the entirety of the run, are largely enjoyable reads for anyone familiar with the TV show, and have an admirable consistency. 7-8 focus on Data being kidnapped by space pirates whose dying leader wants to transfer his consciousness into Data's body. They're good representative issues and have the bonus of being drawn by Gordon Purcell, whose art is less static than that of Marcos. 19's one-issue character study 'The Lesson' is also a decent sample, this pencilled by Peter Krause and inked by Marcos, a competent art team that lasts through most issues until 51.

Friedman's first outstanding multi-part story runs in 20-24*. Worf, Riker and Will Crusher depart for a short mission in a shuttlecraft, but are sucked through a vortex that disables their star drive, in effect stranding them in a strange part of the galaxy. The story focuses both on their attempts to return home and on the emotions of those on the Enterprise who believe them dead; it also gives the Enterprise a mission diverting enough to be an effective counterplot, and to put everything to rights by the conclusion. 25-28 don't have quite the same emotional pull, but are still solid issues. After a poor Q appearance in the second annual, written by John DeLancie, the actor who portrays the character, Q returns under Friedman's pen in 33-35 for a more effective story, in which he transforms the Enterprise's crew into Klingons.

Those for whom a detailed time-scale slotting DC's comics and the novels into the TV continuity is necessary will find it on 37's editorial page (with an update in 69), the story being the middle chapter of a merely average piece starring the *Next Generation*'s Harry Mudd counterpart Ardra. 39-44 appear to be in response to readers requesting more action, and stretch a slim plot that extra mile too far, but Friedman's right back on form with 47-50, a tale of a parallel dimension in which Riker captains an Enterprise that is the universe's last hope against the otherwise all-conquering Borg. Plot and counter-plot ensue, and, given that all the crew are duplicated, Friedman has the luxury of permanently changing the status quo. Excellent stuff, with Krause on top form for his penultimate issues.

Considering the opportunities afforded writers by virtue of the Holodeck's ability to recreate any period or setting, Friedman was remarkably restrained in his use of it. 52-54, though, see Picard there in P.I. Dixon Hill mode, desperately trying to solve a mystery when the lives of crew members are dependent on his doing so. It's not the best of the longer stories, due to yet another appearance from an overused adversary. By this point Deryl Skelton is the regular penciller until 70. His layouts are dull and his art less expressive than Krause's by some distance, with stiff figures, and faces too obviously copied, and thus distracting. Gordon Purcell, for most of the remaining issues, is far better. 66 is a whimsical solution to the problem of dealing with nuclear stockpiles, and 71-75 return the Tholians in a story picking up after the final *Next Generation* TV episode. While not quite up to Friedman's best, there's still a well constructed plot with plenty of twists and escapes and not one, but two decent revelations as to who's responsible for some attacks on lonely outposts.

The final two issues, as did the final TV show episode, concern further intervention by Q. Hearing a funeral eulogy in which Picard wishes that all his crew had Data's android immunity to many forms of danger, Q grants the wish by transforming the entire crew into androids. All start on the same level that Data did, logical, nearly emotionless and lacking basic human concern, while Friedman masterfully includes Data's reactions to the occurrence. He's grown immensely through interaction with humans and other species, and sees his friends failing as humans. The eventual message is obvious, but getting there is hugely entertaining.

The annuals and specials are a generally rum bunch, with Friedman not on form for those he writes. There's a nice Diane Duane-written short in the first special, and Chris Claremont follows up on the *Star Trek* 'Debt of Honor' graphic novel in the second, but it's the third special that's the best of them all, with a quiet story about complex negotiations and new technology, yet nonetheless absorbing for all that, from Michael DeMerritt and Ricardo Villagran. The back-up has Scotty in the twenty-fourth century. There's also a one-shot special adapting the final TV episode, and the sixth annual continues a story from *Star Trek* annual 6 that mixes and matches the crews from both Enterprises, although it's hardly compelling.~FP

STAR TREK: THE NEXT GENERATION

WildStorm: *4 issue miniseries ('The Killing Shadows') 2000, one-shot ('Embrace the Wolf') 2000, 4 issue miniseries ('Perchance to Dream') 2000, Graphic Novel ('The Gorn Crisis') 2001, 4 issue miniseries ('Divided We Fall') 2001*

In 'The Killing Shadows', the crew protect a scientist from Bodai Shin (the killing shadows) who have been wiping out leading Federation science types. Picard and his crew go planet-side to find out more about the assassins and the secret subculture in which they operate. The art looks very good, with some pencils in 1 by Brian Hitch who captures likenesses without the images looking stilted. Even when Andrew Currie takes over the pencilling completely, it's still much more fluid than your average *Star Trek* comic. As for the story, four issues is a lot for what Scott Ciencin had to say. 'Embrace the Wolf' is a chance for Picard and co. to face off against Redjac, an evil force that once battled Kirk and had been Jack the Ripper. Now Redjac is on the Holodeck, facing Data (in Sherlock Holmes outfit) in a game of wits. Doesn't that sound great? All this, and some very ugly art. Wow. In 'Perchance to Dream', the crew are at an alien governor's inauguration protecting her from moral extremists who object to her sexual preferences. Written by Keith R. A. DeCandido, it's an enjoyable and well-paced adventure.

Remember the guy in the green rubber suit during the credits of the original *Star Trek* series? He was a Gorn, and they're back, in 'The Gorn Crisis'. Yes, a hundred years after Captain Kirk, Picard and the Enterprise return to the planet on a diplomatic mission, but discover the Gorn halfway through a military coup, and things don't look good. The painted artwork is stiff and lacks consistency, with a mediocre story by Igor Kordey – it seems hard to justify the $29.95 cover price. 'Divided We Fall' teams the cast of *Next Generation* with those of *Deep Space Nine*, set after both shows ended on TV. It's a suitably widescreen plot involving a band of revolutionaries in Trill society, and the emotional upheavals they cause among the familiar faces. For some reason Andrew Currie has a real problem capturing the likeness of Lt Riker, but otherwise it's something fans of the show can pick up with confidence.~DB

STAR TREK: THE NEXT GENERATION
Miniseries

DC: *4 issue miniseries ('The Modala Imperative') 1991*, 4 issue miniseries ('Shadowheart') 1994-1995, 4 issue miniseries ('Ill Wind') 1995-1996*

DC/Malibu: *4 issue miniseries (The Next Generation/Deep Space Nine) 1994-1995**

'The Modala Imperative' follows-up a miniseries of the same name starring the original Enterprise crew. The new crew return a century later to see if Modala is ready to join the Federation, and the mysterious weapons supplier from the other series comes calling for payment. Peter David enjoys himself writing, but the Pablo Marcos art is rushed and ugly. The Enterprise, acting as security for the Solar Sailing Cup, sets 'Ill Wind' in motion. It's a curiously subdued piece from Diane Duane. Picard and The Mestral, a head of state unable to resign yet with many enemies, both feel hemmed in, and each envies the other's freedoms. Sabotage during the race and an assassination attempt complicate matters, but the nice character touches don't disguise that this is stretched too long over four issues. Worf and Riker are the leads for 'Shadowheart', in which Worf learns that his human brother, believed recently dead, is leading a rebellion in a Klingon outpost. Again, it's stretched too far, although the creative team of Michael Jan Friedman and Steve Erwin pack in a little more conflict, both physical and emotional. A teaming of the 24th-century Enterprise crew and those manning Deep Space Nine occurs over four issues, but as different companies have the comic rights to each series, each publishes two parts, both numbering them 1 and 2. DC publish the first and fourth chapters and Malibu the second and third. Mike Barr and Michael Jan Friedman construct a perfectly acceptable plot set as the Enterprise stops off at Deep Space Nine shortly after its recovery. The interaction between the two casts is well handled, and artists Gordon Purcell and Terry Pallot also do a fine job. It was collected as 'The Landmark Crossover'!~FP

STAR TREK One-shots

The best of three one-shots Marvel released in 1997 is Tom DeFalco and Mark Bagley's 'Mirror Mirror', an above average sequel to the TV episode of the same name set on the USS Enterprise of an alternate universe. On a ship where promotion comes from killing your immediate superior, machiavellian Mr Spock seeks a new way whilst trying not to be killed by his junior officers and the sadistically psychopathic Captain Kirk. 'Operation Assimilation' is the tale of Moliok, a strong willed Romulan who gets turned into a Borg. That's it. Really. At least it's well drawn by Steve Erwin and Terry Pallot. 'Telepathy War' concludes the crossover story that ran through Marvel's *Star Trek* comics in winter 1997. A plot by the Founders to neutralise the telepathic races of the Federation is foiled by the joint efforts of the cast of *Deep Space Nine, Star Fleet Academy, the Next Generation*, and *Mr Spock*. It's unsatisfactory; full of improbable coincidences and treknobabble, and the plot hook is lifted from Alfred Bester's *The Demolished Man*.~WW

STAR TREK SPECIAL

WildStorm: *One-shot 2001*

This has the feeling of a sampler, but is in fact WildStorm's last gasp at *Star Trek*. A short tale of each crew is provided, with two further stories cross-pollinating the original crew with the *Next Generation*, and providing a final farewell for Dr McCoy. It's all crafted to professional standards, and while there's nothing outstanding, neither should it disappoint its intended audience.~WJ

STAR TREK: STARFLEET ACADEMY

Marvel: *19 issues 1996-1998*

Using background history and supporting characters from the various *Star Trek* shows this series follows a team of Star Fleet cadets as they attend the Federation training academy and somehow get involved in plots and adventures that take them all over the galaxy. They catch drug pushers, Changelings, and spies, fight their opposite numbers from the Klingon school (Klingons go to school?), save the universe, and even have to deal with a spy in their midst. Woeful blending of *Star Trek* and Enid Blyton's *Famous Five*, and with too much effort wasted on making it all fit into the TV continuity. For hard-core fans only.~WW

STAR TREK UNLIMITED

Marvel: *10 issues 1996-1998*

Double sized title enabling the presentation of separate adventures of both the Kirk and Picard Enterprise crews in 1-5. From 6 on it's generally full length stories, permitting the regular writing team of Dan Abnett and Ian Edginton, to

include moments other than plot, improving what was already solid entertainment that should appeal to most *Star Trek* fans. The best issues are 7's switching of Enterprise captains and 9's romp starring Chekov and Sulu, but there isn't a bad issue in the run.~FP

STAR TREK: UNTOLD VOYAGES

Marvel: *5 issue miniseries 1998*

Glen Greenberg and Mike Collins relate episodes from the second five-year-mission of the original crew, set after *Star Trek: the Motion Picture*. Routine adventures with Klingons, space pirates and misunderstood entities making life tough for Kirk and Co. Fairly mediocre and probably a nightmare to a Trek completist.~WW

STAR TREK VOYAGER

WildStorm: *One-shot ('False Colors') 2000, one-shot ('Avalon Rising') 2000, one-shot ('Elite Force') 2000, 3 issue miniseries ('Planet Killer') 2001*

Captain Janeway leads her crew in what read like attempts at TV scripts. In 'False Colors', Voyager encounters a less than convincing Borg vessel, so having their own Borg crewman helps matters. 'Avalon Rising', is written by Janice Ellen Young and Doselle Young, who need to check on the meaning of the term 'ponce'. It's set on a medieval planet where Janeway and her crew have become the stuff of campfire tales, and David Roach's well-balanced artwork is reminiscent of syndicated Sunday pages. 'Elite Force' features a raid on a Borg cube led by Tuvok, and 'Planet Killer', written by Kristen Kathryn Rusch and Dean Wesley Smith, borrows the Doomsday Machine from an original *Star Trek* episode. The undynamic art by Robert Teranishi inked by Claude StAubin is a parade of photo swipe talking heads sprinkled over clipped backgrounds, but the script is so dialogue heavy that this might be bearable if the pretty backgrounds properly described what was happening. All stories are bogged down by attempts at characterisation at the expense of any page-turners, many further so by writers intent on prioritising their own new creations at the expense of the Voyager crew. They're all collected anyway as 'Encounters With The Unknown'.~SW

STAR TREK/X-MEN

Marvel: *One-shot 1996*

In the spirit of the original Star Trek series, writer Scott Lobdell has the crew of the Enterprise encounter a strange dimensional rift through which they're pulled. For maximum effect, shake the comic about a bit when reading this sequence. On the other side they encounter the X-Men. It's an unlikely forced team-up involving Gary Mitchell, seen in the 1960s TV series, under the influence of X-Men adversary Proteus. Lobdell throws in all sorts of other superfluous characters, but the title is saved by the deftly written interaction between the Enterprise crew and the X-Men. Fans of both should figure out the Dr McCoy joke, but the opportunity to have Kirk say to Cyclops "Beam me up, Scotty" is sadly missed. A number of artists contribute, most notably Mark Silvestri.~HY

Atelier Lana's STAR TREKKER

Antarctic: *1 Graphic Novel 1991, 1 issue 1992*

The graphic novel introduces the crew of the Constellation II, more interested in partying than searching out new worlds, but quite able to deal with Kirk and company in this loose Japanese parody of Star Trek movies (they go back in time to eat the whale). It's more of the same lunacy, lacking familiar Star Trek faces, in the following one-shot. Atelier Lana's comedy art is well drawn, and perhaps he should be recognised for his precognitive abilities, managing to pre-empt a robot doctor on Star Trek, and the name of genuine Enterprise Vulcan T'Pall by a decade.~WJ

STAR WARS

Marvel: *107 issues, 3 Annuals, 1977-1986, 4 issue miniseries ('Return Of The Jedi') 1983-1984**

Star Wars merchandising branched out into every conceivable medium in the late 1970s, and comics were no exception. Marvel started with a competent adaptation of the film in 1-6*, including some scenes from the original script that never made it to the screen, such as a sequence in the Tatooine workshop between Luke Skywalker and his friend Biggs. The adaptation was also released as an oversize Marvel Treasury edition, initially in two parts, then collected. *The Empire Strikes Back* adaptation was also issued in the Treasury format, and as a colour magazine. The gap between 6 and the next film was bridged with a series of stories which, while entertaining, were visibly unable to advance plot or character. The unresolved (and unresolvable) love triangle between the major characters was a particular albatross around the neck of many plots, with Han, Luke and Leia unable to have each other or, indeed, anyone else. Adventures instead focused on weird aliens and bizarre robots, interspersed with fights with storm-troopers and TIE fighters, which wasn't too far from the spirit of *Star Wars* in any case. 39-44* detail the events of *The Empire Strikes Back*, but, like the first film, leave the comic in limbo until the subsequent movie, this time without even the advantage of having all the main characters available for use, as the middle film of the trilogy had left Han Solo a captive of his old enemy Jabba the Hutt – a useful device in case Harrison Ford, by now a major Hollywood star, chose not to return for a third outing. This left the comic in the awkward position of not being able to have Solo's friends attempt to rescue him while trying, unsuccessfully, to make it seem like they hadn't got round to it yet because they had better things to do. *Return of the Jedi* was adapted in a separate miniseries, written by Archie Goodwin with art by Al Williamson throughout. It came in two formats, regular comic-size and collected as a magazine, in an attempt to attract a non-comics audience. *Star Wars* itself survived for a few years after the end of the trilogy, basically running on until interest in the movies began to peter out.

During its near-ten-year run, *Star Wars* boasted some impressive creators, particularly on the art side. The first ten issues, written by Roy Thomas, were pencilled by Howard Chaykin. Archie Goodwin, with Carmine Infantino on pencilling duty, took over from issue 11, and, under a succession of inkers, steered the book to 37, during which period the stories took Luke Skywalker back to Tatooine, and dealt with both Han and Chewie's debts to Jabba the Hutt, and Ben Kenobi and Darth Vader's pasts. Many of the stories either noticeably skirt around actually revealing anything at all, or are simply inaccurate in the face of later developments. Goodwin stays on the writing through to issue 50, aided by Al Williamson on art, starting with the *Empire Strikes Back* adaptations and lasting through to Infantino's return with 45. After this, an unsettled creative team dooms the book to a succession of fill-in issues until David Michelinie (writer) and Walt Simonson take over with 56, kicking off with a tale of Lando Calrissian on Bespin. The next regular team is Jo Duffy and Ron Frenz, inked by Tom Palmer, who take the book up to its unspectacular finish. Unlike the Death Star, the comic dies with a whimper rather than a bang. The final issue includes art by Whilce Portacio – some of his earliest published Marvel work. In general, however, while the series always remains around average, it is the interest in the films, rather than the comics for their own sake, which keeps back issue prices ridiculously high.

To their credit, since Dark Horse began publishing *Star Wars* comics they reprinted many of the Marvel comics, most prominently as six paperback books titled *Classic Star Wars* 'A Long Time Ago...' They've also reprinted all three movie adaptations, and 95 by Goodwin and Williamson, released as *Classic Star Wars:* 'The Vandelhelm Mission'. They're now reprinting the entire series in paperbacks.~JC

STAR WARS

Dark Horse: *47 issues + 1998 to date*

The regular series set in the *Star Wars* Universe takes place in largely chronological order in step with the cinema release of Episode I and Episode II. It's broken into palatable story arcs, conveniently named on the covers, with changing, though recurring, characters and creators. 'Prelude to Rebellion' (1-6), has Jedi Knight, Ki-Adi-Mundi interacting with his rebellious daughter, while his home planet, Cerea, debates membership of the Republic. 'Outlander' (7-12), written by Tim Truman, sees Ki-Adi-Mundi on Tatooine, searching for a Jedi, now Tuskan warrior, called Sharad Hett, whose son, A'Sharad is destined to train as a Jedi. Truman stays for 'Emissaries To Malastare' (13-18), in which Jedis, Mace Windu, Ki-Adi-Mundi, Yaddle and Adi Gallia are involved in supervising peace negotiations and then the smuggling of Akk Dogs on Nar Shaddaa.

John Ostrander and Jan Duursema are teamed for 'Twilight' in 19-22, a good thriller with twists and character, in which Jedi, Quinlan Vos, suffering from memory loss, meets Villie Grahrk, a smuggler, whilst trying to find his padawan (apprentice), Aayla, who has disappeared. Quinlan Vos must then face the witches of Dathomir, in Pat Mills and Ramon F. Bachs' 'Infinity's End' (23-26), another good piece that keeps the reader guessing. 27 tells a poor fairytale of an arrogant young Jedi and a princess, while Davidé Fabbri joins Truman for 'The Hunt For Aurra Sing' in 28-31. Ki-Adi-Mundi, Adi Gallia, A'Sharad and the Dark Woman join the hunt, but it's necessarily inconclusive. Ostrander and Duursema return to re-unite Quinlan Vos and Villie on a prison planet, where they're joined by several other Jedi to confront a Jedi turned to the dark side, in 'Darkness' (32-35).

'The Stark Hyperspace War' (36-39) is a wide-scale adventure as a smuggling collective challenge the Republic, and there are battles and a siege on Troiken where Jedi (including Qui-Gon and Obi-Wan) and Republic representatives are trapped. The same team of Ostrander and Fabbri tell Villie's side of the 'Jedi Council: Acts of War' series in 'The Devaronian Version' (40-41). 'Rite of Passage' (42-45) is another good tale from Ostrander and Duursema, as Quinlan Vos and Aayla face father and son mercenaries, members of a near extinct warrior race. The series has 'Republic' added to its title with 46 and the start of the three-part, 'Honor and Duty', in which Obi-Wan and Anakin are asked to guard a senator, who has just replaced an assassinated relative, though the plot hinges on the family of Senate Guard, Sagoro Autem, whose brother appears to be the person who hired the assassin.~NF

Classic STAR WARS

Dark Horse: *20 issues 1993-1994*, 9 issue limited series ('The Early Adventures') 1994*, 2 issue microseries ('A New Hope') 1994*, 2 issue microseries ('The Empire Strikes Back') 1994*, One-shot ('The Vandelhelm Mission') 1995, two issue microseries ('Devilworlds') 1996, one-shot ('A New Hope' Special Edition) 1997, 3 issue miniseries (Han Solo at Stars End) 1997*, 6 issue miniseries ('A Long Time Ago…') 1999**

Reprinting the newspaper strip adventures of the *Star Wars* characters produced between the initial film releases, the original artist of choice was Al Williamson, whose 1950s EC strips had influenced *Star Wars* creator George Lucas. Williamson was committed elsewhere, though, so Russ Manning drew the first three years worth of material, written by Rick Hoberg, comprising 'The Early Adventures'. Superbly illustrated, it's for art lovers and Star Wars completists only. When Williamson took over he asked to work with long time co-creator Archie Goodwin, then writing the Marvel comic, and the strip hit high gear. Their collaboration is set between the destruction of the Death Star and the attack on the Ice Planet of Hoth. Reprinted over 20 issues, it forms an epic novel that rattles along at rocket speed, yet still successfully manages to fill in all the blanks and plot holes of the movies. It's good old-fashioned space adventures often surpassing the source material.

As the newspaper strips available for reprinting dried up, Dark Horse re-packaged Marvel's film adaptations along with another Goodwin and Williamson collaboration 'The Vandelhelm Mission' from *Star Wars* 95, followed by stories now considered non-canonical from Marvel UK's early 1980s titles in ''Devilworlds'. You will find work from Alan Moore, Alan Davis and Steve Parkhouse among others, but it's not their best or the best *Star Wars*. To commemorate the 20th anniversary re-release of the first *Star Wars* movie there was a new adaptation of the original script, now known as 'A New Hope'. It's solid work from Bruce Jones, Eduardo Barreto and Al Williamson. A new newspaper strip was also launched, drawn by Alfredo Alcala. 'Han Solo at Stars End' reprints the strip, and while Alcala's art is not to everyone's taste the strip is a little gem. The 1999 series reprints stories from the Marvel issues.~WW

STAR WARS Episode I

Dark Horse: *4 issue miniseries ('The Phantom Menace') 1999*, one-shot ('Anakin Skywalker') 1999, one-shot ('Obi-Wan Kenobi') 1999, one-shot ('Queen Amidala') 1999, one-shot ('Qui-Gon Jinn') 1999*

Obviously enough, 'The Phantom Menace' adapts the film, and does so well, with Rodolfo Damaggio and Al Williamson a fine artistic combination. It does, however, highlight how similar the plot is to the original *Star Wars* trilogy compressed into a single film. The one-shots concentrate on the main characters from the film, telling stories based around it, and should all have an appeal to *Star Wars* fans except 'Obi-Wan Kenobi', which pointlessly provides a *Phantom Menace* precis from the title character's viewpoint. Ryder Windham provides the best story in 'Qui-Gon Jinn', set following the pod race on Tatooine, but while Robert Teranishi captures cast likeness, his art is static. 'Queen Amidala is set just prior to the pod race, and Jar Jar Binks co-stars. The art by Galen Showman and P. Craig Russell is the best on the one-shots, although Steve Crespo and George Freeman run them close on 'Anakin Skywalker'. Also set before the pod race, it follows Anakin's life immediately prior to the arrival of the Jedi. All the comics come with the choice of a movie still or an illustrated cover.~FP

This review covers the series in largely chronological order within the *Star Wars* canon. Other miniseries have been issued under their own prominent titles rather than the *Star Wars* heading (*Crimson Empire, Droids* and *Jabba The Hut* among others) and are dealt with under those titles. 'Jedi vs. Sith' is the powerful story, from writer, Darko Macan, of the final battle between the Jedi and Sith lords on Ruusan, where three children have been recruited to replace the dead. 'Jedi Council', with battles aplenty, explains how a violent warrior race, the Yinchorri, immune to Jedi mind control are manipulated by the Sith into attacking the Jedi on Coruscant, with Mace Windu leading a team of knights (including Qui-Gon and Obi-Wan), to locate their base. Ryder Windham contemplates the issue of slavery in 'Jedi Quest', in which Obi-Wan and Anakin have a mission to escort a Colicoid diplomatic mission, but are intercepted by pirates. 'Jango Fett' and 'Zam Wesell', written by Ron Marz, are two parts of a story that begins with them both hired to retrieve a stolen artefact, but then requires them both to try to prevent its use

* Available in a collected edition

against the Republic. Tom Fowler is responsible for the good, painted artwork on the first of these, though Ted Naifeh is not as impressive on the second. 'Open Seasons' is a history of Jango Fett, written by Haden Blackman, telling how he came to be chosen as the prime clone by Count Dooku. 'Episode II: Attack of the Clones' is attractively drawn by Jan Duursema, but is otherwise a straight adaptation of the film.

'Starfighter concerns the mercenary Nym, hired to bring a halt to the activities of a pirate, with the Trade Federation waiting to pick up the pieces. This is a good romp from Blackman and Ramon Bachs. 'Tales From Mos Eisley' contains three short stories, by Bruce Jones, told over a drink and with twists in their tails. Windham teams with *Star Wars* actor, Anthony Daniels for the clever and amusing 'The Protocol Offensive', drawn by Igor Kordey, in which C-3PO and R2-D2 are 'helping' diplomatic negotiations until a murder and powerful weapon endanger the whole planet. In 'Underworld', three Hutts (Jabba, Embra and Halta) have a wager on which can most efficiently retrieve the Yavin Vassilika, allowing the use of three contractors each. Jabba chooses Han Solo, Lando Calrissian and Boba Fett leading to a playful treasure hunt, well told by Mike Kennedy and Carlos Meglia. 'Empire', which may or may not be a miniseries, begins with the excellent, four-part 'Betrayal', by Scott Allie and Ryan Benjamin. Set in the weeks prior to 'A New Hope', the Grand Moff Trachta and some Imperial Generals are plotting to kill the Emperor and Darth Vader.

'A New Hope Special Edition' by Bruce Jones and Eduardo Barreto, is a good, but not great, re-telling of the film, which introduced the Star Wars characters. There are three manga series, adapting the films 'A New Hope', 'The Empire Strikes Back' and 'Return of the Jedi'. They're all in different styles, but are faithful to the films and enjoyable reads, though the first by Hisao Tamaki is the clearest. 'Tag & Bink Are Dead' is a mildly amusing comedy about two rebels trying to stay alive during the events of 'A New Hope' and 'The Empire Strikes Back'. Ranulf Trommer, pilot and son of an Imperial General is sent to the planet M'Haeli in 'River of Chaos', to spy on the Governor suspected of something illegal. Whilst there, he's framed by and falls in with the planet's budding rebellion, which has just attracted the attention of Princess Leia. This is a well-crafted tale, by Louise Simonson, of the reasons for rebellion. 'The Jabba Tape', by John Wagner and Kilian Plunkett, is a comedic squabble over the legacy of Jabba the Hutt, fun, if not well coloured. 'Shadow Stalker' is related to the 'Shadows of the Empire' series, originally presented in Topps' *Star Wars Galaxy* magazine 9-12. Jix is sent by Darth Vader to assassinate a defecting Imperial Governor, but finds that the situation isn't as clear-cut as he was told. 'Battle of the Bounty Hunters', by Windham and Christopher Moeller, is a novelty, but well-presented, pop-up book, depicting Boba Fett's trials as he tries to deliver the frozen Han Solo to Jabba the Hutt.

Unarguably the best of these series, 'Mara Jade: By The Emperor's Hand', is the story of what Mara Jade did after failing to kill Luke at Jabba's Palace. She's sent to kill Dequc, leader of the Black Nebula organisation, which is usurping Imperial authority on the planet, Svivren. Having killed only a double, however, Mara Jade finds herself cast as a traitor after the Emperor's death, and is imprisoned, before she can try again. Written by Timothy Zahn and Michael A. Stackpole, with artwork by Carlos Ezquerra, this is a very attractive, well-characterised story. 'Heir To The Empire', 'Dark Force Rising' and 'The Last Command' are a trilogy, all adapted by Mike Baron from the novels by Zahn. They concern Grand Admiral Thrawn's attempts to revive the Empire's fortunes with assistance from rogue Jedi, Joruus C'Baoth, who wants Luke, Leia and the latter's twins, Jacen and Jaina. Luke meets Mara Jade for the first time and smuggler Talon Karrde is introduced. With artwork from Olivier Vatine, Terry Dodson (inked by Kevin Nowlan), and Edvin Biukovic respectively, this starts well, but loses something in the final episodes.

Another trilogy is 'Dark Empire', 'Dark Empire II' and 'Empire's End', which tell of the return of the Emperor Palpatine and Luke's dangerous journey to the Dark Side, the Emperor's dark agents' plotting and the birth of Leia's third child, Anakin, while Luke plans the rebirth of the JediKnights, and then the final fate of the Emperor, who wants to use Anakin for his rebirth. Written by Tom Veitch and with distinctive artwork from Cam Kennedy (first two) and then Jim Baikie, this is a good story, with an irritating narrative voice. Each issue of the 'Handbook' is concerned with a different series, providing background information on *X-Wing Rogue Squadron*, *Crimson Empire* and *Dark Empire* respectively. In 'Jedi Academy: Leviathan', Luke's Jedi students travel, in response to a distress signal, to a mining colony where something monstrous has been awakened. 'Union' tells the story of Luke and Mara Jade's wedding, which disgruntled, ex-Imperial soldiers are plotting to disrupt. This is terribly sentimental, surprisingly from Stackpole, with false sounding dialogue, and artwork from Robert Teranishi that has some beautiful panels, but makes all of the characters seem far too young.

The two 'Infinities' series each tell an alternate version of *Star Wars* history. Chris Warner and Drew Johnson complete the whole story from 'A New Hope' to 'Return of The Jedi', from the premise that the Death Star didn't explode. Luke spends years with Yoda becoming a Jedi Knight, whilst Leia becomes a Jedi herself, under the tutelage of her father, Darth Vader and the Emperor. In 'The Empire Strikes Back', Luke dies on Hoth, and Leia takes his place on Dagobah, training with Yoda before facing Darth Vader.~NF

STAR WARS TALES

Dark Horse: *14 issues + 1999 to date*

As with all Dark Horse licensed material, almost everything in this anthology is crafted to a level of professional competence, meaning it provides decent adventure material that should appeal to *Star Wars* fans. There's little that pokes its head up above the parapet of acceptability, though. This is certainly not due to a conservative editorial policy, as the title finds room for interpretations of characters by Dave Cooper (2), The Filbach Brothers (14), Dave McCaig (9), Tony Millionaire (5), Jay Stephens (9), Craig Thompson (5) and Andi Watson (8). The series spans all eras of the *Star Wars* mythos, and sometimes mixes them such as setting Darth Vader against Darth Maul in 9, and sooner or later most major players are covered. A popular theme is looking in on characters or events just prior to their impact in one of the movies, such as a meeting to discuss the creation of the Death Star, rendered in whimsical fashion in 6, or Garth Ennis and John McCrea's story of a Stormtrooper in 10. That issue also includes the illustrative art of Vatche Mavlian, who's not quite mastered his technique yet, but will be very impressive once he has. The better stories include the teenage diary entries of Princess Leia in 11, Ryder Windham and Kilian Plunkett's look at young Anakin Skywalker and C3PO contrasted with Darth Vader in 6 and the series starts well with Qui-Gon teaching Obi-Wan some lessons in 1 from Jim Woodring and Robert Teranishi. Other notable names contribute along the way, but what they produce is no better than the general standard.~WJ

STARBLAST

Marvel: *4 issue miniseries 1994*

Utterly stupid story making little sense to anyone who doesn't also read *Quasar*, particularly issues 54-57, with which it crosses over. Dozens of superheroes are embroiled in a plot to siphon off the Starbrand energy welded to Quasar's girlfriend and use it for nefarious purposes. The appalling dialogue – step forward, Mark Gruenwald – makes everyone sound like kids playing at being superheroes, and the ending is extremely rushed.~FP

STARBLAZERS

Comico: *4 issue miniseries 1987*, 5 issues 1989*
Argo Press: *2 issues 1995*

The Comico run consists of pages assembled from animation cells from the Leiji Matsumoto created feature *Battleship Yamato*, seen by many as the initiator of comics/animation fandom in 1970s Japan. The Yamato is a spaceship named after the pride of Japan's fleet during WWII. The colour and production standards are impressive, but lack the implied motion and feel for whole-page design that a comic needs. Result: luscious but ultimately very dull. The Argo Press effort is a translated version of later material, *Yamato: The New Voyages*. The mirror proofs are reproduced in full colour (unusual for imported manga) and are eminently readable translations. As with most manga series you're expected to be completely familiar the Yamato and her crew (introduced in 2) so reading stray copies may be unrewarding.~SW

STARCHILD

Taliesin Press: *13 issues (0-12) 1992-1994**
Coppervale Press: *4 issue miniseries ('Crossroads') 1995-1996**
Image/Coppervale Press: *5 issue miniseries ('Mythopolis' 0-4), 1997-1998**
Coppervale Press: *2 issues ('Tales from the TwoPenny Inn') 1999*

An expansive and ponderous generational saga from James A. Owen that explores the nature of the creative act using a rustic and classical fairytale vehicle. It concerns the actions of Ezekiel Higgins, who becomes the latest dalliance of Titania, Queen of Faerie, and the children, and grandchildren, of that union. This is over-complex and uncomfortably derivative, but the early lack of narrative discipline eventually gives way to more considered and effective storytelling. It's collected as *Starchild:* 'Awakenings', and is worth the effort.

In 'Crossroads' Owen relates stories just prior to the events of the first series, one to an issue. 'Mythopolis' is the further adventures of Anders Higgins after the resumption of Reality at the end of 'Awakenings'. If the Wild Wood was a distillation of a rustic fairytale countryside, the city is a similar treatment of medieval through Dickensian urban life, full of gutters and gas lamps, and not at all a cheery place. After the scene setting Prologue in 0, 1-3 introduce the menacing Grey Men as Anders sets to deciphering the eerie Book Without Words inherited at the end of 'Awakenings'. 'Fisher King', in 4, introduces a new enemy for Anders and is also known as *Starchild* 21.

The final series was never completed. It's short stories further blurring distinctions between comic page and illustrated prose that Owen uses for portions of his work. It's the vehicle for adventures in storytelling – an abiding theme of all the author's work – and both issues feature half a dozen stories. *The Essential Starchild* is ostensibly a series of reprint volumes, but with such substantial tinkering and retooling by Owen, as well as extra pieces, that it might be fairer to consider the work as a Director's Cut. Overall *Starchild* is a worthy effort, but not easily accessible, and sometimes not much fun.~WW

STARDUST

DC/Vertigo: *4 issue miniseries 1998**

Neil Gaiman and Charles Vess, take a step backwards into the security of illustrations accompanying text. The story is beautifully realised with great charm as are Vess' gorgeous watercolours and drawings. Tristan Thorne's half-faerie birthright, which he knows nothing of, is the subject of the first issue, and in 2 he promises his girl a newly-fallen star. In Faerie he knows where anything is as soon as he's asked, but the star, who surprises him by being a girl with a hurt leg fractured in the fall. The journey back is complicated by others who seek her for less innocent reasons. Thereby hangs the tale, as full of resonance from legend, fairytale and drama as you'd expect from Gaiman. Vess' delicate illustrations manage a romantic elegance without succumbing to over-sugary sentiment. A lovely artefact, but hardly what one could call a comic.~SW

STARFIRE

DC: *8 issues, 1976-1977*

A sword-and-science/sorcery series about a slave who attempted to free her world from alien invaders (she was a sort of love-child of Princess Leia and Attila the Hun), *Starfire* had potential, but lacked direction. And without wanting to sound sexist, Starfire (not to be confused with the *New Teen Titans* character) didn't seem to have enough strength to file her nails, let alone fight with a sword.~HY

STARGATE

Entity: *4 issue miniseries 1996*

Adaptation of the film of the same name, by Barry Blair and Delfin Barral. There's no attempt to make the characters look like the actors, and that's not necessarily a bad thing, but there's little exposition and no heart in this.~NF

STARGODS

Antarctic/Conquest: *2 issues 1998, one-shot ('Visions') 1999*

An ambitious attempt to mix science fiction and mythology in a series about war amongst star-faring pantheons (Greek, Asgardian and Egyptian), heading for Earth. The computer-generated artwork is so overwrought and darkly coloured, it's often difficult to make out what's happening amidst the 3-D effects, and many figures look as stiff as the toy-like models they're based on. 'Visions' just contains pin-ups from the two previous issues.~NF

Legends of the STARGRAZERS

Innovation: *6 issues 1989-1990*

An all-female space crew roams the galaxy in this distressingly exploitative series. There's not much to the plots other than ways of showing off skimpily dressed women in poses copied from glamour mags, making the entire concept a rather unsavoury substitute for pubescents unable to buy *Playboy*. The back-up strips and detours are usually better conceived, with Tom Yeates contributing to 3.~WJ

STARJAMMERS

Marvel: *2 issue microseries 1990, 4 issue miniseries 1995-1996*

In the microseries the team of *X-Men* supporting characters embarks on a space-operatic quest in a race against its traditional enemies, the Shi'ar empire. Writer Terry Kavanagh lacks a clear direction. The plot features too many characters (Imperial Guard, Excalibur, X-Factor), too many token appearances and too many plagiarisms of *Star Trek* devices. By contrast the miniseries is intelligent space opera in which the Starjammers and Shi'ar dance around each other in the face of a new, common menace: the Uncreated. Warren Ellis injects welcome background and characterisation into Starjammer personnel. Breathtaking Carlos Pacheco pencils and beautiful, airbrush effect computer colouring make this series a very attractive package.~APS
Recommended: miniseries 1-4

STARK RAVEN

Endless Horizons Entertainment: *6 issues 2000-2001*

Super-powered enforcers, assassins and renegades, a possibly corrupt secret branch of the military, and a terrified mafia, are all components of an ambitious story. The key is an event in about which official explanations don't tally with emerging facts. Unfortunately, with only six issues of a proposed ten published this amounts to a lot of smoke and no fire. Writer Ken Smith's ambition is commendable even if his reach occasionally exceeds his grasp (particularly with clumsily inserted blocks of expository dialogue), while the art is very Image influenced.~WJ

STARLIGHT

Eternity: *1 issue 1987*

Ten years later and this story of buxom babes piloting a starship would have been a fan favourite. In 1987 it sunk without trace among the glut of black and white comics. Penciller Uriel Antonio couldn't decide if he wanted to be Miller or manga, but was very promising, and Scott Hanna's inks are already accomplished. It's no masterpiece, but given the exploitative cliché as concept, *Starlight* is not entirely without merit.~FP

THE STARLIGHT AGENCY

Antarctic: *3 issues 1991*

As far as the writing goes, this is a decent stab at a detective agency in the future, with a lot of thought given to the background. The art, though, doesn't quite meet the full professional expectations.~WJ

STARLORD

Marvel: *One-shot 1982, 3 issue miniseries 1996-1997*

Always heavily promoted as science fiction, *Starlord* is little more than superheroics in outer space. None the worse for it though, as the sporadic tales of Peter Quill and his symbiotic relationship with a starship regularly surpass average. His bibliography reads: *Marvel Preview* 4, 11, 14, 15, 18, *Marvel Super Special* 10, *Marvel Premiere* 61 and the second series of *Marvel Spotlight* 6, 7 in addition to the eponymous entries. The 1982 one-shot is a colour reprint of *Marvel Preview* 11 by Chris Claremont and John Byrne, wrapped up in a cosy six-page framing sequence by Claremont and Michael Golden. Seven pages of Dr Who by Steve Moore and Dave Gibbons provide back-up.

In the miniseries, weakly telepathic Sinjin Quarrel faces a life of mundane obscurity as a justice administrator on a backwater planet until he stumbles across Starlord's abandoned and derelict ship. Science-fiction author Timothy Zahn shows his strengths as Quarrel struggles to come to terms with the Starlord identity, powers, gadgets and Ship's sentient persona. Substantial plotting weaves Quarrel through tangled political machinations of corrupt officials, and the non-explanation of Quill's disappearance whets the appetite for the future. Dan Lawliss' painted art is solid but unspectacular; the story just lacks sufficient fizz and sparkle to earn recommendation.~APS

STARMAN

DC: *46 issues 1988-1992*

Although DC published various **Starmen** over the decades a new character first occupied an eponymous title. It's light superheroics, aping the 1960s Marvel template. Will Payton wakes up in a morgue unable to account for six weeks of his life. During that time he's somehow learned to fly and acquired superhuman strength and resilience along with being able to generate great heat. He can also morph his features and skin-tone. Roger Stern and Tom Lyle produce most of 1-30, during which Payton faces an assortment of villains, meets plenty of other DC characters and generally plays the superpowered boy scout. There's a nice mixture of action and introspection, with 10's face-off against Blockbuster a good sample of the former, and 24 of the latter. For an all-round sampler try 7, revealing what Payton is and featuring most of the supporting cast. Len Strazewski continues the formula from 30, but he's not as adept, and later issues, while competent, lack any spark.~FP

STARMAN

DC: *82 issues (0-80, 1,000,000), 2 Annuals, 1 Giant, 1 Secret Files 1994-2001*

This *Starman* series at its best is an unusually satisfying read. Writer James Robinson introduces Jack Knight, son of the first DC character to adopt the name Starman. Knight's brother wore his father's costume to battle the **Starman** above in 26 of his title, but was dispatched with little ceremony here only to make an annual return as a ghost in sometimes twee bonding issues. When the logic behind them is revealed, though, it matches the remainder of the series in an ingenious use of DC's past continuity. Robinson enjoys switching styles of storytelling, his plotting is exceptional, foreshadowing events dozens of issues in advance, his nostalgia for old DC superhero comics serves well, and his characters are finely tuned and memorable. Old villain The Shade is particularly well manifested as a literate eminence grise. A factor adding to the mood is the conception of Opal City, Starman's hometown. It's gloriously designed by first pencil artist Tony Harris: a consistent and individual art-deco backdrop gives the series a mystique and history and at once sets it apart. Starting as a reluctant superhero, preferring to run his memorabilia store to following the family tradition, Jack eventually falls into line, and his awkward yet loving relationship with his father is particularly well presented. The career choice permits *Starman* to wash over the breadth of popular culture past and present, and superhero standbys such as the costume and the secret identity are discarded, to no detrimental effect. Although tying up loose ends of a multi-part story and hinting at the future, 17 sums up the mood of *Starman* in a single issue.

Structurally, *Starman* is a superhero comic like no other. Jack Knight is often supplanted by anyone else who's taken the name Starman over the years, or one of the large supporting cast, these issues regularly interrupting multi-part stories involving Jack. Another series feature is more than one penciller working on an issue, divergent styles neatly accommodated by the plot. Presumably initiated as a way of helping Harris maintain a schedule, it's to Robinson's credit that what would elsewhere be regarded as fill-ins are never throwaway and often have a bearing on later events. A top-notch selection of pencillers helps, with Guy Davis (23), Stefano Gaudiano (annual 2), Gene Ha (46, annual 2), Craig Hamilton (28, 54, annual 1), Steve Yeowell (27, 35, 47-49, 55, annual 2) and Chris Weston's Kirby pastiche (55) particularly impressive.

48-50 are turning points. From 48 two long stories occupy most remaining issues, and Peter Snejbjerg becomes regular penciller from 50. While his style lacks the ornate flourishes favoured by Harris and his regular inker Wade Von Grawbadger, Snejbjerg's storytelling is superior. Film writer David Goyer co-plots 'The Stars My Destination' between 48 and 60, in which Jack journeys into space. His company is alien Starman Mikaal Tomas (previously only seen in *First Issue Special*) and a holographic representation of his father; his quest to find his girlfriend's long lost brother, Will Payton, the previous Starman. Jack meets assorted DC characters from beyond the universe, as obscure as various Omega Men and the Space Cabbie, and as pivotal as Superman's father. It's grand space-opera, but as a whole doesn't hit the series' peaks. The ambition is to be admired, though, and it paves the way for a considerable achievement, the far superior 'Grand Guignol' in 61-73, with preludes in 47 and 56. That features the entire cast as previously introduced plus extra heroes Elongated Man, Black Condor and Phantom Lady. Opal City falls under the malign influence of The Shade, apparently not the reformed villain after all. Blocked off from the outside world and with all its protectors captured, Robinson draws together almost all loose threads from the series. Here the benefit of a large cast is some being expendable and others not being what they previously seemed. The epilogue, a memorial service in 73, is particularly effective. With the story over there are still moments of significance, particularly the mystery of a Starman active in the early 1950s as revealed in 77-79. Better still, there is as near to a definitive conclusion as is likely for corporate owned properties. DC have chosen to profit from collected editions, with most issues now available, rather than continue under other hands a series indelibly stamped with Robinson's style. The particularly fine selection of covers from Harris, Alex Ross and Andrew Robinson should also be noted.~FP

STARRIORS

Marvel: *4 issue miniseries 1984-1985*

Having licensed Transformers with lucrative results, Marvel obviously thought they could come up with their own version. Whether they considered this witless derivative pap could also spawn toys and cartoons is lost to history.~WJ

STARS AND GUTTERS

Armchair: *2 issue microseries 1998*

These contain five stories about heroes written by Gavin Burrows. Some work better than others, but all have something to say. The strongest is 1's 'Swings and Roundabouts', drawn by Steve Martin: Jack prays to his hero James Dean for help, with a result that induces a gasp. 2 contains the best story overall, drawn and co-plotted by Peter Poole. 'The Other Side' can be enjoyed simply as a surrealist romp, although there's much more to it than that. It's about a young artist who's come to Spain in 1936 to paint, but he's barely laid down a stroke when Salvador Dali steps out of the easel (and also out of the future), extolling the virtues of chaos as the ultimate creative compost for an artist. The story is buzzing with ideas, and the artwork is perfect.~FC

STARS AND S.T.R.I.P.E.

DC: *15 issues (0-14) 1999-2000*

When 14 year old Courtney discovers her adoptive father Pat Dugan was a 1940s sidekick called Stripsey, she goes crimefighting using the accoutrements of his former partner the Star Spangled Kid. For protection, he accompanies her in an armoured suit. The smalltown setting works well in accentuating the strained relationship between Courtney and Pat, but Lee Moder's cartooning is adequate rather than spectacular (the artistic highlight being Chris Weston's pages in issue 0). The lighthearted touch employed throughout by writer Geoff Johns is a good approach, and plasters over too many convenient coincidences. Young Justice come to call in 5-6, which are representative sample issues. Older fans may also appreciate an untold story of Pat's colleagues in the Seven Soldiers of Victory in 9 and the Shining Knight 10-13.~FP

STARSHIP TROOPERS

Dark Horse: *2 issue microseries ('Official Movie Adaptation') 1997, 3 issue miniseries ('Insect Touch') 1997, one-shot ('Brute Creations') 1997, 4 issue miniseries ('Dominant Species') 1998*

Based extremely loosely on the Robert Heinlein novel from 1959, a race of giant spider-like aliens threatens humanity. Earth has to mobilise and take the war to the invaders. The Starship Troopers are conscripts, expendable ground troops in an interplanetary war, while the spiders prove to be cold, unreasoning engines of destruction (inspired by the Nazis of World War II in Heinlein's story). The adaptation is by Bruce Jones and artists Arthur Adams and Andrew Pepoy. As a prequel, 'Insect Touch' tells how mankind's first encounter with the aliens played out on Mars while 'Brute Creations', with moody art by Tommy Lee Edwards and Robert Campanella tells of a skirmish between a Mormon community living on the outskirts of the empire and the aliens. 'Dominant Species' has the troops sent to deal with an alien stronghold. Despite all the hardware and red/yellow/blue spiders this is a series of homogenised war stories. Dull to the max.~SW

STARSLAMMERS

Marvel: *Graphic Novel 1983*
Bravura: *4 issues 1994-1995*

The Starslammers are a race of mercenaries who're the best combat soldiers in history. They had a considerable incentive for learning to fight, once being hunted for sport by a race with superior technology. This is the story Walter Simonson tells in the graphic novel, but it's told in a needlessly convoluted manner that removes most of the impetus. The art is impressive, though, and Simonson's approach to depicting telepathic communication is particularly clever and effective. The Bravura series is set hundreds of years later, and was unfinished, as Simonson withdrew it from Bravura before publication of the final issue. It's still worth reading, however. In this story one of the Starslammers has been captured after an unsuccessful attack on the colony of a small and unlovely empire, and some strange things start happening on the ship transporting him to the emperor's planet. It's a lively, interesting read with solid characterisation and good dialogue. Take a look at it, if only for the scene where the mercenary asks Colonel Phaedra why she chooses a bikini as her military uniform, to which she gives a witty, intelligent answer!~FC

STARSLAYER

Pacific: *6 issues 1982*
First: *28 issues (7-34) 1983-1985*

After many years doing *Warlord* for DC, Mike Grell moved to the fledgling independent company Pacific and produced a mirror-image title in *Starslayer*. Instead of a modern man in a barbaric land he gave us a barbarian in the far-flung future. He goes over old ground thematically – the lone warrior's quest for a honourable way to live, etc. – and left as artist with 7 and scripter with 9 for *Jon Sable, Freelance*. Torin MacQuillon, a half-Scythian somehow living with Celtic Britons, is seized at the moment of death by Tamara, an Earth super-agent on a mission to save our solar system. Why she needs a hairy, middle-aged swordsman is never really explained to anyone's satisfaction but she does, and they do, but not without chucking the Earth into the Sun to "reignite" it. This pisses off the Earth's rulers, who promptly chase them across the universe for the rest of the series.

In John Ostrander's hands, Starslayer quickly became an adjunct of Grimjack, with the heroes based in Cynosure fighting Celtic goddesses, a Grimjack crossover in 18 (it had been the back-up strip from 10 onwards), and various characters, such as Kallibos, in common. Lenin Delsol's art, 7 onwards, was very flat, and singularly unsuited to the continual fight-and-flight pages he was required to draw. Tim Truman, who took over from 16, depended on his inker (soon finisher) Hilary Barta excessively, ending up being credited with "continuity". By 19 the title was seriously losing its way. Ostrander's attempt to give it its own feel by introducing various deity/protectors for the characters and staging fights between life and death reads like a load of pseudo-religious hogwash, which indeed it is. Dave Stevens fans will find The Rocketeer's first appearance in 2 and 3, while Tom Sutton fans can enjoy his lush artwork on The Black Flame from 17 onwards (27 is all Black Flame). Unfortunately, the script is bilge by Peter Gillis. *Starslayer* was an okay idea, poorly executed, which soon descended into predictable pirates-in-space clichés. Early issues were reprinted, modified with some new dialogue and colouring by Valiant's Windjammer imprint in 1994 as *Starslayer: The Director's Cut*.~FJ

STARSTREAM

Whitman: *4 issues 1976*

Conscientious, but ultimately unsuccessful attempt to adapt classic science-fiction stories to comics. Anderson, Asimov, Bloch, McCaffrey, Niven and Van Vogt, among others, supply rich source material, but the stories, though competently recounted, are cramped and stifled and suffer from largely unimaginative artwork.~HS

STARSTRUCK

Marvel/Epic: *Graphic Novel, 6 issues 1985-1986*
Dark Horse: *4 issues 1990-1991*

Starstruck began life as a stage play, written by Elaine Lee with sets and costumes by Mike Kaluta. Epic published a graphic novel and this six-part series in colour, while the Dark Horse series was intended to run for twelve issues, reprinting what had gone before with 320 pages of new material. It's a complicated story containing pleasure robots, the great houses of the multiverse, March Baptists (the wealthiest Christo-Zedian denomination in the inhabited universe), Andromedicones (a self-propagating race of androids), Galatia-9 (once Molly, now an Amazon), the Guernican art squad, the tranquil nunz and Brucilla the Muscle (not to mention the Galactic Girl Guides and their terrorist tendencies). Told in a variety of voices and not always in a linear timeline, Lee's script requires some effort to understand but it's worth it and Kaluta's artwork is gorgeous.~NF

STATIC

DC/Milestone: *47 issues 1993-1997, 4 issue miniseries 2001*

Present at the massive gang war known as the Big Bang, Virgil Hawkins, geeky high-school student, gains electromagnetic powers from the chemicals unleashed by corrupt authorities on the rioting crowds. Calling himself Static, he sets out to improve his neighbourhood. Yawn, right? Heard it before. What that synopsis doesn't convey is the essence of Virgil's personality. He's tough, engaging, with a well-hidden sensitive side and a highly literate streak that wins you over, making you root for him during his days as a neophyte superhero. His cast of supporting characters is equally diverse and appealing, primary among them being Frieda Goren, his best friend (but refreshingly not a romantic interest), in whom he confides his secret; and Daisy Watkins, the insecure and troubled girl who wins his heart. R.L. Washington III and John Paul Leon carry him through his trials and tribulations with skill and panache, turning him over to Ivan Velez Jr and the unsurnamed Wilfred seamlessly in the middle of a story arc (19), after which the comic, against all odds, gets even better! The superheroics are well conceived, with Virgil using his head as much as his powers to defeat his enemies in a variety of surprising ways. Additionally, the creators tackle issues – bulimia, anorexia, drugs, sexual identity – faced by real teenagers, and present them intelligently, realistically, and without any of the preachy 'quick fixes' that usually plague comics with 'morals'. This policy caused the creators problems from time to time. 'What Are Little Boys Made Of?' (16-20), the story arc dealing with a gay supporting cast member, was rejected by the Comics Code Authority, and a safer-sex hint on the cover of 25 made distributors DC freak out completely and stick an extra cover on the issue! After 29, the creative team changed again, to less skilled hands, and it became routine superstunts, albeit with a beautifully drawn, but nonsensical, Gil Kane fill-in in 31. Some people will also want to get the Rod Ramos issue, 32, but frankly it's not great work. Eventually, sadly, it fizzled out in a flurry of inappropriate and short-run creators. 1-4 are collected.

In 2000, an animated TV show called *Static Shock!*, starring Virgil and company, was launched. In response, DC issued a miniseries called *Static Shock* – 'Rebirth of the Cool'. Oh dearie me. Despite the woeful title, the Dwayne McDuffie/John Paul Leon collaboration, set a few years on from the close of the ongoing series, is a pleasure. Virgil has semi-retired his Static identity to concentrate on other matters, but is called back to action when many of his fellow super-beings start disappearing. Not only a clever re-introduction to the Milestone 'universe' (with an interesting revelation about its untold history), but an ingenious synthesis of the comics and TV versions of the character. There has been no sequel for *Static*, or the rest of Milestone, so far, but since the TV show has run three seasons, the properties remain in the public eye. We can only hope. It has so far resulted in a collection of the early issues.~HS

STATIC-X

Chaos!: *One-shot 2002*

Wayne-5534, Ken-7390, Tony-2692 and Tripp-1811 are members of a rock group and leaders of an underground resistance movement, but when their revolution fails, only neural safeguards can override the state's brainwashing as they are split up amongst different work forces. Intending this to be the first of a series of one-shots, with the first about the band's escape, and with each issue offering an exclusive CD of the band's music, Brian Pulido scripts from a story concept and lyrics by the band. It's hardly original or riveting, but Andrew Pepoy's inks add an interesting texture to David Brewer's otherwise inexpressive pencils.~NF

STEALTH FORCE

Eternity: *8 issues 1987-1988*

Four recently deceased specialists are resurrected by a mysterious corporation and ordered to undertake covert missions or face a second and final demise. Big on bodycount, but short on actual suspense or drama, a disappointing outing from screenwriter Mike Valerio and neophyte artist Patrick Olliffe. For gun nuts only~WW

STEAM DETECTIVES

Viz: *5 volumes + 1999 to date*

These are the adventures of boy detective Narutaki in Steam City, a hybrid of London and Tokyo that runs on steam. Narutaki has a butler, a beautiful nurse girlfriend and a giant steam-powered robot containing the nurse's father's brain. The villainous mad scientist is called Dr Guilty. They ought to be amusing, but as executed by Kia Asamiya the stories lack atmosphere, and are crazily fast-moving and mindless manga by numbers. If you like uninterrupted shouting, insane laughter, and explosions then this is one for you. These digest volumes reprint, five at a time, episodes first published in Japan in 1995.~GK

STEAMPUNK

WildStorm: *One-shot ('Catechism') 2000, 12 issues 2000-2002**

Set in an alternate London of 1838 after Lord Absinthe has used knowledge of the future to create his own kingdom, this is described as "an industrial gothic sci-fi action adventure love story". If that sounds as though creators, Joe Kelly and Chris Bachalo, were confused about what this series was meant to be, wait until you try to work out what's going on when reading it. Cole Blaquesmith, with a coal-powered heart, has been awoken after a hundred years from hibernation, mourning the loss of his lover, Fiona. Disoriented, he is drawn into the rebellion of Sir Robert Peel who's looking for a champion of the people, and hunted by Absinthe's assassin, Faust. While Absinthe plots with and against the Pope for power, Victoria, a bounty hunter trained and loved by Faust, finds her loyalties wavering towards Blaquesmith. This series requires a lot of attention. How rewarding that is, will depend on a reader's tolerance for Kelly's poetic, enigmatic, and often wilfully obscure dialogue, and Bachalo's detailed artwork, which rarely provides any real perspective of the big picture – everything's in close up. At times, it seems as though Kelly and Bachalo are working on completely separate comics, so divorced is the narrative from the artwork, and there are times when dreadful colouring makes interpretation almost impossible. Despite this there is a certain appeal, lying somewhere between *Luther Arkwright* and *Teknophage*. These issues represent the first two of three parts. While 13 has not yet been scheduled, 1-5 have been collected.~NF

STEED AND MRS PEEL

Eclipse/Acme: *3 issue miniseries 1990-1991*

Scripters Grant Morrison and Anne Caulfield with artist Ian Gibson reunite the title characters from the *Avengers* cult TV show, with Tara King and Mother thrown in for good measure. The two stories serialised over this series are intelligent, lively, and very true to the spirit of the show, with secret societies committing murder with impeccable manners, and mysterious goings-on in quaint country villages. Printing defects plague the print run, though, with many issues printed off-register, smeared or otherwise marred.~HS

STEEL

DC: *5 issues 1978*

In 1978 DC cancelled a lot of comics at very short notice, causing much wailing, gnashing of teeth and sacrificing of first born among fans. They were, however, almost silent about missing this shoddy World War II superhero hacked out by Gerry Conway and Don Heck. Entirely fittingly, DC continuity had it that a reworked version headed what's still considered the worst ever version of the *Justice League*.~FP

STEEL

DC: *53 issues (0, 1-52), 2 Annuals, 1994-1998*

One of the four replacement Supermen introduced during that hero's temporary demise, John Henry Irons, armour-clad weapons scientist, graduated into his own series under the nom-de-guerre of Steel. Louise Simonson's deft and empathic scripting, focusing closely on Irons' family circle and his own confusion as he struggles with his heroic role, stops the title from becoming 'Black Iron Man', as it so easily might have. It even distracts the reader from the appalling John Bogdanove art, of the 'everyone looks like they've been hit in the face with a shovel' school. More competent artists Chris Batista, then Phil Gosier, take over, and the comic becomes a pleasing, low-key study of the responsibilities of power and the duties of family, interspersed with the inevitable kicking of heads. That's until 30, when, presumably in light of the Shaquille O'Neal movie deal, Simonson and Gosier were abruptly yanked from the series, replaced by generic creators who pump up the action and downplay the emotion, hugely to the series' detriment. The movie was a calamitous failure, the title continued to lose its way with less and less inspired creators, and when nothing more interesting can be thought of for the 50th issue 'special event' than a 'Millennium Giants' crossover with the Superman titles, then you know the strip's in trouble. Although his own series has perished, Steel played a prominent role in the *Our Worlds at War* crossover.~HS

The STEEL CLAW

Quality: *4 issue miniseries 1986-1987*

The Steel Claw originally ran in the British weekly comic *Valiant*, and this miniseries collects its first episodes from the early 1960s. Louis Crandall, inexplicably renamed Randall here, was a conniving lab assistant with a steel hand, the result of an earlier accident. Caught in an explosion, he survived, but whenever his hand touched electricity he became invisible. He was a crook here, but later reformed, becoming a secret agent and even a superhero for a while. With scripts by science-fiction author Ken Bulmer, and exquisite art from Jesus Blasco, this should have been a great comic. Unfortunately, the printing is dire, and the colouring seemingly consists of nothing but pink and green. Nice Garry Leach covers, though.~DAR

STEEL STERLING

Red Circle: *1 issue (4) 1984*
Archie: *3 issues (5-7) 1984*

Arbitrarily continuing the numbering from *The Shield, Steel Sterling* is one of the craziest superhero titles around, especially considering when it was produced. Robert Kanigher's hero is an everyday kind of guy, superstrong and supermoral, but beset by ordinary doubts and fears. He drives around the USA in a van full of multicultural teenagers encouraging everyone to fulfil their potential and making inspirational feature films. Chiefly drawn by Eduardo Barreto in a hurry, Steel's adventures bring him into contact with ghosts, mysteries, mercenaries and more prosaic dangers like drunk drivers. 4 is one of the most unintentionally funny comics ever written: Kanigher's script jumps effortlessly from the Four Horsemen of the Apocalypse to drink-driving statistics. After showing the perpetrator of a crash one of his victims' heads in a carrier bag *Steel* then starts in on a peculiar eulogy to macho women (which lumps tennis player Chris Evert in with Joan of Arc and the Amazons). It prompted responses from Robert Dole and Nancy Reagan! After becoming an Archie title the adventures of Steel's kid sidekicks, the Steelers, were emphasised, and the book padded out with other Kanigher material.~FJ

STEELGRIP STARKEY and the All-Purpose Power Tool

Marvel/Epic: *6 issue miniseries 1986-1987*

Steelgrip is an extravagantly muscled young construction worker, and one day he's offered the chance to work with the new Power Tool, the invention of the mysterious Mr Pilgrim and the first use of "Technalchemy". At rest, it's a small box, but when Steelgrip pulls the handle it builds itself into whatever form will suit the current task. In the first issue, this has a certain clean-limbed charm, but even then it is already obvious what we're in for: a problem occurs, Steelgrip pulls the handle, the machine solves the problem, Steelgrip gets called a hero. Boring.~FC

STEELTOWN ROCKERS

It's classic soap opera: the wildboy drummer, the problems at home, the jealousies...and it's written with great characterisation and pacing by Elaine Lee, and matched by Steve Leialoha's artwork. The six issues fly by and leave you wanting more, more, more, but that's good showmanship.~FC

STEVE CANYON

Kitchen Sink: *24 issues 1983-1989*

By the time *Steve Canyon* began, in January 1947, over two hundred newspapers had already signed up to take it, on the strength of its creator's name alone. Having left *Dickie Dare* to do *Terry and the Pirates* for the Chicago Tribune Syndicate, Milton Caniff had created an enormously popular strip but wanted more – ownership and editorial control. To get that he had to take the risk of creating a new strip and signing a contract with the Chicago Sun's Marshall Field.

Steve Canyon is an adventure strip in the mould of *Terry and the Pirates* but for an older audience. The basic idea is that Canyon is a flyer whose small company, *Horizons Unlimited*, undertake any assignment as long as it's exciting and perilous (and legal, of course). Caniff himself described it as a picaresque novel. It's got thrills, adventure and romance, all wrapped up in complex narratives. The action is always fast-moving and can take place all over the world – the more exotic the better, to begin with. Artistically, Caniff's style didn't change but he continued to exhibit his mastery of the techniques of cinema (longshots, close-ups, odd angles etc.).

Kitchen Sink's magazine reprints, in four-month batches, the first episode (including the Sunday strips, which could be read separately but which were part of the same story as the dailies). Each issue includes articles about Caniff and examples of his other work. Edited by Shel Dorf and including commentaries by Caniff himself, it's an excellent production.

The early adventures introduce Copper Calhoun, a rich, dangerous woman who wants to inspect properties overrun by the war; Happy Easter, an ornery old confederate who becomes a regular cast member, Madame Lynx, Dr Dean Wilderness (an attractive but very capable lady), Lady Nine and Convoy, who would eventually grow up to lead a group called The Black Widows. All of this took Canyon around Africa and the Middle East. 6 introduces Fancy and Cheetah in tropical-island and Hong Kong settings. With 8, the page count was increased and the magazine became squarebound. It features Canyon in a fighter plane group battling the Red Chinese, it introduced Summer Olsen, who would later become Mrs Steve Canyon. 9 has Canyon teamed with Doe Redwood for a dangerous undercover assignment, 10 brings back Madame Lynx (with Canyon pretending to be her husband), and in addition throws in the start of the serialisation of Noel Sickles' strip *Scorchy Smith*.

With 12 Canyon has rejoined the Air Force and has to track down a war profiteer with the aid of Cheetah. 13 has extra editorial pages; the first story features the death of Raven Sherman. 15 contains Canyon's proposal to Summer Olsen and 16 sees him fighting the Russians over the Aleutian Islands. 17 and 19 are special issues, the latter celebrating the fortieth anniversary of the strip and containing a full year's worth of storylines. With 'In Formosa's Dire Straits' (22), Kitchen Sink changed the format again, including the name of one of the adventures on the cover and increasing the size of the artwork. 'The Scarlet Princess' (23) features strips from 1955 and 1956, taking Canyon from the Cold War in the US back to the war in China. Unfortunately, the series ended with 24, with at least thirty-two years of Caniff's strip still waiting to be reprinted. *Comic Revue* magazine continue reprints.

The influence Caniff would have is hard to underestimate – from Frank Robbins and Lee Elias to Hugo Pratt and many others. His storytelling is remarkable. Though the circumstances might now seem strange, these strips are also a kind of social, cultural and political history, firmly set in the world as it was then.~NF

STEVEN

Kitchen Sink: *8 issues 1989-1990 (1-7), 1997 (8)*
Fantagraphics: *2 issues 1999*

Doug Allen's Steven is the ultimate nihilist. The first time he says "yes" in the strip is when his idiot friend hits him with a plank and reverses his personality. Allen's half-page gag strips (and the word "gag" is used loosely) first appeared in a local Providence newspaper. The Fantagraphics issues appear under the titles 'Steven Presents: Dumpy' and 'Steven at Sea' but are in fact just continuations of the collected newspaper strip, and unfortunately some of them are printed out of order. Steven's world is full of nursery-rhyme characters shakily drawn against detailed settings. There's a cleverness to some of the work (which is reminiscent of Peter Blegvad's cartooning both in style and in humour) but the persistent negativity of it all soon becomes boring.~FJ

Fantagraphics: 3 *issues 1989-1990*
Revolutionary Comics: *2 issues (4-5) 1990-1992*
Starhead Comics: *1 issue (6) 1993*

Graduating from *Weirdo*, Dennis Worden compiled this occasionally published tirade of semi-philosophical and mock-political, surreal strips featuring the mouthy and irascible stick figure everyman. Not as incisive as Harvey Pekar or as passionate as Robert Crumb, although Worden would probably disagree.~WW

STIG'S INFERNO

Vortex: *5 issues 1984-1986**
Eclipse: *2 issues (6-7) 1987*

When Stig's piano lid falls on him he's ejected into hell, whereupon he comes across all kinds of demons and distressed souls. Excellently drawn by Ty Templeton, the amount of gags both visual and verbal packed into an issue is immense. Unfortunately, the effect is one long shaggy dog story. Full marks for inventiveness, but it won't be to everyone's taste.~WJ

STING of the Green Hornet

Now: *4 issue miniseries 1992*

A wartime adventure of the Green Hornet and Kato as they battle a slinky Nazi baroness and her tame supersoldier in an affectionate tribute to Captain America's origin. The Shadow cameos, amusingly, in issue 1. Perfectly competent, but by no means exceptional.~HS

STINZ

Fantagraphics: *4 issues 1989-1990**
Brave New Worlds: *1 issue (5) 1990*, series two 3 issues 1991**
Mu Press: *5 issues 1994-1997*
A Fine Line Press: *3 issues (6-8) 1998-1999*

Stinz is a centaur, whose people live in an isolated Geisel valley, but are not entirely cut off from interaction with humans. Having originally appeared in *The Dreamery*, Stinz' own first series has him joining the army. It covers training, which was hardly designed for four-legged recruits, promotion to squad leader, and a leave requested to visit and then marry his pregnant fiancé. Series two reflects on episodes from the war, and sees Stinz elected Mayor of his village. The Mu issues introduce Stinz' daughters, Siim and Reet, and tell some tales in the valley, before beginning a linked storyline involving the return of Stinz' army Captain, Gift, and the return to the valley of a human Baron, with his aristocratic wife. Against this background, the final issues explain how the war ended, why Stinz won't leave the valley when the Baroness tells him to, and what happened to what may be the only gun left in the world.

Donna Barr has created a complex environment for her hero, and doesn't stint in depicting the background detail required to make it believable, or from the comedy, emotions and minutiae of everyday life. Her heavily inked, ornate style is always at the service of the story and this is a rewarding series, once the reader becomes used to the German expressions littered throughout the dialogue. There is also a collection of the *Dreamery* episodes from Eclipse, called 'Horsebrush and Other Tales'.~NF

STITCH

Slave Labor: *4 issue miniseries 1999-2000**

Stitch is a rag doll. At least his body is. He's also an amnesiac who wakes up in a spooky bedroom with a collection of other talking toys. There's a pervasive aura of menace as he meets other amnesiac dolls and they share sketchy memories of five missing children... With compelling and moody cartooning from Tommy Kovac, this also contains the first appearances of the Skelebunnies, two cute little rabbits who are killed by a demon but refuse to stay dead.~WW

Sergio Aragonés STOMPS Star Wars

Dark Horse: *One-shot 2000*

Master cartoonist Aragonés is too clever to opt for the obvious method of satirising *Star Wars*. Instead he concocts a framing sequence where he and scripter Mark Evanier visit the film studio, and through jiggery-pokery Aragonés ends up participating in the movie. That said, though, after all this time new jokes about *Star Wars* are few and far between. Professional, without being compelling.~FP

STONE

Image/Avalon: *4 issue miniseries ('The Awakening') 1998-1999, series two 4 issues 1999-2000*

The Agimat stones are ancient sources of power and their wielders challenge each other in order to accumulate the power and soul of the loser. Gerry Alan is simply an arrogant TV star until he finds out he's also an Agimat warrior when he's attacked by several monsters. A dreary and uninspired fantasy from Brian Haberlin and Whilce Portacio.~NF

STONEWALL IN THE SHENANDOAH

The Heritage Collection: *One-shot 1996*

Another of Wayne Vansant's dry, detailed relatings of a pivotal battle during the American Civil War. This time it's one of the Confederacy's greatest victories, and a well-regarded piece of military strategy from General Stonewall Jackson. Historians aren't going to read comics, and this is too dull for the kids, so you wonder about its purpose.~DB

STORM

British European Associated: *1 Graphic Novel ('The Deep World')1982*
Titan Books: *2 Graphic Novels ('The Last Fighter', 'The Pirates of Pandarve') 1987-1989*

British artist Don Lawrence spent much of the 1960s painting chapters of *The Trigan Empire*, a magnificent futuristic adventure strip concerning two brothers ruling an empire based on the Roman Empire of old. Any British collection is worth searching out, particularly the Hawk Books *Tales of the Trigan Empire*. Lawrence's sumptuously painted artwork was appreciated far more in Europe than at home, where graphic novels were still twenty years away, and he began illustrating *Storm* in 1976.

Written initially by Paul Dunn, then from the second volume by Martin Lodewijk, there are now over twenty volumes in plenty of European languages, but few have been translated. Storm is an astronaut who returns to Earth in a state of suspended animation, and emerges to discover plenty of changes. He's now in a world in which Conan the Barbarian would feel at home, with minimal technology, but plenty of cut-throats. Once the absence of oceans has been explained in 'The Deep World', there are few references to the planet ever having been known as Earth, as Storm encounters assorted alien scenarios. He's accompanied by a gorgeous redheaded woman named Ember (except in 'The Deep World', where she's Red).

Storm proves extremely adaptable at coping with whatever and whoever is thrown at him, including escaping a gladiatorial arena in 'The Last Fighter'. Titan then skipped several volumes to the point where Storm and Ember are transported to Pandarve. Storm is of particular interest to the Theocrat of Pandarve as "an anomaly". *Storm* is high on fantasy and action, and low on character, dragging the reader along through fast-paced adventure, but the stories are very similar in plot and structure. As such they're almost old-fashioned, a feeling sometimes heightened by Lawrence's stunning but precise and illustrative painting, but it's the art that makes each volume worth a look. Lawrence has influenced plenty of British artists in his day, and in the 1990s assimilated the different styles of painted artwork in Britain and Europe. The January and March 1997 issues of *Heavy Metal* feature other *Storm* volumes, again jumping a few since 'The Pirates of Pandarve'. It's hoped that more will follow, as Lawrence's art for more recent *Storm* is ever more stunning.~WJ

STORM

Marvel: *4 issue miniseries 1996*

The X-Men's co-leader stars in her own miniseries by Terry Dodson and Warren Ellis. She's plagued by guilt that had she not neglected the Morlocks, the band of deformed mutants from the New York sewers she once led, she might have prevented them from becoming the terrorists Gene Nation. Storm searches for a way to say 'sorry', and finds herself transported into the other-worldly realm where her former followers now live. Okay, but by no means unmissable.~JC

STORMQUEST

Caliber: *6 issues 1994-1995*

Tom and Mary Bierbaum's lively attempt to establish a literal heroic dynasty, a multi-generational family in which adventuring is the family business, has potential, but comes unstuck due to the abysmal Image-style super-deformed artwork, which forces the reader's eyes away from the page.~HS

Before the Four:THE STORMS

Marvel: *3 issue miniseries 2000*

Terry Kavanagh and Charlie Adlard delve into the past of Susan and Johnny Storm to tell their childhood adventures before they became members of the Fantastic Four. Unfortunately, as no-one would be interested in a comic about two kids doing their homework in between bouts of sibling rivalry, there's far too many unlikely supernatural coincidences going on. Before the Four, the Storms were simply ... not interesting. Bad premise for a series, really.~JC

STORMWATCH

Image/WildStorm: *50 issues, 2 Specials 1993-1997, one-shot ('Sourcebook') 1994, series two 11 issues 1997-1998*
WildStorm: *4 issues ('Team Achilles') + 2002 to date*

Stormwatch is a global anti-terrorist force operating from the orbiting Skywatch space station and controlled by Weatherman One, whose enhanced mental abilities allow him to keep an eye on what's happening globally. 1-3 introduce Battalion, leader of the main team, his brother (who later becomes Strafe) and baddies The Mercs and Regent. Backlash is introduced in 3 while 4 and 5 feature Daemonites attempting to take control of the bodies of the Warguard, a dangerous group in cryogenic storage on Skywatch for use as a doomsday weapon. In the next two issues, three previously captive members pop up (Flashpoint, Nautika and Sunburst), and Rainmaker and Ripclaw turn up in 8 as a prelude to Rainmaker joining Gen^{13}.

In a radical, if not entirely advisable, move Image released issue 25 immediately after 9, then returned to the regular schedule, thereby dropping hints as to the outcome of the various plots developed in the fourteen subsequent issues. The plots are very much standard superhero team fare: Battalion appears to be killed, Weatherman One is replaced by Synergy and the team starts falling apart, they take part in the 'WildStorm Rising' crossover (22). The Warguard are wakened again for a final showdown (23-27) that results in various members' deaths and the destruction of Skywatch. The next issues concentrate on introducing a new line-up for a battle with Islamic terrorists in 30-34. 35 and 36 are 'Fire From Heaven' crossovers with more membership changes, as a result of which Weatherman One splits them into three units: Prime to deal with superhuman threats, Black for covert operations and Red for 'deterrent, display and retaliation'. As the team takes a political stand, the various members are showcased in darker story-lines – policing the world isn't fun anymore.

46 features the team in a night out together, the Daemonites briefly return in 47, before The High gathers a team of heroes designed to change the world whether it wants it or not (48-50), prefiguring the direction of the next series, which begins with Stormwatch being banned from American soil when they come too close to that country's hidden agenda. 4-6 introduce The Midnighter and Apollo as rogue ex-agents of Stormwatch, while 7-9 depicts an alternate world viewed fighting the Kherans through the Bleed. 10 is a prologue to *WildC.A.T.S./Aliens* (unusually for such a crossover, not only does this take place in continuity, but it devastates the team), and 11 an epilogue as well as a prologue in its turn to The Authority, which begins where this second series ends.

Co-created by Brandon Choi and Jim Lee, who provide the stories to begin with, the initial strength of *Stormwatch* is in the dynamic illustrative style of its artists, Scott Clark (1-3, 6-8, 25) and Brett Booth, both inked by Trevor Scott. Matt Broome's similar but less ornate work (11-20) is best when inked by Scott, while Renato Arlem's artwork (22-24, 26, 30-36) is looser but craggy. Lee's decision to hire Warren Ellis as scripter from 37 onward was a gamble. Coupled with improved scripts, Tom Raney and Randy Elliott provided simple, but effective artwork with plenty of cold, hard inking. Oscar Jimenez took over from Raney for the new series (1-3), but was swiftly followed by Bryan Hitch (4-11). All the Ellis issues are available in collections, but he was taking Stormwatch closer and closer to the edge of the WildStorm universe, which was effectively shattered by the introduction of *The Authority*, after which, any other WildStorm series seems redundant and certainly lacks the pleasures that existed in it previously.

In 'Team Achilles', Ben Santini is putting together a new Stormwatch without super-powered members, but finds himself trapped with a couple of these new characters in the United Nations building when it's attacked by terrorists (1-3). He makes an exception in 4, however, when he brings in a telepath to help find the person who is triggering superpowers in terrorists. This is written by Micah Ian Wright and drawn by Whilce Portacio, and makes an unpleasant read.~NF

STORMWATCHER

Eclipse: *4 issue miniseries 1989*

Writers Ian Abbinnett and Alan Cowsill produce a solid piece of fantasy that refuses to take itself too seriously, as alcoholic dwarf Atek Stormwatcher gathers his old band of heroes for one last adventure. Good fun well illustrated by Andrew Currie.~WW

THE STORY OF O

NBM: *3 volumes 1991-1992*

Guido Crepax produced his adaptation of Pauline Reage's dominant/submissive classic back in the mid 1970s. A young photographer, mesmerised by her lover, is introduced to a world of Masters and slaves at the chateau of Roissy, where she progresses from a submissive suffering for her lover's sake to a devoted acolyte. Crepax has an innate understanding of the ritualistic magic of power exchange relationships, and adapts Reage's twin novels intelligently. His stark, long-limbed figures and aptitude for capturing surfaces – the sheen of leather, the rich drape of satin, the dark weight of iron – are peculiarly appropriate to the story, which is far more than just another whips and chains fuckfest. The first two volumes split the original, long story, while the third contains the follow-up.~FJ

Friends of Lulu Presents STORYTIME

Friends of Lulu: *1 volume 2001*

Friends of Lulu aims to interest more females in comics, promoting the work of women creators and encouraging positive portrayals of female characters. So far so good. This anthology was compiled to promote the organisation and showcase the talents of the membership. Here is where it starts to go wrong. Stephanie Gladden, Joan Hilty, Michel Lacombe (credited as 'Michael'), Jen Sorensen and back cover artist Paul Sizer pull their weight. Living up to expectations are Donna Barr, the team of Trina Robbins and Anne Timmons, Sharon Rudahl and Phil Yeh. That, unfortunately, accounts for less than a quarter of the eighty-five story pages. The remainder lack spark, vision, and even in some cases, talent. That a dashed-off illustration from Bryan Talbot, far from his best work, outshines the majority of the content reveals volumes, as does the poorly designed cover. A Mary Wilshire illustration is enlarged to a size never intended, and no-one bothered to clean up the prominent splash of water on it. Admirable of purpose, this is likely to do Friends of Lulu more harm than good.~FP

STRAIN

Viz: *5 volumes 1999-2001*

Shunichiro and Shingo Kusaka are half brothers whose lives have been very different. Shingo became a Malaysian street thug while Shunichiro inherited a huge corporation. Mayo the Malaysian is a hitman and he and his friends are shielding a young girl street orphan, Shion, from the 'Organization' a mob that hired Mayo to kill her mother. Because of this change of heart Mayo becomes the top target of the mob and goes on the run from cop and criminal alike. Shunichiro has two drives. He wants to control all Southeast Asian oil, and he wants to eradicate anyone who shares his blood – his "strain". This complex and engaging thriller grows from crime caper to global conspiracy epic to grand tragedy. It's a stylish and gripping read from top notch creators Buronson and Ryoichi Ikegami.~WW

STRANGE ADVENTURES

DC: *244 issues 1950-1973*

DC/Vertigo: *4 issue miniseries 1999-2000*

Starting with an adaptation of *Destination Moon*, this soon settled on the generally imaginative and well drawn short science fiction strips that saw DC very nicely through the 1950s in a number of titles. Notable contributing artists include Alex Toth (17), Bernie Krigstein (32, 33), Murphy Anderson in almost any issue to 50, and Carmine Infantino in almost every issue to 150, and plenty of Gil Kane. The first ongoing character was Captain Comet, introduced in 9. Adam Blake's future identity was selected by his father, who watched a passing comet and told his infant son that this signified he was destined to become a great man. Exhibiting powers and a supernormal intelligence, Adam was born with abilities that wouldn't be common on Earth for 100,000 years. Of course, this being the 1950s, he adopted the identity of Captain Comet to protect Earth. Although one of comics' first mutants, this average science fiction stuff lasted until 49.

104 saw ongoing series reintroduced, initially tentatively with the Mike Sekowsky, then Infantino-drawn Space Museum, in which father and son visit said museum, prompting a Gardner Fox story about one of the artefacts therein. The début of Star Hawkins in 114 (who appeared sporadically until 185) instituted a permanently muddled future detective who relied on his robot secretary Ilda to pull his fat out of the fire. There was a curious romantic subtext on her part also. 117 introduced the best known ongoing feature to grace the title, John Broome and Gardner Fox's Atomic Knights, with lovely Murphy Anderson artwork. The story's set after an atomic war, and the knights bring law and order to lawless times wearing old-fashioned medieval armour that somehow also shields them against the prevalent "nuclear radiation". Inventive and beautifully drawn, the series ran until 160, and ran as reprints in 217-231. Animal Man arrived in 180 and ran sporadically thereafter, in an attempt to woo the superhero audience. Able to adopt the characteristics of any animal, he never caught on here, and was destined for better things in the 1980s. There's a case to be made for 187's débutante the Enchantress being the original bad girl, as mild-mannered June Moon transformed into the unrestrained sorceress, but the stories were half-hearted, and, once again, she would be destined for better moments in the 1980s *Suicide Squad*.

Strange Adventures is most remembered for Deadman, created by Arnold Drake. It starred a murdered circus acrobat whose ghost possessed living humans as he searched for his killer, a mysterious man with a hook replacing one hand. It's a mixture of *The Fugitive* and *Quantum Leap* (which it preceded by two decades). Neal Adams brought his distinctive and dynamic illustrative style to the ghostly detective, although Carmine Infantino drew Deadman's début in 205. The story, incomplete when *Strange Adventures* ousted all originated strips, was concluded in *The Brave and the Bold* after several Deadman guest appearances elsewhere.

With 217 DC finally made the obvious decision and moved their best-known space adventurer Adam Strange into *Strange Adventures*. Sadly, it was all as reprints from 217, although they provide a cheap way of obtaining some classic old stories, along with one final new Adam Strange story by O'Neil, Kane and Anderson in 222. 226-236 are all giant-sized issues with plenty of choice reprint shorts. All in all, with the exception of Deadman and the charm of Star Hawkins, there's nothing remarkable about Strange Adventures other than its consistency. Throughout the run it offered competently crafted material, and any issue sampled at random is likely to provide a diverting read.

The series returned under the Vertigo imprint where the emphasis was definitely on the strange now, with more adult themes. 1 features the talents of Brian Bolland, writing as well as drawing, Dave Gibbons, Bob Rodi and Frank Quitely, so you know you're onto a good thing. The rest of the series has nice contributions from Richard Corben (3), Klaus Janson (4) and Bruce Jones (4), but is hit and miss, although with enough different styles of art to satisfy all tastes.~HY

STRANGE ATTRACTORS

RetroGrafix: *15 issues 1993-1996*

Caliber: *2 issue microseries ('Moon Fever') 1997*

Charming science fiction saga by Mike Sherman and Michael Cohen. Sophie, curator of the Museum of Lost Things on Sisyphus, meets and falls in love with a diplomat, E-Meson, who becomes influenced by a magic amulet and leaves to marry her best friend, Widow. At the wedding, however, he kills Widow's father, H.R. Widower, the richest, most powerful man in the solar system. From then on things become progressively stranger as Sophie finds herself drawn into a world of rebellion, where the actions of the resistance have been documented in code in her favourite comic, *Spicy Space Stories* through the 'real' adventures of Pirate Peg and her Moon Marauders. 'Moon Fever', still unfinished, concerns Pirate Peg's search for vengeance against a former comrade who betrayed the Marauders. *Strange Attractors* is a lively, witty story that is frustratingly incomplete. 1-7 are collected as Chaos Jitterbug.~NF

Steve Ditko's STRANGE AVENGING TALES

Fantagraphics: *One-shot 1997*

There are two main themes to these short stories, ironic comeuppance and "the world owes me a living" liberalism. The first are illustrated in the sort of horror tales that Ditko drew for Marvel and Charlton, the second in one or two page gag strips. Whatever the subject, Ditko's lost none of his storytelling skills: here are doomed men whose final understanding of their fate is laid out in full before us. On a lighter note, it's worth mentioning that in the absence of any comment from Ditko himself, there are comments about him reprinted from *The Comics Journal* and an advert for that magazine with tag lines like "Aesthetic criticism that may infuriate Ditko". One day, we may get issue two but in the meantime...~NF

STRANGE COMBAT TALES

Marvel/Epic: *4 issue miniseries 1992-1993*

STRANGE DAYS

Eclipse: *3 issues 1984*

Billed as the first "truly New Wave comic", *Strange Days*, a collection of stories by Pete Milligan illustrated by Brendan McCarthy and Brett Ewins, certainly looked radical compared to the rest of Eclipse's output. Apart from the surreal, drug-fuelled Shockwave, for which McCarthy conjured up amazing watery landscapes above which floated huge vessels in the shape of famous people's heads, the other strips were firmly rooted in superhero tradition, but given enough of a spin to make them fun and cool. Unfortunately, Johnny Nemo, stylish future PI, and Paradax, the gaunt, gauche teen superhero, didn't catch on, although these characters survived the title's brief lifespan to appear in UK newsstand anthology *Deadline*, and the Paradax stories were collected as a one-shot.~FJ

STRANGE DAYS

Marvel: *One-shot 1995*

Adaptating the movie of the same name, this tells the story of an ex-cop, now pedalling black-market memories to those who wish to relive others' experiences. It's a sleazy life, and he's only just getting by until he's given a clip showing the murder of a high-profile rap star by the police. Now staying alive just got a lot harder. This is a decent adaptation of what was not a bad film, though the artwork is problematical with Mike McKone's pencils generally more attractive than this would lead you to believe.~DB

STRANGE EMBRACE

Atomeka: *4 issue miniseries 1993*

A criminally neglected masterpiece that comfortably sits alongside the most highly regarded comics of the past decade. As a study in malevolence and truly horrific obsession there's nothing to match *Strange Embrace* in comics. Writer and artist David Hine begins with the psychic Alex Steadman, who murders his parents before becoming a tenant in a vast house owned by the reclusive, broken Anthony Corbeau. Probing his mind as he sleeps, Alex learns of Corbeau's youth, seemingly one of callous indifference to those around him in keeping to a solitary indulgence. As more of Corbeau's family history seeps through, a tragic story is revealed, fleshed out by the hidden diaries of Corbeau's long-deceased wife. Magnificently plotted and considered down to the smallest observations, this deeply disturbing story is ideally matched by Hine's art. Jagged and dark, his choice of African tribal carvings as a recurring motif provides profoundly unsettling primal imagery to counterpoint the preposterously formal turn-of-the-century domestic structure. In a truly graphic novel that's part Joseph Conrad, part E.M. Forster and part Edgar Allen Poe, the shocking events depicted have resonance that remains long after the story concludes. If you're interested in intelligent adult comics you should spare no effort in locating this series, and that it's yet to be collected in more durable format by any publisher is a woeful oversight.~FP

STRANGE HEROES

Lone Star: *6 issues + 2000 to date*

Two strips share this comic, with seemingly only one living up to the title. 'Spellbinder' concerns an apprentice sorcerer under the tutelage of a master mage who lost a duel and is now a cat. Three good pencillers to date illustrate, and Bill Willingham's scripts are funny, creative and unpredictable, with 5's dealing with a nest of monsters in resourceful fashion particularly appealing. Willingham's coasting for 'Otherland', though. He's good enough that it's slightly better than standard lost land fantasy, but it hardly shines so far.~WJ

STRANGE KISS

Avatar: *3 issue miniseries 1998*, 3 issue miniseries (Stranger Kisses) 1999*, 3 issue miniseries (Strange Killings) 2002*, 6 issue miniseries (Strange Killings:'The Body Orchard') 2002*

Warren Ellis at his most excessive and gratuitous in these tales of William Gravel, defrocked SAS Sergeant Major and combat magician, as he reluctantly and periodically saves the world from the bizarre and the unknown. In *Strange Kiss* nasty lizard things are possessing the detritus of society in what Ellis treats as an exercise in vulgarity. In the sequel, an examination of deviancy and sexual excess, hookers undergo drastic physical modification as the debauched rich and powerful create new experiences for themselves. Gravel must deal with the threat of the kind of money that can turn an entire city against you. *Strange Killings* delves into Gravel's past in England where a prison riot has cost the Government a crack unit of SAS sent in to quell it. In 'The Body Orchard' Gravel's old SAS squad seemingly goes rogue. Is it what it seems or is it part of a plan to keep America destabilised? Once Ellis gets past a juvenile obsession with showing off how sick he can be, the stories are well paced horror thrillers, but Mike Wolfer's art is adequate at best.~WW

STRANGE PIRATE TALES

Big Hairy Ape Comics: *1 issue 2000*

Wally Wood is the acknowledged influence on creator Steve Mannion, and these are very silly pirate tales indeed, largely featuring the terrifying Brownhole Johnson and the beautiful Sea-Goin' Lil. Nice to look at, but without much in the way of substance, the effect is further diminished by wildly inconsistent art. Buy cheap only.~WJ

STRANGE SPORTS STORIES

DC: *6 issues 1973-1974*

This was editor Julie Schwartz's pet project: sports stories with a science-fiction base. While not up to the Olympic standards of the 1960s stories in *The Brave and the Bold*, this knockout comic sailed along quite well without needing a kick-start. It had lots of balls going for it, with stories and art down to a tee. A nice series to net, but even though it didn't dive in quality, it was just about worth racing or wrestling for. Any more sport puns for future editions will be most welcome.~HY

STRANGE SPORTS STORIES

Adventure: *3 issue miniseries 1992*

Much like an EC anthology, this title has a host, Hall O. Fame, who lives in the Museum of Sports History, Trivia and Oddity. With three short stories, written by Charles Marshall, in each issue, the mix of horror, science fiction and comedy seems to offer something for everyone. There's certainly some fun to be had in a basketball team that includes Abraham Lincoln, John Wayne, Martin Luthor King and Albert Einstein (2). However, there's a predictability to the scripting and the art of Mitch Byrd and Bruce McCorkindale, though attractive, offers no variation in approach to the different types of story being told.~NF

STRANGE SUSPENSE STORIES

Charlton: *Series one 77 issues 1952-1965, series two 9 issues 1967-1969*

One of Charlton's earliest anthologies, temporarily retitled *Lawbreakers Suspense Stories* in 1953 indicating the predominant crime theme in its pre-comics code contents. These first 22 issues feature an element of horror and are largely poorly drawn. Members of Al Fago's shop of artists such as Dick Ayers, Seymour Moskowitz and Tony Tallarico accompany some early Steve Ditko stories and covers from 1954. The sweating man in an electric chair on 19 is a fine example. These issues also feature some of Joe Shuster's last comics work. With 23 the title changed again to *This is Suspense*, reverting with 27 in 1955. Despite the hacked-out scripts from Joe Gill, Ernie Hart, Carl Memling and Ralph Newman some of the later 1950s stories were well drawn, particularly Ditko's in 31-41. Worthy of a mention are the eccentric 'Menace of the Maple Leaves' in 33, 'The Elixir', a fountain of youth story in 36 and 'The Desert Spell' in 34, one of Ditko's best jobs from the 1950s. His return in 1960 (most issues between 45 and 53) saw the brilliant artificial evolution tale 'His Brother's Keeper' in 47 and 48's strange story of 'The Human Powerhouse' with obvious similarities to later Spider-Man villain Electro. 50-74 are incredibly poor. With 75 the title began running Captain Atom reprints before the title converted to *Captain Atom* in 1965. In 1967 a one-shot initiated new numbering and dull mid-1960s

Charlton mystery stories. A year later the title continued and 2 featured 'Second Chance', a great Ditko time travel story.~SW

STRANGE TALES

Marvel: *Series one 188 issues, 2 Annuals 1951-1968 (1-168), 1973-1976 (169-188), series two 19 issues 1987-1988, one-shot 1994, series three 2 issues 1998*

The oldest Marvel title to survive to the superhero era. The first hundred issues exhibit weird and fantasy short stories, with the most notable for the modern reader being the introduction of Fin Fang Foom in 89. Thereafter, two ten-page features share each issue through to 168.

Human Torch in 101-134 takes the biscuit in the corn and hackney departments. Chill to the thrills as jocular Johnny Storm and his doll, dizzy Dorrie Evans, swing through this sixties scene. Stan Lee and Larry Lieber pitched plots and dialogue far lower than their intended juvenile level as they tried to encourage younger readers to identify with the junior Fantastic Four hotshot. Many endearingly laughable villains premiered here, including Eel, Plantman and Paste-Pot Pete. 124-134 co-star the Thing; these inevitably degenerate into continuous wisecracking bouts, written as only Stan the Man can. Ridiculous tosh. Horribly dated. Wonderfully nostalgic.

Doctor Strange began as a weird/fantasy back-up feature in 110 and quickly proved sufficiently popular to win his own continuing series a few issues later. His outstanding early adventure is the epic encounter with the Dread Dormammu, which ran virtually uninterrupted from 126-146, although the latter few issues are essentially drawn-out epilogues. The *Marvel Masterworks* reprint cuts off at 141. Lee's scripts are enhanced by Ditko's pencils; his eerie depiction of alien dimensions and his rendition of various spells are a major factor in the strip's success. Continued stories play a major role thereafter, but turn labyrinthine and turgid as writers and artists chopped and changed. The entire run is available as *The Essential Doctor Strange* Vol 1.

Nick Fury, Agent of S.H.I.E.L.D. started in the pits in 135 but improved constantly throughout the course. Nick Fury, established World War II hero, became Marvel's answer to James Bond as the current-day CIA colonel was promoted to director of espionage agency S.H.I.E.L.D. Plots hinge on a countless abundance of preposterous high-tech gizmos whipped up out of thin air. These serve as an amusing foil for Fury's blunt, coarse and raucous personality. Jim Steranko took control of art from 151 and plot from 154, and the strip soon became identified with his inimitable artistic style. 146-155 are reprinted as *Nick Fury and His Agents of S.H.I.E.L.D.*

After 168, the title fissioned into two comics: *Nick Fury, Agent of S.H.I.E.L.D.* and *Doctor Strange*, the latter inheriting the old *Strange Tales* numbering. However, in 1973 *Strange Tales* was revived as a showcase title with issue 169. First on stage was Brother Voodoo, aka Jericho Drumm, who for five issues mastered the voodoo arts to gain revenge on the Houngan who killed his brother. Plots are thinly disguised by voodoo decorations in one of Len Wein's poorer efforts. The storyline continued in *Tales of the Zombie* 6. 174, 176-177 spotlight the Golem, a legendary humanoid statue animated by a human spirit to serve the forces of good. He was finally laid to rest in *Marvel Two-In-One* 11. 178-181 feature Jim Starlin's first assignment on Warlock. Starlin immediately plunged him into a cosmic epic against the Magus, an alter ego of Warlock from five thousand years in the future. The strip shone with subtleties and hidden meanings, particularly as Starlin used it as a vehicle to express his dissatisfaction with the Marvel hierarchy. Spot the 'Cosmic Code' stamp of approval on 179's cover. The story continued in Warlock 9. Doctor Strange reprints from 130-141 serve as *Strange Tales'* swan song.

When sales on the second series of both *Cloak and Dagger* and *Doctor Strange* faltered, Marvel revived an old title with an old format in 1987. Both features ran ten-page strips in each issue. Writers Bill Mantlo and Terry Austin plus various artists recycled rites-of-passage dramas around the young teenage superheroes Cloak and Dagger. Forgettable, juvenile approach. Their story continued directly in *The Mutant Misadventures of Cloak and Dagger*.

Peter Gillis and a mixed bag of artists engaged Doctor Strange on a single storyline throughout this run. After a promising start, it descended into a routine pilgrimage which depended heavily on Gillis' final few issues of *Doctor Strange*. The Doctor's adventures continued directly in *Doctor Strange, Sorcerer Supreme*. The 1994 one-shot is a multi- flashback with the Torch, Thing, Nick Fury and Doctor Strange, composed in the early-1960s *Strange Tales'* style with a fittingly daft plot. The third series is a hasty resurrection of the 1998 *Man-Thing* and *Werewolf by Night* titles following their cancellations. Both storylines are continued in a sixty-four page anthology title with styles and creators unchanged. Marvel's ill fated *Strange Tales* imprint dives to an inglorious termination as this flagship title is prematurely chopped with issue two, leaving both main feature plotlines unresolved. Humiliation is complete as the ten page back-up similarly ends with the tag line "To Be Continued!"~APS

STRANGE WEATHER LATELY

Metaphrog: *10 issues 1996-1999**

The first, magazine-sized, issue is a collection of busily illustrated shortish strips about everyman Martin Nitram. Subsequent standard U.S. comic sized issues, in a more confident style, painted in grey tones, tell one continuing story. It's all a curious mix of downbeat urban realism and excursions of varying wildnesses into coincidence and general weirdness. Martin isn't actually seen taking hallucinogenic drugs so maybe he's schizophrenic, or you are, or strange things really happen! Who cares? Workshy dopers and other slacker connoisseurs, probably.~GK

STRANGE WINK

Dark Horse: *3 issue miniseries 1998*

A less than unified anthology of paintings, strips, illustrated prose and poetry featuring artist John Bolton. The material is from the 1980s and early 1990s and all the strips were published (often in full colour) in UK titles such as *Crisis* and *Expresso*. There is an amusing series of pokes at famous painters including Picasso, Van Gogh and Bosch written by Graham Marks. One for the devotee.~SW

STRANGE WORLDS

MPI: *2 issues 1958-1959*
Male: *3 issues (3-5) 1959*

Despite the unfamiliar publisher names, this science fiction anthology was produced by the company that would within two years become Marvel. The standard of the artwork is high, with work by Steve Ditko in most issues, backed up by the likes of Jack Kirby and Al Williamson, but the stories are utterly forgettable. Still, if you're lucky, you may forget them so quickly that you don't notice that the plotlines are being reused even within the space of five issues. Is this a record?~FC

STRANGEHAVEN

Abiogenesis Press: *14 issues + 1995 to date*

Gary Spencer Millidge's self-published black and white series reads like a cross between *Twin Peaks* and *The Prisoner*, written by someone on valium. A man comes to a small, almost clichéd English village somewhere near the coast on Dartmoor and finds himself trapped there. All roads lead back into the village, and he soon becomes enmeshed in the ritualistic lifestyle the villagers lead. Gradually he realises that many of the inhabitants arrived by accident and, like him, seem unable to leave. Millidge throws in loads of mystical elements into a very English brew – the Masonic Knights of the Golden Light, ghosts, miraculous weather, and a murder mystery to boot. The art is heavy on detail and stiff with photo referencing but the overall effect is pretty. Quirky but commercial. Two collections are available.~FJ

STRANGER IN A STRANGE LAND

Rip-Off: *1 issue 1989*

Excellent cartooning from Bruce Bollinger, but his stories of "an ageing hippie lost somewhere in the Bible belt" do no more than raise the occasional grin. It's seedy and it's offbeat, but it's not very funny.~WJ

THE STRANGERS

Malibu: *26 issues, 1 Annual 1993-1995*

The Strangers are a team of superheroes who all acquired superpowers at the same time when the Jumpstart effect hit a cable car in San Francisco, which is incredibly convenient. They start by pursuing an alien woman, Yrial, who lives on an island in the sky and whose leader claims to know why they got their powers. He's not about to just tell them outright though, is he? Grenade, Atom-Bob, Zip-Zap, Spectral, Lady Killer and Electrocute aren't the greatest names in superhero history, but Steve Englehart's scripts concentrate more on the people inside the costumes, ensuring that the code names aren't overused.

The Strangers help Hardcase and Choice against Aladdin in 4 and are then involved in the 'Break-Thru' crossover (7), which goes some way to explaining the origins of the Ultraverse. 8 begins the story-line that examines the mystery of Yrial and the island in the sky, concluding with 12. The introduction of villain Pilgrim, out to destroy the team, runs through to issue 18 and the first *Night Man* and *Strangers* annuals, wherein Atom-Bob betrays them and the Teknight (ancient warrior resurrected in futuristic armour) gets picked up before joining the team in 19. Taboo and TNTNT (a group of villains) feature in 23-24 and the final issues after Marvel acquired Malibu are part of the 'Godwheel' crossover – which effectively destroyed the credibility and quality of the entire Ultraverse.

Englehart's scripts and Rick Hoberg's artwork make this an enjoyable, different superhero series which quite effectively examines the problems and characters of people suddenly and inexplicably given strange powers. The personal relationships and family ties are well defined and Hoberg's tight pencils (fortunately in most, if not every issue) give *The Strangers* a distinctive feel. It didn't really have enough time to prove itself but might well have done so if Marvel hadn't put the boot in. 1-4 were collected in paperback.~NF

STRANGERS IN PARADISE

Antarctic: 3 *issue miniseries 1993-1994*
Abstract Studios: 14 *issues 1994-1996*
Image/Homage: *8 issues 1996-1997*
Abstract Studios: *45 issues (9-53) + 1997 to date, one-shot ('#93298') 1999*

The Antarctic Press series introduces Katchoo and Francine, two high school friends who are now, ten years later, sharing an apartment. Francine has a boyfriend, Freddy, with whom she won't sleep because she's afraid that that's all he wants from her. Katchoo has a king-size crush on Francine but meets David, who starts to take her thoughts in another direction. Then Francine catches Freddy with another woman and sets in motion a series of events that culminates in Katchoo getting arrested.

The Abstract Studio series starts two months later. 1-9 is a complex story looking at Katchoo's past while exploring her continuing relationship with David and Francine. Hitherto played for laughs, the stories take a more serious turn, as Katchoo reveals that she used to work as a call girl to female clients for Darcy Parker. David turns out to be Darcy's younger brother and there's the small matter of a dead Senator and a stolen $850,000. With the move to Homage (and then back to Abstract) the series leaps forward, as, ten years later, Francine, married to Brad and with a five year old daughter, Ashley, reminisces about the past. Darcy tries to blackmail Katchoo into returning to her for a final job (1-12), while the high school meeting of Katchoo and Francine is explored in 13-15. The plots of Rachel and Tambi, involving a complex criminal conspiracy, are at the heart of 17-38. More is explained about Katchoo's motivations and her relationship to Darcy Parker's girls, whilst, in the 'present', Francine's mother reluctantly summons Katchoo to a depressed Francine. 39-43 cover Francine's concerns over her forthcoming marriage, but everything the reader has been told to this point is thrown into the air with 43-44, which offer several different possible endings to the storyline. With 45, Francine returns to Houston, pregnant but having decided not to marry Brad, and two plots develop, one around whether Francine and Katchoo will manage to recognise their love for each other, the other about a police investigation prompted by the events of 17-38.

The first 14 (reprinted in 49) is the text story, with illustrations, of Molly and Poo, and creator, Terry Moore, often uses text pieces to tell more story or allow for longer dialogues. The one-shot is a collection of illustrated lyrics and poems. Moore writes in a very naturalistic style. Artistically, his simple lines are enhanced by rather ornate inking, but the whole can be very pleasing. The story and characters can be very involving as Moore has created some complex relationships and a suspenseful thriller, but the drawing out of the romance seems overly manipulative, with the frequent interruptions and re-starting of the relationships. These diversions tease the readers, but, perhaps, it's more important that Moore is committed to exploring all aspects of his characters lives and decisions.~NF

STRATA

Renegade: *5 issues 1986-1987*

An ambitious fantasy tale combining various schools of writing, from Edgar Rice Burroughs to Stephen Donaldson. Inspector Flambeau is transported from England to the floating world of Strata, peopled by a number of secret societies, all of which are at war with each other. Accompanied by two Zen Buddhist otters, Flambeau meets the Air Pirates and finds himself switching between London and Strata whenever his life's threatened. Regrettably, the series was never finished. Written by Joe Judt and drawn by Ray Murtaugh and Jim Brozman, Strata was witty and deftly structured; it could have been a cult hit given the opportunity.~NF

STRATOSFEAR

Caliber: *3 issues 1994*

Set in a futuristic Britain, elite operative and weapons specialist Metzger is partnered with an android to tackle Serious Crime. The android is a devout believer in the supernatural and spends a great deal of time trying to convince the world-weary cop that most of their current cases are part of a mystic influx. Paul Birch, Shane Oakley and Gary Crutchley deliver an above-average science-fiction police thriller.~WW

STRAW MEN

All-American: *8 issue limited series 1989-1990*

With its origins in the past of Dr Jon Stonewall and his son, Craig, this is a story about the creation of Craig's son, apparently through the genetic experimentation of his father, and their estrangement. Jon is one of the three heads of the Primacy Movement (Labs, Church and Party), which offers members longer lives and promises a future without disease or genetic defect. Craig, with a deformed hand, hides amongst circus freaks until a government agent convinces him that it's time to confront his father. Michael Vance and R. A. Jones' script is well considered, producing a downbeat story about the dangers of playing god when you're starting from a compromised position. Despite the time span of the narrative and amount of plot, there's some convincing characterisation, though no heroes as such, and the final denouement is not as convincing as it ought to be. Rob Davis' artwork is not flashy, and tells the story perfectly adequately without drawing attention to itself.~NF

STRAY BULLETS

El Capitan: *28 issues + 1995 to date*

With a past consisting of work on Valiant and Defiant comics, no one had any right to expect much from David Lapham's self-published *Stray Bullets*, but it's proved to be one of the finest titles of the 1990s. Each issue focuses on a different character, or set of characters, and is a complete story in itself, but each episode also relates to every other one, combining together to form a larger continuity. The comic also flits from year to year (1 was set in 1997, 2 in 1977, 3 in 1980 and so on). Early episodes were almost unbearably violent, but as the series progressed Lapham has allowed himself to concentrate far more on characterisation, which is a joy, since one of Lapham's greatest skills is an ear for dialogue.

Broadly speaking, *Stray Bullets* has three continuity strands. There's the violent, retarded Joey (1, 3), the troubled ménage à trois on the run from the Mob (Orson, Beth and Nina in 5, 8, 9 and 11), and, most impressively, the dysfunctional childhood of Ginny (2, 4, 7), though elements from all three strands overlap. 6 and 10 featured the exaggerated and goofy adventures of Amy Racecar, apparently a grown-up or fantasy version of Ginny. On top of delightful plotting, cinematic storytelling and gripping dialogue, Lapham's art is a revelation. It's expressive, kinetic and totally unique, making the comics an essential purchase.

With 12, the various strands were pulled together, climaxing in 15's bloody finale. It is to Lapham's credit that he was unafraid to kill off some of his major characters and that, in 16, he was willing to start all over again with a new cast and a new narrative. This next strand of characters included Hank, a nebbish suddenly invigorated by the accidental killing of a road-rage hoodlum, the white trash couple Kathy and Ricky Fish, and 'exotic dancer' Amelia. If anything, this second sequence was even more character-driven than the earlier issues, with Lapham revelling in his descriptions of low lives, losers and has-beens. In time, Beth and hitmen Scott and Monster were reintroduced, effectively making the comic one long, infinitely expanding, decade-shifting story. In addition to his regular narrative, Lapham also created further Amy Racecar stories from time to time, and released two *Amy Racecar* colour specials. The early promise he showed when the series started has been wonderfully realised, and Lapham is now unquestionably one of comics' most accomplished talents. Six collections to date reprint the entire series.~DAR

STRAY CATS

Slave Labor: *4 issue miniseries 1999*

Creator L.G.X. Lillian Mousli's first work to be translated from German. The misadventures of childhood friends Penny and Paul wander in an out of dreamtime, fantasy, past and present. Mousli's simply drawn artwork gives the reader the impression that the story is going to be childlike and straightforward, so the story's twists and turns are all the more surprising as a result. Crude, disjointed, but curiously charming.~SW

STRAY TOASTERS

Marvel/Epic: *4 issue miniseries 1988-1989**

Oddly compelling experiment by writer/artist Bill Sienkiewicz. A woman is killed by what may be a toaster. It mutilates her body as if trying to rewire a machine but gets a couple of wires crossed. A damaged psychologist, Egon Rustemagik, is called in by the police. He's been in a mental institution until recently and the trail leads him from the dead woman to her psychiatrist, an old lover of his called Abby. She, in turn, has taken in a small boy called Todd, who turned up on her doorstep and whose only words are 'toast and jam'. Sienkiewicz's artwork is nearly abstract in places; at other times he uses exaggeratedly cartoony images (like Ronald Searle), detailed brushwork or collage. It's frustrating reading but draws you in with its mystery.~NF

STREET FIGHTER

Ocean Comics: *4 issue miniseries 1986-1987*

Enjoyable masked crimebuster romp in the style of *The Shadow* or *Doc Savage*. Adam Ranger aims to smash the drug rackets whilst searching out the secrets of his own lost identity. Sparse, underplayed script from Ron Fortier aptly illustrated in a Steve Ditko style by Gary Kato makes this series worth a look.~WW

STREET MUSIC

Fantagraphics: *6 issues 1988-1989*

Anthology title with day-to-day life as a theme that promises more than it delivers from a list of creators including Rick Taylor, Mark Martin and Richard Sala. The majority of the material is written by Mark Burbey, and the meat of each issue is the eponymous title strip about a mixed relationship in a working-class area. It combines triumph and tragedy, but in a detached fashion, never really inducing the care factor necessary to make the strip work. Consequently the best contributors are Angela Bocage and Carol Tyler. Tyler's strips of appalling jobs she's had, and appalling characters she's encountered in the workplace, are by turns hilarious and distressing. Justin Green's return to Binky Brown stories in 2 would be cause for celebration were it not illustrated text. Green's a top comic creator, but a merely average writer. Buy *The Job Thing*, collecting the Carol Tyler stories, and investigate better anthologies before sampling this.~WJ

STREET POET RAY

Marvel/Epic: *5 issues 1990*

A series of 'hello trees! hello flowers!' poems illustrated with child-like drawings does not add up to an intelligent commentary on the state of the world. One wonders if it was a cynical joke, rather like the *Marvel Fumetti Book*, designed to test just how much crap we'd take if it came from the right company.~FJ

STREET SMELL

Bruce Mutard: *4 issues (0-3) 1994-1998*

In 'The Body' (0), a model has her head removed, because her agent is only interested in her body. Other strips feature a rant against Bikini competitions (1) and 'Bermuda Triangle' (2), in which two boys discover the naked body of a woman in a drain and debate what to do with it. The main strip in 1-3 is 'Love To Know You', about Brian, who wants to go out with waitress, Nancy, but cannot approach her, imagining instead how conversations might go in his head. The strip also covers his feelings about his job in a porno store and about women generally. Creator, Bruce Mutard, is concerned primarily with the exploitation and misinterpretation of women, but his satirical pieces are less telling than his more fatalistic and pessimistic social strips. He has a naturalistic approach to both the writing and artwork, which has similarities to Jaime Hernandez, but grainier.~NF

STREET WOLF

Blackthorne: *3 issue miniseries 1986*

Nathan Blackhorse is an urban avenger who'll deal with gangsters seemingly beyond the reach of the law. Reality-based, this seems to aim at the mood of a superior TV cop show, but the reach of the creative team exceeds their grasp. It doesn't work, because although fallible, our man's character is stuck on 'moody' with an overriding sense of moral justice. It works for Clint Eastwood, but not here.~FP

STREETS

DC: *3 issue miniseries 1993*

Turning-points in the life of hooker Jenny Masden are related in this *NYPD Blue*-style wannabe-noir miniseries. Writer James Hudnall's terse style evokes the grimy, hopeless environment admirably, and the three issues are cleverly constructed so each can be read as a stand-alone story. John Estes and Rob Ortaleza illustrate 1 and 2 well, but sadly John McCrea's tendency to make everyone look amiably loony makes him an inappropriate choice for the third issue.~HS

STREETWISE

Two Morrows: *1 volume 2001*

Having successfully developed a large niche market in nostalgia-led comics magazines, and inspired by a Jack Kirby autobiographical story that opens the book, John Morrow and Jon Cooke approached mainstream comic creators about producing true anecdotal stories. They inadvertently tapped a wellspring. These were stories people wanted to tell, and from

the fine Steve Rude cover of a young Jack Kirby inspired by pulp magazines this is a treasure trove of excellently drawn memories spanning five decades. A brief rundown of topics includes Sergio Aragonés recounting a disastrous performance, Barry Windsor-Smith's UFO encounter, Evan Dorkin's summer camp greed, Murphy Anderson's first shiner, Brent Anderson nearly drowning and John Severin illustrating Roy and Dann Thomas' safari. Then there's Joe Kubert, Gray Morrow, Nick Cardy, Sam Glanzman, Eddie Campbell, Paul Chadwick, Walt Simonson and plenty more. An embarrassment of riches. Two other contributions deserve special mention. Some might feel that with the illustrious line-up Alan Kupperberg is misplaced, but the run-through of his life with comics from child to professional should appeal to comic fans. Then there's Jeff Jones. It's a shame his name ranks so high that his faxed phone doodles saw print. Still it's the only poor page in the book. This is not only good autobiographical comics, it ranks among the best anthologies. In the manner of all zealots, comic fans are perennially searching for the comic that will convert non-enthusiasts. This is a good starter. Roll on volume two.~FP

STRIKEFORCE: MORITURI

Marvel: *31 issues 1986-1989*

In a not-too-distant future outside regular Marvel continuity, Earth was losing a battle against invading aliens. A formula was developed which could give humans the edge but which would kill its recipients within a year. The novelty of the series was that it was planned to move in 'real time', creating a constant stream of disposable heroes who burned brightly and gave their lives for their planet. Perhaps predictably, characters created to last for an average of twelve issues were never going to be much more than throwaway ideas, which made it difficult for the series to build up much of a following. 1 has three pages of early Whilce Portacio art and he also inks some later issues.~JC.

STRIKER

Viz: *4 issue miniseries ('The Armored Warrior') 1992*, 4 issue miniseries ('Secret of the Berserker') 1995, 3 volumes 1998-1999*

High-school student, Yu Ominae, is code-named, Striker, an employee of a foundation dedicated to safeguarding and preventing the use of hidden technology. Empowered by an armoured suit, Yu clashes with CIA and KGB agents in Japan over control of volcanoes, then meets a giant robot awakened by English scientists. In stories first serialised in the *Manga Vizion* anthology, Yu's further adventures see him find Noah's Ark, the nectar of the gods and the Holy Grail. Written by Hiroshi Takashige, this is reminiscent of *Martin Mystery* in using myths and legends as plot springboards, but this is a much more physical series, with little depth of characterisation. The artwork by Ryoji Minagawa is clean, dynamic and not overly stylised. The three volumes contain both of the miniseries (the first was also collected separately in 1993) as well as the material serialised in *Manga Vizion*.~NF

STRIP AIDS

Willyprods/Small Time Ink: *One-shot 1987*

Don Melia organised this fundraiser, offended at a newspaper cartoon perpetuating ignorance about AIDS. He solicited contributions from cartoonists, magazine strip artists, small press creators and beyond. Thus you have Bob Lynch rubbing shoulders with Posy Simmonds, musician Tom Robinson's computer created strip, reprints of an acerbic If sequence from Steve Bell a few pages after tired old *Bristow*, the return of Brendan McCarthy's Paradax, and editorial cartoonists like Clive Griffin. The ignorant pub conversation related by Kate Charlesworth is good, and Hunt Emerson explains where condoms come from.~FP

STRIP AIDS USA

Last Gasp: *1 volume 1988*

This paperback lacks the eclecticism of its British inspiration by presenting mainly comic creators, albeit many distant from the mainstream. More pages produce repeated earnest activism, dissection and mourning. Condoms are popular, with both Terry Austin and Don Simpson original, and the idea of S. Clay Wilson advocating them astounding. Interesting analogies encompass a Bill Messner-Loebs *Journey* strip, Rebecca Huntington drawing Joyce Brabner's junior school experiences, and Steve Leialoha's Poe adaptation. The tale of Africa is more chilling as only the beginning, and history has caught Geof Darrow's Reagan strip. Jules Feiffer makes a telling point, Hal Robins produces an Edward Gorey style condemnation and detailed realistic rendering from Bob Fingerman is a novelty.~FP

STRIPS

Rip-Off: *9 issues 1989-1991*

The adventures of Zack, a horny student, preoccupied with the usual monomania of heterosexual seventeen-year-old males: scoring with the shapely co-eds of his acquaintance, and filling in the gaps between encounters with frenzied masturbation. Predictable and obvious? Well, no. As written and drawn by Chuck Austen, the characters of Zack, his girlfriend Shari, and Lee and Kenna, two fantasy objects of his acquaintance, are complex, engaging, self-contradictory masses of hormones, and hugely appealing to look at, too. The assured, trenchant dialogue makes this a rare sex comic you can enjoy reading two-handed, and Austen's cartoony, Mangaesque art is zany, funny and sexy. Light years removed (and improved) from his painfully constipated early superhero artwork. Sadly, its appearance coincided with the rise of the crazed Anti-Sex League in both the US and the UK, and the series was, as far as we can tell, bludgeoned into extinction by censorious cretins.~HS

STRONG GUY REBORN

Marvel: *One-shot 1997*

Guido Carosella is a mutant whose ability to absorb kinetic energy and convert it into muscle has turned him into a hideously deformed freak. After recovering from a cardiac collapse, he's at a loose end so his 'just good friend' Lila

Cheney (the most popular teleporting rock star in the galaxy) takes him on tour where he's kidnapped by one faction in an intergalactic war. It's fun and frolics – apparently – as Guido and Lila must end a millennia old conflict and get back on stage before the support band finishes. STRONTIUM DOG

Eagle: *4 issue miniseries 1985-1986*
Quality: *One-shot 1986, 30 issues 1986-1989*

Johnny Alpha is one of the mutants despised throughout the galaxy. Largely normal-looking compared with some, it's his pupil-less eyes that reveal him, eyes that see through walls. He's a Search and Destroy agent, one of the few professions open to mutants, with the pejorative term Strontium Dog deriving from the SD on his official badge. The most inventive of Alpha's devices is the time bomb. On detonation the victim remains frozen in time and space for a fixed period while Earth continues its rotation. The result is one victim stranded in space without oxygen. Strontium Dog's companion is Viking warrior Wulf Sternhammer, and the only other major recurring character is Gronk, a timid furry alien.

The miniseries is a biography of Johnny Alpha, intertwined with the political campaigning of Nelson Kreelman, who is calling for mutants to be outlawed. The Quality series is largely a succession of missions. Alan Grant writes this as a relatively straightforward adventure strip, and Carlos Ezquerra draws almost every issue. He's a dynamic and imaginative action artist, but his sometimes almost pointilliste style isn't to everyone's taste.

In the story told over 20-25 Wulf Sternhammer dies, and Alpha is framed for his murder by gangster Max Bubba. It was a brave move by Grant, and one that works. With the old buddy act no longer a feature his plots are more creative, and more interesting supporting characters arrive. Middenface McNulty grows into a sardonic and resourceful cast member, and Durham Red, introduced in 26, became the most popular Strontium Dog. She's a vampire, as likely to feast on her victims as turn them in, and her début is during a plot involving the kidnapping of Ronald Reagan. Start with the final issues, and if you like what you read sample further.~WJ

STUCK RUBBER BABY

Paradox Press: *Graphic Novel 1995*

Stuck Rubber Baby is cartoonist Howard Cruse's masterpiece, and it's no exaggeration to label it one of the finest comics ever published. Its 210 pages trace the coming of age and coming out of Toland Polk, a teenager growing up in the fictional Southern town of Clayfield. Much of the story has an autobiographical feel, so unsurprisingly Toland's gradual awareness of his homosexuality is extremely convincing. Cruse's masterstroke, however, is to link Toland's sexual awareness with both the progressive emergence of the gay movement throughout the 1960s and the fight for racial equality. Many of the book's most powerful scenes involve the constant, almost institutionalised, racism of the South, exemplified by clashes between black protesters and police. For all its length and weighty themes, Cruse never once forgets that this is all meant to be entertaining, and the book is a delight from cover to cover. The art's good, too.~DAR

STYLISH VITTLES

Dementian: *1 volume + 2002 to date*

Tyler Page's *Stylish Vittles* chronicles the progression of his relationship with Nanette in excruciating detail. It sometimes seems no small moment is too trivial for inclusion, with Page not realising his experience is common to most of the western world. Fully a quarter of the book is given over to a self-indulgent opening sequence, and just as events become interesting with differences of opinion over religion driving a wedge between Tyler and Nanette there is the bitter phrase "to be continued.. " Page will develop into an excellent artist, but this is a frustrating volume.~FP

SUB-MARINER

Marvel: *72 issues, 2 Annuals 1968-1974, 4 issue miniseries (Prince Namor, The Sub-Mariner) 1984*

Continuing from the Sub-Mariner's feature in *Tales to Astonish* (after the one-shot stopover in *Iron Man and Sub-Mariner*), this was a well-crafted mainstream superhero comic with occasional bouts of inspiration. In 1-8 Roy Thomas and John Buscema produced solid entertainment that was almost proto-sword-and-sorcery due to its Atlantean setting. Subsequent issues never quite matched the momentum, though Thomas handed guest stars excellently, from the Thing (8) and Dr Strange (22) to the first, and unofficial, gathering of the Defenders in 34 and 35. Thomas occasionally used the comic to re-introduce 1940s characters, notably the original Human Torch in 14 and the Red Raven in 26. The comic only regained a sense of direction, however, at the end of Thomas' tenure from 36-39, where Namor marries his sweetheart, the Lady Dorma, who is then killed. At the time that was a daring move that resulted in his abdication and subsequent quest for his father, effectively relocating the strip to the surface world. Visually, Thomas was well served by Marie Severin (9, 12-19, 21-23, 44, 45), Sal Buscema (25-36) and Ross Andru (37-39), though the strip only really came alive again under Gene Colan (40, 43, 46-49). Thereafter Gerry Conway didn't do very much with the dangling quest plot, and eventually ended up killing Namor's father in 46.

50 saw the return of Sub-Mariner's creator (way back in 1939) Bill Everett, whose playful, perhaps simplistic, writing polarised the readers of the day. Artistically, however, he had never been better, and each issue is a finely detailed treat. Sadly, Everett was plagued with ill health, resulting in a number of fill-in artists (the superb Dan Adkins in 56, Sam Kweskin in 58-60), and portions of 61 were the last comic pages he drew. Illness also led to

back-up strips. There are 1950s reprints in 53 and 54, and a gem from Alan Weiss, again in 54.

Everett's successor, the normally excellent Steve Gerber, never really got to grips with the character, and he wasn't helped by uninspired Don Heck art. More interesting was Gerber's 'Tales from Atlantis' back-up strip, drawn by Howard Chaykin (62-64) and Jim Mooney (65-66), but cancellation was no surprise. The last issue, by Steve Skeates and Dan Adkins (hampered by Vince Colletta's inks), was notable for an early sympathetic portrayal of homosexuality, albeit somewhat disguised.

In an attempt to update *Sub-Mariner* the 1984 miniseries explored Atlantis in greater depth than before, and ultimately led to Namor being forced to abdicate the throne. Despite some quite interesting insights into Namor's rather haughty personality from writer J.M. DeMatteis, there's little outstanding here.~DAR

Saga of the SUB-MARINER

Marvel: *12 issues 1988-1989*

Prior to their relaunch of the Sub-Mariner in the ongoing series *Namor* in 1990, Marvel issued this 'guidebook' to his career so far. It covers his début in 1939 and takes him up to the present day, but while continuity maven Roy Thomas certainly tied up the threads, his obsession for detail led to a rather leaden pace. Informative, but very dull.~HS

SUB-MARINER COMICS

Timely: *42 issues 1941-1949 (1-32), 1954-1955 (33-42)*

Hybrid offspring of Atlantean Princess and American explorer, Namor the Sub-Mariner, belonging to both worlds but at home in neither, battles with his conscience. Will he join his father's people or conquer them? This dilemma occupied the first few years of the Namor stories, and as late as the start of World War II he wasn't quite sure. He eventually joined the allies, but perhaps it was out of expediency, and his amorality remained fascinating. Sadly, after the war his creator Bill Everett had less to do with the strip and the tone changed noticeably. From the brooding Atlantean figure of the past Namor became seemingly an American. His vast physical power stunted, he was reduced to a muscleman in trunks, albeit one with a triangular head. Fighting petty crooks and murderers he and his cousin Namora, a Janice-come-lately addition in 1947, looked out of place. Eventually the Great Beach Bully kicked sand in his face and he retired.

Like his contemporaries Captain America and the Human Torch, Namor enjoyed a 1950s revival, but unlike them he had the advantage of a revitalised Bill Everett, at perhaps the height of his creative powers, writing and drawing. A few stories pandered to the Commie-bashing mood of the day, but they were still exquisitely rendered, and most tales dwelt on his role as protector of the oceans. Eerie monsters, beautiful women and frequent visits to his Atlantean homeland filled the strip. A flawed, but lovely ten issues were released before he sank once more into the depths, later re-emerging as a supporting anti-hero in *Fantastic Four* 4.~HS

Dark Horse: *4 issue miniseries 1998-1999*

Mark Schultz wrote and painted covers for these undersea adventures, very similar in tone to the *Xenozoic Tales* series fans the world over wished he'd continue instead. Roger Peterson's art is the difference between the two series. He's far from inadequate, but with Schultz writing, he falls short given the obvious comparison.~WJ

SUBURBAN HIGH LIFE

Slave Labor: *3 issues 1987, one-shot 1988*

Edited by Frank Cirocco, this is an anthology of short humour strips, mixing parody, photo montages, real and fake advertisements, 'true' facts and other oddities. Regular features include Rick Geary's 'Suburban Romance' one pagers, Norman Dog's 'Knuckleheads', and Cirocco's own 'Lost Episodes' series with parodies of the *Addams Family*, *Leave It To Beaver*, *Mr Rogers* and the Jetsons (by Scott Shaw!). Trina Robbins explains how to keep Spam fresh as a regular meal (1), while Scott Saavedra explains The Moderne Family (1), provides an episode of Java Town (3) and tours Uncle Fuji's Fun Factory (one-shot). Other contributors include Mark Martin (3), Tom Tomorrow (3, one-shot) and Joe Sacco (3). It's all quite strange, but usually a lot of fun too. The one-shot is magazine sized.~NF

SUBURBAN JERSEY NINJA SHE-DEVILS

Marvel: *One-shot 1992*

Presumably intended as a hilarious parody, though any comic that opens with a child murder can't be much fun, under any circumstances. This repulsive item rapidly becomes a standard Steve Gerber misogynistic, misanthropic tirade, with the attempted comedy elements, and Amanda Conner's artwork, looking way out of place. Once you've read the title, you've had the best there is in this comic. For curiosity seekers only.~HS

SUBURBAN NIGHTMARES

Renegade: *4 issue miniseries 1988**

Inventive retro look at the 1950s, continuing themes explored by Larry Hancock, John Van Bruggen and Michael Cherkas in *Silent Invasion*. Each issue has a chapter of The Science Experiment, a cautionary tale about a purpose-built community near an atomic testing site, a new short strip and one reprinted from *Silent Invasion*. The moods and art styles are varied, but all stories deal excellently with disturbing occurrences on some level.~FP

SUBVERT Comics

Rip-Off: *3 issues 1970-1976*

The early work of Spain Rodriguez is an acquired taste. The heavy-handed political moralising and basic humour of his 1960s and early 1970s work is wrapped in stories looking like nothing so much as poorly drawn Marvel material. His Trashman character, starring in all three issues, is a heavily armed avenger, espousing right-on 1960s politics as he encounters the minions of fascist America and blows them away. Twenty-five years on it's very hackneyed, and issues of *The Punisher* have better confronted political issues.~FP

SUDDEN GRAVITY: A Story of the Panopticon

Caliber: *4 issues 1998-1999*

Greg Ruth's intense psycho-drama set in a nameless psychiatric institution in the heart of an urban sprawl. The action centres around a reluctant and burned out psychiatrist, recalled to treat the city commissioner who has just murdered her family and burned down her home. He develops a growing awareness that the staff are more disturbed than the patients and that many of the inmates would be better treated by an exorcist than a psychiatrist. Our eponymous heroines, sisters and nurses with the Peace Corps, not only fly, but ski, trek – hey, these babes would pogo-stick to get to their patients if they had to! Supremely silly stuff, worth a look if you come across 'em cheap, but for God's sake don't pay big money for them.~HS

SUGAR AND SPIKE

DC: *99 issues 1956-1971 (1-98), 1992 (99)*

A marvellous humour series created by Sheldon Mayer. Neighbours Sugar Plumm and Spike Wilson were two infants who could walk but not talk. They communicated in baby talk, not understood by adults, of course. Although never a top seller, DC maintained Sugar and Spike to ensure a young entry-level readership to comics. The readers more often than not saw the world through the eyes of the youngsters, which is why adults are usually only seen as legs (though you do see what the tots' parents look like in 5). The loveable brats had amusing, yet somehow appropriate names for various objects, e.g., a mirror was a "magic window". The supporting cast also played an important part, the most surreal being Sugar's 125-year-old great-great-great-grandfather, who first appears in 24. Some of the tots' friends included Little Arthur, a four-year-old pest, Bernie the Brain, a clever little brat, Zelda, a toy robot, and, in the early 1970s, a black child, Raymond Smith.

1-63 featured several short pieces each issue, but 64 ran the first full-length story, edging the series into slapstick, more in tune with Mayer's 1940s *Scribbly* series (Scribbly made his first appearance in many a year in 30). Mayer's failing eyesight along with falling sales led to cancellation, although new stories were produced for foreign markets a decade later. A previously unpublished final issue arrived as one of the otherwise all-reprint *Silver Age Classics* in 1992, and a facsimile of the first issue was published in 2002.

Any issue is recommended as a sample, although copies in good condition are very hard to find. Besides being thumbed by grubby young fingers, many have the paper doll cut-outs cut out. Don't be put off by the childish appeal of the series: as with today's *Rugrats* (for which this was very much a forerunner) *Sugar and Spike* works on two levels. It's ostensibly for children, but older readers will appreciate the situations, and the finesse with which the characters are drawn. One thing will become quite obvious: as in real adult life, the bossy female, Sugar, was able to wrap the poor sap, Spike, around her little finger!~HY

SUGAR BUZZ

Amaze Ink: *9 issues + 1998 to date*

This anthology features numerous different strips all by the same creative team of writer Ian Carney and artist Woodrow Phoenix. Strips are also occasionally guest-written by Ian's eight-year-old son Jake, but this works surprisingly well, with most illustrated by guest artists. The art is spare but stunning, sort of "nostalgia retro", 1963's view of the future. Jetsonesque, but done with more care and attention than any animated show ever bothered with. As for the tone of the stories, imagine sitting through a classic Hanna-Barbera cartoon marathon stuffed to the gills with caffeine, mild hallucinogenics and Chocolate Frosted Sugar Bombs. It's very wacky stuff. There are usually three features to an issue ranging from fifteen or so pages down to snappy 'n' stylish one-pagers, no continued stories, and each issue can be read independently.

A plethora of imaginative characters have been introduced. Splash Girl (5) is a delusional superheroine who thinks everyone she meets, whatever their gender or species, is her missing husband Stan (who presumably fled screaming years ago) and expends her mighty marine-based powers trying to persuade them of the fact. Ultra Spacers (6) are geriatric former heroes of the galaxy on the verge of being compelled to retire. Can they avoid the twin menaces of forced redundancy and the treachery of an ex-comrade? Sugar Kat (3) is bored with her life as an international superstar and idol of millions, so decides to horn in on her twin sister Rebecca's detective agency. Armed only with her preternatural glamour and the uncertain, perpetually-dying cat Yearbook, they solve bizarre mysteries. The couple in 'Bad, Bad Monkeys' (4) are not named Ricky and Lucy Ricardo, but it is they. They decide to adopt, but instead of a grateful orphan, they get the world's wickedest monkeys! 'My Wife, The Robot' (4) is a flawless one-page tribute to *Bewitched* and *I Dream of Jeannie*, in which the robot wife causes chaos when hubby brings the boss home to dinner. A deeply poignant final panel. Pants Ant (2): "He's an Ant! He wears Big Pants! Armed with an endless supply of trouser-related weapons, he makes the world safe for trews-wearers of all persuasions!" The anthology format means that not everything will connect. 'Horse Eat Dog!' (5) is repetitive and tedious, 'Precious and Percival' (7) confusing and a real downer, and do we ever need to Upchuck Duck (1) again? The twisted, gonky humour has a real appeal, though, and the few misfires are offset by the many, many gems. Early issues are available in a collection.

Very few of the series ever repeat, as Carney and Phoenix have far too many new ideas to display, but a couple have spun off into other comics. Sugar Kat has starred in a three issue series and a crossover with *Skeleton Key*, and Pants Ant, who gained his own Trouser Hour special. He also has a pilot for the Cartoon Network on the way, while Sugar has been optioned by Warner Brothers, so those two, at least, are the unqualified pick of the litter. But there's so much more! The Holiday Heroes, with the Whitsun Table Lamp (4)! Bubblegum popsters Batchelor Speedbump (9)! Jesus' Two Dads (8)! I want it all! I want it now! I.... think I need to go adjust my medication...!~HS

SUICIDE SQUAD

DC: *Series one 66 issues 1987-1992, series two 12 issues 2001-2002*

A preposterous name belies an interesting premise and the first series is excellent superhero adventure. Supervillains imprisoned for life can have their sentence commuted by undertaking a government mission. The catch is that the mission could result in their death.

1-2 are as good as any, introducing those who carry a large portion of the run. They're largely flotsam and jetsam who'd been knocking around for years, but about whom no one really cared. Given almost blank slates, writers John Ostrander and Kim Yale transform the likes of Nightshade, Deadshot, Nemesis, Count Vertigo and Captain Boomerang into memorable characters. The integral costumeless supporting cast are also particularly well conceived and handled. The finest creation is Amanda Waller, the formidable squad leader who manipulates, coerces, blackmails and just plain stamps her authority all over everyone. She's a one-person lesson about the corruption inseparable from absolute control, yet alongside the powers-that-be as portrayed in the series she's almost virtuous. Ostrander and Yale have favourites, but generally remain true to the concept, resulting in a turnover that keeps the interaction, and therefore the title, fresh. There are also well-considered plots for the Squad's missions, and sympathetic artwork from pencillers Luke McDonnell, John K. Snyder and Geof Isherwood. They're not the first comic artists to come to mind, but all can adapt to suit action scenes or quieter moments of introspection and interaction. Some issues (8, 19, 31) are little but. For the best early action issues see 5-7, in which a rescue mission to Russia goes catastrophically wrong.

39 wraps up the first portion of *Suicide Squad* as official sanction is withdrawn, leading to the Squad working on a freelance basis. The major difference is that there's no one pulling Waller's strings, resulting in her becoming even more forceful and a more active member of the team. From 52 the

costumes are little in evidence, more in keeping with the covert overseas operations undertaken (although you wouldn't know this from the covers). Representative of later missions, 'The Dragon's Hoard' (53-57) is a complex thriller with various parties interested in obtaining a cache of weapons hidden in Cambodia.

The revival is okay, but doesn't match the previous series. Keith Giffen adopts warped humour and a bleak tone from the off, signalled by the decimation of characters he seemed fond of during his Justice League run. Paco Medina's stylised art won't appeal to all, but there are guest shots from Russ Heath (4) and John Severin (10) dealing with the post World War II past of the Squad's leader, Sgt Rock. Familiar faces return, with Deadshot in 5 particularly good. The new cast have a spark, and Giffen's method of storytelling (follow the dialogue closely) is well chosen. The best issues are the finale in 11-12, adding a twist to the entire series that will mean little to anyone who hasn't read the remainder.~FP

THE SUIT

Virtual Comics: *3 issues 1996*

Considering this was a launch title from a new company there's astonishingly little creative effort here. Perhaps it was hoped the high production would conceal the artistic deficiencies. Only writer Dan Chichester emerges with a little credit, with a half-decent idea about alien armour that constructs genetic duplicates of compatible people to host it. Beyond that, rubbish.~WJ

SUN DEVILS

DC: *12 issue limited series 1984-1985*

Intergalactic space opera with a war against saurian tyrants who, oddly enough, seem to have purchased Nazi strategy plans. Why so many companies considered this science-fiction adventure with a far future energy-distribution team so compulsive is a question for the times. Damning with faint praise, 1-5 have the best Pat Broderick art you'll find, but are otherwise unremarkable. Better by far is Roger McKenzie and Paul Smith's daft back-up strip in 2-4, Mike Mahogany, a hard-boiled detective with a difference: he's a ventriloquist's dummy. These are sixty-four-page, largely reprint comics, each with a different theme: Western, mystery, UFOs or occasionally specific superheroes. There's little of note. 24 has four Supergirl stories from Action 295-298, and delightful nonsense they are. *Challengers of the Unknown* in 25 contains three Jack Kirby stories, of which 'Captives of the Space Circus' has its moments, but the four heroes are, frankly, a dull lot. The Westerns (14, 15, 22) contain some nice Gil Kane stories, with some outstanding artwork in 'Stand Proud the Warrior Breed' (in 15), a rare new story. Although the title is seemingly set in a universe on its own, Bridwell constructed the stories to fit within mainstream DC continuity, and featured little-used characters such as Black Orchid, Wonder Woman's black sister Nubia, and, from the Golden Age, T.N.T. and Dyna-mite. In some ways it was more *JLA* than *JLA*. Bridwell also created the Global Guardians, an interesting range of international superheroes, who in later years would play major roles in the *Justice League* titles. Well worth sampling perhaps via the recent collection.~HY

SUPER MANGA BLAST!

Dark Horse: *27 issues + 2000 to date*

This manga anthology is aimed somewhere between the orientation of *Animerica Extra* or *Smile* and the more adult strips of *Pulp*. 'Oh! My Goddess' strips not printed as part of that series appear in 1-12, replaced by Makoto Kobayashi's 'Club 9', an entertaining comedy about Haruo, a young, naïve, provincial woman, who becomes a club hostess to help pay for her tuition. The strip depicts her misadventures as her natural charm helps her to be successful. Kobayashi's better-known strip (at least in the West), 'What's Michael', the clever and very funny tales of an everycat, are in each issue. Also continuing from previous appearances, the horror adventure series, 3x3 Eyes, by Yuzo Takada, begins with an adventure in Hong Kong (1-7) then sees Yakumo pursuing an amnesiac Pai in China (8-15), before they set off in search of the sacred land and an incense burner.

In 'Seraphic Feather' Apep Heidemann is on the moon investigating a recently discovered alien starship and its connection to three powerful Emblem Seeds. This can be rather confusing, but Hiroyuki Utatane's sleek artwork makes it a pleasant experience at least. Mohiro Kitoh's 'Shadow Star' by contrast, also has polished artwork, but is told in a clearer style. It's the story of young girl Shiina Tamai who finds a strange starfish-like creature that can fly and has morphing powers. She calls it Hoshimaru and then, investigating its origins, meets the shy, Akira, who has her own star creature, Ensof. Masamune Shirow's confusing, but kinetic and occasionally breathtaking *Appleseed* returns in 25, with Deunan and Briareos still working for Olympus city's police force.

Kobayashi's two strips are both excellent, while 'Shadow Star' is the better of the science fiction strips (though Appleseed will have its fans). All of the strips are being issued in collections after enough material has appeared here.~NF

SUPER SOLDIERS

Marvel UK: *10 issues 1993-1994*

It seems that the formula used to create Captain America was shipped to Britain, and applied there as well. The five tedious, fight-crammed issues uniting those who survived its application ought to have prompted any sensible reader to pack the title in, but from 6 matters improve. All-new material began in 8 with a well-produced revival of the Challengers of the Unknown. 11-14 have team-ups connected with a storyline involving the Atom, and 15 offered the Flash and the New Gods.~HY

SUPER-VILLAIN TEAM-UP

The quality varied as did the creative teams with four writers and eight artists in 1-10. Doom's constant conniving to have Namor join him seems forced and eventually he begins to share the title with other bad guys such as the Red Skull and Magneto. 9 is part of a crossover with *Avengers* 154-155, pencilled by Jim Shooter, better known as a writer. Eventually the series just fades away, running out of steam long after the readers ran out of interest.~WW

SUPERBOY

DC: *Series one 196 issues, 1 Annual 1949-1973, one-shot 1980, series two (The New Adventures of) 54 issues 1980-1984, series three 22 issues, 1 Special 1990-1992, series four 100 issues, 4 Annuals 1994-2002*

Superboy first appeared in *More Fun Comics* 101 in 1945, and the adventures of Superman as a youngster were popular in several titles thereafter. The stories were set in Smallville, somewhere in Kansas, and supporting characters included Ma and Pa Kent, who'd found the rocket containing Superman as a baby. 10 introduced Superboy's childhood sweetheart Lana Lang, who, like a junior version of Superman's Lois Lane, was always attempting to discover Superboy's identity, convinced he was Clark Kent. Her snooping was the catalyst for many a story. 1-16 were fifty-two pages, but even when the comic shrank to thirty-two pages it still provided three intricately plotted eight page tales with plot prioritised over characterisation and continuity, exactly the reverse of today's material. There was also an innocence leading to the covers of 55 and 75 featuring spanking!

Superboy 5 featured a character called Supergirl, not to be confused with his cousin, introduced later in the 1950s, and 8 offers the first story of Superbaby! As with other Mort Weisinger edited titles, imagination was paramount. 68 provided the origin and first appearance of Bizarro, an imperfect duplicate of Superboy. The less well-remembered Beppo, the Super Monkey arrived in 76, while 78 featured the origin of the imp from the fifth dimension, Mr Mxyzptlk, and 80 has Superboy meeting his cousin Supergirl for the first time. 104 has the origin of The Phantom Zone, the strange dimension where Kryptonian villains were imprisoned. In 124 Lana Lang rescues a passing alien, and in gratitude she's given a ring enabling her to change into any insect she desires, letting her become Insect Queen, a role she unfortunately didn't assume too often. It made a change from her periodically requiring super-powers. The Legion of Super-Heroes also appear, and in 86 their guest spot introduces Smallville schoolboy Pete Ross, who discovers Superboy's secret identity in 90, but keeps it to himself. 89 has the first appearance of Mon-El, originally thought to be Superboy's long-lost older brother from Krypton. Similar to Superboy in all but costume, he would be a mainstay of the Legion of Super-Heroes, and have his own title as *Valor* in the 1990s. 98 debuts another Legion member, Ultra Boy, and in the same issue Pete Ross is accepted as an honorary member. Naturally enough, Insect Queen is also soon accepted.

Throughout the 1950s George Papp, Curt Swan and (primarily) John Sikela were the main pencillers, with pleasing, open styles. Lack of credits makes the identification of writers far more difficult, but Otto Binder was a mainstay, writing the first Bizarro story. As the years passed we learned more about Krypton. Superboy started as the planet's sole survivor, but more and more Kryptonians popped up, making Smallville an unofficial space-port. Assorted Kryptonian artefacts also provided plots. And there was Krypto the Superdog. He was hidden in the same rocket that brought Superboy to Earth, and had the same powers as his master, and, luckily, a strange sort of intelligence for a dog. He couldn't talk, but his thoughts were distinctly human at times! He even joined his version of the Legion of Super-Heroes in 131, The Space Canine Patrol Agents, a superpowered group of dogs in space. They included Chameleon Collie, Tail Terrier, with a stretchy tail, Tusky Husky, who could transform one of his teeth into a long tusk for prying things open; and who could forget Hot Dog, able to heat himself up like a furnace? The main artists during the early 1960s were George Papp, Al Plastino, and the great Curt Swan. None were recognised for dynamic art, but their styles were perfect for the friendly tone of the series. The giant-sized 147 reprinted many older Legion of Super-Heroes tales along with a new story recounting their previously untold origin.

At the end of the 1960s there was an attempt to make DC titles more dramatic. Newcomer Neal Adams, with his realistic graphic style, became the main cover artist, and this reflected a slight change of mood inside as well. In 145 Ma and Pa Kent shed twenty years, now looking more Superboy's parents rather than his grandparents. With 149 Murray Boltinoff became editor, and replaced the long-serving artists with the far more dramatic style of Bob Brown from 150 (further improved by Wally Wood inking 152-155 and 157-161). The stories, while keeping their charm, also received a boost through the writing of Frank Robbins. Boltinoff used many elements introduced by Weisinger, but wasn't as concerned with continuity, running a story in 158 in which Superboy discovers his Kryptonian parents in suspended animation. This tends to be ignored by Superman fans. Lana Lang matured, though Krypto retained his human intellect, and Superbaby stories were never more than a few issues away, with 167's introduction of Murphy Anderson inks to Brown's pencilling an excellent combination.

By now a standard twenty-four pages of stories incorporated a longer Superboy story and a shorter back-up, a slot The Legion of Super-Heroes occupied periodically from 172. That was an uneventful story, but succeeding in reviving interest in the group. The Superboy stories at the time were unmemorable, even with the return of Weisinger-era mainstay Leo Dorfman to the writing, and it was the occasional Legion back-ups from Cary Bates and George Tuska that grabbed the attention. 184 introduced artist Dave Cockrum. He'd been an assistant to Murphy Anderson, whose style was initially very apparent in his work, and Anderson joined his protégé in 188 and 190. Cockrum's flair and stylings transformed the Legion, bringing the strip up to date with a 1970s version of the future rather than the 1950s version used since their introduction, and with 193's redesigned costumes the team finally looked as if they belonged in the 30th-century. 195 introduced Wildfire, and without warning 197 was titled *Superboy starring the Legion of Super-Heroes*, the Legion having almost usurped Superboy's comic, doing so completely with 259. Although it's always imaginative, there is a repetitive quality to *Superboy* material, and readers wanting to sample material from the 1940s to the mid-1960s are best advised to pick up one of the reprint collections. These are 129, 138, 147, 156, 165, 174 and the hundred-page 185. The 1980 one-shot was the first comic produced by a major company specifically for the comic-shop market.

The 1980s series attempted to emulate the fun stories of the 1960s, the period in which it was set, with writing by Cary Bates and art from the great Kurt Schaffenberger. Superboy was sixteen, in keeping with a policy of ageing Superman and Superboy concurrently. This was a strange title for the times, looking back and recycling old scenarios when everything else was geared to moving forward. It was a pleasant enough, and definitely intended for younger readers. The 'Dial H For Hero' feature moved from *Adventure* to this title, between 28 and 49, and became the longest-running back-up. Readers designed brand-new superheroes, into which the lead characters transformed, with the strip written by E. Nelson Bridwell or Bob Rozakis. Superboy's creative team changes to Paul Kupperberg and Alex Saviuk with 36, but the style remains the same. The only issue of note was the giant-sized 50, featuring an entertaining story by Kupperberg, with art by Schaffenberger and framing sequence by Keith Giffen, starring Superboy and the Legion of Super-Heroes, and a young, bald, Lex Luthor. A must.

The next *Superboy* comic tied-in with the TV series, and the continuity bears no relation to the regular comics. Clark Kent and Lana Lang attend Shuster University (a nice homage to Superman's artistic creator Joe Shuster) and Superboy has more or less just discovered his powers and origin, and starts his career at college. Clark is no longer a wimpy schoolboy and Lana is no longer a snoop. Writer John Moore and artist Jim Mooney (later Curt Swan) produce an adequate title, restricted by TV continuity, although 5 features three strange characters from the thirtieth century. The special ties up all loose ends.

Continuity revisions at DC dispensed with the original Superboy (having Clark Kent begin his career as an adult), so the 1990s model is a clone created by the genial scientists at Project Cadmus as a replacement for Superman when the world believed him dead. Introduced in *Adventures of Superman* 501, he simulates Superman's abilities through "tactile telekinesis". Superboy settled in Hawaii without a dual identity, considering himself as a media star rather than a superhero. The supporting cast are Superboy's manager and his daughter, and Dubillex, an alien-looking telepath and telekinetic who also escaped from Project Cadmus, and who looks after a scruffy little dog named Krypto. Superboy is very popular with the girls and was given a contemporary look with shades, leather jacket and a kinky leather belt around his right thigh. 1-30 are largely the work of Karl Kesel and Tom Grummett, inked by Doug Hazlewood, and are a thoroughly entertaining run. 2 introduces Knockout, a red-headed Amazonian with great strength, and 8, as part of the *Zero Hour* crossover, has this Superboy meeting his 1960s counterpart. It's a sad story that pulls the plug on the old Superboy once and for all. Fans of *Suicide Squad* should check 13-15, and history repeats in 18 and 19, with the new Mon-El, now Valor, arriving. 25-30 feature a major story involving Knockout and those Apokolips favourites the Female Furies, with even the new Supergirl looking in for 28. The turbulent relationship between Knockout and Superboy comes to a head in the final chapter. From 31 Ron Marz writes slightly more seriously, but Ramon Demado's more abstract art didn't mesh well. Marz's best effort is 38-41 where young Supes gets a spot, and another and another. Rather than adolescent acne, his DNA is breaking down, and the eventual conclusion ensures he'll never become Superman. Kesel and Grummett return with 50, starting a story based on Kamandi, The Last Boy on Earth. Our young hero finds himself on an island inhabited by intelligent animals. Some would play supporting roles in later issues. Superman bestows a Kryptonian name, Kon-El, on his young protégé in 59, while 60-64 introduce the concept of 'Hyper-Time' to the DC Universe. With the main setting now Project Cadmus, Kesel and Grummett reintroduce other elements of Jack Kirby's *Jimmy Olsen* stories, with his 1940s character, the Guardian, playing a major role. They depart with 79.

After a slight dip in quality, writers Jimmy Palmiotti and Dan Didio take over with 94, with artist John McCrea, now going over the top with the humour. They end the series in good form with Superboy becoming a superintendent of a building. Cue kooky neighbours and situations with the building becoming a catalyst for various misadventures. Unfortunately, this approach wasn't allowed to develop. Overall the series was a decent enjoyable comic, with the best of the annuals being 1995's 'Year One' story dealing with Superboy's origin.~HY

SUPERBOY AND THE LEGION OF SUPER-HEROES

DC: *62 issues (197-258), 1 Treasury Edition 1973-1980*

In 1973 The Legion of Super-Heroes evicted Superboy's feature from his own title. Short strips written by Cary Bates had been appearing periodically, gradually growing in popularity, particularly since the artist had been Dave Cockrum. With 197, and little warning, the cover-title became *Superboy Starring the Legion of Super-Heroes*. With more pages at his disposal, Bates introduced a greater depth, and when combined with Cockrum's excellent storytelling, wonderful sense of design and bright, clear style, there was a renaissance for the Legion. Cockrum also redesigned the 30th-century world occupied by the Legion, giving it a real futuristic look for the first time. 200's wedding was an early pinnacle, signifying that the Legionnaires were getting older and there was a progression to the strip. Sadly, Cockrum only lasted until 202, being lured away to jump-start a similar revival for *X-Men*.

His replacement, was another new artist, Mike Grell, who made an effort to assimilate Cockrum's style before establishing his own look. 203 was also significant for a death, an unpredictable move despite the large cast. The ties with the past remained as the Legion regularly made trips back to the past to visit Superboy, still nominally the star of the comic. After a while, Bates seemed to lose interest, but a shot in the arm was provided with 209, when the writer responsible for many of the Legion's previous glories in *Adventure Comics* returned. Initially, Jim Shooter didn't seem entirely at ease with the new format. Human-interest stories had been his forte, and in 211 he turned in his best when Element Lad, the sole survivor of his planet's destruction, confronts and nearly executes the person responsible. Shooter sparked Bates, and they alternated on scripts, which did produce the occasional clunker such as 217's introduction of an appallingly stereotyped black character with a huge chip on his shoulder. Luckily he wasn't around for too long, and future stories showed a racially integrated society, so perhaps the mistake was for the best. Shooter and Grell both left with 224, Shooter not having lived up to his previous work, and Grell clearly losing any interest. DC's *Legion Archive* editions have now reached this point.

225 introduced a new creative team of Paul Levitz and Jim Sherman, inked by Bob Wiacek. Sherman's graceful figurework suited the strip, and Levitz, formerly a notable fan of the feature, set about making changes. He killed-off an old character, and in 226 introduced Dawnstar, unfortunately another character with a chip on her shoulder. But he did develope individual personalities for each of the Legionnaires, which, considering there were over two dozen of them, was no mean feat. 231 is a particularly good Levitz story, featuring the return of their deadliest foes The Fatal Five, and is a good issue to sample from the late 1970s. There's a new burst of creative energy in 230-240, inspired by Levitz and Sherman, but also from the unlikely team of Gerry Conway and Ric Estrada. Many noted creators dropped by for guest shots, including Walt Simonson (237, not well inked by Jack Abel), Jim Starlin (239) and Howard Chaykin (240), but Mike Nasser's Adamsesque styling was also notable on 231 and 235. Also issued at this time was the oversize treasury edition in which Lightning Lad and Saturn Girl are married. It's not one of Levitz's best scripts, and the art by Grell and Vince Colletta is abysmal. Don't be tempted.

Levitz departed with 245, but his final story in 241-245 was the best Legion epic for years. The Legion had to battle assorted intergalactic races, culminating in the reappearance of a major adversary, Mordru. It's Levitz at his best; a well-paced story packed with action and intrigue, although Sherman left with 242, replaced by Joe Staton. Perhaps not the ideal artist for the feature, he did at least start on a high note. In 248 Gerry Conway marked his lack of imagination with a dull story featuring a creature from the sewers. He sharpened some characters, but this wasn't a golden era. His run was interrupted by 250-251, although Jim Starlin chose to operate under the alias Steve Apollo, not happy with what was produced. He needn't have been ashamed: it was a decent story, with nice artwork, as a Legionnaire becomes totally insane, leading to some interesting later plots. It was also an oasis of quality in a mediocre run. Staton was distressed by a parade of unsuitable inkers, and possibly by a succession of inane plots from Conway. The lack of quality didn't affect sales, and it no longer required Superboy's presence, so from 259 the title became *The Legion of Super-Heroes*.~HY

SUPERBOY AND THE RAVERS

DC: *19 issues 1996-1998*

At the invitation of the mysterious Kindred Marx, Superboy becomes a regular attendee of The Event Horizon, a dimension-hopping party frequented by super powered beings from all known planets. The winner of the 'Worst Name For A Comic Since *Speedball*' Award, this tragic attempt at a 'Youth Culture' comic had its heart in the right place. Any series that attempted to revive the career of Rex the Wonder Dog and Dial H for Hero couldn't be totally evil, but good intentions alone could not save it. Inattentive, unfocussed storylines and decreasingly incompetent substitutes for original artist Paul Pelletier killed it before its second year ended.~HS

SUPERBOY PLUS (The Power of Shazam!), (Slither/Scare Tactics)

DC: *2 issues 1997*

The first issue is dreadful as Captain Marvel Junior hangs out with Superboy, swapping girlfriend and partner stories. 2, by Len Kaminski, Anthony Williams and Andy Lanning is a solid piece of work featuring Slither, as the snake-boy's continuing mutation drives him to infiltrate the Cadmus genetic research Project. Here Superboy is seeking a cure for his own curse of being permanently 16 years old! Unprepossessing fun.~WW

SUPERBOY'S LEGION

DC: *2 issue microseries 2001*

This postulates that Superboy wasn't found until 2987, and so raised in the 31st Century. Rebelling against his adoptive father, R.J. Brande, and the repressive Earth regime, he forms a team of teenaged champions to protect the galaxy. Mark Farmer's script shows an astute grasp of the essential characters, and some novel changes on established faces; his take on the Ranzz twins, Lightning Lad and Light Lass, as bored aristos, is particularly amusing. The pidgin dialogue attributed to the team's only non-human member is unfortunate, and the identity of the villain-behind-the-villains disappointing, but overall the story is very strong, an affectionate homage to the *Adventure*-era Legion without being a slavish copy. Artist Alan Davis is on dazzling form, particularly given the multitude of characters and the necessity of cramming everything into two issues. This is one series that really cried out for a third volume.~HS

SUPERCOPS

Now Comics: *5 issues 1990*

Abysmal nonsense from Chuck Dixon and Peter Grau as genetically enhanced clones are used as a super S.W.A.T. team to battle crime in the near future. Two rogue clones team up with a 'real' cop to ferret out a conspiracy at the supercop factory, but it's all just a silly excuse for macho posturing and lots of shooting. Predictable and dull.~WW

SUPERFLY

Michael Hunt Publications: *2 issues 1999-2000*

Mike Diana's is an appalling story. He was successfully prosecuted for obscenity in Florida on the basis of his minicomics, forbidden to draw and subject to regular searches of his house to ensure he obeyed. In the midst of the outcry among the comics community about this injustice, the question of whether or not Diana produces anything worthwhile has never come up. He doesn't. His art's as crude as his topics, and the joke name of the publisher qualifies as high wit among the material on offer.~FP

SUPERGIRL

DC: *Series one 10 issues 1972-1974, series two, 23 issues 1982-1984, one-shot ('Movie Special') 1985, one-shot ('...and Team Luthor') 1993, 4 issue miniseries 1994, series three 80 issues, 2 Annuals, one-shot (Supergirl +) 1996-2003, one-shot ('Wings') 2001*

Following lengthy runs in *Action Comics* from 1959, and *Adventure Comics* from 1969, Superman's cousin finally headlined under her own name. Unfortunately, Cary Bates' scripts were mawkish and simplistic, casting Kara as a naïve ingénue rather than the sophisticated career girl she had been in Adventure. In retrospect, the garish covers and silly captions ("I may be the mightiest girl in the world, but I still can't get a date!") have a kitsch appeal, but at the time they were embarrassing. Zatanna the magician backed-up 1-4, and in 5, co-starred with Supergirl as the two of them vie for the affections of the Abominable Snowman. Oh dear, oh dear. A guest-appearance by Prez appropriately terminated this run of tat, and the title was merged with *Lois Lane* and *Jimmy Olsen* to form *Superman Family*.

When that was terminated Supergirl was given another try solo, but with a creative team of Paul Kupperberg, Carmine Infantino, and Bob Oksner, it was doomed from the start. Tepid soap-opera plots and mild-mannered superheroics turned over without ever warming up, and 16 showed any inventiveness with a guest-appearance by Ambush Bug. He jumped to the conclusion that Kara was her cousin Kal after... a certain surgical procedure. Risque for the period, and quite funny. There was a stay of execution preceding 1985's *Supergirl* feature film, but when that tanked, Kara's number was up, and following the movie adaptation, our heroine was killed in *Crisis on Infinite Earths* 7.

The concept was too popular to lie fallow, however, and a new Supergirl, a.k.a. Matrix, a shapeshifting protoplasmic being from another dimension, was introduced in Action Comics 674. The creation of that dimension's heroic Lex Luthor, her limited experiences caused her to fell in love with the malevolent Luthor, She became his super-powered stooge as a member of his task force, Team Luthor. The 1994 miniseries by Roger Stern and June Brigman examined, and eventually terminated, the relationship between Supergirl and Lex, when she discovers his plan to clone her and create a legion of super-slaves.

DC faced a problem in that they perceived a following for a Supergirl, but the one they had, an alien chameleoid blob, didn't generate much in the way of empathy. They resolved this by fusing the Matrix Supergirl with dead teenage bad girl Linda Danvers, to create a composite being. One aspect was a former delinquent whose reformation caused almost as much confusion among her family as her resurrection did; the other was a super-being who, while losing some of the powers she possessed (no longer able to change her appearance beyond switching from Linda to Supergirl, for example), gained others of a mysterious celestial origin. Theology is a difficult subject to tackle in popular media, and it's long been a paradox of comics that evil, and even Satanic, topics, can be portrayed more easily than their divine counterparts. When it's been attempted the results have frequently been awkward. Writer Peter David, who authored the new Supergirl throughout, walked a skilful tightrope between the banal and the offensive. Supergirl is clearly of divine origin despite her specific genesis being a Satanic ritual gone awry, and is accompanied in her adventures by Buzz, a demonic character who is first her enemy, then her ally, with the potential to be something more. Spike to her Buffy, as it were. David lures us in with resurrected DC characters – Chemo, Gorilla Grodd – but is constructing a much more elaborate canvas than simple battles-of-the-month. Gary Frank (1-8*) and then Leonard Kirk (most issues to 74) provide excellent naturalistic artwork, coping admirably with the low-key scenes of characterisation and conversation that are essential to a work of this nature, but well able to pull out the stops when pyrotechnics are required. It has, however, the flaw of very few jumping-on points. It is involved, convoluted, features multiple characters with similar appearances (questions of identity are pivotal to the series), and can actually deter people. 23, a powerful illustration of the necessary evils of freedom of speech, is virtually the only issue in the first 50, barring the debut, that you don't need a degree in the series to 'get'. It's generally excellent work, but unless you're there from the start, you're out of the loop.

In 50, Linda/Supergirl's powers are substantially diminished as her celestial aspect is sundered. Reduced to old style abilities like leaping tall buildings in a single bound, she adopts a new costume based loosely on the animated version, and sets off on a quest to "pull herself together". This continues, rather longer than it ought to have, until 74, and while there is much fun to be had (particularly with recurring guest star Mary Marvel, with whom she's also teamed in Supergirl +), even the most devoted fan eventually starts muttering under their breath, "Get ON with it, will you?". With 75, there is a dramatic change of pace, as Linda/Supergirl discovers, well, Supergirl; a young girl in the classic 1950's costume, possessing vast powers and claiming to be a survivor of Krypton. Seeing contemporary Earth through the eyes of this naïve young visitor, and watching the baffled reactions of Linda and chums as they attempt to help her and solve her mystery, has given the series a real shot in the arm. The very appealing art by Ed Benes (vastly improved since his dismal days as a Mike Deodato impersonator) helps considerably. This new direction is charming entertainment.

The most recent *Supergirl* is a difficult series to recommend. Most issues deter new readers, but read in sequence, the bigger picture becomes clear, and it is a rewarding endeavour. There is intelligence and purpose on display, and Peter David's humour, which he has been criticised for overdoing, is held in check here and used for contrast and relief only. It cannot be wholeheartedly endorsed as 'the absolute best ever', but if a substantial run comes your way, give it a try.

Brief mention should also be made of the Elseworlds one-shot, in which J.M. DeMatteis and Jamie Tolagson take the earth Angel concept and beat readers over the head with it until their ears bleed, in DeMatteis' usual subtle manner. Avoid that.~HS

SUPERMAN

DC: *Series one 423 issues, 12 Annuals, 2 Specials, 1 Spectacular 1939-1986, series two 185 issues +, 12 Annuals, 3 80-Page Giants, 3 Secret Files 1987 to date*

Created by Jerry Siegel and Joe Shuster, Superman was the first superpowered costumed superhero, spawning generations of imitators. To this day he remains among the most recognisable global cultural icons. After a year's appearances in *Action Comics* had made the comic a runaway bestseller, Superman was given his own quarterly title. It originally featured reprints from *Action*, but soon switched to all new material. There's an undeniable crudeness and simplicity about the early stories, but they had a presence seldom seen in the contemporary comics industry, with Shuster and his assistants producing some fluid work. Siegel never bored the reader, writing well-plotted stories, often with a social slant and well defined characters. By the time of this series the core Superman cast had been established, with *Daily Planet* (initially *Daily Star*) employees Lois Lane, Jimmy Olsen and Perry White (initially George Taylor) all having débuted in Action. The villainous Lex Luthor, still with red hair, made his second ever appearance in 4. By 10 he was bald and resembling the figure we're used to. You can follow all these early exploits in DC's *Superman Archives* series.

The Lois and Clark rivalry was an early element, with the very capable Lois often annoyed and puzzled at being scooped by the seemingly slow Clark Kent. She had no time for Clark, but loved his alter ego, although it wasn't too long before she began suspecting they might be the same person. She was featured in a back-up strip between 28 and 42: simple tales, but they clearly established her tenacious character. The covers were very striking from the start, and the US entry into World War II brought a parade of symbolic patriotic illustrations. One of the best was 14's Superman standing in front of a Stars and Stripes shield with an eagle perched on his shoulder, drawn by Fred Ray. Inside, Superman often showed the Axis powers what for.

30 introduced Mr Mxyztplk, a mischievous magical imp from the fifth dimension who returned to taunt Superman every ninety days or so. That was the length of time he had to remain in the fifth dimension after Superman tricked him into saying his name backwards, the only means by which he could be returned against his will. Superman became more powerful as the series progressed, kept in good shape by the artists from the Shuster studio, including Leo Nowak, Fred Ray and John Sikela as well as Paul Cassidy and Wayne Boring. An important artist was Jack Burnley, whose Superman was chunkier, and whose art had a more polished look than his peers. In 45 Lois gained superpowers for the second time, the first being in *Action* 60, and this was an indication of the direction the *Superman* titles were taking, with whimsical fantasy gradually edging out more reality-based stories.

53's tenth anniversary special expands Superman's originally very short origin story. The infant Kal-El is rocketed to Earth by his parents in order that he survives the destruction of his home planet, Krypton, Earth's yellow sun endowing him with superpowers. Wayne Boring, now becoming the primary *Superman* artist, drew the story, and writer Siegel seemingly forgot Superman's career as Superboy, despite the character having run in *Adventure Comics* for two years by that point. And not let's forget all those Superbaby tales! Superman's Kryptonian heritage would come to play an increasing role, with 61 introducing green Kryptonite, a mineral fragment from Krypton that was deadly to Superman when he was exposed to it. 65 featured some villains who'd also survived Krypton's destruction, and with the amount of Kryptonians who'd turn up throughout the 1950s it sometimes seemed those who died were the minority. 76 was another landmark, featuring the first teaming of Superman and Batman, who within two years would pair regularly in *World's Finest Comics* (where, at this point, they occupied separate strips).

The 100th issue was celebrated by our hero appearing in a full-length story rather than in three separate stories. The stories may have been light on characterisation in today's terms, but the amount of plot and action packed into eight pages forms a lesson in economy that many contemporary writers might benefit from learning. A prototype of Superman's cousin, Supergirl appeared in 123, a temporary creation made possible through magic, but the real thing would débul a year later in Action 252. Other long-running supporting characters introduced in the late 1950s included Lori Lemaris (129), the mermaid from Atlantis, and Titano (127) the giant super-ape. Both appeared well into the 1960s. Time-travel tales had also become popular, and 141 is notable for a Siegel story in which Superman visits Krypton before it exploded and romances a film star.

Long-time editor Mort Weisinger exerted a tight control, and was heavily involved in plotting the stories. Via additions to the mythos he ensured Superman's continuing popularity. Issues from the early 1960s pioneered the 'imaginary' story, where the writers could place Superman into situations that would otherwise compromise continuity. A classic of its time is 149's 'The Death of Superman', in which Lex Luthor succeeds in poisoning Superman with Kryptonite. It features some marvellous scenes, particularly the procession of mourners passing Superman's body as it lies in state. 162's 'The Amazing Story of Superman Red and Superman Blue' is also fondly recalled. Superman is split into two people, one of whom wears a red costume, and the other a blue costume. One marries Lois Lane, and one marries Lana Lang (Superman's childhood sweetheart), thus solving the problem of which of them he really loved. In 170 there's a story in which Luthor travels back in time before Krypton explodes, in order to wine and dine Superman's mother, but luckily the marriage is stopped just in time. That issue also contains a story featuring John Kennedy and intended for publication before his assassination, with Kennedy stressing the importance of physical fitness and exercise.

If you can tune in to the peculiar world that had evolved around Superman there are a number of other classics. 'The Last Days of Superman' (156) has Superman apparently dying of a Kryptonian plague, and is a heart-tugging homage, while 161 features the death of Superman's adopted parents, Ma and Pa Kent, and 164 has a showdown between Superman and Luthor, introducing a world where Luthor would become a hero. By now Curt Swan was the major *Superman* artist, a perfect storyteller whose work was raised even further when inked by George Klein. Wayne Boring still has his moments, though. One of them is 'Krypton Lives Again' (189), where Superman once more returns to Krypton before it's destroyed. 199 is the first race between Superman and the Flash, and 204's cover, by Neal Adams, heralds a new era. In 205 villain Black Zero claims responsibility for the destruction of Krypton. It's been disregarded by fans, but stands as a decent story. Editor Mort Weisinger bowed out with an imaginary story in 230-231, with Clark Kent as a killer and Lex Luthor superpowered.

233 was the most dramatic turning-point since the inception of the *Superman* title. New editor Julius Schwartz appointed Denny O'Neil as writer, and while retaining Swan as pencil artist, formed an inspired team by introducing Murphy Anderson as inker until 270. The story has the transformation of all green Kryptonite on Earth into iron, thus wiping out at a stroke a recurring old plot. Of course, this left Superman almost invulnerable to harm, but that was also dealt with as an other-dimensional creature seeped off some of Superman's powers, thereby limiting his activities. Clark Kent was also modified and transferred to TV reporting. O'Neil wrote some decent stories about a Superman who now had to expend some effort, with Cary Bates, Len Wein and Elliot Maggin chipping in. It was Maggin who wrote one of the best stories of the era, 247, where Superman is taken to task for interfering too much with humanity's destiny. New characters from this era with a lasting appeal included Steve Lombard, sports correspondent and practical joker, and Terra Man, a Western-themed villain introduced in 249. 241-253 were at least forty-eight page comics, with back-up strips including 'The Private Life of Clark Kent' and 'The World of Krypton', and plenty of good 1940s reprints. 245 and 252 are 100 pages, with the latter of particular note. It reprints very early Lex Luthor appearances, and two strips by Lou Fine, whose work is as legendary as it is unavailable. His dynamic graphic design and flowing figures were startling in the 1940s, and continue to influence to this day. This period was a well-considered attempt by DC to force what was still their top selling title into the 1970s.

Writers Bates and Maggin were rarely outstanding, although Bates' Star Sapphire story in 261 was a treat. Maggin's best returned the flavour of the 1960s with a story about Krypto the Super-Dog in 287. The essence of the early 1970s restoration was lost by then, and Superman was again all-powerful, with only magic able to affect him. When teamed, though, Bates and Maggin did produce excellent stories, each obviously sparking the other. 296-299 have Superman losing his abilities when in Clark Kent mode, leading to some interesting situations and a redefinition of Kent, and their 300 has a story of Superman in the 21st century. 'The Second Coming of Superman' in a 1977 Spectacular has a teaming of the villainous Brainiac and Luthor and involves an alien race that regard Superman as a God. It's a well-paced story by Bates, assisted by Martin Pasko, who contributed to 310-335. Pasko's stories worked by treating the superheroics as secondary to the soap opera content, with Lois having given up on Superman to start a relationship with Clark Kent. 314 has a story in which Clark proposes marriage, and Lois accepts on the condition he admits to being Superman, but he doesn't. Lana Lang also plays a larger part, complicating matters, and she's more assertive than previously, and there's a professional and personal rivalry between her and Lois. For those who wanted to see Lois and Superman married, 327 began the back-up strip 'Mr And Mrs Superman', starring the 1940s Clark and Lois, who married and are now designated as living on Earth 2. In 330 Pasko tackles the topic of how Superman has disguised his identity all these years with just a pair of glasses. It's to do with super-hypnosis affecting the subconscious mind of all who encounter Kent. It's all mumbo-jumbo, and the fans refused to believe it, but it's merely a blip in Pasko's efforts, which remain an underrated run.

Assorted writers from 336 maintain a level of competence. The romantic situations between Clark/Superman and Lois and Lana run through most permutations, with the occasional surprise provided by Lana's alien would-be suitor Vartox, who's based on Sean Connery's *Zardoz* movie character. The Cary Bates written 365-368, featuring The Superman Revenge Squad, stand out from the surrounding issues, as do 385-387, which continue from *Action* 554. Beginning with the retirement of Lex Luthor, it's a powerful story that eventually transforms him into an even more vengeful villain. 400 is an excellent anniversary issue, written by Elliot Maggin and featuring pin-ups and stories by some of the best comic creators then working, including Frank Miller, Al Williamson, Mike Kaluta and Jim Steranko. 411 is a personal tribute to editor Julius Schwartz on his seventieth birthday, illustrated by the old art team of Swan and Anderson, and 414 has Superman dealing with the death of Supergirl (killed in *Crisis on Infinite Earths*). Supergirl's death was a symbolic end to an era, or would have been if not for the superb Alan Moore and Curt Swan story that concluded the run. 423's 'Whatever Happened to the Man of Tomorrow?'* was the ultimate imaginary story, featuring almost everyone in the Superman legend, written by Moore in nostalgic and reverential fashion. It ends with the apparent death of Superman. Or does it? The story continued in *Action* 583*, and one couldn't ask for a better finale.

This wasn't the first Superman story written by Moore, though, as he and Dave Gibbons had produced annual 11, another imaginary story showing what might have happened had Krypton not exploded, leaving Kal-El to be brought up there by his family. Other specials of note are the first in 1983, written and drawn by Gil Kane, who also drew annual 10. Anyone wanting a flavour of *Superman* through the decades can't do better than pick up the DC/Titan collection *The Greatest Superman Stories Ever Told*. Once Superman had been overhauled, the numbering continued as *Adventures of Superman*.

Following his revamping of Superman in the *Man of Steel* miniseries, *Superman* was restarted with a first issue. John Byrne wrote and drew 1-22 (though Mike Mignola pencilled 18 and 23), maintaining a high standard throughout, helped by inkers Terry Austin and Karl Kesel. Byrne tried to take Superman back to basics, taking a lead from *Superman: The Movie*. Clark Kent never became Superboy as his powers began to manifest during his late teens, and he was definitely the only survivor of Krypton. Gone also is the mild-mannered Clark Kent. This worked at first, but in hindsight was a major mistake. A fundamental appeal of the strip was the bumbling Clark Kent that everyone could identify with being Superman. Now he was successful in both personas, with Kent redefined as an ex-college football star – i.e. Superman with glasses! Lex Luthor was the recipient of a major workover as well, and this has been a sustained success. He's no longer the mad scientist, but now a rather ruthless billionaire industrialist who resents Superman presence in Metropolis. While presenting an acceptable public front, he's not above the kidnap and torture of Lana Lang in 2 to find more information about Superman. Luthor is the star in perhaps Byrne's strongest story, a back-up in 9 where Luthor offers a waitress a million dollars to come back to Metropolis with him for one month. The poor girl has the dilemma of whether to go or stay with her husband.

Byrne's version of the Joker in 9 is also good, and his run is littered with updated versions of old heroes and villains. 11 returns Mr Mxyzptlk, who causes all kinds of mayhem, yet fits this new Superman's world as easily as he did the old. Mermaid, Lori Lemaris is reintroduced in 12, and 18 is a touching story, in which Superman returns to Krypton and dreams of the world that he has lost. 22 features a new Supergirl, and caused outrage among older *Superman* readers because Byrne had Superman execute three Kryptonian villains from another dimension. Superman had not killed since his early appearances, but when the villains threatened to destroy Earth he saw no other option. His anguish at this deed, however played an important part in his development and reaffirmed the reasons why he'll never kill again. While establishing the old Superman was gone forever, this confirmed to some that Byrne's understanding of the character didn't coincide with theirs.

With 23 Roger Stern takes over as scripter and produces little of note. He's helped through his first issue by the lovely art team of Mike Mignola and P. Craig Russell, and from 24 the art is in the capable hands of Kerry Gammill. Story quality increases as Jerry Ordway writes from 34, and when he starts drawing from 36 as well, there is some genuine distinction. 37 offers a homage to Jack Kirby's run on *Jimmy Olsen* with an appearance by the Newsboy Legion, and Olsen as Elastic Lad. Jimmy soon becomes a major supporting character again. There's a distinct upheaval in 49-50, when Clark, after waiting over fifty years, proposes to Lois Lane, and Lois says "Yes".

From 51 editor Mike Carlin introduced cover triangles. Carlin had reintroduced Weisinger's system of stories plotted editorially given to the creative teams, except portions now appeared in each *Superman* comic. Entire stories continued from one title to another, leading to confusion among readers. The numbered cover triangle indicated the sequence to follow. While the system provided a four or five part story over a single month, different creative teams on each chapter led to contrasting interpretations of characters, particularly artistically. In 'Time and Time Again' (54-55*) Superman is bounced backwards and forwards through time. The action is fast-paced and very well planned, and in this title there's a memorable World War II tale and a meeting with the Demon in Camelot. It's also the final Jerry Ordway story, and from 58 Dan Jurgens is writer and penciller, introducing Agent Liberty in 60. He becomes a solid supporting character and alternative Metropolis superhero. Jurgens also gives old supporting characters, Pete Ross and Lana Lang a new lease of life.

'Doomsday' (74-75*) affected all Superman titles, as the infamous 75 sees the death of the world's greatest hero. Drawn in one-panel pages, the action is gripping, with the ending living up to the promotional hype. It was a well thought-out and executed plot, and there hasn't been a better story in this title since. It propelled *Superman* back to the attention of the comic-buying public, and received enormous media attention. 'Funeral for a Friend'* and 'Reign of the Supermen'* then run through all *Superman* titles, featuring four characters who may or may not be Superman, each title concentrating on one of them. Here it's the cyborg Superman, whose methods were not only harsh, but prompted by ulterior motives, revealed in 81. The climax features the return of a certain red and blue clad hero. Well, you just can't keep a good character down!

90-91 have Luthor wrecking Metropolis, and Clark Kent is slowly hunted down by an old nemesis leading up to 'The Death of Clark Kent' in 100. By this time most stories were being made available as collections after a while. 106-108* have Superman blamed for Krypton's destruction. The death of a major supporting character prompts Lois to reconsider becoming Mrs Superman and, after lots of soul-searching, off she goes in 115. Superman tracks her down in 118 where after lots of soul-searching she changes her mind. So after nearly sixty years Clark (Superman) Kent finally marries Lois Lane, although it's in the one-shot 'Wedding Album', and the world lost one of its enduring love triangles. And it's been downhill ever since.

After marrying Superman off, how do you keep interest? Give him new powers and a costume of course, dragged out far too long in 123-135. There's a homage to the old Superman Red/Superman Blue tale from the 1960s, but far more interesting is the birth of Luthor's daughter, Lena, who will play a major role. In 142 Superman decides he hasn't time to be Clark Kent anymore, so it's Superman full-time aided by his super-robots, who decide it's time for a new world order. Jurgens' last issue is 150 and he was successful in keeping all the crossover storylines going. Walt Simonson's homage to the classic 'Kryptonite No More' from 233 in the 1992 special is worth mentioning, but most annuals are based on the company-wide theme of the year, and read like fill-ins. The best in 1998 explores the issue of Superman executing the villains in 22. The two 1999 80-Page Giants offer a wide variety of tales and art styles and are worth looking at.

Jeph Loeb starts well in 151 by having Lois make a secret deal with Luthor, but the pseudo-manga art from this point is totally unsuitable, leaving penciller Ed McGuinness terribly miscast, and not helped by the self-indulgent colouring. The title sometimes bears the hallmarks of the kid with the new paintbox, and it's a hideous mess. Still, if you really concentrate, Loeb writes a few good stories. Due to a Y2K virus Metropolis is transformed into a space-age looking city, Luthor becomes President of the United States, and Superman's newer origin is now in doubt with the emergence of the old style Krypton. And Krypto the super-dog is back. After the events of the 'Our Worlds at War' crossover, Superman adopts a slightly darker costume to reflect the sign of the times, which was an unfortunate coincidence given the September 11th attacks of that year. One bit of good news is there's no longer a need for cover triangles from 177. Loeb ends his run in 183 by having Clark Kent fired from *The Daily Planet*. New writer Geoff Johns starts off with the first part of a 'Return to Krypton' crossover (sigh). Followed by yet another (yawn) crossover, 'Ending Battle'. What's it all about? Who cares? The art, now by Pascual Ferry, hasn't improved, and currently the only interesting thing about *Superman* is the continuing machinations of Lex Luthor. The average issue now sells fewer than 35,000 copies, which is disgracefully low for an internationally recognised icon. Still, it's nothing to be surprised about.~HY

The Adventures of SUPERMAN

DC: *187 issues + (0, 424-609) 9 Annuals 1987 to date*

With the relaunch of Superman in 1987 the original *Superman* title was renamed, but continued its numbering. Clark Kent is back at *The Daily Planet*, learning to work with Lois Lane all over again, but initially courted by single mother, Catherine Grant. Other changes include having Clark's foster parents, the Kents, still alive on their farm and Lex Luthor as a corporate leader, whose authority and plans are undermined by the appearance of someone who provides support to Metropolis without charging for it. *Daily Planet* editor Perry White has a troubled son, who's used by Luthor to undermine both Perry and Superman, and there's a new champion of the underdog in Metropolis, called Gangbuster, in reality social worker Jose Delgado, who is also seeking Lois' affections.

Initially these stories are told by Marv Wolfman and Jerry Ordway (to 435), then by Byrne and Ordway (436-442), until Ordway becomes writer and penciller with 445. His stocky, slightly stiff figures create a link to the Superman of the past, whilst depicting his new life in Metropolis and the DC Universe. This includes, for example, Batman and Superman swapping secret identities in 440 and the unfolding mystery of Supergirl (from 439) A hint of things to come appears with 444, which is part of the concluded Supergirl story in *Superman* 21 and 22.

With 455, the series begins to be associated much more with the other *Superman* titles (*Action* and *Superman*, at first, then *Man of Steel*), following the introduction of the Cleric, the Eradicator, Mongul and Warworld. At the same time, Dan Jurgens becomes regular penciller before also picking up the scripting as well with 460 (until 478). One major storyline was the attempts by the Eradicator to recreate Krypton on Earth, while Jurgens even slips in a homage to the Fantastic Four (466), in which things don't go as well for the adventurers, but Clark's engagement to Lois happens off-title. From 474 (1991), an extra number was added to each of the Superman titles, ordering them sequentially through the year. Though this didn't immediately mean all stories continued into the other titles (the Linear Men are introduced here, with Superman meeting the Legion of Super-Heroes, 476-478), issues like 480 ('Last Son of Krypton') and 484-485 (two parts of 'Blackout') were soon more common than not.

Ordway returned to write 480-500, and Tom Grummett became regular penciller (to 506), covering storylines such as 'Panic In The Sky' (488-489), in which Brainiac attacks Earth with Warworld, leaving Matrix as Supergirl at the end of it. Others involving Blaze and Lord Satanus (493), Kismet (494), and Doomsday and the Death of Superman (497-500). 501-504 cover the 'Reign of the Supermen', starting with Superboy, but closely linked to the master story throughout the titles. Karl Kesel is writer from 501, beginning his association with Superboy, but from this point on there are even fewer single-issue stories. A major villain, Conduit, is introduced in the zero issues, threatening Superman's friends and family, with the storyline continuing into the regular issues, concluding in 523-525. Barry Kitson (507-513, 515-519) and then Stuart Immonen (from 520), become regular pencillers, the latter staying until 550, though there are a number of fill-ins during his run. After Grummett's return to draw 551-556 and 559-562, attempts to keep a regular creative team on the title are abandoned for a couple of years. As far as the plots were concerned, Lori Lemaris shows up in Clark's life to complicate his relationship with Lois and in 545 Superman turns blue (not with cold, unfortunately, but as his powers change). For a while we have both Superman Red and Superman Blue, leading into the 'Millennium Giants' storyline (556) and the *Superman Forever* one-shot. From 564, Superman, under the influence of Dominus, takes a more pro-active approach to crime, trying to prevent it, rather than stopping it after the event, and this leads to the 'King of the World' one-shot. 572 introduces Strange Visitor, a female version of Superman Blue, 574 features Obsession claiming to be Mrs Superman, and 576 is part three of 'Y2K', which sees Metropolis being transformed into a futuristic city by Brainiac. 583 is part of the 'Emperor Joker' storyline, as the Joker remoulds the world to suit his desires and 584 is the start of Lex Luthor's run for the Presidency.

With 586, the *Superman* titles revert to more self-contained tales, though keeping the annual numbering, with 586-588 featuring Lord Satanus by J. M. DeMatteis and Patrick Zircher, 592-596 featuring 'Strange Visitor', by Joe Casey and Mike Wieringo and 603-605 pitching Superman into battle against Brainiac with help from Superwoman and Owlman. 589, 591 and 593-595, however, are parts of 'Return to Krypton', 'Infestation' and 'Our Worlds at War' respectively. Casey appears to have settled as regular writer (from 588), working with artists Derec Aucoin (590, 597, 608-609), Wieringo (592-596, 600) and the excellent (though arguably unsuited), Carlos Meglia (603-605) amongst others.

Quite apart from the plots generally crossing over into the other Superman titles, Adventures additionally shoehorns crossovers with major DC events. The first Annual, by Jim Starlin and Jurgens has a dull "alien comes to Earth to eat brains" plot, the second, written by Jurgens and illustrated by half-a-dozen different artists crosses over with the *L.E.G.I.O.N. '90 Annual* and the third is an *Armageddon 2001* crossover by Louise Simonson and Brian Hitch, telling of an alternate future, in which Superman succumbs to Maxima's charms. In keeping with other DC annuals, 4-9 follow that year's theme, with only the last, featuring stories and artwork from John Rozum and Alcatena, Mike W. Barr and Dale Eaglesham, Paul Grist and Enrique Villagran, on the topic of weird westerns, at all interesting.

Jurgens, Grummett, Kitson and Immonen all produce satisfying interpretations of Superman, more or less polished, depending on the inkers, but equally unremarkable, maintaining something of 'house' look for one of DC's more important characters. Since 570 and in the *Superman* titles generally, artists with more of a manga style have been hired, creating more diversity, but also some controversy, along the way. After its first few years, *Adventures* exists only as part of a family of *Superman* titles, with only the artwork (sometimes) to distinguish it. Whether or not this is a problem for potential readers, depends on their willingness to embrace all those titles or wait for stories that will be started and completed here. Many issues appear in collections, but these generally gather all segments of a particular story from the various titles it's seeped into.~NF

SUPERMAN ADVENTURES

DC: *66 issues, 1 Annual 1996-2002*

Based on the Warner Brothers animated TV show, this Superman's adventures are not set in DC continuity. Clark Kent and his friends get the pared-down cartoon design treatment, as do familiar adversaries like Luthor, Brainiac, Metallo, Toyman, General Zod, Mr Mxyzptlk and The Parasite as well as new villains like Livewire. 1 is written by cartoon show director Paul Dini with art by Ty Templeton, after which Scott McCloud provides an excellent run in 2-13 drawn by Rick Burchett and inker Terry Austin. Their initial flair is supplanted by plot driven stories that any number of scripters can easily achieve. The art mainly falls to either Neil Vokes or the fluent Aluir Amancio. Vokes clearly doesn't want to draw in cartoon style and so delivers a series of unchallenging superhero stories, broadly-inked by Austin, where the main character's head is shaped like a flat-iron. Among the more notable writers there's Mark Evanier in 14, 15, 42, 53, the latter two guest-starring Mr Miracle, Dean Motter in 51, 54, 55 and the team of Evan Dorkin and Sarah Dyer write the one-off *Supergirl Adventures* (21) along with 39, 65 and 66. Mark Millar fans might want to check 16, 41, 52, and most issues between 19 and 38. The Annual guest-stars Zatara and Doctor Fate, and is by Hilary Bader with art by Joe Staton. 1-6 are available as a collection, but this is often less than super after 13.~SW

SUPERMAN FAMILY

DC: *59 issues (164-222) 1974-1982*

This giant-sized comic continued the numbering from *Jimmy Olsen*. From 164-181 it was mostly reprint, with a new lead feature alternating between Jimmy Olsen, Lois Lane and Supergirl. On becoming a dollar comic with 182, it was new material all the way, starring the three previous leads, with new ones such as the witty Krypto (182-192), Nightwing and Flamebird (182-194), set in the bottle city of Kandor, and the most impressive Mr and Mrs Superman (from 195), starring the Golden-Age Superman and Lois Lane, set in the 1950s.

The three main features were disappointing on the whole, lacking the charm of their 1960s tales, with the exception being a Supergirl/Doom Patrol team-up in 191-193. While the title used many of the elements which made the Superman mythos such a success, it didn't add anything.~HY

SUPERMAN Graphic Novels and One-shots

Superman's oversize and expensive one-shots generally offer a poor return, many not matching the contemporary standards of his regular titles. The fault can be squarely laid at the feet of writers content to coast, while the art is generally of a high standard.

The format of choice for 1970s specials was the oversize "treasury". These were largely reprints, but beware *Superman Salutes the Bicentennial*, with Superman on the cover and Tomahawk inside. 1976 provided a landmark as Superman teamed with Spider-Man, the first inter-company crossover. Gerry Conway concocts a workable plot fully involving the respective characters' supporting casts that brought out the best in artist Ross Andru, who delivered a sense of scale commensurate with the format. The slightly smaller sized sequel written by Jim Shooter wasn't as good. Exclusively at DC Superman encountered Wonder Woman, Captain Marvel, then cover-featured as "Shazam", and Mohammed Ali. The best by far, and a beacon to this day is *Superman vs Mohammed Ali*. Denny O'Neil's plot is enjoyable hokum about a contest to determine Earth's champion to fend off an alien invasion, but the art produced by Neal Adams at the peak of his enthusiasm still impresses. Adams even drew well over a hundred and fifty ringside likenesses of celebrities and fellow comic creators for a wraparound cover. It would be 1988 until the next Superman graphic novel, 'The Earth Stealers'. It's curiously old-fashioned nonsense from John Byrne and Curt Swan complete with goofy looking aliens and Earth being, well, stolen.

Adaptations of the third and fourth *Superman* movies, neither considered the best of the canon, reflect the films themselves and seem to have been created in a hurry. *Under a Yellow Sun* is partially presented as a thriller novel by Clark Kent, juxtaposed with and reflecting Superman's attempts to prevent Luthor smuggling weapons into Metropolis. Eduardo Barreto turns in some nice pages for the novel sections, and John Francis Moore's writing ranks this among the better one-shots. Michael Gilbert's cartoony Superman won't be to all tastes, but Mann and Superman is a simple story well told. A small-time hoodlum exchanges bodies with Superman, and the experience conforms to neither's expectations while imparting some lessons about life. Life lessons also feature in the resolutely ordinary 'The Odyssey', an untold tale of Clark Kent's early adult life.

Superman for Earth aimed to increase ecological awareness, but is so relentlessly hectoring that conversions must have been few. The inside cover specifies the recycled paper content of the comic, leading one to wonder about the recycled content of regular DC comics. Mark Millar writes 'For the Animals' attempting to discourage kids from cruelty to animals. It's hardly compulsory reading. Despite the title, 'Save The Planet' has no ecological message. A new owner purchases *The Daily Planet* newspaper, seemingly intent on closing it down, as Superman has to deal with a potentially planet destroying meteor shower. The obvious simile is indicative of the overall quality. The best feature is Kevin Nowlan's acetate overlay cover on the pricier edition. It's one of several *Superman* one-shots since the early 1990s tying into the continuity of his regular titles. 'The Wedding Album' has the preparations for Clark Kent's wedding to Lois Lane, and the ceremony itself. It covers all nuptial bases, rids Kent of his ridiculous ponytail, and those who consider the Superman cast old friends will enjoy ninety-one pages of well produced soap opera from over thirty creators. If only the same could be said of 'Y2K', a dull lead-in to a story in the regular titles about an advanced Brainiac. 1998's *Superman Red Superman Blue* splits Superman into two beings. It's very ordinary, but comes with a pair of 3-D glasses to view the 3-D cover and a reprint of the daft 1953 *3-D Superman*. That's not to be confused with *Superman 3-D* from 1998, by which time the effects have improved considerably, making for a nifty novelty on a mediocre story. Even the normal pages view well through the 3-D glasses. The split Superman is restored in *Superman Forever*, the highpoint of which is the well designed lenticular animation cover of Clark Kent switching identities, drawn by Alex Ross. Inside then regular Superman creators take turns at a plot largely concerned with locating Luthor's baby. If you liked the regular titles in 1998, you'll like this. Luthor's baby also cranks the plot in the hardback 'End of the Century', set at the millennium with roots in the previous millennium. It's largely the work of Stuart Immonen, whose yellow and brown toned pages depicting the past are excellent, but it hardly delivers a level of entertainment commensurate with the $25 cover price.

Secret Files offer short stories and pin-up pages with text background information on characters, and are united by the fact that Superman's most prominent participation is generally his name on the cover. *Team Superman* delves into the backgrounds of Steel, Superboy, Supergirl and their friends and foes, while Metropolis showcases the architecture of Superman's hometown as it was in 2000. *Our Worlds at War* is only notable for ten pages of impressive art by Alberto Saichann, a blend of the Filipino style, early Image and Frank Miller. The best *Secret Files* treatment is *Superman Villains*, which details the origins of the villains comprising the Superman Revenge Squad, plaguing Superman in 1998. Writer and artist Stuart Immonen portrays the origins in the form of Little Nemo in Slumberland, making for a charming gimmick. As a bonus there's Evan Dorkin's presentation of the Toyman's novelty catalogue. Toyman is the subject of another one-shot, decently drawn by Immonen, the slim *Superman/Toyman:* 'Playing Rough'. Seemingly issued to promote a new line of Superman toys, it's unremarkable. 'King of the World' has Superman establishing a virtual dictatorship while his robots search for a villain able to alter reality. Hmmmm, perhaps all is not what it seems. Artist Dougie Braithwaite is good, but this is otherwise ordinary. 'Where Is Thy Sting?' is wretched. It features the tedium of Superman purging his inner guilt and Lois Lane's height changing from panel to panel among many sloppy pages from coasting artist Liam McCormack-Sharp. Not that he had much to work with.

Post Spider-Man, Superman has largely avoided associating with other characters for single issue specials. *Superman Plus* teams Superman with the 30th Century Legion of Super-Heroes, temporarily stranded in 1997, but it's uncharacteristically unimaginative from Tom Peyer. Superman and Savage Dragon team twice. 'Metropolis' has the ghost of Jack Kirby hovering throughout. While not bad, it recycles Kirby ideas, lacks his imagination and offers more to *Savage Dragon* fans than *Superman* lovers. The treasury sized *Superman Fantastic Four* has a cosmic powered Superman, Galactus and the Eradicator, but is the usual Dan Jurgens combination of decent art and ho-hum story.

Elseworlds stories star alternate Supermen and were called "imaginary stories" in the 1960s, when they occasionally graced Superman's regular titles rather than being premium-priced items. They broadly fall into two groupings: those where Superman arrived on Earth during an earlier time, and those where he arrived on another world. A subset of both has Superman's story merged with another familiar scenario such as *Speeding Bullets*, a daft effort where the infant Superman is raised by Bruce Wayne's parents to become Batman. They're disappointing, largely replaying a recognisable story with a paucity of imagination, and on the rare occasions when the tale moves a step beyond a reflection of Superman's established history, originality is at a premium. 'Distant Fires', for instance, while displaying fine art from Gil Kane and Kevin Nowlan, is writer Howard Chaykin not bothering to extend himself beyond science-fiction clichés. José Luis García-Lopez draws *Kal*, Superman re-cast in Medieval times, while A Nation Divided offers Civil War action, and in The Superman Monster a Viktor Luthor creates Superman. None of them impress. Roy Thomas is blessed with Ted McKeever as artist splicing the Superman cast into *Metropolis*, creating a dark and gloomy world that matches Lang's film, and with good art from Michael Lark in re-telling the Superman story in the context of H.G. Wells' *War of the Worlds*. Both are the upper end of the quality scale for Superman Elseworlds. 'At Earth's End' continues from the *Kamandi* miniseries of the same name. Kamandi is absent, and while it doesn't rely on the familiar myth, it's hardly compelling. *Superman Inc*, has excellent art by Garcia-Lopez and Mark Farmer, but what lifts it above all other Elseworlds *Superman* is a decent plot. Steve Vance casts one Clark Suderman parlaying sports star status into becoming a media tycoon who creates a superhero TV show. The primary elements of the Superman story are present and correct, but deftly twisted by Vance in a good read. *Son of Superman*, is also a good read, although co-writer Howard Chaykin has covered similar territory better elsewhere. In the near future Superman has disappeared, but solar activity awakens abilities in his son. Terrorists wage war against a totalitarian government in Superman's name, the Justice League is federally funded and Luthor is up to his neck in old tricks. Solid art from the team of J.H. Williams and Mick Gray round off a decent package, but not so good you should buy the hardback edition.

The flip of Elseworlds is *Realworlds*, a story about how the fictional Superman legend might impact on the real world. Here a man's life is shaped by a Superman symbol. It's the weakest of the *Realworlds* stories (the others starring Batman, the JLA and Wonder Woman), playing out in predictable fashion beyond the shocking first appearance of the symbol. The real world is also the theme of 'Peace on Earth', a return to the treasury format. It's the answer to an often-posed question: If Superman is all-powerful, why doesn't he sort out Earth's continuing problems, like hunger? Alex Ross provides a wealth of iconic images, overlaid by Paul Dini's first person narrative and the eventual conclusion is neither cop-out nor fantasy, although a sad comment on mankind. 'Peace on Earth' was aggressively, and possibly over-promoted on release, increasing sales at the cost of undermining integrity. It shouldn't be an easy read, and in keeping with the tone Ross donated the profits from selling the original artwork to charity. Good on him.

The hook for 'The Last God of Krypton' was artwork by renowned fantasy painters Greg and Tim Hildebrandt. Thankfully they can tell a story, but while it's diverting to see Elvis cast as Superman their art is so heavily reliant on posed photo-reference it has a static gloss. Furthermore frozen exaggerated reaction is both laughable and distracting, occasionally drawing the eye away from the focal point of a panel. Walt Simonson's story about a threat from Krypton isn't his best either.~FP

SUPERMAN: The Man of Steel

DC: *6 issue miniseries 1986, 135 issues (0-134), 6* ***Annuals*** *1991-2003*

When DC revised Superman in 1986, they suspended publication of both *Superman* and *Action Comics* and replaced them with *Man of Steel*. This miniseries rewrote the Kryptonian's history in such a way that much of the copious back-story was sidelined rather than simply deleted. John Byrne, both writing and drawing, detailed Superman's history from first appearance to discovering his origins, and laid some highly specific groundwork for the relaunch. He also formally acknowledged the power of the traditional supporting cast. Each issue takes the viewpoint of a different figure from the mythology and spotlights a key event. 1 introduces the new interpretation of Jor-El and Krypton, then gives way to the modern representation of America's heartland and the Kents who reared the boy who would become Superman. 2 introduces Lois Lane and shows Superman's first public feat. 3 has the first meeting with a decidedly hostile Batman, 4 the first clash with a much more evil Lex Luthor, and 5 is an especially poignant reworking of the original Bizarro story, discarding years of slapstick nonsense. In 6 Lana Lang and Pa Kent save Superman from falling victim to his own Kryptonian heritage. It's a smart and thrilling series that still serves as a reminder of what a good Superman comic can be. When publication of the regular Superman comics resumed, with the addition of a third title, despite being all-new, the character was established as still and already the World's Greatest Hero.

The title was retained for the first expansion of the Superman franchise since Byrne's relaunch, enabling DC to present to all intents and purposes a Superman adventure every week. It also shoe-horned itself into the peculiar double numbering "triangle" system adopted in the interests of clarity with subplots crossing between the various Superman titles. *Man of Steel* 1, therefore, was also 1991's nineteenth instalment of *Superman*. Although a putatively pedantic point, it is the root cause of the seeming lack of cohesive identity typical for so long of many Superman tales. Creators Louise Simonson and Jon Bogdanove start impressively enough, introducing new characters and Cerberus, a major new villain, and a subplot about a strike at *The Daily Planet* that harks back to a more socially relevant time for the character. A *War of the Gods* crossover intrudes in 3, but otherwise the creators are left pretty much alone to settle in before the perpetual overlap of plot threads from the other titles draws them in. 6, for example, is part 3 of 'Blackout'.

Kieron Dwyer gives Bogdanove a seasonal break for 8's Christmas adventure, before a long run of striking illustration begins with the first part of the epic (length) 'Panic in the Skies' (9). The Cerberus storyline climaxes in 13 and after that almost all stories are part of the greater continuity. Whilst not necessarily a guarantee of poor quality, this reliance on extended, multi-title storylines does make for an unsettled read, and often the highly charged scripting and evocative, powerful drawing of the title overwhelms preceding and succeeding chapters. The relevant segments of 'The Death of Superman' (18-19), and the follow-up, 'Funeral for a Friend' (20-21) are both excellent, whilst the following chapters elsewhere pale by comparison. The introduction of African-American John Henry Irons as a super-armoured Man of Steel for the 'Reign of the Supermen' (22-27*), led to the character – now called Steel – getting his own title, and was Bogdanove's last issue for some time.

The editors tried to rekindle the ballyhoo of Superman's death and resurrection with even tighter cross-continuity, guest shots (such as a daft fight with Lobo in 30), an intercompany crossover (with Milestone in *Worlds Collide* parts 1 and 10) in 35-36 and DC's own *Zero Hour* event (37, 0, 38). It was all much of a blur, though, with a welcome change of pace in 47. Here a flashback tale relates how *Daily Planet* owner Franklin Stern and editor Perry White foiled a Eugenics scheme by white supremacists to breed a "Super-Man" before it's back to the continuity treadmill. 'The Trial of Superman' (50-52*) is followed by another unremarkable procession of tales although there's a chuckle or two when Mr. Mxyzptlk tries to play cupid to the temporarily estranged Lois Lane and Clark Kent (56). This later turns into absolute laugh-out-loud gold in the follow-up, 'Death of Mr. Myxzptlk' in 75, the ultimate parody of 'The Death of Superman', written and drawn by Bogdanove.

With 87 a new editorial policy severely curtailed the inter-title links and Mark Schultz and Doug Mahnke became the regular creators. If too close ties with the other Superman publications was detrimental, the deregulation policy was instantly worse, with what appeared to be four different versions of the character blundering about, acting like a simplistic, testosterone-drenched, musclebound simpleton in one comic and a calculating genius in another. There were still some big crossovers (such as 'Y2K' part 4 in 98 or 'Condition Critical' part 3 in 102) but they now alternated with multi-part stories exclusive to *Man of Steel* alone. 115-117 were part of the ambitious 'Our Worlds at War' event and when all the dust settled there was a tentative move to re-establish those lost links. As artists came and went and story quality stalled, a fill-in that ought to be compulsory reading for Superman scripters slipped by everybody. 129, by Chuck Austen and Pascal Alixe managed a fresh look at the character and a truly moving view of his relationship to the ordinary cops in Metropolis that sadly seems to have been lost in the fuss over the overblown multi-part inter-title fistfight 'Ending Battle'. The more things change…~WW

SUPERMAN: Man of Tomorrow

DC: *15 issues 1995-1999*

Even with Superman starring in four titles a month there were still four weeks a year with no new *Superman* comic on sale. *Man of Tomorrow*, a quarterly to plug these gaps, produced the closest thing to stand alone tales during a period of intense inter-title continuity, at least at the start. Roger Stern, Tom Grummett and Brett Breeding kicked off with stories that reintroduced and in many ways starred, arch-foe Lex Luthor. There were guest stars aplenty with the Alpha Centurion (2), Captain Marvel (4) and a segment of the DC crossover event 'Underworld' in 3. Luthor's wedding in 5 is something of a turning point however, and from then on the exigencies of tight continuity diminish much of the identity. From 6 Paul Ryan becomes penciller and a succession of fights replace the intrigue of the early issues. Louise Simonson becomes scripter with 11 and moves more of the focus back to Luthor, but the damage is done and each issue becomes just more pages of someone else's storyline. J. M. DeMatteis, Ryan Sook and Jeff Gan close out the series with a maudlin tie-in to the *Day of Judgement* crossover. A competent superhero outing with nothing to actually inspire or remember, and of course, Superman readers don't really have any choice, do they?~WW

SUPERMAN Miniseries

DC: *4 issue miniseries ('The Secret Years') 1985, 3 issue miniseries (Superman/Doomsday) 1994*, 4 issue miniseries (Superman/Wonder Woman: 'Whom Gods Destroy') 1997, 2 issue microseries (Superman:Silver Banshee) 1998, 4 issue miniseries (Superman For All Seasons) 1998*, 3 issue miniseries ('The Dark Side') 1998*, 3 issue miniseries ('The Doomsday Wars') 1999*, 4 issue miniseries (Superman & Bugs Bunny) 2000, 3 issue miniseries (Superman/Gen^{13}) 2000*, 2 issue microseries (Last Son of Earth) 2000, 4 issue miniseries ('Day of Doom') 2002-2003*

DC/Dark Horse: *3 issue miniseries (Superman vs Aliens) 1995*, 3 issue miniseries (Superman Madman Hullabaloo!) 1997*, 3 issue miniseries (Superman vs Predator) 2000, 4 issue miniseries (Superman vs Terminator) 2000, 3 issue miniseries (Superman/Tarzan: Sons of the Jungle 2001, 4 issue miniseries (Superman vs Aliens II: 'Godwar') 2002, 3 issue miniseries (Superman vs Predator II) 2002*

'The Secret Years' deals with the college experiences of Superboy before he set up shop in Metropolis in a selection of solid, entertaining tales that were later excised from the continuity. Bob Rozakis, Curt Swan and Kurt Schaffenberger craft a Rite-of-Passage journey that epitomises the best of the previous incarnation of the Man of Steel, and Frank Miller drew some spectacular covers to set it off.

Elseworlds are stories of alternate realities where events and situations are changed from mainstream continuity, lending themselves easily to iconic characters such as Superman and high concept stories. In 'The Dark Side', the rocket from Krypton lands on Apokolips, planet of the evil Darkseid, who raises the child to be a super-stormtrooper. John Francis Moore writes a heavy-handed parable of redemption, but Kieron Dwyer's impressive drawing is a saving grace. There's no such escape for Steve Gerber's lacklustre 'Last Son of Krypton', where the journey is to the high-gravity world and our hero faces a childhood of torment on cold, hard, Krypton. Worst of all is the awful 'Whom Gods Destroy' where the Nazis developed Atomic weapons, forcing Superman to become an isolationist for fifty years. When septuagenarian Lois Lane stumbles into a game played by

Olympian Gods and is turned into a good Wonder Woman to battle an evil Nazi one, all vestige of sense departs. Among the worst things Chris Claremont has ever written and the art is no reward.

The Dark Horse teamings all fall under the 'Elseworlds' banner, and are generally disappointing. When a Terminator team is sent back to our era with knowledge to thwart its own defeat, Superman is sucked into a future Metropolis to battle the genocidal mainframe on its own home ground. In *Superman vs Predator*, the team sent to recover a crashed spaceship in the South American jungle stumble across a scheme to wipe out Earth's genetically flawed and inferior. Enter a Man of Steel infected by a space virus and a Predator determined to keep his race's visits to Earth a secret and you've got an above average thriller from David Michelinie and Alex Maleev. Chuck Dixon and Carlos Meglia's tale of what might happen if Kala the She Ape opened that rocket from Krypton and John Clayton grew up an English Gentleman in 'Sons of the Jungle' is an insubstantial, if pretty moneyspinner that doesn't stand up to a rereading. The art for the first adventure with the Aliens by Dan Jurgens and Kevin Nowlan looks great, but once again the convolutions of making a scary monster a match for an invulnerable hero squash whatever tension there might be. 'Godwar' is somewhat of a departure. The role of the Alien is practically non-existent, in what is essentially a tale of the New Gods, albeit one magnificently drawn by Jon Bogdanove and Kevin Nowlan, where the sight of Jack Kirby's noblest creations dying to prevent the infestation of New Genesis is genuinely stirring.

Superman For All Seasons is Jeph Loeb and Tim Sale's reworking of the Boy to Man to Man of Steel myth. It's a vivid and charismatic delight that comes the closest yet to capturing the essential wonder of the character, but Silver Banshee, from Daniel Brereton and Joyce Chin is nothing more than a padded Halloween campfire tale that wouldn't work as a back-up, let alone command its own title. With the huge commercial success of 'The Death of Superman' it's no surprise that DC would want to revisit both the characters and the premise itself. Sadly, 'Hunter/Prey' is an over-priced piece of nonsense from Dan Jurgens using the origin of Doomsday as an excuse for lots of big punch-ups. Furthermore, 'The Doomsday Wars' is a convoluted and saccharine tale wherein Superman has to choose between saving a premature baby or rescuing the Justice League from a Doomsday possessed by Brainiac. It's a surprise and relief, therefore, when 'Day of Doom', with Bill Sienkiewicz adding gravitas with the inking, is a strong tale dealing with the victims and aftermath of Doomsday's rampage across America.

In 'Hullabaloo!' Mike Allred tells a disappointingly timid tale that has Frank Einstein transported to Metropolis and the Man of Steel diverted to Snap City, each absorbing the other's characteristics. Cue lots of confusion and sly allusions to glory days gone by as their respective mad scientist friends and significant others work to set things right. By contrast, Superman and Bugs Bunny is wonderfully engaging as Superman and the JLA team with classic Warner Brothers cartoon characters to save their respective dimensions from destruction. Mark Evanier and Joe Staton create a gloriously funny adventure that balances the screwball antics of Bugs and Daffy with tongue in cheek jibes at comics icons. Pepe Le Pew scores with Wonder Woman, Bugs is Super Rabbit, and you must beware as the Duck Knight Returns! A natural gem, unlike *Superman Gen*^{13}, which tries hard, but is little more than a good-looking, forced farce from Adam Hughes, Lee Bermejo and John Nyberg. The stacked and superstrong Fairchild is hit on the head whilst vacationing in Metropolis, leading her to conclude that she's Supergirl with amnesia. At least it doesn't take itself too seriously, which is clearly very easy to do if when adding to the canon of the world's foremost comic icon.~WW

SUPERMEN OF AMERICA

DC: *One-shot 1999, 6 issue miniseries 2000*

In the ho-hum one-shot, with Superman's mind on other matters, Luthor forms a new team of Guardian Angel types headed by a cadre of teenage superheroes, ostensibly to deal with the problem of teenage gangs. Fabian Nicieza writes the miniseries and the pencilling is as sterling as ever from Dougie Braithwaite. Nicieza knows how to crank up both mystery and tension issue by issue. The individual team members have some serious problems and unrevealed secrets, Luthor's up to no good, but in over his head, and one of the heroes has a big surprise heading their way. That's dealt with in unpredictable fashion in the final issue amid some wishy-washy (and plot convenient) moralising, but all in all the miniseries is very satisfactory.~WJ

SUPERNATURAL LAW

Exhibit A Press: *13 issues (24-36) + 1999 to date*

In order to reflect the name of a film in development based on the series, Batton Lash's *Wolff & Byrd*, 'Counselors of the Macabre', changed title with 24, but in all other respects, this is the same series. There are parodies of TV shows (*Ally McBeal* and *Buffy the Vampire Slayer* in 24), other comic characters (Hulk in 29 and Cerebus in 32-33) alternated with occasional issues of shorter stories and fresh looks at the supernatural. 27 has a strip inked by Steve Ditko reprinted from *Satan's Six*, while 35 is a gorilla story told in homage to Carmine Infantino. 36 is the clever tale of a horror author in a coma, being prosecuted by his creations with Alanna having to stay asleep to represent him while dreaming. The strip benefits too, from strong, believable and likeable characters and several running jokes.~NF

SUPERNATURAL THRILLERS

Marvel: *15 issues 1972-1975*

One of many 1970s mystery comics, this one differed from the norm by initially adapting classic horror stories. Theodore Sturgeon's *It*, and *The Invisible Man*, *Dr Jekyll and Mr Hyde* and *The Headless Horseman* in 1, 2, 4, and 6 respectively were decent, if not thrilling. Far better was Robert E. Howard's lesser-known *Valley of the Worm* in 3, an out-and-out sword-and-sorcery strip feeling somewhat out of place here, retold to great effect by Roy Thomas, Gerry Conway, Gil Kane and Ernie Chua. 5's original story, *The Living Mummy*, has a slave of noble origins who has been mummified by an oppressive pharaoh reawakening centuries later to track down his murderer's descendants. It proved popular enough to spawn a series beginning in 7. Originally by Steve Gerber and Rich Buckler, the writing was taken over by Tony Isabella, Len Wein and John Warner, while Val Mayerik and Tom Sutton (in 15) drew it. Never near Marvel's top strips, it was always entertaining, and remains worthy of a look.~DAR

THE SUPERNATURALS

Marvel: *4 issue miniseries 1998-1999*

Appallingly misguided reworking of Marvel's horror characters, and for some reason the Black Cat, by Brian Pulido, who recasts them all as teenagers. Pulido left the actual writing to Mark Andreyko (who would later redeem himself elsewhere), and the sales to Marvel who charged double their regular price for a twenty-two page comic because it included a crap character mask, and $3 for their promotional leaflet. This was the final thrash for the arrogant Marvel machine of the 1990s.~FP

SUPERPATRIOT

Image: *4 issue miniseries 1993, 4 issue miniseries ('Liberty & Justice') 1995*, 4 issue miniseries ('America's Fighting Force') 2002*

A supporting character in *Savage Dragon*, Superpatriot is a cybernetically enhanced soldier. The first miniseries opens with one of the most shocking scenes ever presented in a comic, but it's all downhill from there. The second series is a better proposition all round. Dave Johnson's art has improved, and there's a decent story from Keith Giffen that sees Superpatriot manipulated and introduced to the children he was unaware he had, and a contrary pair they are. Throw in would-be global guardians The Covenant and you've got a well-plotted action romp. The third miniseries is the best yet, with artist Cory Walker a real find, although more backgrounds would be nice. This time Superpatriot can deal with criminals easily, but coping with civilian life is a problem, as are the kids. Robert Kirkman delivers a funny plot, incorporating Superpatriot's past, throws in some old Savage Dragon foes, and confounds expectations along the way. If the quality curve continues, the next miniseries should be a masterpiece.~WJ

SUPERSTAR

Image: *One-Shot 2001*

The idea of a superhero who literally depends upon the adulation of the public in order to sustain his powers is half-baked to begin with, and writer Kurt Busiek doesn't do anything to make it work here. For your money you also get a few predictable, half-hearted jabs at media manipulation and the emptiness of celebrity, oodles of tedious fight scenes and some attractive, pseudo-realistic artwork from Stuart Immonen.~AL

SUPERSWINE

Fantagraphics: *One-shot ('Christmas with Superswine') 1989*
Caliber: *2 issues 1991*

Gary Fields' cartooning is excellent. His stories leave something to be desired. Superswine is an all-drinking, all-belching pig in a cape and mask, who, whisper it, isn't really heroic at all. Of these issues the first is marginally better, as Fields combines the origins of Batman, Spider-Man and Superman to give our hero an origin. It's nowhere near as funny as it thinks it is, although there are plenty worse comics. Anyone whose funny bone is tickled should also hunt down *Kaptain Keen*, which Superswine shares, and issues of *Critters*.~WJ

SUPREME

Image/Extreme: *43 issues (1-30, 0, 31-42), 3 issue miniseries (Legend of Supreme), 1 Annual 1992-1996*
Maximum Press: *6 issues (43-48) 1996-1997*
Awesome: *9 issues (49-52a, 52b-56) 1997-1998, series two 6 issues ('The Return') 1999-2000*

For Supreme substitute Superman, with the only element of originality being his return to Earth in 1, having left in the 1940s. The majority of 1-40 is wretched, with creator Rob Liefeld seemingly letting anyone who rang his doorbell have a try at the comic. Shawn McManus' presence pencilling a bunch of early issues is a mystery, but he's as bad as the rest in illustrating a preposterously muscled goon unencumbered by plot. Only writer Gary Carlson (22-24, 26-31) made any effort until 41, leaving the annual setting Supreme against a mad Nazi a slight cut above. It still won't count among Keith Giffen's career highlights. Better is Giffen and Robert Loren Fleming's writing on the miniseries, filling-in Supreme's origin and having him deal with everyone who participated in his creation.

Writing from 41, Alan Moore effected an immediate quantum leap in quality sustained until almost the end. All the more remarkably, Rick Veitch excepted, this was achieved with very ordinary artists until the arrival of Chris Sprouse with 53 (although he also drew 50). Wanting to provide the type of stories he enjoyed during childhood, Moore cultivated the charm of the 1950s and 1960s Superman via flashback sequences in most issues. They were largely illustrated by Veitch in suitable style on pages toned to resemble browned old comics. Their simplicity is deceptive, requiring considerable imagination. The adopted style is the only derivative factor and they serve to foreshadow modern day plots, often issues in advance. Contrasting these with activities set in the 1990s, Moore placed Supreme in a wider context. He introduced dozens of alternative versions, assorted allies, some new, some drawn from the previously established history, and even instigated the conceit of having him adopt a civilian identity as a comic artist. Among it all, he toyed with the structure of superhero stories, their constant revisions, and egotistical creators amid an excellent adventure comic with a broad streak of humour. The humour was sometimes knowing, often parody and occasionally very black. 50 is a good sample issue. The flashbacks investigate the outcome of potential marriages while in the present there's a tension as Supreme has fallen in love. For unknown reasons a planned oversize issue concluding 'The Supreme Story of the Year', which had been running since 41, was split into 52a and 52b. Any issue can be read and enjoyed individually, though. The second series continues directly from 56, delayed by financial problems, which caused Sprouse's departure after 1, and returned to effect a seemingly final cancellation. By this time Moore was recycling some ideas to amusing, but diminishing effect. Perhaps fittingly the final issue was a tribute to Jack Kirby. After several false promises from others, Checker Books has published a collection of the now rare early Alan Moore written stories, with a second volume promised for summer 2003.~FP

SURGE

Eclipse: *4 issue miniseries 1984-1985*

Among fans Mark Evanier has never had a particularly high reputation as a writer, perhaps because his non-humour work has chiefly been on lesser-known superhero titles. Yet *DNAgents* was a clever series, exploring the idea of humanity through a group of heroes grown in tanks by the evil Matrix corporation. In this spin-off Surge hunts his girlfriend's assassin and is put on trial for murder in the great superhero tradition. Only the man who captured him can provide the evidence that will prevent his execution. Utilising supporting characters from the main series, Evanier and co-scripter and artist Rick Hoberg examine the nature and function of revenge. Each issue also contains a back-up featuring one of the other DNAgents, all written by Evanier. 3's Sham story is drawn by Mike Sekowsky and in 4 Steve Rude draws the Rainbow short.~NF

THE SURGEON

Rough Cut: *2 issue microseries 2000, one-shot 2001*

A soulless, butchering monster who navigates time using living bodies to manufacture his vehicle. Investigative reporter Alice Duncan arrives at Westfield Hospital, notorious for being haunted, to collect her wayward brother Chris. The shady Doctor Blythe and his team run by Murray Coleman are there to exorcise the hospital. The Surgeon's craft arrives and all hell breaks loose. Put together from a film screenplay, John Dorans' script and plotting are tight and well paced. The artwork's atmospheric chiaroscuro comes courtesy of penciller Jaeson Finn. The one-shot features a cartoony visit to the gladiatorial arena of Rome and an excellent Surgeon short written by inker Colin Barr. A superior horror comic.~SW

SURVIVE

Apple: *1 issue 1992*

Seemingly very early work in five-page segments from Don Lomax, by 1992 well ensconced at Apple producing the decent *Vietnam Journal*. This extrapolates what might occur following World War III. "Want to see more? Then write!" pleaded the concluding type. We obviously didn't.~WJ

SURVIVING SASKATOON

David Collier continues his unique mixture of personal narrative combined with historical events, this time relating the story of David Milgaard, a teenager in the wrong place at the wrong time convicted of a murder he didn't commit in 1969. Collier illustrates in his Crumb-lite style, and at the conclusion provides updates on all the major players. It's a miscarriage of justice well told, and little known outside Canada, and Collier provides a compulsive read.~WJ

The SURVIVORS

Spectrum Comics: *4 issues 1983-1984*
Prelude Graphics: *2 issues 1986**
Burnside Comics: *1 issue 1987**

In the 4010 nine humans launched into space after World War III, awake two thousand years later than planned. Gail Thurston's husband, Karl, is missing. Lynn Merrill has been killed in suspended animation and her husband, Roy, is killed while in a rage by Zachary Brewer. The six remaining then become the target of bounty hunter, Shrek 65 and Dreadlord, who both want them as body parts for The Old One in his undersea city, where they find themselves caught in the middle of a war. The final issues see jealousy over Kate creating friction between Zachary and Dominic, until Alexis' evil side (the women have been granted superpowers while asleep) threatens them all.

The series, created by Steve Woron, began in *Spectrum Comics Previews* and looked promising, but never really managed to find its feet. It features Woron's early, Paul Gulacy-influenced, good-girl artwork, though Bob Lewis' inks throughout (Darren Goodheart becomes penciller after two issues) are more important to the consistently smooth appearance of the strip. The Illustration Studio collected the final three issues in one volume in 1989.~NF

SWAMP THING

DC: *Series one 24 issues 1972-1976, series two 127 issues, 6 Annuals 1982-1993*
DC/Vertigo: *44 issues (128-171), 1 Annual 1993-1996, one-shot ('Roots') 1998*

Len Wein's creation of an intelligent bog monster unable to communicate with people who fear him on sight provided a pathos well served by Berni Wrightson's moody and evocative art, for which the initial run is remembered. 9's alien encounter is a good sample. Wrightson replacement with 11 was Nestor Redondo, who relished depicting the lush swamp vegetation in complete contrast to Wrightson's penchant for gloomy horror, but was equally accomplished. There are notable moments after the departure of the original creative team, but overall it was a slow decline to cancellation. All Wein and Wrightson issues were reprinted in four issues of *Original Swamp Thing Saga* and five issues of *Roots of the Swamp Thing*, and there was a dry run for the feature in *House of Secrets* 92 (reprinted in 33 of the second run).

Initially titled *Saga of the Swamp Thing*, the revival was to tie in with the release of the 1982 b-movie based on the character, and the team of Martin Pasko and Tom Yeates delivered a sprawling epic in 1-15. Encompassing corporate greed, ex-Nazis, witchcraft and an assortment of stock horror characters, the story rambles in places, but only really suffers in comparison with what was to come. The latter-day vampires in 3 provide a particularly chilling tale, and are revived by Pasko's successor Alan Moore. The art team of Steve Bissette and John Totleben arrived with issue 16, and their talent for genuinely gruesome creations was more suited to the tone of the title. Moore quickly, but respectfully, concluded Pasko's plots in 20 and from his supporting cast retained only the recently returned Abigail Arcane, Swamp Thing's tragic love from the original series.

Moore discarded the idea that Swamp Thing was in any way human in a startling story titled 'The Anatomy Lesson' (21), and eventually developed him into an Earth elemental able to materialise any vegetated area. Under Moore *Swamp Thing* encompassed horror standbys as manifestations of human problems and cruelty, and as it had done in the 1970s, redefined what a horror comic could be. Almost every issue by Moore, Bissette and Totleben (and subsequent artists Rick Veitch and Alfredo Alcala) can be recommended, and the variety of approach and storytelling methods is astonishing. As samples try four very different stories: the tale of a toxic hobo in 35 and 36, the examination of menstrual pain in 40, Gotham held hostage by Swamp Thing in 52 and 53, or the horrific return of Martin Pasko's supporting characters in 54. 34's psychedelic coupling is much championed, but lacks the linear coherency of Moore's best work here. The Moore-written issues to 56 have belatedly been collected by DC, while eleven Titan black and white collections were issued in the 1980s, and 20-43 were reprinted in black and white under the 'Essential Vertigo' label.

As both writer and penciller from 65 Rick Veitch produced some memorable issues, and no later writer was as consistent, although Mark Millar tops his peaks. His story of a doomed airliner in 70-71 is noteworthy, as were Swamp Thing's encounter with Superman (79) and a surprisingly good tie-in with the cross-company *Invasion* story (81). Having Abby and Swamp Thing conceive was an interesting idea, although standby stud John Constantine was required for the actual deed. Veitch then sent Swamp Thing travelling through time, but sadly, editorial qualms about a scene involving the crucifixion of Christ led to his resignation with 87. Doug Wheeler's best was a tale about a musician (94), garnished by Kelley Jones' Wrightsonesque art, but he wrote dull stories thereafter, accompanied by dull illustration. From 110 horror novelist Nancy Collins returned Swamp Thing to the Louisiana swamps, and the art team of Scot Eaton and Kim DeMulder (from 117) was the best since Veitch and Alcala. Although the run isn't bad, any sense of horror is outweighed by cosy domesticity (except in Collins' final issues) and any social commentary is hammered home. For a flavour, 121-123 feature environmental protesters and the return of the Sunderland Corporation from early issues.

A revitalisation was heralded when Mark Millar and Philip Hester joined DeMulder with 140, but it's slow in coming. Their initial story (co-written by Grant Morrison) starts with a surprise but descends into muddy symbolism. Issues to 150 stretch credulity by having the invincible Swamp Thing manipulated and on the run. Where Millar scores is by returning emotional despair, horror and unpredictability to the title. His next effort is much improved, a story in individual chapters sending Swamp Thing into an assortment of alternate worlds. The best is a Nazi-controlled USA, stunningly illustrated by Chris Weston, in 153, but 154's alternate Abby Arcane, 157's story of the woman who destroys a chain letter and the tale of a boy and his dog in 159 are also excellent. The art, though, never matches former heights, with the problem appearing to be DeMulder's inks not suiting Hester's angular pencils. Gradually obtaining mastery over all the elements, Swamp Thing becomes a challenge to God, and from 166 the final tale encompasses almost every character who's been influential during the course of the series. It tugs at and unwinds fixed conceptions of the cast and their alignments in masterful fashion, with arch-enemy Anton Arcane's unpredictable return for a philosophical debate in 168 typical of the story. Although not the best chapter, the conclusion to *Swamp Thing* is a natural progression, with an upbeat ending, which is what most would have wanted. Sad, then, that the memory is sullied by Jon J. Muth's one-shot, marked by some fine, bleak painting, poor storytelling, much padding, hardly any Swamp Thing and the most pretentious writing this side of a Candida McWilliam novel.~FP

SWAMP THING

DC/Vertigo: *20 issues 2000-2001*

Mary Conway awoke from a coma three years ago and has been living a typical teenager's life since. However, when her boyfriend betrays her with her best friend, Mary's true personality violently re-asserts itself as Tefé Holland, disgruntled daughter of the original Swamp Thing, also possessing the powers of an Elemental. From this opening, the series explains how Tefé became Mary and introduces a couple of travelling companions as she sets off to discover her place in the world: destroyer or saviour? Chasing Tefé are her parents, the sadistic agent, Romero, trying to kill everyone who's ever known Tefé, Kudzu, a samurai assassin and two agents from the Department of Agriculture. Tefé has long conversations with John Constantine (10) and her father (18). There's an issue of stories about fathers (9, with guest artwork from Steve Lieber, Guy Davis and Paul Pope) and when Tefé kidnaps Senator Culler Strand's daughter, Heather, the scene is set for a climactic encounter (11-17). Brian K. Vaughan's portrayal of Tefé isn't always heroic, but he captures a sense of isolation and abandonment that drives the story of her search for an identity. Roger Petersen (1-11) and Giuseppe Camuncoli (12-20) have a similar, stylised approach in the artwork, but Camuncoli's is sharper, more angular, non-naturalistic and motif rich (like a less ornate P. Craig Russell). It's surprisingly effective in contrast to the organic nature of the script.~NF

SWEET

Adept: *5 issue miniseries 1998-1999**

Leyland Myrick's bleak stories are completely at odds with any interpretation of the title, but this is a promising and well-received debut. Particularly pleasing is that Myrick's stories are completely removed from the genre obsessions mined by comics over the decades. Love is the unifying theme, be it the gaoler's obsession with his charge in 2, or the faux Victorian horror of 5, and the unconventional (although never obscure) storytelling is a definite rarity to be encouraged. To carp, these are very brief reads with not enough artistic detail to flesh them out, but Myrick will improve.~WJ

SWEET XVI

Marvel: *6 issues, 1 Special 1991-1992*

Writer/artist Barbara Slate attempts to recreate her *Angel Love* success, but comes badly unstuck with an overly cute, wilfully anachronistic attempt to set up a bunch of *Archie*-type teens in Roman days. Cutesy, cluttered and irritating rather than charming.~HS

SWEETMEATS

Atomeka: *One-shot 1992*

A John Bolton cover of a female vampire smearing blood across the wall is an appropriate welcome for the contents, which begin with a strip showing a callous twenty-something vampire paying money for sex with a young girl. Writer Steve Tanner and artist Pete Venters appear to feel the twist ending justifies the sordid premise, and, unbelievably, it's downhill from there. The longer second story is of an alluring sixteen-year old high-security hospital patient with a taste for blood, who captivates all who come in contact with her. It's an exploitative, voyeuristic piece offending on numerous levels, finishing off with a bit of lesbian fantasy canoodling for the lads. While there's absolutely nothing wrong with stories about sex, context is everything; these are appalling.~FP

SWERVE

Amaze Ink: *2 issues 1995-1996*

With the Earth destroyed, leaving only a belt of garbage, Agent 23 is the last human. In his ship, The Indigo Rayburn, 23 becomes a champion racer, until forced into exile by enemies. Now he's back to win a coveted third title. This has some visual attraction, though there is a tendency for lines to bleed together. The attempt at cool writing, however, by creator, Kyle Hunter, isn't successful: 23's grandstanding and posing seem juvenile rather than hip. The story remains unfinished.~NF

SWIFTSURE

Harrier: *18 issues 1985-1987*

A companion to *Conqueror*, early issues had a space-opera and fantasy line-up, usually with a curiously 1950s feel to them, with the solo stories of Conqueror's Lt Fl'ff, illustrated by Steve Yeowell, amongst the best of them. An anomaly, though a welcome one, was Lew Stringer's guest Brickman strip in 6, humorous Batman parody. With 15, new editor Rob Sharp attempted to revitalise the title with three new series, but despite a suddenly improved line-up, *Swiftsure* had lost too many readers, and folded a couple of issues later.~HS

Batman: SWORD OF AZRAEL

DC: *4 issue miniseries 1992-1993**

The story that introduced Jean Paul Valley to his destiny as the avenging angel Azrael and set him on the path to taking on the mantle of the Batman. Azrael's father is killed trying to assassinate Lehah, ex-treasurer of the Order of St Dumas, who has set himself up as an arms dealer and is now out to destroy his old partners. When Batman investigates a gun battle he finds himself caught between Lehah and the Order in Switzerland where, as Bruce Wayne, his identity becomes known to Azrael. Apart from the reasoning behind Batman's secret identity being blown (isn't it enough that practically everyone works it out in the films?) and the need to set Azrael up for 'Knightfall', this is a reasonable Batman adventure, full of intrigue and even some detection, as written by Denny O'Neil. What really pushes it above many of the contemporary *Batman* stories is the artwork by Joe Quesada. His cinematic layouts are given a boost by inker Kevin Nowlan, whose tight, smooth technique gives the whole a sharp, dynamic feel.~NF

SWORD OF DAMOCLES

Image/WildStorm: *2 issues 1996*

Like *Sigma*, this is part of *Fire From Heaven*, but here there's a tighter link between issues, telling the story of the title character without really digressing into the wider storyline. The Sword is the servant of Damocles, whose attempt to recreate his own world at the expense of Earth is one of the two main plotlines running through 'Fire From Heaven'. He's conned into attacking Winter in 1 and killed by his counterpart, Union in 2. Warren Ellis' script is sparse and does the job but Randy Green's artwork is simplistic and unattractive.~NF

SWORD OF SORCERY

DC: *5 issues 1973*

Certainly one of the best sword-and-sorcery series produced for comics. It starred Fritz Leiber's Fafhrd the Barbarian and the Gray Mouser. The contrast of the two main characters inspires entertaining stories from Denny O'Neil. Fafhrd is a red-haired giant of a man, with more brawn than brain, while the Mouser is a wily schemer. If you like sword-and-sorcery with a touch of humour, and want a change from *Conan*, then give this a go. With impressive early art from the likes of Howard Chaykin, Walt Simonson and Jim Starlin, you can't go wrong.~HY

SWORD of the ATOM

DC: *4 issue miniseries 1983, 3 Specials 1984-1988*

Conceived by Gil Kane and Jan Strnad, who then respectively drew and scripted the series, this isn't such a radical reinvention of the Atom, more a change in direction. Discovering his wife Jean in the arms of another man, Ray Palmer (The Atom) takes a job in South America, crashes over the Amazon, is stuck at six inches tall and discovers a lost alien race that happens to be the same size as him. From then on the story is worthy of a *Conan* epic as the Atom aids a princess and some rebels against her father, contending with various jungle threats like soldier ants along the way. The series ends with the Atom back at regular size but determined to re-find the princess, Laethwen. The first special is the story of Ray and Jean splitting up. The gimmick is that the special is excerpts from Ray and Jean's book about their break-up. The second special is something of a retread of the miniseries, though there's some fun in the size-changing antics of Jean and her new lover Paul as they too get to visit the jungle. The final special is still by Strnad, but Kane is replaced by Pat Broderick, whose similarities to Kane merely highlight the fact that it's not Kane. This is more of a horror tale, as the Atom visits another of the aliens' cities, which is in the middle of a plague that causes the dead to return to life after burial. Strnad's scripts are fine as far as they go but it hardly matters that it's Ray Palmer in these Burroughs/Howard-inspired tales. Kane's artwork is at its best on the miniseries, though the first special contains some of his latter-day minimalism.~NF

SWORDS OF TEXAS

Eclipse: *4 issue miniseries 1987*

Scout spin-off as the Swords accept a contract to ship some arms to Mexico, but get more than they bargained for. There's also some good old boy roister-doistering with the 'Dogs of Danger' back-up strip.~WJ

SWORDS OF THE SWASHBUCKLERS

Marvel/Epic: *Graphic Novel 1984, 12 issue limited series 1985-1987*

Preposterous stuff. Space pirate Raader's mother was an 18th-century Earth pirate, so Raader speaks with a "ho ho Jim m'lad" accent. You know it's proper space opera because characters have apostrophes in the middle of their names, and most aliens are biped humanoids, many based on earth animals. Raader's race has pointy flaps of skin extending from their temples. It's meant to be light-hearted and fun, but is dull and derivative.~FP

SWORDS OF VALOR

A+: *3 issues 1990*

Anthology reprinting often obscure short strips drawn by the good and famous for Charlton, ACG and 1970s Atlas titles. The muddy black and white reprinting of stories originally in colour is less than desirable, but for those wanting to search out the early work of John Buscema, Jim Aparo and Walt Simonson among others this is a cheap place to begin.~FP

SYNDICATE

N-Studios: *2 issues 1996*

In 2017, with Britain controlled by the Japanese after losing the Corporation War, Charley Valentine is a policewoman, who likes nothing better than a fight in a bar with her pool-hustling boyfriend, Harvey, after a hard day blowing away the bad guys. Unfortunately, when she accidentally learns who killed her father a year ago, she ends up on the other side of the law. Nigel Raynor's high energy thriller doesn't really convince because the setting isn't used for anything more than a character's racist remarks and there's no explanation for the gung-ho, gun-crazy attitude of criminals or cops, though the less-cluttered artwork of 2 does improve the storytelling.~NF

SYNTHETIC UNIVERSE

Hardcut Publishing: *1 issue (3) + 2002 to date*

Continuing the numbering from a minicomic, this is a collection of odd short strips by Alison Elizabeth Taylor, including the continuing tale of thrift in the 2020s, when hair is considered unclean, and a couple of stories written by Andrew Hunter and drawn by Taylor. The overall effect is one of discomfort, that nothing is quite right, but there is also a sense that that's all there is to find. Perhaps the issue makes more sense, if you've read the minicomics. Taylor's style is reminiscent of Al Columbia, though much more open and, as yet, not as accomplished.~NF

SYPHONS

Now: *7 issues 1986-1987, 3 issue miniseries 1994*, 3 issue miniseries ('The Sygate Stratagem') 1994, 3 issue miniseries ('Countdown to Armageddon') 1995, 1 Annual 1995*

Pedestrian superhero adventure as four orphans gain superpowers from an alien spaceship and become embroiled in an intergalactic war between barbarian aliens and superpowered humanoids called Syteams. Predictable from page 1, although the miniseries have some adequate to excellent artwork from Mark Beachum and industry workhorse Rich Buckler. For undemanding die-hard superhero fans only.~WW

THE SYSTEM

DC/Vertigo: *3 issue miniseries 1996**

Peter Kuper is probably best known for his *Third World War* comics or his *New York* album. Both are intensely political works and though *The System* doesn't have the same focus, it too is about politics. Experimentally told without word balloons, it's a series of vignettes, much like Robert Altman's film *Short Cuts*, as a number of individuals cross paths as they go about their daily business in the city. Though the characters have their own stories there's an underlying terrorist plot and a political scandal that threatens all their lives. Kuper's artwork is minimalist but carries the story along at a brisk pace, though careful reading is required because of the lack of dialogue.~NF

TABOO

SpiderBaby: *3 issues 1988-1989*
SpiderBaby/Tundra: *4 issues (4-7), 1 Special 1990-1992*
Kitchen Sink: *2 issues (8-9) 1995*

Lavish horror anthology founded by Steve Bissette. Despite a tendency to indulge its creative teams, *Taboo* stands head and shoulders above other horror titles since the demise of *Creepy* and Eerie. Bissette as editor explored the parameters of how and why things upset us and frequently triumphed by persuading creators not known for working in the horror genre to contribute. Notable for running major series such as Alan Moore and Eddie Campbell's 'From Hell' (from 2) and Moore and Melinda Gebbie's unfinished erotic what-if? 'Lost Girls' (5 onwards).

Stories range from schlock horror to disturbing mood pieces. Many of them are experimental in both form and content, challenging the reader. You may feel that much of the content ultimately fails, but they fail in an eye-opening way. Of particular note are Rick Grimes' stories, set in a sardonic world of tortured lines and sick humour, and Jeff Nicholson's downbeat stories of office life in a weird, inexplicably sinister corporation.~FJ

TAD MARTIN

Caliber: *5 issues 1991-1993*

Uncompromisingly brutal and utterly amoral, therefore compelling, all the more so for having the feel of autobiographical confession about it. Tad Martin is ironically subtitled "Average American teenager" on the cover of the first issue, and the comic covers the twin teenage obsessions of sex and violence, with the crude drawing matching the crude text. 4 is text with a few illustrations. Creator Al Frank's apparent misogynism is disturbing, but don't let that put you off sampling the comic world's answer to punk music: loud, simple, and in and out in three minutes.~FP

TAILGUNNER JO

DC: *6 issue miniseries 1988-1989*

A renowned geneticist is given cybernetic implants and merges the personality of his dying daughter Jo into him. She spends most of her time in a convincingly portrayed fairytale cyber-reality while her father attempts to exact restitution from the corporation that transformed him and still holds his wife. The title refers to Jo operating her father's cybernetic implants while he's occupied with other matters. Peter Gillis turns in a stunningly bizarre concept that works very well, and sank almost without trace in the days when DC published adult material, but didn't quite have a handle on how to promote it. Successfully avoiding the twin traps of becoming either too twee or too testosterone-influenced, *Tailgunner Jo* both delights and excites, much of the credit being due to the art of Tom Artis. He switches from one locale to the next with aplomb, never short-changing the children's fantasy elements for the more popular action sequences. The series sags a little in the middle, which is odd as the ending might have been expanded, and prospective readers should be warned that the story really has to be read in sequence to make sense.~WJ

TAKEN UNDER

Caliber: *1 issue 1992*

Very much the taster for a series that never materialised, as this makes absolutely no sense in isolation. Characters slouch about muttering portentous dialogue amid mysterious happenings. Michael Lark's fractured imagery is appealing in isolation, but hardly attempts to tell a story.~FP

TAKION

DC: *7 issues 1996*

These days no superhero would drop an aircraft carrier on a skyscraper or three to deal with a problem. In 1996, though it was okay for a being of pure energy embodying the source of all life. Scientific mumbo-jumbo sees Earthman Josh Saunders transformed and able to instinctively manipulate the fundamental energy of the universe. For all that, he's rather a fuckwit, bumping through space and time into battle scenarios. Confusing, non-linear and with an irritating stream-of-consciousness narrative, *Takion* ties into Jack Kirby's *New Gods* concepts. Perhaps preferable to diluting those stories still further, *Takion* is nonetheless a mess.~WJ

THE TALE OF ONE BAD RAT

Dark Horse: *4 issue miniseries 1994-1995**

Rumour has it that when Dark Horse supremo Mike Richardson signed this Bryan Talbot miniseries he thought he was getting the second part of Talbot's *Luther Arkwright* epic. He can't but have been delighted by what he did get: a multi-award-winning story of Helen, a young runaway whose only friend on the street is her pet rat. Her love of Beatrix Potter takes her on a pilgrimage to the Lake District, where she finds the resources to come to terms with the paternal sexual abuse that drove her from home in the first place. In an astoundingly well written final scene she confronts her father, who's looking for forgiveness. Talbot avoids preaching or editorialising about this most difficult subject, producing a work more powerful for its lack of conclusions.

One Bad Rat is an excellent introduction to comics, and ought to be put before a much wider audience. The plot is intelligent, the writing sensitive and the art clear but detailed. Talbot produces an excellent Potter pastiche and uses other English illustrative techniques – most notably the simplified figures and detailed background style Alfred Bestall used to such effect on *Rupert* – to enrich his style, finally getting beyond the stiffness that characterises much of his earlier work.~FJ

TALES FROM GIMBLEY

Harrier: *One-shot 1987, one-shot ('More Tales') 1988*

Gimbley is Phil Elliott's spinner of way-out yarns, his balding present incarnation as the pub raconteur, narrating stories about the magnificently quiffed youthful Gimbley, collected from various early 1980s small press comics. These are odd stories, occasionally seeming to be without purpose, but also quite capable of reaching down into you to tweak a long-hidden emotion. Phil Elliott's art improved from story to story here (sadly, they're not collected chronologically) and would improve still further, but the basics of his European clair ligne style are present and correct. Those not expecting slam-bang action and a pay-off on every page could do worse than seek these out.~FP

TALES FROM THE AGE OF APOCALYPSE

Marvel: *2 issues 1996-1997*

In 1995 all X-titles were briefly replaced with issues about an Earth where Professor X had died before forming the X-Men. This presented untold tales of that world. 1 sees a heroic Magneto and his X-Men plan to assassinate Apocalypse, but it's really about how seeds of rebellion were planted in Cyclops, a fanatical supporter of Apocalypse. 2 develops the theme as Cyclops and his brother Havok track down their real father, who carries a secret that could destroy the world. Competent enough if you're a fan but a little bewildering if you're not.~WW

TALES FROM THE BOG

Aberration: *7 issues 1995-1997*, one-shot ('Director's Cut') 1998*

Charming tales of a close-knit bayou community. The characters are portrayed in a style very influenced by Dave Sim's *Cerebus* and appear to be spoonbills. Later issues have pencils from Scott Roberts but it's really writer/creator Marcus Lusk's show. Due to the deliberately langourous pacing the 7 issue run gives the series too little space to really spread its wings, although each issue nevertheless has its own sparkle of well-observed humanity. The 'Director's Cut' of 1998 is a slight reworking of 1 and is also numbered 1. Delicious and over too quickly.~SW

TALES FROM THE CRYPT

EC: *27 issues (20-46) 1950-1955**
Gladstone: *7 issues 1990-1991*
Russ Cochran: *6 issues 1991-1992*
Gemstone: *30 issues 1992-1997**

Continuing its numbering from *Crypt of Terror*, *Tales from the Crypt* was the horror comic template, spawning hosts of imitators, outraging the parents of a generation, inspiring countless artists, and resulting in a TV series thirty years after publication. That the material is still reprinted today speaks volumes for the high editorial standards employed: EC horror titles stand head and shoulders above the many imitations they spawned over the decades.

Each issue contains four twist-ending stories, written for the most part by Al Feldstein and Bill Gaines. Early issues have interesting moments (Kurtzman's college initiation story in 21, though the usually excellent Wally Wood fails to draw convincing horror), but it's not until the arrival of Jack Davis with 24 that everything begins to gel. By this point Gaines and Feldstein have settled on their strangely moralistic formula of evil thwarted in appropriately gruesome fashion or revenge occurring from beyond the grave. Davis, Jack Kamen and Graham 'Ghastly' Ingels are the featured artists in almost every issue from the mid-20s, and are consistently excellent, with Ingels' story of a murdering shadow in 39 outstanding. A precociously competent Joe Orlando is most commonly the fourth contributor, although George Evans (who illustrates a quiz show story in 43) and Bernie Krigstein (whose best is Murder Dream in 45) are also of note. The sheer volume of stories Gaines and Feldstein wrote for three EC horror titles inevitably ensured a dip in quality, and the pair began substituting more explicit gore to cover predictable plots from about 34. Razor-sharp fire poles, a bigamist dismembered and used as sporting accessories by his wives, and butchers short of meat selling parts of corpses are typical of this era (although the title wasn't above self-parody, as evinced in 31's story about artist Jack Kamen). With Senate hearings on horror comics beckoning, the writers were forced to be less reliant on gore, and the final issues are a return to form. The quality of the art never dips. *Tales from the Crypt* is best read an issue at a time. En masse, the stories are formularised and predictable, although their over-the-top nature can still raise a chuckle.

The stories have been reprinted many times and in many different formats, few following the original numbering. If you can afford the boxed set, it's a complete reprinting, although not in colour. The Gladstone series couples reprints of *Tales from the Crypt* with *Crime SuspenStories*. The Russ Cochran series combines two original issues every time, and some are also available as oversize editions. The Gemstone editions are facsimiles of the originals and the run begins from 1, by re-titling the *Crypt of Terror* issues, hence the longer run.~FP

TALES FROM THE EDGE

Vanguard Comics: *13 issues, 2 Specials 1993-1998*

This anthology starts entertainingly with editor J. David Spurlock's Rick Montana, Space Cowboy (1-4), illustrated in the style of Al Williamson (1) and Wally Wood (2-4), Wood's own 'Encounter' (1), a horror strip from Howard Nostrand pre-dating the Comics Code, and Pat Boyette's 'Stinger Ray' (2-4). The signs are there that this isn't going to take any easy routes, however, with the inclusion of work from fine artist Barron Storey who appears in 1-10 and the Special, including a continued piece, the pretentious and incoherent 'Slidehouse' in 2-7. This 'art' influence extends to Marshall Arisman (2-6, whole of 12, Special), whose drawings are influenced by photojournalism, George Pratt (an interview and illustration in 6-8, 13), Spurlock's own story of rock star indulgence (7, 9), Bill Sienkiewicz (article and illustrations in 9), Greg Spalenka (mixed media strip in 9-10) and Douglas Winter (distorted photographs in 10). Dennis Calero's adaptation of the Sting song 'The Wild Wild Sea' (7) is almost welcome after that. Slightly less arty, are Bill Koeb's strips in 10 and 13 and David Hollenbach's in 13. The whole of 11 is given over to Jim Steranko, "Graphic Prince of Darkness", with articles, illustrations and storyboards from Francis Ford Coppola's *Dracula*. The second Special ('Nightstand Chillers'), was a benefit containing reprints.~NF

TALES FROM THE FRIDGE

Kitchen Sink (US)/Cozmic (UK): *One-shot 1973*

Very funny EC pastiche also taking the time to lampoon the Dick Tracy and Flash Gordon newspaper strips along the way. Bob Stewart and Russ Jones introduce obese glutton Global McBlimp, whose hamburger recipe is parlayed into a chain of Globalburger franchises by his manipulative flatmate Rod Usher. When Global's gorging finally results in cardiac arrest and pauper's grave, the EC morality tale and horror elements come to the fore, complete with a totally over-the-top final panel. There's even room for some good one-pagers at the end. PC be damned, fatties are funny.~WJ

TALES FROM THE HEART

Entropy: *2 issues 1987**
Slave Labor: *9 issues (3-11) 1988-1994**
Marvel/Epic: *One-shot ('Temporary Natives') 1990, One-shot ('Bloodlines') 1992*

Witty, warm-hearted, endearing and educational in the best fashion, *Tales from the Heart* is a unique comic. It draws on the experiences of co-writer Cindy Goff and others during two years spent as Peace Corps volunteers in the Central African Republic, known as "The Heart of Africa", hence the title. 1-3* detail the Peace Corps induction and composite lead character Cathy Grant's arrival and orientation in Boguila. She's naïve, but with an open mind, which is just as well, as her preconceptions are challenged as she gradually learns to adapt to a totally different reality and set of expectations. Goff and co-writer Rafael Nieves are adept at painlessly incorporating an immense amount of background detail and local custom into their stories, at the shorthand introduction of new characters, and of subtly progressing their cast. This would count for little were pencil artists Seitu Hayden (1-6) and Aldin Baroza (7 on) not also first-rate at conveying mood through posture and expression, and at portraying the sparsity of the area in sympathetic fashion.

Each issue is complete in itself, with 8 being a good sample. With her room-mate departing for the capital, Cathy's anticipating a peaceful day, but it doesn't materialise. Issued with the added marketing clout of Epic, the colour one-shots were intended to direct a new audience back to the parent title. They're a contrasting pair. 'Bloodlines' reflects on the harrowing atrocities committed by former C.A.R. dictator Bokassa, and 'Temporary Natives' deals with a Peace Corps volunteer at an impasse. Both are excellent. Never patronising and always absorbing, *Tales from the Heart* is a neglected gem.~FP

TALES FROM THE OUTER BOROUGHS

Fantagraphics: *5 issues 1991-1992*

Douglas Michael unfolds often ridiculous stories in a wayward manner, with layouts and style very similar to Rick Geary in choosing to caption individual illustrations and using minimal dialogue. Where he differs is in extending his stories over an entire issue. This works well for 1's nicely meandering tale of a murder attempt that doesn't quite go to plan, but thereafter drags on stories way beyond any point of interest. Artistically Michael is certainly no Geary. All things considered, sample the first issue and then plenty of Rick Geary.~WJ

TALES FROM THE TOMB

Of interest for stories written by *Little Lulu* creator John Stanley. Working within the limitations of what Dell would permit as a horror comic, he's surprisingly inventive, although the art, much of which looks like the work of Tony Tallarico, is very poor. It's an expensive curiousity these days, though.~WW

TALES from the TUBE

To date probably the only comic devoted to surfing, this is a superb collection of strips put together by Rick Griffin. Griffin's several contributions include a mixture of travelogue pieces on surfing haunts and semi-mythical paeans to the sport, all drawn in his trademark psychedelic style. Robert Williams contributes a fantastically drawn strip, 'The Ties That Bind', and the little-known Jim Evans is also of note. Add work by S. Clay Wilson and Robert Crumb and you have an essential addition to anyone's collection, whether a surfing fan or not.~DAR

TALES OF SUSPENSE

Marvel: *99 issues 1959-1968, one-shot 1995*

This title ably charts Marvel's rise from a struggling outfit to industry leaders, and for much of its run was home to two of their most enduring characters Iron Man and Captain America. In 1959, though, superheroes were only beginning to make a comeback, and this began as just another mystery anthology, with the early issues making use of inventory pages prepared before the company's mid-1957 implosion. The writing was uninspired, but it was beautifully drawn by the likes of Al Williamson (1, 4), John Buscema (1) and Russ Heath (2). As the title progressed new features emerged around an artistic core of Steve Ditko, Don Heck, Paul Reinman and Jack Kirby, and a Kirby strip in 7 ('The Molten Man-Thing') set the tone for the next few years. Readers delighted to a menagerie of marauding monsters such as Goom, Googam (son of Goom), Kraa, Maaboo, Brutu and Oog. The best of these, 'I Created the Colossus' in 14, written by Larry Lieber, as these strips invariably were, weighed in at a hefty eighteen pages and positively exploded with wanton destruction, as did a sequel in 20. All the monster strips were graced with powerful art by Kirby and Dick Ayers, but after 31 they concentrated on quirky science fiction and horror strips that, while better written, lacked the zen-like moronic fun. Almost every one of the first 46 issues also featured an exquisite five page twist in the tail strip by Stan Lee and Ditko that frequently outshone the lead feature. Much of their appeal lay in Ditko's stylish inventive art, and while almost every issue is well drawn, on some (10, 11, 14, 17, 20, 22 and 39) he excelled himself. A lovely Reed Crandall strip in 12 aside, the other back-ups were not particularly noteworthy, and despite his best efforts Don Heck had to wait until the introduction of Iron Man in 39 to make his mark.

From a modern perspective, Tony Stark, multi-millionaire arms manufacturer is an unlikely choice for pre-teen reader identification. Captured by communists in Vietnam, a fatally wounded Stark creates a life-saving armour suit that he uses to roundly thrash his captors. In time he gained a typical supporting cast of pining secretary and faithful chauffeur, and faced the constant threat of his heart giving out. In the early days writer Robert Bernstein clearly didn't know what to do with the character, resulting in charmingly daft strips like 44's journey back in time to meet Cleopatra. It was at least graced with terrific Heck art, with Kirby filling in for 40, 41 and 43, and Ditko doing so in 47-49. Stan Lee took over the writing from 47, producing a more action-oriented strip, and Heck's art began to suffer as he was forced to copy Kirby's style of storytelling, a situation not helped by some poor inking. Gene Colan's dynamic art from 73 improved things immensely, and any of his issues, particularly 84 on inked by Frank Giacoia, are fine examples of prime period Marvel superhero comics. Unfortunately, though, the breakneck action came at the expense of any significant characterisation, and the most enduring aspect was the incessant commie-bashing, with the bulk of Iron Man's villains being reds of some description. Certainly Iron Man's strip is the only one to feature Nikita Khruschev as a regular supporting character. Transferring to his own title Iron Man left his red-baiting days behind him.

As early as 49 Iron Man was supported by another feature, the banal 'Tales of The Watcher'. Few mourned its replacement in 59 when Stan Lee and Jack Kirby presented the newly resurrected Captain America's action packed strip. And the emphasis was very much on action to the exclusion of pretty much everything else. Kirby's art here was as explosive and exciting as anything else he ever did, though, and that's quite some compensation. The first few instalments lacked direction, but the strip came alive with a sequence in 63-71 set during World War II. It gave Captain America the context and supporting cast his contemporary stories had lacked, and subsequent episodes were one-dimensional. The best of them pitted our hero against the Red Skull (79-81), significantly a 1940s character, but most were readable if only for the art. The non-Kirby issues (70-77, 87-91) were well enough drawn, but without Kirby's exhilarating pace the episodes fall rather flat. Captain America also graduated to his own title after 99, continuing the numbering of this title.

The 1995 one-shot is one of several post-*Marvels* painted comics, featuring (fittingly) Captain America and Iron Man. Surprisingly, given a creative team of James Robinson and Colin MacNeil, the issue is run-of-the-mill. The Iron Man stories in 39-50 and the Captain America run in 59-81 are both available in hardbound *Marvel Masterworks* editions, while less luxurious black and white *Essential* volumes reprint the entire Captain America run and Iron Man stories to 72.~DAR

TALES OF TERROR

Eclipse: *13 issues 1985-1986*

When Bruce Jones didn't want to continue *Twisted Tales*, Eclipse came up with this series, pretty much carrying on where that title had left off. There are some good stories here by writers like Chuck Dixon, Bill Pearson and even Jones himself. There's good artwork too, from John Bolton (7, 9, 12), Gray Morrow (3, 4), Carol Lay (6, 7, 11) and José Ortiz (10), and some really stand-out covers: Tim Conrad (5), John Bolton (9, 12) and John Begley (2).

The stand-out combinations, however, are: Mark Wheatley's 'Suzy Dreams' (1), about a battered wife's escape into fantasy; Eric Vincent and Anthony Smith's 'Live in Dead' (2), also drawn by Vincent, in which an over-tidy husband, returning as a zombie after being killed by his wife and her lover, finds time to do the dishes before remembering just

why he came back from the dead; Dixon and Micheluzzi's 'A Fine Head on her Shoulders' (2), in which a murderess expects to get away with it because she's been told that she can only die by being beheaded and so has no fear of the hangman; Tim Truman's 'Every Evening Billy Comes Home' (6), in which a dog dreams of protecting its dead master; Scott Hampton's 'The Revenant' (8), in which an artist helps a ghost's revenge for her rape and murder; and Toren Smith and Lela Dowling's take on Cabbage Patch dolls in 4.~NF

TALES OF THE BEANWORLD

The Beanworld Press: *21 issues 1985-1993**

As the covers suggest, this is "a most peculiar comic book experience". Beanworld is a fantasy world where everything depends for its survival on its place within that world. The beans get a sprout-butt from Gran'Ma'Pa and give it to the Hoi Polloi, who turn it into chow, which the beans can then eat and thus live while they wait for the next sprout-butt to emerge. Larry Marder creates a huge cast of peculiar characters, from Mr Spook, leader of the bean army, to Beanish, an artist who has a strange, secret meeting with Dreamishness, a mysterious shining creature. Marder waits until issue 20 to reveal the origin of the Beanworld, while 21 explains how Professor Garbanzo, the beans' inventor and toolmaker, first discovered the Four Realities in which they live. Utterly charming, *Tales of the Beanworld* can be read as an adventure story but it's also about the way things need to work for beings to live together. If this sounds odd, it is, and there's little by way of explanation in the series: you'll have to make of it what you will, but it's worth the effort. From 2 *Beanworld* was distributed by Eclipse, and the Eclipse logo appeared on the cover from 5.~NF

TALES OF THE CLOSET

Hetrick-Martin: *9 issues 1987-1996*

One day in 1986 eight youngsters discover they've something in common: they're gay, or think they might be. The series explores their feelings of shock, confusion, acceptance or rejection, and the reactions of those around them. Stated baldly it sounds obvious and schlocky, but writer/artist Ivan Velez Jnr deftly captures the anguish and alienation of gay youth and, in ensuing issues, moves the cast through hilarious and cataclysmic events without missing a step. This isn't a stroke book, rather it's a moving and intelligently presented evocation of the perils and pitfalls any youngster can fall victim to when first exploiting their sexuality. The only gripe is the slower-than-molasses progress. Announced as ten issues, it managed roughly an issue a year, but with Velez getting more lucrative gigs at DC and Marvel, and wrangling with Hetrick-Martin over ownership of the series, the finale looks unlikely to appear.~HS

TALES OF THE JACKALOPE

Blackthorne: *8 issues 1986-1987*

R. L. Crabb uses the history and anthropology of the mythical Jackalope (a stag/rabbit crossbreed) to blend whimsy and satire in usually funny, often barbed yarns with a surreal, ecological viewpoint. Although some of the political content may have dated, much of the material still packs a punch and a chuckle – notably 'Chickens and Eggs' in 4 and especially 'Ayatollah Kokamami and Khadafy Duck' in 3. Junior Jackalope and Suicide Squirrel also appeared in *The Fauna Rebellion* and *Laffin' Gas* 4 and 5.~WW

Star Wars TALES OF THE JEDI

Dark Horse: *5 issue miniseries 1993-1994*, 2 issue microseries ('The Freedon Nadd Uprising') 1994*, 6 issue miniseries ('The Dark Lords of Sith') 1994-1995*, 6 issue miniseries ('The Sith War') 1995-1996*, 6 issue miniseries (0-5, 'The Golden Age of the Sith) 1996-1997*, 6 issue miniseries ('The Fall of the Sith Empire') 1997*, 5 issue miniseries ('Redemption') 1998**

Preceding *Star Wars* film continuity by 4000 years, the Jedi are heroic warriors who protect the Republic. The first miniseries introduces Jedi initiates destined to become legendary, Ulic Qel-Droma (1-2) and Nomi Sunrider (3-5). The pair are teamed in 'The Freedon Nadd Uprising', and feature in most subsequent series. Tom Veitch writes the first two series, and his material is so far removed from the source it amounts to no more than standard fantasy. *Star Wars* novelist Kevin Anderson teams with Veitch on 'Dark Lords of the Sith', and writes solo thereafter, being particularly adept at foreshadowing elements of continuity millenia away. 'Dark Lords' is the best series, approaching the scope and thrills of the movies in exploring the dark side of The Force and its exponents. 'The Sith War' continues the story, but not as well. All these series have flaws pertaining to the nebulous nature of The Force, and its application. At times those attuned to The Force are seemingly invincible, yet a few pages later, when the plot requires, the same person is fallible. Even given that training is required to manipulate The Force, the inconsistencies are glaring and all too convenient.

The Golden Age of the Sith' and 'The Fall of the Sith Empire' are one continuous story set 1000 years prior to the other series. There's little to differentiate it from them, but the vagaries of The Force play almost no part, and the story is better for it, if a little stretched over eleven issues (the zero issue being of little consequence to the remainder).

Aspirations of epic scope are hindered throughout by art lacking dynamism, and often merely functional, although never bad. Chris Gossett is involved in most series, yet his art is cluttered and overly rendered until 'Redemption', where a more spartan approach appeals greatly. This series is a welcome change of pace overall, jumping a few years from the events of 'The Sith War' as a remorseful Ulic ponders his place in the universe, while others call for his head.~FP

TALES OF THE MARVEL UNIVERSE

Marvel: *One-shot 1997*

An anthology depicting reactions among Marvel's characters to the supposed deaths of several of their peers in defeating Onslaught. Mark Waid and Andy Kubert preface their *Ka-Zar* series, and Kurt Busiek and Mark Bagley do the same for *Thunderbolts*. Dr Strange and War Machine share the spotlight, and the consequences of Reed Richards and Dr Doom's deaths are investigated. For anyone entrenched in Marvel continuity it's a nice package, but the stories are slim fare for the casual reader.~WJ

TALES OF THE MARVELS

Marvel: *One-shot ('Blockbuster') 1995, 2 issue microseries ('Wonder Years') 1995, One-shot ('Inner Demons') 1995*

Banner title for various independent one-shots and microseries thematically linked to Marvels and all similarly adorned with painted artwork. Each lead character is an ordinary man or woman whose life is changed by an encounter with a superbeing. 'Blockbuster' has private detective Ramon Stewart witness his parents' deaths in a free-for-all between the Silver Surfer, Fantastic Four, Doctor Doom and Tyros. This reappraisal of *Fantastic Four* 260 focuses on the survivors' plight as their claims for compensation falter in a legal quagmire and Stewart's frustrations shift to a personal vendetta against the Surfer. Mike Baron's narrative is very creditable, although the suggestion that Stewart could actually kill the Silver Surfer is not entirely convincing.

'Wonder Years' tells a powerful tale of young, painfully shy Cindy Knutz (that's Knutz with a "kay") and her obsession with Wonder Man, who saved her life from Red Ronin's footprint at the time of Avengers 198. Dan Abnett and Andy Lanning's portrayal of her tunnel vision is utterly believable. Sunglasses are advised for the colouring. In 'Inner Demons', Bowery bum John Mahoney forms an uneasy friendship with a fellow pointy-eared, strong, silent, amnesiac down and out. Mahoney's battle with his inner demon (alcoholism) takes centre stage before the amnesiac's identity is revealed in the dénouement. Read *Fantastic Four* 4 for the answer. Mariano Nicieza pens marginally the weakest *Tale of the Marvels*, but only because the general standard is so high. There are some excellent painted pages from Bob Wakelin, who unfortunately didn't paint the entirety, and there are some substandard pages by others towards the end.~APS

Mirage: *7 issues 1987-1989*

Jim Lawson, who would develop into the main Turtles man, cut his teeth here, alternating with Ryan Brown, both of them writing and drawing. There are robots, giant alligators and dinosaurs. Lawson's issues are better by virtue of his being a more talented artist, but there's nothing that isn't improved on in the main Mirage Turtles comic.~WJ

TALES TO ASTONISH

Marvel: *Series one 101 issues, 1959-1968, series two 14 issues 1979-1981, one-shot 1994*

Most of the early output of this title is science-fiction stories, often very well illustrated by the likes of Kirby, and Don Heck at his best, but, with very few exceptions, routinely scripted and relying on EC-style twist endings. Without EC's liberal use of gore, prohibited by the still-new Comics Code, or their A list artists, the content lacked bite. Stories by the Stan Lee/Steve Ditko pairing, each seeming to bring out the best qualities of the other, were honourable exceptions, imaginative and eerie. A one-shot tale in 27, 'The Man in the Ant Hill', wherein a scientist shrank himself to the size of an insect, scored unexpectedly heavily in sales, so the lead, Dr Henry Pym, was brought back as a series star, becostumed and dubbed 'Ant-Man', with 35. Given some thought, the Marvel staff might have realised that a tiny human up against full-size humans might make for less than dynamic conflicts; but then, they'd tried something unlikely with The Fantastic Four and that had worked, so what had they to lose? The early Ant-Man stories have a certain clunky charm, but the series badly needed a shake-up. It got two. Janet Van Dyne arrived in 44, as Ant-Man's partner, the Wasp. A refreshing character who gave the impression of having a keen mind behind a flighty façade, she livened up the stuffy Hank Pym no end. His early protests of romantic detachment notwithstanding, it wasn't long before they were a couple, and the only one of Marvel's early couples whom you could believe actually desired each other. The Ant-Man tales were collected in 2002 as *The Essential Ant-Man*. The second major change came when Pym discovered how to grow as well as shrink, and ventured forth as Giant-Man from 49. Despite these changes, and many charming moments between the bantering lovers, the strips remained weakly plotted, and Hank and Jan's villains are third-rate.

With 60, the Hulk, who had failed in his own title but been a success as a roaming villain, started a series backing-up, and soon eclipsing, the Giant-Man stories. Old Jade Jaws concentrated a bit more on the tragic-monster side than on his old rampaging routine, with the ragged and weary Bruce Banner waking up in strange locations all over the world, helpless to do anything but speculate what his alter ego had wrought. Giant-Man and the Wasp were pushed to the back of the comic, then ousted all together, as Prince Namor, the Sub-Mariner, another anti-hero from the beginnings of Marvel, took over their slot with 70. Hank and Jan became popular supporting characters, most prominently as part of the *Avengers*, and Namor and the Hulk vied with each other to see who could be most tragically misunderstood. This state of affairs continued until 101, when, a distribution restriction having been lifted, Marvel was able to split *Astonish* and its other shared titles, *Strange Tales* and *Tales of Suspense*, into their component parts. The Hulk title continued *Tales to Astonish*'s numbering, while *The Sub-Mariner* restarted from 1. The title, though not the numbering, was revived for a short-lived series of reprints from Sub-Mariner in 1979, and the 1994 one-shot was a prestige-format painted story teaming Hank Pym, no longer Giant-Man, and the Wasp with the now intelligent and erudite Hulk. Peter David's script was adroit, especially in catching echoes of the old Hank and Jan banter, but John Estes' painted art merely looked vague and washed-out.~HS

TALES TO OFFEND

Dark Horse: *One-shot 1997*

TALES TOO TERRIBLE TO TELL

NEC: *11 issues 1989-1993*

Reprints of violent and gruesome pre-Comics Code horror comics. After a couple of 'sampler' issues it focussed on different publishers each time, representing three or four stories and an intelligent annotated commentary and company profile, making compelling reading for comics historians. 10 and 11 were renamed *Terrorology*, but the content remained unchanged. Mention should also be made of a companion title, *My Terrible Romance*, devoted to a different genre, (oh, go on, have a guess...), which is of equally high standard but ran for only two issues.~HS

TALEWEAVER

WildStorm: *6 issue miniseries 2001-2002*

Fantasy tale with echoes of *Lord of the Rings* beautifully rendered by Philip Tan. It's an insubstantial yarn of Axel, a young man whose stories are the only solace for an enslaved village, and how his life changes when an opposing army liberates them. Just as in any good story, the lad finds himself, through chance and keen wits, increasingly important to the cause of good whilst improving his own fortunes along the way.~WW

TALK DIRTY

Eros: *3 issue miniseries 1992**

A woman, a man and a crane. Mathias Schultheiss' rumpathon is well drawn, but the distancing technique of printing dialogue alongside individual illustrations tends to highlight the banal nature of any talk during sex, although that could also be an unsympathetic translation. If the comic's working as intended you won't notice any of that. The couple manage to keep going for three issues, so you've got to admire their staying power.~FP

TALOS of the Wilderness Sea

DC: *One-shot 1987*

Fantasy story that's not so much a boy and his dog, but a boy and his big cat. Sterling illustration from Gil Kane is marred by poor plotting from Gil Kane, and there's little here that hasn't been seen in countless fantasy novels and films.~FP

TANDRA

Hanthercraft: *14/15 issues (1-12 – see below) 1976-1993*

Tandra is a little-known masterpiece; a fantasy epic strong on plot and characterisation. Stylistically very much in the mould of *Prince Valiant*, being blocks of text accompanying individual illustrations, *Tandra* is a generational saga spanning twenty years of both the characters and the creator, Christopher Hanther (known only by his surname), who began work on the series in 1973. Hanther's art isn't up to Hal Foster's standard, but doesn't fall very far short by the later issues, and is already confident and composed by the conclusion of the first volume.

A striking opening sequence sets the tone for the series. On seeing a woman being attacked, David Galon leaps to her rescue. A relationship develops, but she's summoned away through an iron door in a brick wall. When he attempts to follow, the door peels off the wall like paper. Galon's persistence pays off, and he's transported to Tandra, a primitive world where he has to survive through his wits and strength. Although not always centre stage, Galon is the central figure throughout the series. His intelligence, engineering skills and adaptable nature ensure his success in a world almost unblemished by science, but whose inhabitants fear the occasional visits of wizards from the sky. From Galon's invention of a superior airship in *The Iron Cloud*, the series really takes off. It transpires that the wizards dwell in a ring surrounding the planet, and from that point revelations about the world and the relationships between various factions increase with each succeeding chapter, leading to an inevitable battle for supremacy between Galon and the brutish Kilthane.

The original chapters have been re-sequenced for more commonly available packages, numbered from 1 to 12 (including a 9A, 9B and 9C), with the most obvious reconstruction being the combination of two early collections, titled *The Golden Warrior* and *The Iron Cloud*, into a single volume. Although not all Tandra issues are numbered, each page is numbered in sequence (up to 718 as the final page of 12), enabling the saga to be followed in order. Those interested in a complete researched chronology will find it in issue 7 of the succeeding series, *Dragonrok Saga*. For someone so accomplished with pen and ink, Hanther's cover paintings are strangely poor, but this shouldn't put anyone off sampling a series that has a rightful place alongside the most highly regarded comics of recent years. More recently Hanther has concentrated on making improved and coloured versions of his *Tandra* pages available on CD-Rom and via the internet. Check www.tandra.com.~FP

TANGENT COMICS

DC: *One-shot (The Atom) 1997, one-shot (Doom Patrol) 1997, one-shot (Flash) 1997, one-shot (Green Lantern) 1997, one-shot (The Joker) 1997, one-shot (Metal Men) 1997, one-shot (Nightwing) 1997, one-shot (Sea Devils) 1997, one-shot (Secret Six) 1997, one-shot (Tales of the Green Lantern) 1998, one-shot (The Trials of the Flash) 1998, one-shot (Wonder Woman) 1998, one-shot (Nightwing: 'Nightforce') 1998, one-shot (Powergirl) 1998, one-shot (The Superman) 1998, one-shot (JLA) 1998, one-shot (The Batman) 1998, one-shot (The Joker's Wild) 1998*

Conceived by Dan Jurgens, Tangent Comics is a re-imagining of the DC Universe, using existing character names, but allowing the writers freedom to create completely new identities around those names. So, for instance, Nightwing is a covert government organisation and the Joker is a female subversive, more good than bad. The one-shots were published in two batches each in a single month and the first is better overall, dealing with relatively minor characters. Apart from Jurgens himself, writers include James Robinson (*Green Lantern*), John Ostrander (*Nightwing*), Kurt Busiek (*Sea Devils*), Peter David (*Wonder Woman*) and Mark Millar (*The Superman*). Artists include J. H. Williams (*Green Lantern*), Jan Duursema (*Nightwing*), Mike McKone (*Metal Men*) and Klaus Janson (*The Batman*).

The best are the two *Flash* issues, written with lots of humour by Todd Dezago (artwork by Gary Frank, 1997 and Paul Pelletier 1998), the *Secret Six* by Chuck Dixon and Tom Grummett and the *Joker* issues, written by Karl Kesel, again with a fair amount of humour (artwork by Matt Haley, 1997 and Joe Phillips, 1998).~NF

TANK GIRL

Dark Horse: *4 issue miniseries 1991*, 4 issue miniseries 1993**

Created in 1988 by Jamie Hewlett and Alan Martin for *Deadline*, the unwashed, violent, hard-drinking, chain-smoking, kangaroo-shagging Tank Girl became the magazine's strongest selling point, and idol of dykes and crusties the world over. Originally living in an unspecified near-future Australia as some form of agent, she quickly abandoned even that flimsy persona for life as an outlaw causing lots of explosions – for no very good reason – and indulging in everything imaginable that's bad for you. In a brain-dead way, her *Deadline* adventures, a selection of which were reprinted in two Dark Horse miniseries (and the first series of *Deadline USA*), are great fun. A third collection reprints material from the British *Deadline* otherwise unseen in the USA.~HS

TANK GIRL

DC/Vertigo: *4 issue miniseries ('The Odyssey') 1995, one-shot ('The Movie') 1995, 4 issue miniseries ('Apocalypse') 1995-1996*

When Tank Girl was optioned for a movie, DC's Vertigo imprint took an interest, and two new miniseries were commissioned. Suddenly, *Tank Girl* had to have 'meaning'. Sigh. Peter Milligan got away with it in 'Odyssey', an amusing, alleged commentary on James Joyce's *Ulysses* in which Tank Girl discovers secrets behind her parentage, but Alan Grant's take on 'Apocalypse' was crude and gross without being inventive or funny. Both Vertigo miniseries had covers by Brian Bolland. The movie was made in 1995, starring Lori Petty and Ice T, and was an unmitigated disaster, featuring a sanitised, unrecognisable version of the character. The comics adaptation by Milligan and Andy Pritchett sported an inappropriate John Bolton cover, and succeeded in being more amusing than the movie which spawned it. Despite the failure of her movie, she penetrated the public consciousness as a Tank Girl lookalike was the star of an advertising campaign for Wrangler Jeans in 1991.~HS

TANTALISING STORIES

Tundra: *One-shot, 5 issues 1992-1993*

Tantalising Stories features the inspired pairing of Jim Woodring's Frank, frequently seen in *Jim*, and Mark Martin's Montgomery Wart. It manages to be very funny, but it makes you question the reassuring world of children's adventures. The juvenile presentation and subject-matter belie subtle narratives that play heavily and knowingly on our mature cynicism.

To call 'Frank' a funny-animal strip is to do it a disservice. Woodring has created a silent, surreal world inhabited by strange beasts. Although his dream-like milieu at first seems to make little sense, as the title progresses relationships and conflicts emerge. Frank goes about his everyday life, reading books, going to parties for the dead, on the alert for attacks from a warthog creature straight out of a Bosch painting. The conflict provides much-needed stability in a world of confusing symbolism. Frank is fundamentally nice, while the warthog is nasty but stupid. You'll either love the strip's quiet humour or wonder what all the fuss is about. Woodring is a consummate cartoonist, able to communicate complex emotions without words. For the black and white series he adopts a broad, brush-inked style reminiscent of Robert Crumb's bolder efforts. Whereas Woodring keeps to a single style, his companion Mark Martin rings changes, from explosive Bigfoot cartooning to sophisticated wash styles. His main characters (Montgomery Wart, a bullfrog who likes to think himself cynical and worldly-wise, Cicero Buck, a very naïve deer indeed, and Murgatroid, a thick but happy frog) get into boyish escapades, à la *Tom Sawyer*. Martin's jaundiced morals, appended to each story, reflect the true spirit of Twain's tales. The dialogue and approach to story-telling, which owe a lot of the classic US newspaper strip *Pogo*, are superb.

The series is good, and the colour one-shot, titled *Frank In 'The River'*, is superlative. Tundra didn't spare the pennies when producing it, and the thick, glossy paper is put to good use. Woodring's Frank story is among his best work. The painted pages glow with primary colours as Frank becomes involved in a bizarre mystery while working for the bad warthog. Woodring reflects the reader's incomprehension as Frank presses further and further into a nightmare world. Montgomery Wart also benefits from colour treatment, painted in a rough watercolour style that adds a great deal of charm to Martin's fluid cartooning. After such an unsettling Frank story you're more than ready for a straight humour piece like this, where the grasping Wart is inspired by a magazine article to leave home. To get away he decides to train as a flight attendant but his attempts at a dry run involving Hallowe'en lanterns are frustrated by his pal Murgatroid's stupidity. Matters are complicated when the insects inhabiting the jack 'o lanterns begin demanding extra peanuts, vegetarian meals and frequent flyer stamps. It's a quite fabulous package.~FJ

A dark-haired baboon named Yingpeng, and Shaohai, a little guy in a mint green outfit spend the whole of 1 having a workout in a friend's tavern. Ien, a girl in a bra-top, joins them in 2. Despite some clever tricks with blurring figures in motion and a storyboard-style feel for action, artististic shortcomings are highlighted by vain attempts to give dimension to figures and backgrounds via computer colouring. Page fifteen's beautifully rendered wooden pail is the highlight of the entire series. Slight and not charming enough to transcend its amateurishness.~SW

TAPESTRY ANTHOLOGY

Tapestry: *1 issue 1997*

Strangely, only Jenni Gregory's *Dreamwalker* represents features occupying a Tapestry title, although Andrew Pepoy's well drawn and whimsical Simone and Ajax would have a career in back-up strips elsewhere. There's early art from David Boller on 'The Wallas' as transparent an attempt at creating a saccharine animated feature as you're ever likely to see, and the final strip, Burrito, is well below acceptable standard. Gregory, though, provides the charm and good story that characterised her title.~WJ

Atlas: *3 issues 1975*

In later years Targitt would have been designed as a testosterone-fuelled, heavily armed, pumped-up vigilante. In 1975 he started as a blonde guy with a penchant for roll-neck jumpers and a pistol, whose adventures are as exciting as watching paint dry in Tedium, Nebraska. An unfortunate letters page seer compares this with *The Spirit* and predicts popularity on a level with *Spider-Man*. Oops. A change to 'Man-Stalker' with added costume was no better, although this was one of the few Atlas titles to feature the same artist, Howard Nostrand in this instance, for every issue.~FP

TAROT: Witch of the Black Rose

Broadsword Comics: *11 issues + 2000 to date*

Awful, exploitative rubbish from former *Catwoman* artist Jim Balent as the glamourous witch Tarot fights the forces of supernatural evil in a horned hat, a g-string and nipple-cups in an eternal quest to make the world safe for Wiccans everywhere. Avoid unless you're hopelessly addicted to bad drawings of unfeasibly large breasts.~WW

TART

Eros: *4 issues 1994-2000*

This has disturbing qualities way beyond the distaste of some readers for sexually explicit material. If the constant subtext of sister/brother incest wasn't enough, there's the pandering to the market for under age of consent sex. This is never stated, although is implicit in the manner that the lead character Tess is drawn. The drawing is the hook, with creator Howie Dard's style appealing, fine-lined and grey-toned, if preposterous when it comes to male genitalia. There are no redeeming ironic qualities, so if you like well drawn sex comics, can you support material that verges on the fringes of paedophilia?~FP

TARZAN

Dell: *131 issues, 4 Annuals 1948-1962*

Edgar Rice Burroughs' noble savage had been a phenomenon in pulp magazines, consolidating his fame with films and top newspaper strips in the 1920s. With artwork by Hal Foster and later Burne Hogarth, the syndicated *Tarzan* strip was one of the seminal influences on the developing adventure strip. He featured in text stories in Dell's *Crackajack Comics* from 1939 to 1942, whilst his daily and Sunday strips were reprinted in *Tip Top* and *Sparkler Comics* from the beginning of the 1940s. In 1947 Dell experimented with originated Tarzan material in their Four Color series (137 and 161). The stories were written by clergyman Gaylord Dubois, who'd been writing newspaper strips since the 1930s, and the art was by Disney storyman Jesse Marsh. A regular title was promptly launched the following year, every issue of which was produced by the same team. Some may find Marsh's artwork crude, but his simplicity of style disguises a sophisticated knowledge of texture, animal anatomy and locale. His eighteen-year stay on the strip is only slightly overshadowed by Dubois managing a staggering twenty-five years between 1947 and 1972. His stories are rarely controversial, but effortlessly maintain the language and mythos founded by Burroughs.

Early issues feature a forgettable back-up strip, 'Two Against The Jungle', which gave way to Brothers of the Spear with 25 in 1951. Dan-El and Natongo, one white, one black, are the adventuring princes who rule the jungle kingdom of Aba-Zulu. Although it had been initiated by Dubois and Marsh, the job of drawing the strip fell to Russ Manning in 1953 (*Tarzan* 39). These strips are a treasure trove worthy of collection, not only for Manning's gorgeous art, but for Dubois' gentle portrayal of his view of racial equality. This was long before it became a socially aware selling point in the 1960s.

When the comic covers weren't painted they featured photos of the film Tarzan's Lex Barker (13-54) and Gordon Scott (80-110). Between 1952 and 1955 Dell also issued hundred-page annuals, some of which featured stories by Marsh, rather uncomfortably inked by Manning.~SW

TARZAN

Gold Key: *75 issues (132-206) 1962-1972*

Continuing the numbering from the Dell issues, this title was of merely average quality, which only took an upswing when long-time artist Jesse Marsh left the strip to Russ Manning with 154. Gaylord Dubois had written the strip since the 1940s, but such was Manning's flair that his run outshone the syndicated newspaper strip that he soon took over. On Manning's departure much of the life left the title, despite brave tries by Doug Wildey and Mel Keefer, among others. Brothers of the Spear continued as a back-up until Manning began drawing the lead feature, and returned as reprints in 196-206. They were briefly replaced by Leopard Girl, which starred Meru, a teenage zoologist who could talk to the animals. DC purchasing the licence to produce *Tarzan* was the best possible tonic, even if they lost Dubois in the process.~SW

TARZAN of the Apes

DC: *53 issues (207-259) 1972-1977*

As Gold Key had rather let the feature fall into disrepute DC really only had to be competent to succeed. That they produced some outstanding material was a bonus. Joe Kubert edited the comic, wrote most of the stories and seemed to have found the strip he was born to draw. He began by adapting *Tarzan of the Apes* in spectacular fashion in 207-210, bringing both the jungle atmosphere and Tarzan's originally primal nature to vivid life. His adaptations of *The Return of Tarzan* in 219-223 and *Tarzan and the Lion Man* in 231-234 are of an equally high standard, as are all his original stories until 235. Once he'd reached that point, though, he seemed to run out of inspiration, and although he continued writing and providing layouts for the likes of Franc Reyes, Rudy Florese and the Redondo Studio it was formulaic stuff. Gerry Conway and José Luis Garcia-Lopez take over from 250, but it's early Lopez and his pencils are unsympathetically inked throughout. Denny O'Neil writes the final two original issues, and 257-258 reprint Kubert stories.

230-235 are all one hundred pages, featuring some notable back-up strips, including a Mike Kaluta-drawn short in 230 and Alex Niño illustrated Korak strips in 231-234. Besides standard Detective Chimp and Congo Bill reprints in those issues, there are also Russ Manning *Tarzan* newspaper strips, rejigged to resemble comic material. Given a trial run in 226, they were obviously popular enough to occupy 237 and 238 in their entirety. Other classic newspaper strips from an earlier era, by Hal Foster, can be found in 208, 209, 211, 215 and 221. There are also other Burroughs stories adapted, with John Carter in 207-209, and *Beyond the Furthest Star* in 213-218.~HY/DAR

TARZAN

Malibu: *5 issue miniseries ('The Warrior') 1992, 3 issue miniseries ('Love, Lies and the Lost City') 1992, 7 issue limited series ('The Beckoning') 1992-1993*

'The Warrior' introduces three men who might be Tarzan, but none of them ruling the jungle. The likeliest candidate lives in Baltimore, locates dimensional rifts in the company of his wife Jane, and takes over tribes of ape-men. The plot is slim, but the mystery drags it along to the final issue, which establishes Tarzan in 20th-century USA. The science-fiction elements in 'The Warrior' are intrusive, but it succeeds in retrieving Tarzan from cinema and TV clichés. 'Love, Lies and the Lost City' is better, a thrilling lost-civilisation story by the all-Danish team of Henning Kure, Teddy Kristiansen and Peter Snejbjerg, while Kure collaborates with Tom Yeates for 'The Beckoning'. It's the best *Tarzan* in comics since the DC issues, marred only by pages of issue 3 being printed out of order. While in San Francisco destroying an illegal ivory operation, Tarzan is mentally manipulated by an African witch doctor into experiencing flashbacks to jungle battles. The trails of poaching and the hallucinations lead back to Africa, where everything pulls together along, with an explanation of how Tarzan and Jane are now both over a century old. Kure and Yeates weave an enthralling adventure that slightly overextends itself with a convenient conclusion, and Yeates draws a Tarzan with both grace and power.~WJ

Dark Horse: *4 issue miniseries ('The Lost Adventure') 1995*, one-shot ('A Tale of Mugambi') 1995, one-shot ('The Land That Time Forgot/The Pool of Time) 1996, 4 issue miniseries (Tarzan/John Carter: 'Warlords of Mars') 1996, 4 issue miniseries (Tarzan versus Predator at the Earth's Core) 1996*, 20 issues 1996-1998, 3 issue miniseries ('The Return of Tarzan') 1997, 4 issue miniseries ('Carson of Venus') 1998, 4 issue miniseries ('The Savage Heart') 1999, 2 issue microseries ('Disney's Tarzan') 1999, one-shot ('Tarzan of the Apes') 1999, one-shot ('Tarzan and the Jewels of Opar') 1999, one-shot ('Tarzan the Untamed') 1999, 4 issue miniseries ('The Rivers of Blood') 1999-2000*

'The Lost Adventure' is Edgar Rice Burroughs' last *Tarzan* novel completed by Joe R. Lansdale, with spot illustrations by Tom Yeates, Gary Gianni, Mike Kaluta and Charles Vess, amongst others. Each issue also contains episodes from the *John Carter of Mars* newspaper strip (1941-1943) produced by Burroughs' son. 'A Tale of Mugambi', by Darko Macan and Igor Kordey, is an offbeat *Tarzan* story told by a native round a campfire as a lesson about the need for leaders not to think themselves above their people. 'The Land That Time Forgot' and 'The Pool of Time' are two of four strips produced by Russ Manning for the European market in 1974 and feature a mysterious island, where dinosaurs still survive amongst a number of other strange beings. 'The Warlords of Mars' concerns an attempt by a pirate to brainwash Tarzan into killing John Carter, but the best of the miniseries is by Walt Simonson and Lee Weeks. They provide a thrilling story combining a traditional Tarzan adventure and an unusual use of Predators, as *Tarzan* must overcome the return to Pellucidar of the reptilian Mahars whilst a company of Predators conspires with them to provide a constant supply of fresh sport.

The ongoing series plants Tarzan firmly back in Africa, as Bruce Jones begins with a tale involving a virus Tarzan brought back from Mars, which revives ancient races (1-6). There are plenty of twists and turns to keep the plot moving, with artwork by Christopher Schenck and Yeates. Schenck and George Freeman provide the art for Allan Gross' 'Legion of Hate' (7-10) featuring Nazis, warrior women and raising some interesting questions about race. In 11-16* writer Lovern Kindzierski pits Tarzan for two issues apiece against The Phantom of the Opera, Frankenstein's Monster and Dr Jekyll and Mr Hyde respectively. The art by Stan Manoukian and Vince Roucher provides the right level of period atmosphere, matching the skilful use of Tarzan in the urban landscapes of Paris and New York. In 17-20 Tarzan and his son, Korak travel into the future to rescue the Waziri tribe from aliens. This isn't Tim Truman's best writing, but art by Yeates and Al Williamson somewhat makes up for it.

The adaptation of Edgar Rice Burroughs' novel *The Return of Tarzan* is well handled by Yeates on his own (compare with the cut-down version reprinted in *Tarzan of the Apes*). Macan and Kordey return for Tarzan's trip to Venus where he comes to the aid of Carson against the tyrannical, Loveking. Pellucidar is visited again in 'The Savage Heart', but Gross' examination of the nature of savagery is let down by lacklustre artwork from Mike Grell. By way of contrast, the adaptation of the animated *Tarzan* film from Disney, by Greg Ehrbar and Mario Cortes, actually has a lot of fun in re-telling Tarzan's origin. When wife Jane is struck down by a mysterious illness, Tarzan travels to Vienna to consult with Sigmund Freud in 'The Rivers of Blood'. Despite promising subplots concerning political intrigue before World War 1, the series only managed half the intended eight issues, leaving the story unfinished. The 1999 one-shots are all softcover collections containing Manning reprints from the Gold Key *Tarzan*.~NF

Jungle Tales of TARZAN

Charlton: *4 issues 1964-1965*

This notorious unauthorised comic adaptation was forcibly discontinued by the Edgar Rice Burroughs estate after four issues. They seized practically the entire print run of 4 and destroyed it. The strips are adapted from the Burroughs' original stories, by writer Joe Gill and artist Sam Glanzman. The story is told entirely in captions, lettered by Charlton's dreadful 'A.Machine' device in 1. Whilst this is consistent with the original *Tarzan* newspaper strip it makes for poorly-paced comics. The artwork in 1-3 is nice, though hardly

Glanzman's best. Luckily, the ultra-rare issue 4 is drawn by Bill Montes and Ernie Bache, guaranteeing more entertainment from the staples in the centrefold than the rest of the comic.~SW

TARZAN FAMILY

DC: *7 issues (60-66) 1975-1976*

Continuing the numbering from the cancelled *Korak* title, the Korak feature simply shifted into this new umbrella title, which also encompassed other Edgar Rice Burroughs creations. Robert Kanigher packs his stories with action – in twelve pages in 60 Korak fights a giant octopus, a horned ape and panther, enough material for a miniseries now – but they never really excite. They're mostly drawn by Rudy Florese or Noly Zamora, and it's interesting to see them attempt to imitate editor Joe Kubert's art style. Zamora also illustrates the new John Carter stories in 62-64, with the Carter tales in the final two issues being reprints. An early, but very welcome, reprint is Len Wein and Mike Kaluta's 'Carson of Venus' adaptation, to be found in every issue, and there are also *Tarzan* newspaper strip reprints. The 1930s Hal Foster pages in 60, 62 and 63 are printed as single pages, but the 1960s Russ Manning illustrated strips are bizarrely cut and pasted to resemble a comic strip.~HY

TASKMASTER

Marvel: *4 issue miniseries 2002*

The Taskmaster was introduced by David Michelinie in *Avengers* 196, or the last page of 195, to be precise, as a rare memorable original creation who could hold his own against the team. This is because he instantly adapts and duplicates any moves he witnesses, combat or otherwise. That's been his ability over the years whether running training schools, supplying armies for super-villains, or acting as a mercenary. It's strange, then, that his talent is largely sidelined here, with a device enabling him to alter his appearance monopolised until the final issue. Taskmaster carries out a mission, but is not paid, causing him to teach his erstwhile employer a lesson. This is a decent enough action-thriller, but given the minimal use of Taskmaster's established ability, and presumably the reason he merits a miniseries in the first place, it could have starred almost any Marvel villain. It's drawn by five credited artists each issue in a refined manga style.~WJ

TATTERED BANNERS

DC/Vertigo: *4 issue miniseries 1998-1999**

This unusual strip, initially written by Keith Giffen and Alan Grant but finished by Grant alone, it's about a misanthropic New York social worker whose world goes mad one morning. Giant dogs on the streets and insects in the showers give a flavour of paranoid 19th century Russian literature by such as Gogol and Dostoyevsky and, similarly, fails to reach a satisfactory conclusion. Mick McMahon's art is not his very best, but one oughtn't to turn up one's nose at unique talent.~GK

TEAM AMERICA

Marvel: *2 issues 1982-1983*

After their first appearance in *Captain America* 269, five mavericks grudgingly gang up to use motorbikes licensed from Ideal Toy Corporation for stunt exhibitions and competition racing. Jim Shooter's yarns (1-2, 8-9, 11-12), which concentrate on racing and character interaction, outstrip Bill Mantlo's weary stories of espionage and environmental disasters. The mysterious, unidentified Marauder and a weak psionic link between the five major stars maintain some intrigue. Latter issues are surprisingly better than the lame premise promises. 9 is noteworthy for a fight-free guest appearance by Iron Man. The admirable issue 12 kicks off with a wonderful cover caption: "Because You Demanded It... The End Of Team America!", resolves all plot-lines and contains a forthright text page about the cancellation by Shooter, who points out that the comic was more successful than *Daredevil* during Frank Miller's first year. How different it all could have been.~APS

TEAM NIPPON

Aircel: *7 issue limited series 1989*

An awful piece of trash from Barry Blair about a team of pre- or post-adolescent (it's hard to tell from panel to panel) martial artists who dress up as superheroes to fight the Yakuza and the Tongs, and, of course, to sunbathe. Among them are Blair creations Samurai and Nightwynd. It's muddled and confusing, with characters appearing after they've been killed (not unknown in comics, but it's not a plot device here) and much of the artwork is as racially stereotypical and as offensive as anything produced during the propaganda-charged days of World War II. Avoid at all costs.~WW

TEAM ONE

Set in the early 1960s, one series details the beginnings of the superhero group that would grow into Stormwatch, the other does the same for WildC.A.T.S. The Stormwatch issues are totally dependent upon an extensive familiarity with the 1990s team, and Steven Seagle and Tom Raney can do little but bore and bewilder with arch comments and a half-baked plot by aliens to capture a missile silo. For WildC.A.T.S. James Robinson and Rich Johnson take another perspective on the missile base battle. Although better written, and with solid artwork, the decision to have the reader try to guess who became who in the 1990s team is distracting and counterproductive. One for the fans, only.~WW

TEAM 7

Image/WildStorm: *4 issue miniseries 1994*, 3 issue miniseries 1995, 4 issue miniseries 1996*

When Image's WildStorm branch constructed a retroactive continuity dating back over several decades, the untold story most readers wanted to see was that of Team 7. This was the supersoldier unit of which many modern-day WildStorm heroes had been members. They included Backlash, Deathblow, WildC.A.T.S.' Grifter, Wetworks' Dane and Gen^{13}'s Lynch) Almost everyone in Team 7 who didn't now have their own title was the father of at least one other major WildStorm character. After various hints and teasers, the real story was eventually told over three miniseries written by Chuck Dixon, and did not disappoint.

The Team 7 story tells of a unit of Navy SEALs set by the US government to be unwitting guinea-pigs for an experiment which gives them immense psychic powers and

makes them the ultimate weapon. But the powers are more than many of them can – or should even be asked to – handle, and the stresses of dealing with what they've become, added to the more and more insidious manipulation and betrayal by a government they had previously trusted, drive the team apart. By the end of the first series many have defected. The following two series carry on the air of doom and inevitability as the Team gradually realise they can't escape the clutches of a government that has used and abused them, and eventually they resign themselves to hoping that if they can't save themselves then at least they can try to save their children. The hindsight of reading a story to which we already know the ending adds a tragedy to the unfolding action, which is both poignant and incredibly fast-paced. As stand-alone stories the series is good, as background to the WildStorm universe it is excellent – and essential for understanding the motivations of the characters in their present-day incarnations.~JC

TEAM TITANS

DC: *28 issues (5x1, 2-24), 2 Annuals 1992-1994*

Absolutely awful spin-off series featuring Teen Titans from an alternate future trying to adapt to a new life in the Twentieth Century. Even close crossplotting with the parent title and transfer of popular character Donna Troy to head the team can't pep up dull stories about dull people. Add to that the confusion of too much time-travel and it was no surprise that the series was erased as part of the *Zero Hour* continuity correction event. Lacklustre and tedious.~WW

TEAM YANKEE

First: *6 issue miniseries 1989*

War is bloody boring in the pages of Team Yankee. Whether that's down to the original novel or a poor adaptation is debatable. There's so much concern that the military terminology and soldier's shorthand conversation is correctly transcribed that large quantities of dialogue become so much babble to the average reader. Constant reference to the explanatory pages in the rear of the issue (1 and 4 only) is required to have an idea of what's going on. By concentrating on the activities of one battalion, war is presented in microcosm, but what might be an exciting against-the-odds war movie is dull and lifeless here.~WJ

Creator Adrie Van Viersen, in conjunction with co-plotter Peter Taylor has turned out a little gem of an adventure comic, written by Taylor and Patrick Sauriol. How a world exposed to alien technology in the 1930s might be is well realised by Van Viersen, and it gives a gloss to the well-worn plot of the cynic turned fugitive accompanied by a beautiful woman, both caught in events beyond their control. Deserving of a far wider audience.~WJ

TEEN TITANS

DC: *Series one 53 issues 1966-1973 (1-43), 1976-1978 (44-53), series two 91 issues, 4 Annuals 1980-1988, series three 131 issues (0-130), 7 Annuals (5-11) 1984-1996, series four 24 issues, 1 Annual (1996-1998)*

Sparked by a team-up of three kid sidekicks – Robin the Boy Wonder, Kid Flash, and Aqualad – in *The Brave and the Bold* 54, DC threw in a distaff member – Wonder Girl, whose existence as a separate entity from her adult self had not previously been suspected – and dubbed the quartet the Teen Titans. Two further tryouts (*The Brave and the Bold* 60, *Showcase* 59) established sufficient demand for the team to be awarded their own comic.

In the annals of truly silly comics, there's little to beat your average issue of *Teen Titans* from the 1960s. Their early pledge to help ' Teens in Trouble', their truly inane Rogue's Gallery – The Mad Mod? Captain Rumble? Ding-Dong Daddy Dowd? Aieee! – and the excruciating dialogue, product of how middle-aged to elderly men (chiefly Bob Haney) thought "hip" teens actually spoke, made these issues an almost hallucinogenic experience. For the best example of this, check out the numbing 'A Christmas Happening' (13), with a magnetic Christmas tree (and the Titans as ornaments!), a ray that turns junk back into new consumer goods, and Wonder Girl in a Santa Claus mini-skirt, in a tortuous mod retelling of *A Christmas Carol*. The series' regular artist, Nick Cardy, once he'd hit his stride in the first few issues, did beautiful, lush artwork that glowed from the page. The combination of this vital, almost tactile art and the outstandingly bonkers stories resulted in some seriously trippy comics. From 16, the creators tried a more serious adventure angle, relying on inter-dimensional invaders to kick start some long term plot threads. This led to, among other things, the revelation of Wonder Girl's origin (and a spifty new costume!), and the addition to the cast of Hawk and The Dove, a philosophically opposed pair of sibling superheroes from a cancelled title. With 25, another new direction, the Titans are inadvertently involved in the death of a great humanitarian figure, and swear off the use of their powers until they have made amends. Approached by the intermittently psychic go-go dancer Lilith, they team with the mysterious Mr Jupiter, and undergo training as his agents, after Robin, too hot a property to nullify, has left the team. Mal Duncan, the first black Titan, joined in 26, a sadly stereotypical ghetto kid with a dream. The non-costumed aspect got old real fast, and by 30, except for Mal and Lilith, the group were mostly back in uniform, but occasionally ventured out in plain clothes to investigate matters, still under the auspices of Mr Jupiter. By now, desperation had set in and

Haney was stealing ideas from anywhere, *The Stepford Wives*, *Romeo and Juliet*, even *Uncle Tom's Cabin*, all overlaid with an attempt at Gothic horror in which the brightly costumed Titans looked embarrassed and out of place. When the series saw its finale, in a truly cringe-making *Rosemary's Baby* swipe, it was a merciful end. Fleetingly revived in 1976, the new version was straightforward superheroics, but of an inferior sort. It lasted only long enough to introduce a whole bunch of second string heroes – the original Bat-Girl (later Flamebird), the Bumblebee, the Joker's Daughter (later the Harlequin), and junior Hawkman the Golden Eagle – as "Titans West", predating the similar *Avengers* concept by over a decade.

The 1980 *New Teen Titans* surprised the critics by being a monster hit from day one. Wonder Girl, Kid Flash and Robin of the old team, plus part-time member Beast Boy, now named the Changeling, were teamed with brand new characters Raven (half-demon empath), Starfire (energy shooting alien princess), and Cyborg (Have a guess. What do you think he looked like?). Cosmic drama and high angst were the theme, writer Marv Wolfman and artist George Pérez clearly taking their inspiration from Claremont and Byrne's *X-Men*, then still fondly remembered. The New Teen Titans fought the JLA, defeated Raven's demon daddy Trigon, battled Starfire's evil sister, tracked down the killers of the Doom Patrol, and faced off against the Titans of Myth, stopping off at Paradise Island on the way. 1-10 are available as a hardbound book in the DC *Archives* series. The pace was brisk, the characterisation deft, and the title a good solid read. Where it truly excelled, however, was in the stories that dealt as much with emotions as with action. The two part 'Runaways' (26-27), the haunting 'Who Is Donna Troy?' in 38, and the stunning 'Judas Contract' in 42-44, climaxing in the third annual, were moving and skilful stories emphasising the emotional frailty of the humans behind the masks. Unfortunately, 'The Judas Contract' was virtually the swan song for quality in this incarnation of the Titans.

The success of *New Teen Titans* was such that DC issued a more expensive companion title, relaunching from 1, and Pérez left the original comic to work on it. DC had pre-empted this by rechristening the original series *Tales of the Teen Titans* from 40, and with the launch of the new comic, this foundered in a year's worth of inferior material before becoming a reprint of the deluxe edition. The new series started promisingly, with another match with Trigon, but that story never reached the heights of the previous series. Pérez left at the conclusion in 5, swiftly forcing upon the readers the realisation that he'd had more to do with the plotting than had been let on. Without Pérez, Wolfman took the Titans through a series of drab fight scenes, pointless exposition, clichéd character traits, and relentless attempts to introduce new characters while frequently ignoring the supposed stars. DC's management was eventually bludgeoned into publishing *Deathstroke The Terminator*, a spin-off starring an unremarkable Titans villain, in an attempt to climb the then popular Punisher bandwagon, but that didn't stop Wolfman shoehorning him into the *Titans* at every opportunity, to the series' constant detriment. Pérez was persuaded to return with 50, as the title changed again to *New Titans*, but his heart was no longer in it. The 'Who Is Wonder Girl?' tale, an attempted sequel to 38 of the second series, was a botched effort raising more questions than it resolved about the Titan whose complete history had been unravelled by *Crisis on Infinite Earths*. Staying only long enough to bestow one of the ugliest new costumes ever on the hapless Ms.Troy (54), Pérez fled again. Other distinguished illustrators worked on the title – Jose Luis Garcia-Lopez, Tom Grummett, Eduardo Barreto – but all seemed ill at ease. By now, the *Titans* were looking desperate; relaunch followed "New Beginning", followed "Old Order Changeth", each new line-up of Titans barely getting time to become known to the readers before being reshuffled again. By 100, an aborted wedding between Nightwing and Starfire, even the compensation of good artwork had gone. The last thirty or so issues were drawn in a sub-professional manner that was simply an embarrassment to what had once been DC's finest title. Eventually, they realised the harm this was doing to their reputation, and cancelled it; about eighty issues too late, but still.

Not wanting to lose the name, they promptly relaunched from 1 again, with an entirely new group – Argent, Risk, Prysm, Joto, and the Atom, a mainstay hero rejuvenated in the time-warping *Zero Hour*. Script and art were in the hands of Dan Jurgens, and Pérez came back, albeit only as an inker, for the early part of the run. Our heroes – Atom aside – had a common origin, being the result of alien genetic manipulation, and the name Titans was bestowed on them by a tabloid reporter. Links to the older team were quickly established, however, as Loren Jupiter, former patron of the original Titans, and Neil Richards, the ex-Mad Mod, became supporting cast members, together with Omen, a mysterious psychic who was eventually revealed to have been a Titan under another name. Despite conscientious efforts from all parties, the series never clicked. Readers resisted a Titans team lacking any big names from the past, and its significant that 'Then and Now' (12-15), which heavily featured the former Robin, Kid Flash, Speedy and Aqualad, is the only story arc at all difficult to obtain. Revealing the true identity and parentage of Omen, as well as featuring the death of a cast member, this is also the best-told tale in the series.

Adding Captain Marvel Jr. to the team, and inserting frequent guest appearances by other DC mainstays, did nothing to help ailing circulation. Plans were already afoot to launch *The Titans*, a new series featuring the original team and friends, so the Jurgens *Teen Titans* was, justifiably, deemed superfluous to requirements. Better than its immediate precursor, it nevertheless remained superheroics at its most generic.~HS

Tales of the New TEEN TITANS

DC: *4 issue miniseries 1982*

This spotlights the new characters introduced to the then extremely successful *Teen Titans*, one per issue. Respectively it concentrates on Cyborg, Raven, Changeling and Starfire, all written by Marv Wolfman and lavishly illustrated by George Pérez, the creative team who introduced the characters. Each of the characters has a tale to tell and a few secrets to reveal, and they're all well crafted and worthwhile supplements to the regular series.~HY

TEEN TITANS SPOTLIGHT

DC: *21 issues 1986-1988*

Started as fan interest in the 1980s Teen Titans was on the wane, this offered solo stories, initially of team members, but later of associates and villains. There's little bad here, but nothing really notable either, with the topics being far better than the execution. Alien Starfire discovers apartheid in 1-2, while Jericho's past returns in the overlong 3-6, all written by Marv Wolfman, while there's early Erik Larsen art on 10's Aqualad solo and 15's look at the Omega Men, an okay follow-up to their series written by Todd Klein. There's a homage to both *Tintin* and *Kamandi* in 11, when the Brotherhood of Evil have to become heroes, Ernie Colón draws Wonder Girl's trip to Central America in 12, and J. Michael Straczynski writes 13's story of Two-Face attempting to demonise Cyborg, which is the best of the run. Frances Kane is first named Magenta in 17, while the next two issues tie-in to *Millennium*. The series closes on a high with Sharman DiVono, Mark Evanier and Dan Spiegle turning in a story about an aggressive jailbird from the 1960s released into the 1980s. It captures the feel of the 1960s without ever descending to that level of silliness.~FP

Eastman and Laird's TEENAGE MUTANT NINJA TURTLES

Mirage: *62 issues 1984-1993, series two 13 issues 1993-1995*
Image: *23 issues 1996-1999*
Mirage: *Series three (TMNT) 7 issues + 2001 to date*

This began an industry, in the process making its creators, who'd self-published the first issues, multi-millionaires. It's heartening given the comic industry's shabby history of ensuring creators whose ideas have earned fortunes rarely share in the proceeds. Kevin Eastman and Peter Laird's concept is decidedly off the wall, although owing a little to the ninja stories Frank Miller produced in *Daredevil*. Raphael, Leonardo, Donatello and the incorrectly spelled Michaelangelo live in the sewers where they are trained as ninjas by the humanoid rat Splinter (1). In addition to the ongoing series each stars in an Eastman and Laird-created solo issue, the best of which is Michaelangelo's Christmas story. There's a grubbiness, grittiness and violence in the early issues. These turtles look as if they inhabit the sewers, as does their human companion April when she visits. For all that, it's the idea and characters that carry the stories, as neither Eastman or Laird are great plotters or artists. Most early issues contain extended choreographed fight sequences spliced with the odd quip or mission recap, and the joke soon wears very thin. A guest shot from Cerebus, along with his creator Dave Sim, in 8 is the best of them.

From 9 other creators contribute with increasing frequency, Michael Dooney being the first. Eric Talbot and Mark Bodé also come aboard as semi-regulars, but it's Mark Martin's début in 16 that's the stand-out. His inventive storytelling, visual asides and ideas beyond fights make for an early treat. He returns in 22 and 23, the second part of which is all but a Gnat Rat tale, but this time his whimsy may prove off-putting, and the participation of the Turtles is minimal. Rick Veitch's 24-26 provide the last issues available in the assorted collections, but his Ed Roth-influenced 30 is better. Michael Zulli's art in 35-36 is welcome and the madcap script and art of Rich Hedden and Tom McWeeney provides another highlight in 38-40. By this time the comic has progressed far away from the ninja roots, and is open to all kinds of interpretations. Those who enjoyed the earlier issues probably won't care much for Hedden and McWeeney, with a Raphael solo story featuring spectacularly inept, yet nonetheless deadly small aliens. Perhaps the most unlikely contributor of the entire run is Richard Corben in 33, a colour issue. It works surprisingly well, with Jan Strnad's story of alternate turtles in time stretching Corben beyond his usual vistas.

With 46 it's goodbye to the guest creators (with the exception of those contributing pin-ups to the strange, almost wordless 50), and welcome back Eastman and Laird, with artist Jim Lawson. The remaining issues of their run are a continuing story, 'City at War', with preludes to 50 and the deal itself to 62. It's a back-to-basics approach and works far better than the earlier issues because by this point the turtles have individual characters, and there's more than just fights. If you prefer the ninja emphasis these issues are as good as it gets. Lawson's art has a European feel, and those who wish can see 62 as an ideal finishing point.

The second Mirage series is distinguished from the first by the lack of Eastman and Laird's names on the cover. Lawson writes and illustrates, and the warm colouring of Mary Woodring, then Eric Vincent, gives a distinct look, although Eric Talbot inking Lawson isn't welcome. 1 is very fragmented, foreshadowing greater issue-to-issue continuity, and a feeling of the ninja issues without a return to them. Anyone who enjoyed the Eastman and Laird run ought to find something worthwhile here also.

Long after the global fad passed, the turtles re-embraced the ninja concept at Image, but with occasional heavier doses of violence. In this they seemingly took their lead from Body Count, or perhaps it's writer Gary Carlson's response to the mass market dilution of the original premise. It provided a surprisingly durable revival. Penciller Frank Fosco falters whenever he strays from Frank Miller's style, but despite weak figurework his art has an action appeal. Carlson shakes up the status quo and plots decent adventure comics with enough going on to draw the reader back the following issue. The placement of guest characters is well conceived, particularly Savage Dragon and his vast supporting cast in 10-11, which make good sample issues.

It's Laird and Lawson who start the third Mirage series, ignoring the Image comics, and ageing the turtles to their thirties. It's consistently the best turtles to date. Laird's writing has improved, and he's developed the ability to introduce suspense and surprises with several subplots on the go at once. Lawson's art is grubby and stylised, and it would seem that no major character from the past is to be ignored here. If you loved the Turtles as a kid, this is the comic for you in meaty thirty-two page chunks.~WJ

TEENAGE MUTANT NINJA TURTLES ADVENTURES

Archie: *3 issue miniseries 1988, 75 issues, 11 Specials, 2 Holiday Specials, 3 Movie Specials, 1988-1995, 3 issue miniseries (TMNT Presents the Mighty Mutanimals) 1991*, 3 issue miniseries ('Year of the Turtle') 1995*

Long running but poorly executed tie-in to the animated show based on the Mirage comic. Initially adapting TV episodes utilising the talents of funny animal comics stalwarts Dave Garcia and Ken and Beth Mitchroney, with 10 scripter Dean Clarrain switches over to original stories. Michaelangelo, Raphael, Donatello, Leonardo, Splinter and April are joined by a vast cast of mutated animal characters in their struggle to defend the Earth from the evil Shredder and Lord Krang. 14 marks a striking change as Don Simpson illustrates the first part of an Amazon adventure that is fast paced, thrilling, funny and delivers a strong Eco-warning without being obvious or preachy. The saga continues as the Turtles make their way back to the USA, foiling the plans of evil entrepreneur Mr Null, even crossing over into the spin-off Mighty Mutanimals to foil the invasion plans of the malicious Maligna. 20, a tribute to the Lee and Kirby monster comics of the 1960s, ends this creative period and the comics devolve into bland and formulaic fights and pizza gags, bad even for kids cartoons. The Movie Specials are very poor adaptations of the films, but the Spring Special, where the Turtles meet the Archies, may be of interest to collectors of the bizarre. 1-16 were available as collections.~WW

TEENAGENTS

Topps: *4 issue miniseries 1993*

Based on characters and concepts created by Jack Kirby, this is a lousy tribute to The King's creative genius. Writer Kurt Busiek and artist Neil Vokes tell a stunningly average yarn about a group of young heroes who travel to earth from an underground city with the aid of their "Omni-Bus", a cosmic coach that is one of the book's few authentically Kirbyesque touches.~AL

TEENAGERS FROM MARS

Rick Spears and Rob Goodridge: *4 issues + 2001 to date*

Supermarket checkout boy, Macon, who has a sideline as a self-published cartoonist, is fired after a mother protests about the demonic violence in a comic he sold to her son, Max, and the manager tells him to pull all of the comics from the market's shelves. Max is one of a group of boys committing grave robbery to fund their desire for the expensive first appearance of Captain Tomorrow, while the city of Mars is under mounting pressure over the images of sex and violence presented to its children. Self-published by the creators, this is an unsubtle (in some respects), well-presented tirade against censorship that also captures the anger and bitterness of youth at the restraints of parents and society. The doll-like features of the characters and slightly distorted anatomy add to the sense of detachment.~NF

Moronic fight comic based on a computer game where all the characters posture and hit each other at the slightest provocation. Total waste of time.~WW

Neil Gaiman's TEKNOPHAGE

Tekno: *10 issues 1995-1996*

Rob Nichols, a real-estate salesman, is transported to Kalighoul. By good luck he manages to work his way up through the ranks of the workers to threaten Phage, a reptilian monster who rules through fear, as seen in issues of *Mr Hero.* His subjects are so used to living in terror that when, as often happens, he decides to eat them, they don't put up much of a struggle. 1-6 tell the story of Nichols' attempt to strike a deal with or kill the Teknophage in order to attain power/wealth and/or rescue a missing earthwoman. Brian Talbot's artwork is, as ever, excellent, and Angus McKie's colouring are points of interest, but ultimately Rick Veitch's characters and story disappoint. The Paul Jenkins and Al Davison (7-10) present a more hopeful view of life on Kalighoul, but there's less humour involved, making the whole thing rather pretentious.~NF

TELLOS

Image: *10 issues 1999-2000*, one-shot ('The Last Heist'), one-shot ('Maiden Voyage') 2001, one-shot ('Sons and Moons') 2002*

This colourful, ultimately Tolkien derived, fantasy starts with an anthropomorphic bunny and a kindly-seeming mage before introducing a man-tiger, Koj, best friend to a young boy, Jarek, and Serra, a teenage pirate queen. They have lighthearted fights with characters hunting a mysterious amulet and with frog police. It's not awfully imaginative, with characterisation often limited to speech impediments or faulty syntax, while the language veers between courtly formality and New York wisecracks, with some expository interior monologue. A wet place in a fantasy story must be named something, but "Torrent, Land of a Thousand Storms" can't have exercised scripter Todd Dezago for long. Mike Wieringo's clear and pleasant art is well suited to the subject matter. There is not much story in 1-3, but things improve in 4 with the introduction of Hawke, an adventurer in love with Serra, and his partner Rikk, a kleptomaniac fox. Dezago's strengths as a writer come in to play with 5, in which this quite comic story hosts very violent surprises. Brad the stoned dragon, who calls everyone "dude", adds welcome humour to the remainder of the run, which is otherwise pretty serious while the heroes conclude their battle with the cruel Malesur, who would cover the whole bright world of Tellos with darkness. The last two issues cleverly reveal an extra level to the story. 1-3 were initially collected as 'The Joining' before 4 and 5 were added for 'Reluctant Heroes', with 'Kindred Spirits' hoovering up the remainder.

'The Last Heist', starring Rikk, with excellent art by Craig Rousseau, is the best of the one-shots, all still written by Dezago. 'Maiden Voyage', by the French artist Didier "Crisse" Crispeels, is the story of how Serra defeated some saucy sirens and became captain of her ship. The best thing about 'Sons and Moons' is the cover by the still great Nick Cardy.~GK

TEMPEST

DC: *4 issue miniseries 1996-1997*

Aquaman's sidekick finally comes of age. Ignored for decades, Aqualad is given new powers with a snazzy new costume. Now able to control heat and cold, he takes the new name Tempest. This was a very pleasant surprise, written and beautifully pencilled by Phil Jimenez (heavily influenced by George Pérez), with impressive colouring by Carla Feeny. The main plot deals with Tempest's inheritance, his dysfunctional family and the historical myths of Atlantis. The story evolves around Garth's emotions and the manner in which he deals with the return of his apparently dead lover, Tula. Jimenez handles Tempest's sense of loss excellently (drawing on his own personal experience) in concluding that life must go on, and the past doesn't return.~HY

TEMPUS FUGITIVE

DC: *4 issue miniseries 1990-1991**

This is an unusual comic: a stroke book for the aviation enthusiast, ingeniously set up to present the reader with a succession of lithe, shiny machines in energetic action, and all tied together by something vaguely resembling a plot. Ray is a fugitive from the future, and he zips backwards and forwards through the 20th century, always (somehow) emerging within feet of an aeroplane. Ken Steacy's dialogue is porn-film terrible and his art for the human characters is perfunctory to the point of contempt, but you could keep warm through a bad winter on the love that's gone in to drawing those aeroplanes. Some landscapes are also striking: aerial views that make you want to grow wings. Flick through an issue if it comes your way, and discover a different way of looking at the world.~FC

TENDER FLESH

Draculina: *One-shot 1997*

Variation on *The Most Dangerous Game,* with a dancer, Paula, lured to an island by a decadent, cannibalistic foursome, who seduce her and then hunt her, after sending her boyfriend away. Using stills from the film itself, occasionally doctored for a comics effect, Kevin Collins provides a script that could have done with being proofread, but despite its bizarre scenes and gratuitous nudity, it probably makes more sense here than in the film it's based on.~NF

government department UPROAR (and it's chief, Sam Jaffe), the power-hungry General Greer and Darkk himself. Other characters include Zorina's mother, Espy's cat, which has powers of its own, Adrenalynn who's a Russian-made cyborg with a young girls' personality, and the manipulative Gulliver who is largely responsible for throwing most of the characters together.

As the series progresses, Darkk's monsters turn against him, particularly Gozza, whose attempted coup comes to nought in 'The Black Embrace', co-plotted by Scott Lobdell. 'Evil's Child' reads like a conclusion, revealing links between Darkk's experiments and the two women. 'Resurrected', effectively re-starts everything with all the main players back in place, and a continuation promised. After a while it's possible to get used to Daniel's impossibly long-limbed women and the scripts and artwork mesh in a more readable way as the ongoing series progresses (Beau Smith is "developer and scripter" until 10). There's just about enough characterisation to make you care what happens, but the pacing and scene shifts often leave too many shortcuts in the storytelling.~NF

THE 10TH MUSE

Image: *10 issues 2001-2002*
Avatar: *1 issue + 2002 to date*

In Greek mythology the nine daughters of Mnemosyne are collectively called the Muses. This series proposes a tenth: Justice. Beauteous district attorney Emma Sonnet transforms into the superheroic Muse to battle evil, but unknowingly. Her double life dates back to a visit to Greece where she went missing for five years. Early issues show Emma and her best friends piecing her experiences back together, followed by visits to *Savage Dragon*'s apocalyptic future and the fantasy past of *Tellos*, awakening to find that the goddess' essence has been stripped away. By 10 the Muse inhabits the assistant of the sinister Grayson Bishop, Emma's unwanted suitor. 10th Muse was created as a vehicle for wrestler and model Rena Mero, better known as WWF's Sable. Despite the arch dialogue, Marv Wolfman scripts lucidly, with the second story arc the best as Emma seeks the help of Medusa in 8 and her sister muses hire a trademark flouting mercenary named Orion in 9. It's an exciting read with a weak introduction thanks to the unexplained guest shots. The better art is by Roger Cruz from 5. His clean linework works well with the colour, adding some much-needed stability to the series continuing into the Avatar series, which was launched with multiple covers. Individual issues remain hard to follow.~SW

TERMINAL CITY

DC/Vertigo: *9 issue limited series 1996-1997*, 5 issue miniseries ('Aerial Graffiti') 1997-1998*

In a massive city, four famous men are publicly disgraced before their scheduled appearances at a major City Fair. One of them is Cosmo Quinn, human fly, now a window-cleaner crawling up the sides of very tall buildings. As the story progresses we find out what the others have been doing when they return to the city to seek revenge for their humiliations. Additional characters are introduced, like mob boss Big Lil, and sisters Faith, Hope and Charity, while the action takes place in and around a large hotel. In 'Aerial Graffiti', a sky-writer turns his slogans into obscenities, threatening the city's reputation ahead of the opening of the Transatlantic Tunnel and Charity's gambling debts become life-threateningly high. The first series is slowly paced, but there is a lot of territory to cover. The second seems rushed in comparison as writer, Dean Motter seems to rely more on explanations than storytelling. It is fun and intriguing, though there are so many significant cast members that characterisation suffers. Michael Lark's artwork is suitably modernist (and heavily influenced by Alex Toth) for Motter's retro city and pulp atmosphere.~NF

TERMINAL POINT

It's all simple action stuff from Bruce Zick, still very much in Kirby-style story mode, but fails to involve.~FP

THE TERMINATOR

Now: *17 issues 1988-1990, 5 issue miniseries ('The Burning Earth') 1990, 2 issue microseries 1990*

If ever there was a film suited to comics where unlimited special effects cost nothing, it's *The Terminator*. Sadly, Now appoint shoddy amateur artists who consistently scupper decent scripts. The comic stays in 2031, a world controlled by machines, one in which the robotic Terminators are programmed to wipe out humanity. Initially there are separate story arcs to look in on assorted human communities and loners, the best of which is 7's story of a modified wolf. From 8 the community introduced in 1-3* is the central focus; John Connor, the hero mentioned in the *Terminator* film, returns in 12. Writer Ron Fortier must have wondered who he angered in a previous life, given the appalling artists who illustrate his always effective scripts. It seems, though, that he was storing credits for 'The Burning Earth' miniseries, illustrated by Alex Ross: a quantum leap in quality. Ross paints a dark gloomy world to match the circumstances, and the story has a final assault on Skynet. This is the series to sample. Now's final fling before their licence was revoked was a two-part story, just titled *Terminator*, recounting events preceding the first film.~FP

THE TERMINATOR

Dark Horse: *4 issue miniseries ('Tempest') 1990*, 4 issue miniseries ('Secondary Objectives') 1991*, One-shot 1991, 4 issue miniseries ('The Enemy Within') 1991-1992*, 3 issue miniseries ('Endgame') 1992*, 3 issue miniseries ('Hunters and Killers') 1992*, 1 Special 1998, 4 issue miniseries ('Death Valley') 1998, 4 issue miniseries ('The Dark Years') 1999*

Based on the film in which a robot 'Terminator' is sent back in time to prevent the defeat of a worldwide computer network that has been systematically destroying humankind. The Terminator's objective is to kill Sarah Connor, the mother of the rebel leader, John, but he is opposed by a human also sent back through time who becomes John's father. In 'Tempest', more humans arrive in the past, with a plan to prevent the future coming about by killing Dr. Hollister, who invented Skynet (the computer network) at Cyberdyne Systems. Needless to say, some terminators arrive to stop them, including Dudley, half-human, half-Terminator, with whose help the humans eventually seem to have succeeded. This leads to 'Secondary Objectives' and the Terminators trying to kill Sarah Connor again. The characters reappear in 'The Enemy Within', no treading any new ground, but the storyline is resolved in 'Endgame', which does have a satisfying conclusion. Written by John Arcudi ('Tempest'), Ian Edginton ('The Enemy Within') and James Robinson (the rest), it's only the last that brings the storyline to any sort of life while Paul Gulacy ('Secondary Objectives') and Jackson Guice ('Endgame'), with very similar photo-realistic styles, offer the best of the artwork.

The one-shot by Robinson and Matt Wagner has a pop-up motorbike in the centrefold, and is a clever and well-painted story about a Terminator trying to kill the wrong Sarah Connor. 'Hunters and Killers' at least attempts to add something to the series, set in Russia where rebels attempt to destroy the Mir space station considered a refuge for a Skynet near-defeat. Unfortunately, it's a flat, unconvincing tale. At this point, Dark Horse lost the license for the series.

The 1998 Special is the prelude to the miniseries of the same year (retrospectively called, 'Death Valley'). It's drawn by Guy Davis, whose artwork simply isn't right for this sort of action-oriented strip. Alan Grant's script tries to introduce something new to a pair of Terminators, who are still trying to kill Sarah Connor, but who are distracted by the leader of a group of Satan-worshippers into chasing him and an innocent family through the desert. Drawn by Steve Pugh, the miniseries is better, but like Mel Rubi on 'The Dark Years' (again by Grant, this tells two parallel tales of John Connor in the present and the future), lacks a realism that seems more appropriate to the series. Dark Horse have collected editions of most series.~NF

TERMINATOR 2

Dark Horse: *3 issue miniseries 1991*

An adaptation of the film, written by Gregory Wright, with artwork by Klaus Janson. It's difficult to follow if you haven't seen the film, but otherwise it's quite an effective adaptation, reviving a lot of the laughs and thrills. Janson, with his sketchy style, is an interesting choice as artist on a project where you might expect slavish photorealism; his crude handling of faces is sometimes distracting, but this is more than balanced by the feeling of spontaneity and freshness.~FC

Marvel/Epic: *4 issue miniseries 1993-1994*

Our hero wakes in a bizarre world he doesn't understand, to find he has amnesia. He has two constants in his life: one is his conviction that he must find Scarlett, a woman he believes loves him despite all evidence to the contrary, and the other is his disproportionate dislike of a cartoon dog that everyone else seems to love. Jamie Delano's plot is strange and full of metaphors, and it's soon obvious that something is not right in this weird place. David Lloyd's art is his usual professional work, and the end result is an engaging comic, although it is a case of when you guess the end rather than if.~DB

TERROR Inc

Marvel: *13 issues 1992-1993*

A very dark sense of humour is at work in the creation of a stylish and articulate inhuman mercenary able to dismember humans and demons alike. Having done so, Terror can replace his own bodily parts with them, absorbing all memories, sensations and abilities. Realising that his Schreck character from the Epic series *Doctor Zero* was too good to waste in a supporting role, Dan Chichester reincarnated him here. The execution, so to speak, doesn't match the concept, but if you want a look try the typically gruesome Christmas tale in 8.~FP

TERRY AND THE PIRATES

Flying Buttress: *25 volumes 1986-1992*

Milt Caniff's Associated Press Syndicate newspaper strip commenced on October 22nd 1934, augmented with Sunday pages from December 9th. It's set in 1930s China with the increasing threat of Japanese incursion. Young Terry is looked after by adventurer Pat Ryan and oriental grotesque Connie, joined later by the grosser Big Stoop. Terry is the emotional focus of the strip whilst Pat remains something of a macho archetype. There are many fascinating women portrayed in the stories, the most infamous being Chinese bandit queen Dragon Lady. The story also keeps running into unforgettable goodtime girl Burma. There's romance with the tragic Raven Sherman, the flighty Normandie Drake and Terry's 1940s girlfriend April Kane. The male villains make their presence felt but General Klang in 6, Baron DePlexus in 8 and Captain Judas in 13-14 are no match for the girls. Terry grew up very quickly when America entered the war in 1941, becoming a pilot under Col. Flip Corkin in 17.

Each sixty-page volume covers just under six months of continuity, running the dailies and the Sunday pages in date order. It is no exaggeration to say that the scripting style that Milt Caniff perfected in the 1930s on this strip is still being used today in most comics. If that weren't enough, these remain some of the most exciting stories ever told in comic form. They're beautifully realised by Caniff in a fluent, unfancy style that owes some of its developing mastery of chiaroscuro to Caniff's colleague Noel Sickles. The reprints run up to Dec 1946 when Caniff left Associated Press to create a strip he owned a slice of and for which he would receive greater rewards – *Steve Canyon*.~SW

TEX BENSON

Metro: *4 issues 1987*

3-D Zone: *4 issues 1990-1991*

Tex Benson is an impossibly desirable space-jock in a light-hearted guns'n'girls strip. Creator Chuck Roblin's art is heavily influenced by the 1940s great Lou Fine, but his storytelling is very muddled and difficult to follow.~WJ

TEX DAWSON Gunslinger

Marvel: *3 issues 1973*

1950s reprints featuring Tex of the title who "rode the Western range with his fighting pals Whirlwind and Lightning". Whirlwind and Lightning were respectively a horse and a wolf, but this doesn't stop Tex chattering away to them both. These days he'd be in a Care In The Community programme; in the 1950s he had his own comic with predictable plots and dull art. Were kids really that naïve once?~FP

THANOS QUEST

Marvel: *2 issue microseries 1990*

Thanos quests for the six infinity gems in his never-ending bid for Mistress Death's approval. This inferior Jim Starlin plot regurgitates past classics, strips Thanos of his awe and majesty and portrays Marvel's cosmic entities as five-year-olds.~APS

THB

Horse Press: *9 issues (1-5, 6 a-d) 1994-2002, one-shot (Giant THB Parade) 1996, one-shot ('Circus') 1998, one-shot (THB:M3) 2000*

Paul Pope seemed to spring out of nowhere. In the time it took him to self-publish three thick black and white volumes of his futuristic teen adventure story, *THB* he'd gone from small press unknown to one of the most fêted new comic artists. Although you can see his art developing over the first couple of issues (a delightful process in itself), he is obviously a talented artist from the start, drawing in several styles, using watercolour and washes for particularly atmospheric scenes, but returning frequently to an elongated brush style reminiscent of the Italian adventure tradition. His page design and pacing owe something to Moebius and Jean Claude Forest, but he's also taken tricks and effects from the likes of Alex Toth: an excellent selection of influences that never overwhelm his natural drawing abilities.

THB is packed with the escapades of H. R. Watson, the precocious young daughter of an important scientific industrialist who, on the cusp of adulthood, is one minute the intrepid adventurer and the next an impulsive schoolgirl. To protect her from people who might want to attack her father through her, she is given THB, a giant genie-like bio-construct concealed in a tiny pill. Just add water and you have an instant bodyguard. Sometimes, however, water is hard to find, especially as the series is set on Mars.

Pope, with all the enthusiasm of a science-fiction fan, has mapped out the minutest details of his extraordinary yet often anachronistic future. Humans build huge Martian cities built by humans over the ruins of the native architecture, and indentured Martians work for them, ruled by a weird bureaucracy of insect-masked civil servants who hide their flesh behind metallic body suits. When HR's father tries to move outside the jurisdiction of the cities, the police begin to hound her, leading to a series of meetings, chases and attacks. The issues are huge, seventy-two or ninety-six pages of detailed black and white artwork (6 itself is split into four as 6a, 6b, 6c, and 6d), allowing Pope plenty of space to develop the relationships between HR and her friends and allies, as well as exploring the Martian culture. Engrossing, if often mystifying, read.

For those who fall in love with Pope as an artist, the oversize soft back 'Circus' is a must. It reworks material from the early issues: 'The Hidden Face' from 1 becomes 'Hidden Face Adventure 97', while 'The Bumble Hip Shake' is completely reinterpreted to become 'THB Circus'. Created between 1996 and 1997 when he'd begun reworking *THB* in a manga style for Kodansha, it covers Pope's extremely creative period when his Hugo Pratt-influenced linear working method was being blown apart by the approach necessary to communicate with a new audience raised on manga. Several critics complain they can't understand Pope's work. Gentlemen, you must try harder! His art looks better than ever printed on the larger pages on newsprint.~FJ

Small, but disturbing moments from the youth of creator Robyn Chapman. Classic yet innovative style of comic storytelling using large single and double-page illustrations with imbedded prose to tell the story of a US war correspondent. THIEVES AND KINGS

I Box: *39 issues + 1994 to date*

A peculiar title, much prized by those who read it, yet little known generally. Unable to pack in enough material per issue to tell his broad fantasy story, creator Mark Oakley (M'Oak) opts to separate his comic pages with pages of text continuing the story. Certainly a valid storytelling device, it comes a cropper here because M'Oak is no more than a functional writer, although his art improves immensely over time. The plot starts with Rubel, teenage thief under royal protection, having located a crown hidden to determine who would succeed to the throne, and having passed it on to the princess. Accompanied by an imp, Rubel manages to make enemies with ease, and in 5 learns that his royal patronage might not be the boon he assumed. Thereafter the focus shifts a little from Rubel, with the trials of reincarnated girl of destiny Heath Wingwit and her mentor, the wizard Quinton, occupying equal space. Rubel and Heath meet in 18, an issue with plenty of background explanation for those wanting to dip in for a feel of the series. Thereafter they're more or less a team with a purpose, although spend plenty of issues separated.

Thieves and Kings frustrates with plenty of seemingly superfluous detours. There is an extended story to tell, and every so often a few clues point towards quite a clever idea, but so many issues have the feeling of marking time. They're characterised by ultimately meaningless chases and battles early on, then disguised a little more skillfully by whimsical conversations. Overall an abiding thought is that the whole may have worked better as a novel. Reading as it does like a children's fairy-tale with the occasional adult intrusion, there's never any real sense of danger, but those who enjoy fantasy material might be as charmed as the regular readership. Sample 23 with Heath attempting to enter a tower, and make up your own mind. M'Oak does keep all issues in print via collections.~WJ

THE THING

Charlton: *17 issues 1952-1954*

Just before their comic line's collapse Fawcett put together this horror anthology hosted by the unseen "Thing". The title ended up published by Charlton, who bought lots of Fawcett's inventory. By 1953 new material was being packaged by Al Fago whose artists included many newcomers to the industry including Tony Tallarico, Dick Ayers, Seymour Moskowitz and Steve Ditko. The tales are cheap, nasty and include gruesome interpretations of *Hansel and Gretel*, *Cinderella* and *Rumplestiltskin* in 11, 12 and 14, with the last two being some of Ditko's earliest comics work. In 14's 'Evil Eye' a man's arms and legs are gnawed off by rats before he is thrown, still living, into the sea. With such horrific contents it was inevitable that the comic would be scuppered by The Comics Code.~SW

THE THING

Marvel: *36 issues 1983-1986, 4 issue miniseries (Adventures of the Thing) 1992, 4 issue miniseries ('Freakshow') 2002, one-shot (Thing/She-Hulk) 2002*

During his critically acclaimed run on the *Fantastic Four*, writer/artist John Byrne took The Thing – one of the team's founder-members – away from the group and gave him a solo title. The Byrne written issues are very good, using the extra space to explore the character intelligently. Later issues, written by Mike Carlin, aren't as good but are still worth a glance, but Ron Wilson's art throughout is ordinary. Byrne returned for the final two issues, a story completed in *West Coast Avengers* 10. The first miniseries reprinted selected Thing team-up adventures from *Marvel Two-In-One*, while 'Freakshow' is a pointless morality play in which circus freaks who Ben Grimm encountered as a child come back into his life as the rocky, man-monster Thing. Oh, and he bemoans his lot for panel after panel, as if we haven't had enough of that in the previous forty years of Marvel Comics. Really, don't bother. In the one-shot The Thing and his one-time replacement in the Fantastic Four team up for a double-sized fight scene for no really good reason. Nicely drawn by Bryan Hitch and Paul Neary though, and the who-is-stronger-the-Hulk-or-the-Thing brigade might enjoy it.~JC

THE THING FROM ANOTHER WORLD

Dark Horse: *2 issue microseries 1992, 4 issue miniseries ('Climate of Fear') 1992, 4 issue miniseries ('Eternal Vows') 1993-1994*

Continuing where John Carpenter's film ended, the first series has a team of Navy Seals massacred, giving the alien an opportunity to escape into the outside world, leaving hero MacReady adrift. Chuck Pfarrar's script seems rushed and rather cramped, while John Higgins' artwork is patchy. MacReady is rescued from the ice and some Argentinians encounter the alien in 'Climate of Fear', by John Arcudi and Jim Somerville, but it's David deVries' 'Eternal Vows' that really moves the idea on, introducing two Things and keeping the suspense at high pitch throughout. In this he's greatly helped by the artwork of Paul Gulacy, who's not at his best but still sharp.~NF

NBM: *4 issue miniseries 2002*

A company executive attempts to control an artificial intelligence that's evolved in a new global computer system while a former programmer attempts to prevent it. Getting further information from writer Chris Rowley is like pulling teeth, as he makes it as difficult as possible to follow the story, with masses of technical language and new slang to prove it's set in the future. The rebels run hither and yon, a step ahead of the authorities all the time, and it would be a totally tiresome read were it not for artist Justin Norman occasionally showing a little inspiration.~WJ

THIRD WORLD WAR

Fleetway/Quality: *6 issue miniseries 1991*

When originally produced to launch the UK's *Crisis*, this was groundbreaking stuff. Pat Mills, hand on bleeding heart, extrapolates a few years into the future from the 1980s envisaging an era when soldiers sponsored by multinationals enforce corporate imperialism amid the poor of South America. Mills commendably incorporates real life atrocities, and he's harsh in his condemnation of the perpetrators, the systems permitting them to operate and ecological ignorance. The material hasn't dated well, though, and the incessant proselytising grates. The stylised art of Carlos Ezquerra, although very good, isn't to all tastes.~FP

THIRTEEN

Dell: *29 issues 1961-1971*

Subtitled 'Going on Eighteen', this is John Stanley's wonderfully realised teen series about the life and loves of Val, her best friend, Judy, her neighbour, Billy, and her sister, Evie. Each issue normally consists of two Val strips, one featuring Judy and one featuring a younger Judy and her relationship with put-upon, Jimmy Fuzzi. Judy starts out as rather plump and homely, but by 5 has thinned out a bit and is more of an equal to Val in the battle for dates. A brief flirtation with Paul Vayne occupies Val from 6-11, until she realises her feelings for Billy, who she's always treated as a doormat. Not that dating him means any less trouble for Billy. Stanley's perfectly paced humour and the pitfalls of everyday life and love make this a joy to read however outdated the fashions and concerns might seem now. The final issues from 26 are reprints from 1.~NF

THIRTEEN O'CLOCK

Dark Horse: *One-shot 1992*

The two stories in this one-shot feature Mr. Murmur, a masked detective who appears to operate much like The Shadow. The title story was originally serialised in *Deadline USA* 1-3. It connects the murder of several doctors at the hands of the corkscrew-wielding Wheezer, a group of doctors who meet secretly and work under the direction of someone who manifests himself as a floating skull, and a flower shop whose owner nurtures flesh-eating plants. So, just the sort of thing you'd expect from Richard Sala, then. His twilight world is full of mysterious creatures, dangerous, if not deranged, men of science and doomed participants (there are few survivors of Sala's tales). His creepy artwork complements this world perfectly and if the results are too genre-specific to put him in the first rank of cartoonists, his work is always entertaining, if grim.~NF

This caught everyone on the hop by selling out astoundingly quickly, largely via word of mouth. It's a classic horror story founded on a good idea. There's a town in Alaska where the sun sets on November 18th and doesn't rise for a month, making it an ideal place for a vampire convention. Steve Niles knows his way around this type of material, providing a cinematic plot that if not confounding expectations, certainly delivers. The Mighty THOR

Marvel: *Series one 377 issues (126-502), 19 annuals, 1 Giant-Size 1966-1996, series two 57 issues + 3 annuals 1998 to date*

By the time *Journey into Mystery* became *The Mighty Thor* (right in the middle of a major tussle with Hercules), the precepts of the Asgardian and Marvel Universes were already fully established. Furthermore Jack Kirby was already the premier superhero and high concept artist working in comics. His efforts would shape every superhero comic for most of the next decade, and his artistic influence would only be rivalled by Neal Adams, who very briefly followed him on *Thor*. With that kind of a legacy it's hard to understand that the *Thor* of that period is a rather poor read.

Replacing the inadequate crime tales and villains such as the Cobra, Mr Hyde or Radioactive Man were stellar armadas, evolutionary meddlers and more and more threats to Thor's mystic homeland Asgard. The perennial ploys of evil half-brother Loki still resulted in nothing, his subsequent awesome punishments still equated favourably with being stood in a corner, and All-Father Odin banished and/or diminished Thor's power every second Tuesday. The nonsensical romance with soap opera reject Jane Foster was abruptly dropped in favour of Sif, a tough Asgardian cookie in 137 and the scope and panorama of a War of Powers began. It would continue in one form or another until long after Kirby's departure. The stories Kirby wanted to tell weren't compatible with the practicalities of periodical publishing. His heart seemed much more in tune with the epic mythologies that featured in the 'Tales of Asgard' back-up feature, begun in *Journey into Mystery* 97 and running almost continuously until replaced by The Inhumans in 146-152. Thereafter the entire page count was devoted to Thor's increasingly melodramatic adventures.

High cosmic dramas demand epic conclusions, but comics survive by never ending, and a never convincingly refuted story explains Kirby's decision to leave Thor and Marvel for DC to produce *New Gods*. In Norse legend Ragnarok is the final days of the Gods, and in Thor it was thwarted many, many times. Scripter, editor and publisher Stan Lee turned down Kirby's pleas to finally have Ragnarok occur. Kirby wanted to begin a new series based on the aftermath. Between 159 and the parting in 179, concept replaced characterisation, never a Kirby strong point. Readers learn that there never was a human Don Blake, merely Thor under a spell (158-159), and the Thunder God fought and eventually discovered the secret of the planet-devouring Galactus (160-162, 168-169) and even battles the artificial human "Him", who would eventually become Adam Warlock (165-166). A change in publishing policy exacerbated the problems as Marvel switched to single issue stories. John Buscema became the first artist other than Kirby to draw an issue of *Thor* with 178, and Kirby's final outing was the first chapter of a tale involving Loki and the devil-lord Mephisto. Neal Adams completed the story (180-181) before Buscema became the regular artist for more of the same-old, same-old, which continued until Gerry Conway became writer with 193.

Conway planned a little further ahead than Lee or Kirby, and his fantasy sensibilities moved *Thor* into a less grandiose, yet more humanistically combative form, which obviously

* Available in a collected edition

suited the more realistic sensibilities of his artist. The Asgardians never looked less like deities than under Conway and Buscema. If there were fewer old standby plots though, there was also no grand spectacle. The closest moments came when a chunk of Ego, the Living Planet is used to hyperstimulate evolution or when Loki uses the Legions of Asgard to invade Earth which introduces a new plot: Odin Goes Missing (232-234). It would recur many times. By now the title was near terminally in the doldrums, as a succession of writers flail about. Rival pantheons are introduced, so are more aliens, old and new whilst a succession of inappropriate inkers dampen the strengths of Buscema's drawing. Even a pencilling stint by arch-stylist Walt Simonson was drowned by the likes of inker Tony DeZuniga (260-271). In 272 classical scholar and ex-English teacher Roy Thomas takes over, beginning an intriguing period that sees the introduction of Red Norvell - a replacement Thor – and a scheme to hasten and thereby control the extent of Ragnarok. This in turn leads to a challenging epic, if overlong and badly drawn. By enlarging on Kirby's *Eternals* series, it links Marvel's gods to Wagner's Ring Cycle of operas, in the process giving Asgard and Thor a proper origin, and thereby explaining the Thunder God's obsessive dedication to the mortal world. It culminates in a battle with the Celestials in 300, although by then Thomas is gone and it's left to Mark Gruenwald and Ralph Macchio to script the big finish. The succeeding issues pall in comparison, although a fill-in by Doug Moench and Rick Leonardi in 303 is notable. It touches new territory when Thor helps a faltering Catholic priest to rediscover his faith in a novel and humanistic treatment sadly absent when Moench becomes the regular scripter for possibly the least readable run *Thor* endured.

Just when cancellation seemed desirable Walt Simonson returns as both writer (337-382) and artist (to 367) and immediately makes all the disparate and almost-great elements that comprise the canon blend and work. By incorporating long forgotten factors, creating new characters and reinvigorating old villains Simonson finally gives the series the scope, sensibility, spectacle and grandeur that had always been just out of reach. The art is imposing and powerful again and the stories at last do justice to the myths they came from. Beta-Ray Bill is an alien as noble as the Thunder God, and is therefore able to benefit from the spell on Thor's hammer just as the god himself is. An alien threat becomes a menace to all of creation and Simonson even revitalises the concept of Elves, returning them to their malevolent Scandinavian Norse origins whilst updating them to fit into the modern world. His great trick was to incorporate all the varying aspects of Thor into one great whole. He wasn't just a superhero fighting villains, nor a space exploring adventurer, nor a magical barbarian warrior for Simonson. He was all of those things at once. Earth and Asgard were of equal importance and both were used to best advantage. Simonson also managed to instil humour into a series that previously hosted only fat jokes at the expense of fellow God Volstagg, and the odd paternalistic jibe at how callow youth was from Odin. One of the most fondly remembered tales of the run has Thor transformed into a frog in (364-366), and it's practically a swan song for the good times. Although Simonson had taken art breaks before (355, 356), with 368 Sal Buscema takes over as full time pencil artist and it's just not the same. Combine that with some poor single issue fill-ins and it seems that the old times are on their way again. By the time of Simonson's departure Thor has a new look, no secret identity, a new weakness and enough new back-story for his writing successors to putter along with until the demise.

First up was arch traditionalist Tom DeFalco, who with long-time collaborator Ron Frenz produced a decent if uninspired run based heavily upon the Jack Kirby era with Thor generally taking the role of New York superhero. There are guest stars (Hulk in 385, Spider-Man in 391, The New Warriors – who premiered in 412 before getting their own series), the odd jaunt into space, yet another pantheon to deal with (Celtic this time in 385), someone else worthy of the power of Thor (Dargo, the future Thor in 384), the return of many Lee/Kirby creations such as the Colonizers, Hercules, 'Tales of Asgard' as a back-up strip, the now mandatory assault on Asgard by evil gods, and the return of the Celestials (387-389) one of the few *Thor* stories collected into book form. A new wrinkle on an old plot was the introduction of Eric Masterson, conjoined with Thor as in the old Don Blake days before eventually taking his identity (433). This coincides with Frenz's changing his art style to a copy of Sal Buscema's that lasted until the original Thunder God's return and the creative team's departure (459) to take Masterson, now called Thunderstrike, into his own title. The subsequent plunge in quality is breathtaking, with the returned Thor apparently deranged, hopping about all over the universe fighting everyone in crossovers. Roy Thomas embroils him a lame plot involving the High Evolutionary and a whole new bunch of manufactured deities and improbable situations, including the return of Don Blake, who you'll recall never actually existed. All this occurs against a floundering back-drop of cheap sales stunts such as costume changes, losing his helmet, and definitely losing all credibility, before at the lowest possible ebb Warren Ellis and Mike Deodato Jr. produce 'Worldengine' (491-494*). Although more a triumph of style than content, at least it restores some marketability to what had become Marvel's worst title in a stable of lousy titles. After the post-modern histrionics William Messner-Loebs took over the writing, but had nothing new to say, and after the moribund regulation battle for Asgard the title finally gives up the ghost, reverting to *Journey into Mystery* with issue 503.

After prolonged dormancy, Thor was relaunched under the art team of John Romita Jr and Klaus Janson and writer Dan Jurgens, who initiate a subplot of humanity resenting a "superhero" who claims to be divine. A new bunch of Evil Gods is introduced, and the hoary old concept of a weak mortal turning into a mighty Warrior God is restored. At least it's handled with a little style as paramedic Jake Olson is killed in the line of duty due to Thor's negligence. Thor dies too but he gets better, thanks to a mysterious being who combines Olson's essence with Thor's so that the Asgardian can atone for the mortal life he wasted. Sadly, after that it's pretty much business as usual for the Thunder God as great art once again marries itself to uninspired plotting to tell the same that killed the series last time.

Slowly it all works towards the reintroduction of the Asgardian Gods, missing since the conclusion of the previous series. Old favourite John Buscema provides guest pencils (9) before Romita Jr excels himself visually, despite mediocre scripts, in the conclusion and epilogue in (12-13). Fill-ins from Mike McKone (14) and Lee Weeks (15) precede another epic as a band of Enchanters return (from 142-144) to topple Asgard and murder Odin. This leads in turn to the return of arch baddies Thanos and Magog and the introduction of The Designate, an all-powerful girl who would play a major part in later Thor tales. Romita Jr leaves after 25 and the series falters immediately, and not just artistically. Erik Larsen's Kirby knock-off style is adequate, but we're once again reduced to seeing the Thunder God having difficulty handling second-rate, retread opposition such as the Absorbing Man, Wrecking Crew, Kurse or the Dark Elf. Andy Kubert takes over the drawing in a series of mindless fight issues, prior to a new story that begins with the major powers of the cosmos hinting at an unavoidable future where Thor is the cause of all woe. Jim Starlin and Stuart Immonen take brief turns at the art followed by a rapid succession of others, but finally the pictures are less important than the first major plot advance since the first time Jane Foster was dropped as a love interest. Odin is gone. Thor has inherited his power, and with 45 even the title changes to *Thor: Lord of Asgard*. A much more aggressive, proactive Thunder God begins to make waves. At last the series has escaped from predictability, but for how long? Like its precursor, the current Thor has few quality plot highs but lots of great art to go along with the repetitive stories.~WW

Thor Corps relies on a gimmick associated with the thunder god's hammer. Dargo (the future Thor), Beta Ray Bill (the Alien Thor) and Thunderstrike (the substitute Thor) are eventually joined by Thor (the Thor Thor) and a host of guest stars ranging from Kid Colt to Spiderman 2099 to save the universe. Tom DeFalco and Patrick Olliffe serve up an unprepossessing dose of hero humbug. In 'Godstorm' Kurt Busiek, Steve Rude and Mike Royer reprise Stan Lee and Jack Kirby with the tale of a storm that rebelled against the young Thunder God in days past. The brainchild of Ray Zone, this series contains artwork from many of the greatest names in comics, including Basil Wolverton (2), George Herriman (5), Joe Kubert (8), Bob Powell (10) and Harvey Kurtzman (15). Unfortunately the artwork has been doctored to be in 3-D. The original pencils and inks are in black, and red and green shadows have been added to create depth when the reader uses a pair of 3-D glasses. This process makes the pages difficult to read without the glasses, so if you can't see in 3-D (or indeed have no particular desire to experience the artwork in 3-D) then the title will have little interest for you. Zone's handling of the process is first-rate but ultimately rather pointless. Since most of these stories were never intended for 3-D, the individual benefits are minimal.~NF

For those not familiar with the story, King Leonidas of Sparta and three hundred warriors halted the invasion of Greece by King Xerxes of Persia in 480 B.C. with the suicidal defence of a mountain pass. Frank Miller decided to translate his long interest in this heroic feat into comics. That he has succeeded in bringing this story to life is a tribute both to his research into the subject and his storytelling abilities. Lynn Varley's sunset-fuelled colouring plays perfectly against the thick blacks of Miller's pencils, effortlessly drawing the reader into period. It's a simple story, but Miller has chosen not to simplify it further by treating its characters as cyphers. Warts and all, he explores Spartan society specifically and Greek society generally – political, social and personal. He doesn't ignore the ruthless nature of the Kings, the expendability of the foot-soldiers nor the racism implicit in the conflict. Miller's approach can be summed up by a scene in 3 where Ephialtes, saved from death at birth by sentimental parents, asks Leonidas for the chance to redeem his father's honour by joining him now. Leonidas hears him out, but rejects him because his hunchback prevents him from lifting his shield high enough in battle. At this, Ephialtes kills himself and Leonidas thinks "Poor soul. May he rest in peace." The death is poignant; we can't help but feel for Ephialtes, yet Leonidas is simply weighing up the danger to the rest of his men. Miller tells us as much about the nature of heroism generally as about the Spartan attitude to life, and death. Physical pain is nothing in the pursuit of honour, duty and glory, but one way or another, something suffers. A large format collection from 1999 offers the reader a chance to appreciate the artwork without page folds.~NF

THE THREE MOUSEKETEERS

DC: *7 issues 1970-1971*

Fatsy (aka The Captain), Patsy (the dumb one) and Minus (the cute, mischievous one) are members of a club with its own secret (tin can) headquarters. Together they have to deal with telephones, sticks of rock, moles and, of course, the occasional cat. Sheldon Mayer's mice are a delight and their short tales are funny and entertaining. From 5, the page-count went up to sixty-four and more of DC's lost anthropomorphic characters reappeared: Dizzy Dog, the Dodo and the Frog, Doodles Duck and Bo Bunny. Mayer's genius is that his work is ageless. This is classic material.~NF

Blast Off Presents Fantastic New Worlds With THE 3 ROCKETEERS

Harvey: *One-shot 1965*

This little treasure collects five unpublished stories drawn for Harvey's anthology titles in 1956, with the first two drawn by the unforgettable team of Jack Kirby and Al Williamson. Williamson contributes two more stories in his late EC style, and the central two-pager, often incorrectly attributed to Harvey Kurtzman, looks more like the work of editor Joe Simon. The Rocketeer stories star dashing space Captain Rip McCoy, his gruff Sergeant 'Beefy' Brown and balding boffin Montrose 'Figures' Faraday, all members of Earth's military

space force. There are marked similarities between this trio and Kirby's later *Challengers of the Unknown*, and with the *Sky Masters* newspaper strip. It's all good, clean, enjoyable and extremely well drawn fun.~SW

3x3 EYES

Innovation: *5 issue miniseries ('Rebirth/House of Demons') 1991-1992**
Dark Horse: *5 issue miniseries ('Curse of the Gesu') 1995-1996*

When Yakumo rescues Pai from a mugger, he loses his soul and thus becomes bound to Pai, who happens to be the last member of a race called The Triclops. Yakumo promises to help Pai and together they travel to Hong Kong in search of the Ningen statue, which has the power to make her human. The Dark Horse series picks up the story straight afterwards as they return to Japan and face a demon that wants the secret of Pai's immortality. Yuzo Takada's dynamically drawn manga has plenty of action and comedy, as well as a romantic subplot involving Pai, Yakumo and his friend Natsuko, but this is only the beginning as the story continues in *Super Manga Blast*.~NF

THRESHOLD

Sleeping Giant Comics: *2 issue microseries ('18th and Market Streets') 1996, 2 issue microseries ('The Stamp Collector') 1997, one-shot ('29 Epilogues') 1997, 3 issues ('Nico Teen', 'The Hair Club', 'The Demolition') 1997-1998*

Peculiar and stylish superhero comic performed in the manner of Grant Morrison's *Doom Patrol* or Bernie Mireault's *The Jam*. David Yurkovich crafts a witty and compelling set of stories featuring the New York Super-Hero Syndicate and their friendly rivals – and Fantastic Four wannabes – Threshold. There's a nice balance between the worldly cynicism and sense of wonder. All the heroes organised into a US style Labor Union that negotiates all its services with city and government before going into action, yet when recruiting new members, applicants have to pass a popular music appreciation test. Surreal and well thought out hero fantasy that's funny in all the right places.~WW

Avatar: *49 issues + 1997 to date*

Cheesy 'adults only' anthology featuring Avatar's stable of naked fighting chicks losing their clothes and hitting each other. The monotony is occasionally broken up by their less prurient characters such as Snowman and Tantrum. One fisted adventure, just the way you like it.~WW

THRILL-O-RAMA

Harvey: *3 issues 1965-1966*

All three issues feature Bob Powell's 'Man In Black Called Fate' – a whimsical storyteller reprinted from the 1950s comic named after him. 2 and 3 cover-feature Pirana, an Aquaman clone, and his pets Bara and Cuda. The 1950s reprints win hands down.~SW

THRILLER

DC: *12 issue limited series 1983-1984*

Thriller was the first major work by writer Robert Loren Fleming, who co-created this unusual team of superheroes with artist Trevor Von Eeden. Sadly, neither creator finished the twelve issues, and neither fulfilled the promise of such a radical yet engaging title. Angeline Thriller ("a cross between Jesus Christ and my mom", according to Fleming) is a bodiless, precognisant entity accidentally bonded to her scientist husband in an atomic explosion. He's terribly guilty about this, and most of the characters have terrific amounts of psychological baggage. Thriller picks on hopeless cases to be her physical emissaries, and the story follows a news cameraman whom she rescues after he's filmed the death of his brother at the hands of a religious maniac.

Thriller uses age-old devices like introducing a newcomer into the situation so you can have everyone introduce themselves, but manages to be at once more intense and more mythical than most superhero comics. Fleming writes about powerful human emotions and deals in mythical archetypes while retaining a subtle and humorous edge. As the series progresses, Trevor Von Eeden's artwork gets increasingly experimental (although he's obviously learnt a trick or two from Miller's early *Daredevil*). Sadly, Fleming left with 7 and Von Eeden followed an issue later, for no very clear reasons; they were replaced by Bill Dubay and Alex Niño, who make an ugly hash of what should have been an epic conclusion.~FJ

THRILLING ADVENTURE STORIES

Atlas: *2 issues 1975*

Very good black and white magazine anthology that almost justifies the appalling colour comics published by Atlas. The second issue is an artistic feast, with Russ Heath, John Severin, Walt Simonson, and Alex Toth having decent stories to illustrate and all turning in superlative jobs. The first issue is patchier, but has Heath and Frank Thorne, and if you can't get enough of Tigerman he's also in here.~FP

THRILLING MURDER Comics

San Francisco Comics: *One-shot 1971*

It's thought that this was originally intended for the fourth issue of *Bogeyman*, although that comic's creator doesn't actually appear here. Like *Bogeyman*, *Thrilling Murder* was a horror comic, but one with a hard, uncomfortable edge. Its most notable story, Robert Crumb's 'Jumpin' Jack Flash', was a Mansonesque exercise in misogyny, though Jim Osbourne's semi-autobiographical 'Kid Kill' manages to surpass it in unpleasant content. With a stellar line-up also including Bill Griffith, Kim Deitch and S. Clay Wilson, *Thrilling Murder* promised much, but only Spain's 'In the Gloom of Nite' is really up to par. Disappointing.~DAR

THRILLING PLANET TALES

Paragon: *1 issue 1991*

Eight sample stories from the 1940s title, *Planet Comics*, originally published by Fiction House and featuring Flash Gordon-style space opera, often with strong, if scantily clad, female leads. If the stories seem rather dated and xenophobic, the real strength of the title is in its artwork. Fran Hopper, one of several female artists employed by Fiction House during World War II, is represented by a Gale Allen strip. Lee Elias, better known for *The Black Cat*, draws a Space Rangers story, George Evans, who later made his mark at EC, illustrates 'The Lost World', and popular 'good girl' artist Matt Baker handles 'Mysta of the Moon'.~NF

THRILLING SCIENCE TALES

AC: *2 issues 1989-1990*

Reprinting neglected (and indeed odd) stories from the 1950s, this is well worth searching out. Behind a Mike Kaluta cover the first issue includes 'The Invasion from the Abyss', a curious collaboration between Al Williamson, Wally Wood, Frank Frazetta, Roy Krenkel and Joe Orlando, plus a solo story by Wood, both from Avon's *Strange Worlds*. The former's not five times as good as any of their individual efforts, but worth reading. Also included are a Fred Guardineer Space Ace story from *Manhunt* and a science fiction Western (not many of those about) from Fawcett's *Bob Colt*. 2 featured Fawcett's Captain Video illustrated by George Evans, Mysta of the Moon by Ruben Moreira from *Planet Comics* and Avon's Captain Science by Orlando and Wood.~NF

THRILLING WONDER TALES

AC: *1 issue 1991*

Black and white reprints of four great 1950s creators: Kenton of the Star Patrol battles space sirens, beautifully drawn by Wally Wood, from Avon's *Strange Worlds*, from which there's also Joe Kubert's 'The Adventures of Henry Twist', a humorous story of a nerd being fought over by thousands of alien women. Dick Ayers illustrates 'The Third Element', a story of mankind uniting against an alien enemy, originally printed in Fago Publications' *Atom-Age Combat*; and finally, just a little out of place, is Bob Powell's first episode of 'Thunda, King of the Congo' (originally drawn by Frank Frazetta), a frothy mix of half-naked babes, naughty natives trying to sacrifice them and brutal action as Thunda and his tiger sidekick come to the rescue.~NF

THRILLKILLER

DC: *3 issue miniseries 1997, one-shot (Thrillkillers '62) 1998*

This Batman miniseries is set in a universe similar to the familiar DC one, but with some differences and a beatnik influence. Barbara Gordon, estranged from her father after her mother's death, owns Wayne Manor. She becomes a vigilante, sucking in Dick Grayson, an ex-circus acrobat, with her womanly wiles. Dick loves her, but she's afraid she's falling for one of her father's dour detectives, Bruce Wayne, penniless when his parents' paper fortune imploded on their deaths. He's one straight cop in a city on the make, where a green-haired woman with a big grin seeks to control the heroin trade via her nightclubs. What starts off for Barbara as a bit of a thrill soon becomes deadly as Dick's family are involved in a fatal 'accident'. Dan Brereton's heavy-handed drawing style gives Howard Chaykin's story a solid, fleshy feel. It's seedy and it's muscular, full of rain-washed streets and smoky jazz clubs. A class act by all involved. The one-shot continues the sleazy feel, with a drug plague threatening to engulf the experimental youth of Gotham.~FJ

THRUD THE BARBARIAN

Carl Critchlow: *2 issues + 2002 to date*

Artist Carl Critchlow serves up an excess of excess starring thug Thrud, some daft knights, very British explorers on a quest, Priest-King Kembaal-O and inept magician To-Me Ku-Pa. British fans will understand. The jokes are telegraphed a mile off, but they're none the less enjoyable for that. The revelation is Critchlow's art, modified to a loose, blocky style at times reminiscent of Mike McMahon, and his muted colouring complements it superbly. This is not quite *Groo*, but better than any other barbarian parody in comics.~WJ

THUMP'N GUTS

Kitchen Sink: *One-shot 1993*

You're sure to know whether or not you're interested in a mindless parody, possibly unintentional, by the misguided Kevin Eastman and the overrated Simon Bisley, of mindless comics featuring over-muscled, skull faced, electronic claw and fisted, missile-breasted or crocodile-teethed morons, garnished with a teensy-weensy bit of swearing.~GK

THUN'DA TALES

Fantagraphics: *One-shot 1987*

Now renowned as a stylish fantasy painter, in the 1950s Frank Frazetta was hacking out comics, including these hokey adventure tales of a pilot stranded in a lost world of dinosaurs and cavemen. T.H.U.N.D.E.R. Agents

Tower: *20 issues 1965-1969*

The acronymically named T.H.U.N.D.E.R. Agents topped the TV vogue for spy organisations by additionally employing superheroes, and managed to innovate besides, not least by issuing giant-sized 25-cent comics when 12 cents was the industry norm. The most interesting concept was Noman, able to shift his consciousness between a host of android bodies in an instant. The brave but blundering Len Brown, named after one of the writers, wore a strength-enhancing belt as Dynamo, and had a sexual frisson with armoured villainess Iron Maiden. The mind-reading helmet of Menthor also showed a spark, which was, unfortunately, not present in the creation of standard superspeedster Lightning and flying hero Raven. The heroes appeared in separate but sometimes connected stories in each issue, and in an era when superheroes were rarely hurt, 7's death of one cast member was a major shock. Unusually, the non-powered supporting players were also fully characterised; they included Weed, a thinly disguised version of chief artist chain-smoking Wally Wood. Other top-notch artists working on the stories included Reed Crandall, Gil Kane, Ogden Whitney, Dan Adkins, Steve Ditko, an on-form Mike Sekowsky and the underrated and distinctive Manny Stallman, largely on the Raven solos. Mind you, there were also John Giunta and George Tuska. So with innovative ideas and several top-notch artists, why no recommended issues? Unfortunately, the step between concept and art was script, and they were generally little more than ordinary, and sometimes dreadful, particularly on Noman. This didn't prevent a Noman solo series, or one for Dynamo. Reprint collections were pocket paperbacks issued by Tower (primarily paperback publishers anyway) in the 1960s and they're rarely seen today. There was also a short-lived 1980s reprint series from JC Productions, and DC have now reprinted 1-4 in their hardcover Archives series. In case you're wondering, by the way, the T.H.U.N.D.E.R. stands for The United Nations Defense Enforcement Reserve. There. You can sleep easy now.~WJ

T.H.U.N.D.E.R. AGENTS

JC Comics: *2 issues 1983-1984*

These are new T.H.U.N.D.E.R. Agents stories, featuring the characters from the 1960s stories reprinted in the *Hall of Fame* series, along with some new ones. There's some nice artwork by Lou Manna and Willie Blyberg, some nice dialogue...but the storytelling's so muddled it makes it hard to care what's happening or to whom.~FC

Wally Wood's T.H.U.N.D.E.R. AGENTS

Deluxe: *5 issues 1984-1986*

Believing the copyright on *T.H.U.N.D.E.R. Agents* had expired, Deluxe assembled an impressive roster of creative talent to produce new stories. Over five issues there are Dave Cockrum, a motivated Steve Ditko, Steve Englehart, Jerry Ordway and George Pérez, and, wisely sticking to the original formula of mixing team stories with those of individual agents, these are good superhero comics. The Lightning stories by Keith Giffen and Tom and Mary Bierbaum are the best of the bunch. They set off the light, glossy action nature of the rest of the comic with downbeat stories about a man who ages every time he uses his superspeed suit and who's being stalked by a murderous enemy. Unfortunately for fans, the copyright on the characters rested elsewhere, and the series came to a premature end.~FP

Peter Cannon THUNDERBOLT

Charlton: *11 issues (1, 51-60) 1966-1967*

A pacifist martial artist was an unusual concept in the 1960s, and this couldn't have emerged at any other time. Signing his strips anonymously as 'PAM', Pete Morisi hid behind an alias necessitated by his full time job as a policeman forbidding moonlighting. His writing is deadpan and stilted, and his art sparse and functional. Furthermore, in two-tone swimming trunks Thunderbolt is cursed with an all-time stinker of a costume, yet somehow everything meshes into a halfway decent strip. Thunderbolt's pacifist attitude is fundamental, inculcated through his having grown up in a Tibetan monastery, and preserved despite battles against weird pulp-style foes. 53's Gore is typical, a would-be world-beater whose left hand is an ape's paw. 57, 59 and 60, by more proficient creators, don't match Morisi's po-faced sincerity, and fail without his input. The bizarre numbering is a Charlton speciality, with the series continuing *Son of Vulcan*'s issue numbers for no apparent reason.

Thunderbolt's back-up features are every bit as off-beat as the lead. The Sentinels, a rock'n'roll trio bequeathed gimmicky devices by a dying scientist, are an interesting idea poorly executed in 54-59, but The Prankster in 60 is plain bizarre. Set in the futuristic Ultraopolis where playing music is punishable by public execution, the Prankster is a garish foe of authority, using the arsenal of a clown to humiliate the regime. Script by Denny O'Neil (under his Sergius O'Shaughnessy alias) and early Jim Aparo art make for a rare original.~FP

DC: *12 issues 1992-1993*

Conscientious and tolerably entertaining revival of the 1960s action hero by Mike Collins, nevertheless lacking a certain spark to make it really take off.~HS

THUNDERBOLTS

Marvel: *74 issues +, 2 Annuals, 1 Special ('Life Sentences') 1996 to date*

This new team of super-beings first appeared when most of the prominent Marvel heroes were sucked into another dimension, and presumed dead. After *Hulk* 449 they moved into their own comic, and at the end of 1 there was a genuinely shocking revelation. The new heroes were in reality, Baron Zemo and several members of the Masters of Evil, a villainous alliance who've plagued the Avengers since the earliest days. Seeing a void in the heroic hierarchy, they'd assumed disguises and modified their powers, doing good deeds to win the public confidence. They planned entry into the abandoned headquarters of the missing heroes, from which they could steal technology and other secrets, and parlay this advantage into dominion of Earth with no effective opposition. That was the theory. Zemo himself (now "Citizen V") remained unregenerate, and a couple of the Thunderbolts remained adherents to his cause, but several others discover they like the admiration and respect of others. If not moved by purely altruistic motives, they weren't on the run all the time. The division is heightened when a new metahuman, Jolt, joins the team believing in their integrity, and her unalloyed idealism throws the mixed motives of the others into sharp contrast. Then there is Meteorite, formerly Moonstone, a clinical psychologist and accomplished manipulator, who refuses to commit to either faction, but remains ready to turn any development to her own advantage. Her detached analyses of all the team – including herself – involve the reader, and she emerges as the title's star.

When the Thunderbolts' imposture is eventually revealed they have to go on the run again. Some of them, rather than returning to a life of crime, decide to pay the price for their actions, and genuinely seek to reform, but after their previous misdeeds – and particularly given the nature of their recent scam – will they ever gain the public trust? These themes of redemption, atonement, betrayal and duplicity occupy most of 1-50, and make for a compelling read. Writers Kurt Busiek (to 33) and Fabian Nicieza (34 up) sustain the premise surprisingly well, losing momentum only after 50, when the title is temporarily taken over by a replacement team, the Redeemers, and then the group is sidetracked into a split storyline. One half of the team is stranded on a parallel Earth of 'Heroes Reborn', while the other, under the guidance of Hawkeye, seeks to augment its ranks with a new generation of (possibly) reformed villains. Everyone seemed to sense that the title had lost its way by this stage, and events were drawn to a rapid close with 75. Very much a writer-led comic, primary pencillers Mark Bagley and Patrick Zircher provide competent storytelling without flash. The 2000 Annual sees the return of a deceased character to the Marvel Universe, and 'Life Sentences' is a realistic look at the problems some of the Thunderbolts have when they try to return to the straight and narrow without relying on their powers. 1 and 2 sold out and were rapidly reprinted as 'First Strikes', and 1-12 are available in collections.~HS

THUNDERBUNNY

Red Circle: *1 issue 1984*
WaRP: *6 issues 1985- 1986*
Apple: *6 issues (7-12) 1987-1989*

Continuing from *Charlton Bullseye* 6 and 10, the Red Circle issue retells how young Bobby Caswell finds an alien artefact, a gift from a dying race who sealed the power of their greatest hero therein. Bobby gains the power, but doesn't realise, until he looks in the mirror, is that the aliens were anthropomorphic animals, and his heroic form is that of a giant, pink-furred bunny rabbit. Creator Martin L. Greim and artists Brian Buniak and Gary Kato took this ingenious but flimsy premise surprisingly far. Thunderbunny discovered a group of 1940s superheroes being held in suspended animation, teamed fleetingly with the T.H.U.N.D.E.R. Agents, and had romantic problems with the fledgling superheroine Moon Miss, all written divertingly and (save for 9's atrocious fill-in) stylishly illustrated. When cancellation loomed, rather than leave the characters dangling, Greim wrote an 'Imaginary Story', set five years or so in the series' future, which serves quite satisfactorily as a farewell, a thoughtful gesture to readers.~HS

THUNDERCATS

WildStorm: *5 issue miniseries 2002-2003*

Lion-O, Tygra and all the old cartoon characters are revived, with new additions Bengali, Lynx-O and Pumyra, in a lacklustre reprise for the new nostalgia generation. THUNDERSTRIKE

Marvel: *24 issues 1993-1995*

There are few original ideas in this substitute Thor's comic, but old concepts are endearingly recycled to provide a reasonable superhero title. You wouldn't know it from a truly wretched first issue, though, packed with leaden expository thought balloons. Once past that, Thunderstrike finds his destiny very much intertwined with the rampaging Bloodaxe. 13-16 were also issued as flip-books featuring New York police's superhero containment squad Code Blue, and Thunderstrike's page-count is halved by back-up strips in 17-21.~FP

TIC TOC TOM

Detonator: *3 issues 1995-1996*

Strange Canadian anthology where the brief of every creator seems to have been to come up with a concept that matches the title. The best of them is a dystopic future intriguing enough to withstand the irritating quirk of Tick Tock Tom starting every speech with "tic" and ending it with "toc". The best art on offer is from Paul Marhue, who presumably put his problems with perspective and scale behind him. Shame he's not doing comics anymore.~WJ

In the original series, the Tick escapes from a lunatic asylum and decides to be a superhero because he's nigh invulnerable. The first issues see him trying out a brief secret identity, clashing with a caped superhero, who happens to be a journalist called Clark (1-2), opposing (with Oedipus Ashley Stevens, a female ninja) the local World of Ninjas franchise (3-4), meeting his first supervillain, Chairface (7), travelling to New York (9-10), where he's accepted amongst the city's many superheroes after defeating a namesake, who then tries to kill him by telling a team of supervillains where he'll be (11-12). Creator, Ben Edlund's clean style is perfect for the cartoon violence of this superhero parody. Spin-off characters are introduced here, including Paul The Samurai (4), The Man-Eating Cow (8) and the Chainsaw Vigilante (9). He also picks up a sidekick, Arthur, a plump rabbit-costumed fellow in a flying suit. With his battle cry of "Spoon", the Tick is a well-meaning, but essentially ineffectual, hero, who succeeds simply by being impossible to deal with. Edlund effectively left after 12 to pursue an animated series for his characters, leaving the storyline unfinished, although a 'No. 13 Pseudo Edition' attempts to solve that cliffhanger.

'Omnibus' is a series of reprints including the encyclopaedic 'Giant Circus of the Mighty' as Volume 4, while 'The Chroma-Tick' reprints 1-9 of the regular series in colour, (and 1-6 of that are then collected as 'The Naked City'). The later 'Circus Maximus' issues also contain encyclopaedia entries. 'Karma Tornado' starts with Edlund credited as plotter, but is largely written by Chris McCullough (1-4) and Clay Griffith (5-9). Here the Tick is largely without Arthur, and any spark of originality has fled by this point.

'Big Blue Destiny', by Eli Stone, tries to recapture some of the original spirit of wacky mayhem, even attempting, in 'The Luny Bin Trilogy' (6-9), to approach Tick's origins, but he's not a strong enough cartoonist or storyteller to pull it off. Regular writers after Stone include Sean Wang (whose best issue is the 'Big Back To School Special', though it's virtually a reprise of Edlund's Chairface story) and Clay and Susan Griffith, who introduce Kid Tick in the 'Big Father's Day Special'. They also have him try to kill Arthur as the story continues into the 'Massive Summer Double Spectacle'. Wang's 'The Tick and Arthur' series reintroduces Oedipus from 3, while 'Heroes of the City' contains short stories of the Tick and his friends, though it does also introduce cheerleader Myndi, who has an arsenal in her pompons.

More recently, the 'Big Xmas Trilogy' sees the Tick try to put on a Christmas pageant and features pretty much all of the characters, while 'Tick & Artie' portrays them as real bugs in strips that originally appeared on the New England Comics website (by "Anonymous", unsurprisingly, given the poverty of ideas). 'Golden Age' contains, as the title suggests, the adventures of the Golden Age Tick, previously unseen. It's difficult to see why anyone's still buying the Tick, because, as amusing as the first series was, no creator since Edlund strays very far from his work, and none capture the detached mentality of the hero that made the strip amusing. Most issues listed above have been kept in print and there are additionally a number of 'Bonanza' issues collecting the various miniseries.~NF

TICK-TOCK FOLLIES

Slave Labor: *One-shot 1996*

An all female touring dancing troupe, a peculiar stunted hominid, a casual romance and a murder. With all that thrown into the pot for stirring it must be business as usual for Chris Butler and Chris Hogg. Despite Hogg's European art style, it's very British and wistfully evocative of a bygone era despite the contemporary setting. The disorienting elements that characterise Butler's scripts are largely held in check until an abrupt change of storytelling technique in the final pages. As ever from the creators, this is decidedly odd and all the better for it.~FP

The only hope of repelling the invaders is a secretly developed battlesuit known as Tiger-X. TIGERS OF TERRA

Mind-Visions: *12 issues 1992-1993**

Antarctic: *13 issues (0-12), 1 Technical Manual 1993-1997*

This is the series with which Ted Nomura began his 'Families of Altered Wars' titles, presenting a past with significant political differences affecting the future. The strengths and weaknesses of all succeeding series are present here, with Nomura already a good artist, but interested in hardware detail above all else. Plot and characterisation are slim, and sometimes it's only Nomura's secondary fondness for drawing attractive women (in a manga style) that drags any plot into an issue at all. For all that the succession of Nomura projects proves a market for his material, but tread warily~FP

TIGERS OF THE LUFTWAFFE

Antarctic: *6 issue miniseries 2001-2002*

Eccentric anthology set in the continuity of writer/artist Ted Nomura's 'Families of Altered Wars', and numbered as issues 89-94 of the greater series. Various sections of the long lived tale of an alternate universe where the Second World War continued due to the interference of extra-dimensional aliens can be played out at a more practical pace than previous story-arc which concentrated only on one era at a time. Features include Tigers of Terra/Luftwaffe:2040 as a prose serial, comic strips Luftwaffe:1946, Black Devil and Two Eagles Have Landed (by Marcel Magnette) and a selection of illustrated technical features on the paraphernalia of flying and related topics. Quality material throughout, but definitely not a read for the uninitiated.~WW

TIGRA

Marvel: *4 issue miniseries 2002*

Greer Nelson (Tigra) infiltrates a vigilante group, the Brethren of the Blue Fist, by going undercover within the police force, in order to find out who killed her husband. Despite somewhat unrealistic plotting in places by writer Christina Z, there is sensible use of Tigra's powers to aid her investigation, enhanced by Mike Deodato's richly embellished, realistic artwork. Encouraging.~NF

Mike Hoffman's TIGRESS

Basement Comics: *2 issue microseries 1998*
Black Daze Publishing: *One-shot 2000*
Amryl Entertainment: *3 issues + ('Tales') 2001 to date*

Mike Hoffman can work in a variety of styles. Unfortunately none of them are his own. He starts as a Frank Frazetta impersonator, the slavish devotion extending to slim stories about rugged men, glamourous scantily clad women and alien lizards. By the one-shot, elements of Gene Colan and Al Williamson have crept in, and in *Tigress Tales* Wally Wood, Jack Davis and Roy Crane have joined the Hoffman portfolio. Frazetta remains the influence of choice for the cover paintings, though. While a skillful mimic with impeccable sources, Hoffman doesn't match them. The tales of Hoffman's silent tiger-woman are simple morality fables, and back-up western strips of Madam Tarantula are equally wispy. He also has form for issuing as many alternative "limited" versions of his comics as he can get away with.~WJ

THE TIJUANA BIBLE

Starhead: *9 issues 1991-1994*
Eros: *4 issues 1996-1999*
Simon & Schuster Editions: *1 Volume ('Tijuana Bibles') 1997*

Tijuana Bible is one of the names used for the pocket-sized comic booklets featuring popular culture characters engaged in sexual intercourse. They flourished during the depression of the 1930s, through to the early 1950s, distributed by travelling salesmen or sold under the counter from taverns and newsstands. They were commonly eight pages long with one panel on each page, though longer examples exist. The characters would be established and sexual activity started by the third panel, with a gag in the final panel. Starhead's 1-3 contain an informative essay on the format by Robert K. Gluckson, explaining that the comic producers stole copyrighted characters and that popular editions were themselves stolen by other publishers. He also covers their publishing history, illegality and the number of different comics available. The Simon and Schuster volume is an academic study with an introductory essay by Art Spiegelman. The chapters break examples down into cartoons/comics, show business, travelling salesmen etc., criminals, and miscellaneous. A hundred strips are reprinted with commentary on their context.

Examples included in the Starhead issues include Joe Palooka, Alley Oop (2), Chaing Kai-Chek, Joe Stalin, Al Capone and Mahatma Gandhi (3). 4 and 8 are Hollywood issues featuring Clara Bow, Jean Harlot, Clark Gable and Ginger Roger amongst others. 5 is a 1939 World's Fair issue, 6 the Fuller Brush Man and 7 royalty. The Fantagraphics issues reprint between fifteen and twenty-five strips each including Jackie Coogan, Anna Mae in Comic Land, Ginger Rogers (1), a Travelling Preacher, School Days, Popeye and Wimpy (2), Batwoman and Robin, Superman and Supergirl, Dick Tracy (3), Red Barry, Popeye, and Little Orphan Annie and her dog, Sandy (4). These are hardly politically correct comics, but there are a few well-drawn strips and most display an infectious exuberance that's easy to enjoy. There is some overlap of the strips reprinted, especially with the Simon and Schuster volume, but on the whole each issue has a significant number of different strips.~NF

TIMBER WOLF

DC: *5 issues 1992-1993*

The Legion of Super-Heroes' follically unchallenged member is zapped back to the 20th century. His companion, goddess in progress Aria, is, of course, immediately kidnapped, so Timber Wolf fights his way through all and sundry to rescue her. Lovely feral art by Joe Phillips, but inker turned writer Al Gordon doesn't have a clue as to story structure.~HS

TIME BREAKERS

DC/Helix: *5 issue miniseries 1997*

Science-fiction written by Rachel Pollack with artwork by Chris Weston. Temporal paradoxes make life possible, apparently, and without them the laws of physics would lack the motivation to get out of bed in the morning. So we have the Time Breakers, all busy introducing more of those reinforcing paradoxes, in conflict with a sect that is eager for time to weaken and come to an end. The story focuses on Angela Attenborough and her recruitment to Time Breakers, and is almost entirely leaden exposition, with no hint of characterisation or humour. Time Breakers only seem to have one method of creating paradoxes, yet Angela reacts with "But... but... but..." amazement to each instance described to her. That said, the mega-paradox used in 5 has style and some originality, but not nearly enough to make *Time Breakers* an acceptable piece of fiction.~FC

TIME COP

Dark Horse: *2 issue microseries 1994*

Puerile and silly tale of Max Walker, a cop who spends his off-duty hours wishing he could have saved his murdered wife, while his day job consists of going back in time to prevent history being changed. Guess what happens when he finds that his superiors are using the time technology for their own purposes? One of those rare occasions when the movie is better than the comic it sprang from.~WW

TIME FOR LOVE

Charlton: *1 issue (53) 1966, series two 47 issues 1967-1976*

Poor quality love stories for the post flower power generation of girls, but despite a half-hearted attempt at fab and groovy design and lip service to freedom and career choices for young women, all the protagonists eventually end up happy with a man, or alone and sad. Charles Nicholas, Vince Alascia and Jack Abel bear the brunt of most of the art chores, so even the mandatory girls in negligees or girls in bikinis scenes offer no relief from the tedium.~WW

TIME JUMP WAR

Apple: *3 issue miniseries 1989*

Taking the entire first issue of only three to set up the idea that our heroes Doyle and Ron have jumped back through time, and incorporating an Alien homage along the way, seems awfully extravagant. From there it's cavemen vs guns in 2 and guns vs aliens vs cavemen in 3. Chuck Dixon provides a decent enough, if undemanding, plot and Enrique Villagran's art is functional but decidedly old-fashioned. Anyone yearning for the type of story once occupying British boys' adventure comics will love Time Jump War.~FP

TIME KILLERS

Fleetway/Quality: 7 issues 1992-1993

Science-fiction anthology reprinting early 1990s stories from Britain's *2000AD*. The lead strip, 'Killing Time'*, mixes Jack the Ripper and genteel Victorian etiquette with time-travellers and the early, but very promising, art of Chris Weston. Mark Millar and Pete Milligan are among those writing the back-up strips, but seemingly with little enthusiasm.~FP

THE TIME MACHINE

Eternity: *3 issue miniseries 1990**

Perfunctory adaptation of the classic H.G. Wells science fiction novel. This probably isn't the best way to experience the story for the first time, as even the 1960s film is better, but if you're really not prepared to read the book...~WJ

TIME MASTERS

DC: *8 issue limited series 1990*

Reviving time-travelling Rip Hunter, this version has conveniently discovered two methods of travelling through time. Unfortunately an individual can use each method only once, so he must now discover a third method for another trip, and he'll also need a fourth method to return. At the beginning of the story, his lab is destroyed and he suspects the Illuminati, the ultimate secret conspiracy group. He also suspects that they're planning to start a nuclear war, so with each issue a member of Hunter's team goes into the past to try to bring down the Illuminati. The characters are paper-thin and the plots feeble, but it manages to generate just enough curiosity to keep you reading: will they succeed, and if so, how?~FC

TIME TRAVELLER AI

CPM Manga: *21 issues 1999-2001**

Ai Ijima is a semi-retired Japanese porn star ("The Traci Lords of Japan") who 'writes' herself as a sexually liberated fun girl who finds a time-machine and whizzes about having adventures in the past and future. Her initial forays are into history where she meets and sexually educates Cleopatra (1), sorts out the warring sides in Mediaeval Europe (2), ditto for Mongolian warlord Fubirai (3), and visits Cowboys (4), Leonardo da Vinci (5) and Atlantis (6). 7 begins an extended trip for Ai and her film crew to the year 3994 in a laborious spoof of the movie Waterworld, with randy pirates, the last descendent of Captain Nemo, a Ship of Light and lots of missing clothing (7-13). A final saga sends her to shogunate Japan to battle and/or boff Ninjas, wizards, cowboys knights, and giant Clockwork robots. Like many Manga comedy titles the humour simply doesn't translate and coy smut is just a waste of space. Even the most easily excitable readers of one-fisted tales are going home frustrated from this one.~WW

TIME TWISTERS

Quality: *18 issues 1987-1989*

Britain's *2000AD* comic has frequently run short sting-in-the-tail science-fiction strips. More often than not they were treated as try-outs for new writers and artists, and there's little imagination at work, except for a period in the early to mid-1980s, when the quality level was upped considerably by the use of established professionals. Alan Moore, for instance, wrote almost two dozen, and Grant Morrison about half that amount, and both were generally matched with decent artists. Although both writers would consider the strips little more than an intellectual exercise, and none rank with their major work, a sample issue provides considerable enjoyment. Artists fare less well, with the pages drawn to reduce to *2000AD*'s page size being stretched and thinned to accommodate their reproduction at standard American comic page size. Most issues to 12 contain plenty of Alan Moore strips, collected as *Alan Moore's Shocking Futures* and *Alan Moore's Twisted Times* by Titan, and thereafter 18 is a decent sample, with early work from both Glenn Fabry and Neil Gaiman.~WJ

TIME WARP

DC: *5 issues 1979-1980*

With the subtitle "Doomsday Tales and Other Things", this anthology attempted to signpost its thematic obsessions, but the reality is closer to the O. Henry-style twisted endings that dominated EC's science fiction series. There's a good start artistically with contributions from Ditko, Sutton, Newton, Aparo, Kane, Chaykin, Orlando and Grandenetti in the first two issues alone, but the writers fail to match them. While there's little new, no issue is completely devoid of interest.~NF

TIMESLIP

Marvel: *One-shot 1998*

Pin-ups and factfiles reprinted from Marvel promo mag *Marvel Vision* wherein contemporary artists such as John Paul Leon, Michael Allred and Glenn Fabry were asked to redesign the classic Marvel characters of the early 1960s. Gratuitous, exploitative and not to be confused with the *Avengers* one-shot.~WW

TIMESPIRITS

Marvel/Epic: *8 issue limited series 1984-1986*

Cusick the Tuscarora is the one with experience, the teacher, while Doot of the Wawenoc is the student, struggling to come to terms with his inherent shamanic, mystical powers. They travel through time in search of knowledge, ever ready to sell what they already have if the price is right. Thus they become involved with the original floods (2, 3) while saving New Iberia from a creature that can't go home until its grief and sadness are drained, or join Jimi Hendrix and an alien siren on a mission to change history in Central America (5, 6). Written by Steve Perry and drawn by Tom Yeates (guest creators in 4 include Steve Bissette, Al Williamson, Rick Veitch and John Totleben), it's an entertaining, visually evocative series that wasn't given a chance to develop. The political undercurrents of 5 and 6 probably did the series no favours, but would seem less controversial now.~NF

TIMEWALKER

Valiant: *15 issues, 1 Yearbook 1994-1995*

Ivar is an immortal with great strength and healing powers, and he has an affinity for the 'time arcs' that appear periodically and catapult him backwards and forwards through time. OK. So he can't be hurt, he wins all his fights, and whenever he's in trouble there's a good chance an arc will appear and whisk him away. Have you guessed this is not a compelling read? Maybe you're not supposed to read it, but just soak up the sight of all those muscles in his arms – the quantity keeps changing, but at best he has about three times the human norm. The only issues with any merit are 10, 11 and 15, co-written by Debra Doyle and James MacDonald, which have actual plot and humour, and above-average artwork, too.~FC

Neurocomics TIMOTHY LEARY

Last Gasp: *One-shot 1979*

Timothy Leary's complex, and occasionally nutty, theories about evolution, consciousness and the untapped possibilities of the human brain are delivered here in dull, weighty segments. It's no wonder Last Gasp can still supply this at cover price after twenty years.~FP

TINCAN MAN

Image: *3 issue miniseries 2000*

The horrible covers do this introspective series no justice, as it possesses a greater poignancy than they suggest. At forty-five homicide detective Alex Darkstar has hit the bottom, and considers his rural childhood, particularly his refuge from an abusive stepfather, his grandfather and the stories he passed on about Alex's heritage. Simultaneously a bizarre robotic creation arrives in town to kill a movie producer, and sticks about to carry out further acts of vengeance against criminals. Darkstar's redemption comes about via investigating the case. It all degenerates into predictability for the finale, but overall writer Jim Thornton and artist Dietrich Smith created something worth a wider look. Tincan man animation can be found at www.fragcity.com.~WJ

TINTIN

Atlantic-Little Brown/Methuen/Magnet/Mammoth: *21 Graphic Novels 1932-1976*
Sundancer: *1 Graphic Novel (Tintin in the Land of the Soviets)*
Attack International: *1 volume (Breaking Free) 1989*

Hergé's adventures of Tintin have been continually in print in the English language for over forty years, and for over seventy in France. The simple "ligne claire" art has been hugely influential throughout Europe, over 100 million *Tintin* books have been sold, and Asterix is the only European comic character to surpass Tintin's popularity. Making the statistics all the more remarkable is that *Tintin* was among the earliest European comic strips. Whereas his American and British counterparts are nothing more than curiosities, *Tintin* is loved by each succeeding generation.

Conceived as an adventure strip for a Christian newspaper's insert for children, the earliest stories are little more than chases propped up by poor jokes and surprisingly slapdash artwork. *Tintin in the Land of the Soviets* and *Tintin in the Congo* remain unavailable as mass-market English-language editions. They're largely unappealing, motivated more by each weekly deadline than by any plot consideration, and were later disowned by Hergé. Not that *Tintin in America* is any better, despite being redrawn for album publication.

Cigars of the Pharaoh is a big step forward, with well-timed comic sequences, a lack of Christian or colonialist propaganda, and a well observed cast. It introduces recurring villain Rastapopoulos and, if one doesn't count Tintin's constant canine companion Snowy, the first regular supporting characters, inept detectives Thompson and Thomson. *The Blue*

Lotus continues the improvement with a structure to the story, effective subplots, and researched and detailed artwork. It's almost the best of the early Tintin stories. In comparison *The Broken Ear* and *The Black Island* are regressive steps, the latter having been largely redrawn in the 1960s by Hergé's chief assistant Bob de Moor. It's worth noting, though, that both were originally produced in the late 1930s, and are streets ahead of most contemporary American product.

King Ottokar's Sceptre is the final fling for Tintin as a solo character, and the best. By this point Hergé has graduated from adventure reel stories to political satire, taking a swipe at the covetous foreign policy of 1930s Germany. Forever armed with a thundering torrent of inventive invective, irascible seadog Captain Haddock débuts in *The Crab with the Golden Claws*, is featured in all succeeding Tintin stories and transforms the series. His short fuse and frequent inebriation, allied with the silent-film comedy of Thompson and Thomson, provide all the slapstick sequences required. The later introductions of deaf and absent-minded Professor Calculus and irritating insurance salesman Jolyon Wagg round off an eccentric supporting cast.

With the exception of the muddled *Land of Black Gold* (which nevertheless has its moments) all albums from *Secret of the Unicorn* until the strangely lacklustre *Flight 917* are Hergé and assistants on top form. The running gags have been established, the comedy is masterful, the plots are almost mathematically constructed, the characters resonate, there's a great attention to detail and the deceptive simplicity of the art appears almost effortless. The best album is *The Castafiore Emerald*, with Haddock a masterful study in repressed rage. Initially it recalls nothing so much as Georgian farce, but becomes a classic locked-room mystery starring imposing opera singer Bianca Castafiore, previously restricted to memorable cameos. After this masterpiece, *Flight 917* is a grave disappointment. Whereas previous potentially incongruous elements have been seamlessly fused to Tintin plots, a rescue by extraterrestrials (although not shown) to conclude a thriller as ordinary as any produced by Hergé since the 1930s just doesn't work. Thankfully, *Tintin and the Picaros*, Hergé's final Tintin story, is a partial return to form. Purists carp over superficial attempts to modernise Tintin (particularly losing his plus fours), but it's funny, Hergé has a point to make about South American dictatorships, and there are interesting new characters. From anyone else it would be considered excellent.

Breaking Free has nothing to do with the then deceased Hergé. Tintin, Captain Haddock and assorted likenesses were appropriated by one J. Daniels for an anti-capitalist diatribe aimed at encouraging the population to rise from the sofa. There's little subtlety in this black and white world, and once the novelty of the transplanted cast expires the ceaseless hectoring dissolves any reading pleasure. Still, if it inspired a few people it did its job.

Oddly for such an enduring character, Tintin himself lacks charisma, never being developed beyond the earnest, plucky and wholesome adventurer introduced in the earliest books. It's the engaging supporting cast and their fully realised comic potential that elevates the title to greatness and to the level where *Tintin* is appreciated by adults as well as their offspring. Forget the substandard animated versions of the novels and the embarrassing film: every true comic fan ought to own at least half a dozen Tintin books.~WJ

TINY TOON ADVENTURES

DC: *4 issues 1990-1991*

The Tiny Toons are junior versions of Bugs Bunny, Daffy Duck and the other Warner Bros cartoon characters. These magazine-size issues are aimed at a very young audience and consist mostly of puzzle pages, jokes, games and mazes, with one short, undistinguished comic strip in each issue.~NF

TITAN

Dark Horse: *One-shot 1994*

Broaching the gap between the *Comics Greatest World* event and the start of regular series such as X, *Barb Wire* and *Ghost* this Superman knock-off tells how the world's most powerful American falls under the sway of shady spin-doctors who want him to work exclusively for the government. This adequate thriller leads directly into the *Will To Power* series.~WW

TITAN A.E.

Dark Horse: *3 issue miniseries 2000*

Prequel to the animated movie set before the invasion of Earth. It's by the numbers science fiction as the military rescue a doctor important to the future of mankind. Unremarkable in every respect.~FP

TITANS

DC: *50 issues, 1 Annual, 1 Secret Files 1999-2003*

The original Teen Titans return, now all a few years older: Nightwing, Robin that was, Flash, once Kid Flash, Troia formerly Wonder Girl, Tempest, née Aqualad, and Arsenal, no longer Speedy. Others from different incarnations of the team are along for the ride, from the capable creative team of Devin Grayson and penciller Mark Buckingham (to 17). Grayson prioritises the interaction of the core characters, with action and villains taking a back seat, and the return of the Nazi Red Panzer out of place. 10-12 connects them all with immortal villain, Vandal Savage, and Cheshire, mother to Arsenal's daughter. This rather turbulent 'family' play a major role in the series. 15-16 hark back to the original *Teen Titans* as Troia tries to smooth various conflicts. Grayson then spotlights the secondary characters, until 21 when co-writer for the last few issues, Jay Faerber takes over in full. He starts well by sorting out the complex history of Troia in 23-25. The latter issue features story and art from previous *Titans* creators including Marv Wolfman, George Pérez and the legendary Nick Cardy, along with then penciller Paul Pelletier. Unfortunately a bunch of misfit kids arrive in 28 as an obvious attempt to create a new Teen Titans, which never took off, so the brats occupied this series. Still Faerber manages to squeeze in some above average stories when they aren't around, such as 30, again featuring Cheshire. Decent art is provided by Barry Kitson and Rich Faber from 37, and Tom Peyer joins from 42. He gets to grips with the characters, but as elsewhere, he's a hot and cold writer so you never know what to expect. Overall it's the best incarnation of the *Titans* since the early *New Teen Titans* days, but still disappointing overall.~HY

TITANS OF FINANCE

Alternative Comics: *One-shot 2001*

This gathers from various sources (mostly *Keyhole*), short biographies of shady and failed bankers, stock traders, investors and other financial types. An unusual topic for comics, writer R. Walker obviously relishes sticking the knife in and twisting, while Josh Neufeld delivers artistically. Included among the rogues are one-time Marvel Comics asset-stripper Ron Perelman, who later married to Ellen Barkin. No justice there, then.~FP

TITS AND CLITS

Last Gasp: *8 issues 1972-1980*

Originally created by Joyce Farmer and Chyn Lyvely as a backlash against the misogynistic violence depicted in most undergrounds, *Tits and Clits* wisely refrained from male-bashing and instead concentrated on sex-positive strips for women. Not a porno comic per se, *Tits and Clits* focuses on the wry and amusing side of sexual relationships, including the difficulty of having any at all. Originally written and drawn solely by its originators, other contributors were soon invited in. Roberta Gregory, Mary Fleener and several others have livened up its pages. As usual with anthologies, the variety of contributors means that an unqualified recommendation is impossible, but open-minded readers will find something to amuse them in most issues.~HS

TOD HOLTON SUPER GREEN BERET

Lightning: *2 issues 1967*

With 1967 now indelibly linked with hippies and peace, repugnant claptrap like this, a more representative sample of contemporary American opinion, surprises. Young Tod Holton is given a magical green beret by his sceptical G. I. Uncle. When he puts it on not only does he transform into a super soldier, but he can magically transport himself to Vietnam, Cuba or Central Africa to beat up gooks, commies and spear-throwing Africans. Time's no problem either with visits to Nazi Germany and Revolutionary USA on the agenda as well. Largely written in light-hearted tone by Otto Binder, twisting his Captain Marvel scenario, it's appalling jingoistic propaganda wretchedly drawn by Carl Pfeufer. Each issue also has one slightly better drawn, although equally gung-ho, strip by Wayne Marston.~FP

TOKA, Jungle King

Vertigo Pop! TOKYO

DC/Vertigo: *4 issue miniseries 2002*

Jonathan Vankin and Seth Fisher tell the tale of Steve, an obsessed video-jock who's come to Tokyo to capture the ultimate techno-thrill for the buzz-starved audiences of the world. Instead he finds himself sucked into the city's darkest criminal underbelly by Maki, a too-hip high school girl, and involved in a bizarre plot to kidnap ultimate pop-star Hike. Sharp looking nonsense that's not as cool as it would like.~WW

TOM CORBETT, SPACE CADET

Eternity: *4 issue miniseries 1990, 4 issue miniseries 1990*

A loose interpretation of the 1950s TV series, featuring a bunch of space cadets led by Tom Corbett on the good starship Polaris. Stories and the black and white art are raw, but the tonal work on the manga-style second series works better. The first series sees the return of Tom's father, and as might be expected, not all is as it seems. The second series concentrates on strange objects found on Mars. This might have had more charm if it kept to a 1950s feel rather than attempting to modernise.~HY

TOM JUDGE: End of Days

Image/Top Cow: *One-shot 2003*

The histrionic, rushed and nonsensical conclusion to *Universe*. Tom Judge is an alcoholic ex-priest who possesses a mystic amulet called The Rapture. Whoever he gives the amulet to gets to run the Fifth Dimension and consequently rearrange the Universe to suit his/her/its whims. Ludicrous and derivative to the point of outright theft, it's bound to disappoint fans of writer Paul Jenkins, and Clayton Crain's slick but lifeless drawing adds to the confusion.~WW

TOM MIX WESTERN

AC: *2 issues 1988-1989, one-shot (Holiday Album) 1990*

Do-gooder Tom starred in over 350 films between 1910 and 1930 and then appeared on a radio show until 1950, despite his death in 1940. The strips reprinted here are from Fawcett's Master Comics, illustrated by Carl Pfeufer and John Jordan. In 2 Tom finds himself buried alive in a coffin full of substandard cement, which explains why he escapes to catch the men responsible, but that's as exciting as it gets. Mix is another Western hero who prefers shooting guns out of the baddies' hands rather than risking killing them. Good job he's such a spectacular shot. *The Tom Mix Holiday Album* is just more of the same.~NF

TOM STRONG

America's Best Comics: *18 issues + 1999 to date*

Born just over 100 years ago on the hidden island of Attabar Teru, Tom Strong's career spans a meta-century that resembles ours, but has felt Tom's and other fictional influences that reach into the future. He is a "science hero" raised in a gravity chamber by his father until he was 8 so that he became proportionately stronger and faster. When his parents perished in an earthquake in 1908 Tom's upbringing fell to the Ozu tribe who shared their secret of long life with him. For the past 80 years his main base of operations has been Millennium City where he, his wife Dhalua and their daughter Tesla are installed in The Stronghold on Anvil Street with an extended family of friends. The villains and menaces are consistently earth-shattering but one name keeps resurfacing: Paul Saveen who has not weathered the century as well as Tom.

1 features an origin story right from his birth, possibly even his conception. In 10 we meet Warren Strong, a rabbit version of Tom from another dimension who returns in 13's tribute to Fawcett's *Captain Marvel*. 11-12 feature an alternate Earth peopled by heroes only a copyright clause away from the Ned Pines published pantheon of the 1940s including doppelganger Tom Strange, who, as Doc Strange, was a knock-off Doc Savage, the original 'Man of Bronze'. Tesla Strong gets her own feature in 8, 9 and 10, meeting the lava-being Salamander in 8 who returns to woo her in 15, staying on at the Stronghold. Perils of Dhalua also features in 9. 16-18 features virtually every cast member thus far plus space cowboy The Weird Rider and Tom's soviet counterpart Svetlana X, all fighting a seemingly unstoppable invasion of Earth.

Alan Moore writes everything, and with two centuries to play with has yet to lose interest. There's a particularly rich vein from 9 to 13 including all three stories in 9, the Necro-Gyro in 10 which Tom uses to visit the dead, the trip to Terra Obscura and 13's Tom Strong Family issue.

Regular artist and co-creator Chris Sprouse is nothing short of brilliant throughout. He's cleanly inked by Al Gordon in 1-14*, and then done even greater justice by Karl Story. The list of guest artists drawing all or portions of issues is truly lush: Arthur Adams (4), Jerry Ordway (5), Dave Gibbons (6), Gary Frank and Cam Smith (7), Al Weiss (8), Paul Chadwick (9), Gary Gianni (10), Russ Heath, Kyle Baker and Peter Poplaski (13) and Hilary Barta in 14. The colour by Tad Ehrlich in 1-7 and then by the great Matt Hollingsworth is a key factor in the title's solidity, as is Todd Klein's lettering. Subtleties like the letters in Tom's word balloons always being larger really add to the overall package. Moore's avoidance of any over-facile concentration on continuity and the many pastiche covers and logotypes leaves the reader with the impression that The Superhero is being commented upon. Inventive, ambitious, consistently well-crafted and entertaining. 1-14 are collected.~SW

TOM STRONG'S TERRIFIC TALES

America's Best Comics: *4 issues + 2001 to date*

An anthology title that allows Alan Moore and his cohorts (including Steve Moore, Alan Weiss, Arthur Adams and others) to tell stories from the past of his Superman/Doc Savage pastiche Tom Strong, including one per issue from Strong's childhood. While the tales are as well crafted as you'd expect from Moore they're no different from what's often served up in the regular comic, making a second title largely superfluous – especially as its publishing schedule is erratic to say the least. The middle strip in each issue, Jonni Future by Steve Moore and Arthur Adams, is generic science fantasy that wouldn't be strong enough to hold a title itself.~JC

TOMAHAWK

DC: *130 issues 1950-1970*
DC/Vertigo: *One-shot 1998*

Based broadly on true-life frontiersman Davy Crockett, buckskin clad Tom Hawk is better known throughout the 1770s western frontier as Tomahawk. He shares his adventures with youthful sidekick Dan Hunter. Well, a man's gotta have somebuddy t'talk to. Tom and Dan's coonskin caps were originally seen in *Star-Spangled Comics* 69 (1947), where they stayed to 121. Tom's own series was first drawn by Bruno Premiani along with back-ups from veteran cover artist Fred Ray, who supplied scripts, as did Bill Finger. Early issues also feature 'Tales of the Arrow Maker' drawn by Leonard Starr in 1-8 before Ray takes over, followed by Jim McArdle in 1954, his last tale running in 25. A selection of Ray stories from this period was the bizarre choice of material in the 1976 treasury titled *Superman Salutes the Bicentennial*. There are also some fine covers by Nick Cardy between 20 and 37. Premiani's work is inked by Ray Burnley from 18 to 36, his last issue, after which Ray and Bob Brown alternate on the artwork, with France Herron writing. Storylines begin to veer off into fantasy, giant apes, time travel and things generally sensational.

With 73 in 1961 Brown takes a back seat to Ray and there's little variation until 117 in 1968. In 81 Herron débuted an early costumed vigilante, Miss Victory, and in 83 he introduced Tom and Dan's outfit The Rangers: Big Anvil, Cannonball, Frenchie Duval, Kaintuck Jones and Long Rifle Morgan, their buddy Brass Buttons joining a couple of issues later. This often made Tomahawk a team title, but hyperbole didn't sit well with the period setting. Case in point: 103's Frontier Frankenstein, a ludicrous and very obvious poke at Marvel's Hulk – right down to the torn purple trousers. 'The Origin of the Rangers' is run as a back-up strip in 109, by which time they've been announced as "The Rip Roaring Rangers" on covers, an attempt to make them resemble an 18th Century band of Marvel-style Howling Commandos. Efforts to rekindle interest continued with the employment of writer Robert Kanigher and artist Frank Thorne, behind beautiful covers by Neal Adams. This line-up was responsible for a tremendous upturn in falir and entertainment value from 117. The revamp only achieved critical acclaim, however, and in a last-ditch gamble the comic was re-titled *Son of Tomahawk* (see below) with 131.

The one-shot by writer Rachel Pollack is a credible attempt to bring some spiritual and political sensibility to the legend of Tom Hawk, retelling his eschewing of society with a Native American mythological underscore and no Dan Hunter in sight. Artist Tom Yeates could have done with more time on the fifty-eight pages that were clearly once a miniseries.~SW

Son of TOMAHAWK

DC: *10 issues (131-140) 1970-1972*

Having failed to spark interest in the dynamic new *Tomahawk*, DC moved the series forward twenty years to spotlight Hawk, Tomahawk's son by a Native American woman. Glorious Joe Kubert covers grace every issue, while inside Bob Kanigher and Frank Thorne provide dynamic and thrilling stories, largely with a moral point, taking on racism (133) and slavery (136) among other topics. Tomahawk sneaks back in from the first issue, older, but still in full possession of his skills and faculties, acting as a counterpart to the headstrong Hawk. The best issue is 138's Christmas story (despite Kanigher having Christ crucified at Christmas), in which Hawk's mother and brother, are taken hostage. Giant-sized from 136, well selected reprints (including Frank Frazetta-illustrated strips in 131 and 139) and Joe Kubert's 'Firehair' strip in 132, 134 and 136 round out an excellent package.~FP

TOMATO

Starhead: *2 issues 1994-1995*

A smorgasbord of fictional tales and autobiographical items, *Tomato* is underscored throughout by a wicked sense of humour. Whether it's the first issue's previously unseen use for a bottle of ketchup, or the problems of arranging to meet Camille Paglia, or 2's tale of Grandma Forney's games of scrabble, or the over-the-top-costume-party reminiscences, the common thread is laughter. There's little else linking the mainly short strips, drawn in wildly differing styles by Ellen Forney. Not everything is successful, but there's an admirable diversity and lack of pretension, and a decent level of entertainment.~WJ

TOMB of DARKNESS

Marvel: *15 issues (9-23) 1974-1976*

1-8 are titled *Beware*. This title reprints weird/horror shorts from the 1950s to the early 1960s. The only story of interest is 22's 'I Created Grutan' from *Strange Tales* 75, which features a mad scientist who attempts to create a growth serum. In this reprint, his assistant's name is crudely relettered as 'Pym'. This is considered the first chronological story about Hank Pym.~APS

THE TOMB OF DRACULA

Marvel: *Series one 70 issues, 4 Giant-Size* **(2-5)** ***1972-1979, series*** *two 6 issues 1979-1980*
Marvel/Epic: *4 issue miniseries 1991-1992*

That a *Dracula* comic written by a man named Wolfman exists at all is preposterous. That it's among the best supernatural titles ever stretches credulity beyond breaking point, but so it is. Although introducing key members of the supporting cast – Dracula's descendant Frank Drake, his partner Rachel Van Helsing and the mute Indian Taj – 1-6 don't develop Dracula beyond cinema cliché. 1-2 were reprinted in 1992 as *The Savage Return of Dracula*.

Gene Colan pencils from the off, Marv Wolfman arrives with 7, and inker Tom Palmer rejoins with 12, cementing the creative team for series one. While the Colan/Palmer art is always atmospheric and excellent, it took some initial fumbling before Wolfman began mining gold. It came as the fascinating supporting cast gelled. In addition to the insecure Drake, confident Van Helsing and Taj, there are Quincy Harker, old and wheelchair-bound from a lifetime fighting Dracula, and Blade débuting in 10, a hip 1970s vampire-hunter in search of a vampire who killed his mother. The first signs of greatness are apparent with 12-14, in which Dracula is cornered and killed, although not without cost, and then resurrected by a misguided priest. These were reprinted as the *Halloween Megazine* in 1996. Hannibal King makes his début in a great twist-ending story in 25, losing little of its effect through King's later familiarity. 32-33 have Dracula confronting the infirm Harker; it relates their previous confrontations and Harker's losses in a moving story. At this point Dracula realises that his vampiric abilities are being sapped, and he relocates to Boston to confront the cause of this. 37 introduces two further regular cast members, hack writer Harold H. Harold and the woman of his dreams, Aurora Rabinowitz, in a tale running until 42, in which Harker and company discover that there are worse threats than Dracula.

Wolfman and Colan's Dracula retains a nobility and seductive attraction despite revelling in his status as Lord of the Undead and murdering with ease, Wolfman making each kill more resonant by presenting a brief biography of the victim before death. Dracula retains a sense of honour, though, and is capable of affection, as is seen in later issues with his wife Domini. Beyond the cast a positive factor is that *Tomb of Dracula* is largely self-contained. When this relative insularity is breached by reminders of the Marvel Universe beyond the result is lacklustre reading, viz the guest appearances of Dr Strange and Silver Surfer (44 and 50), both of them reprinted as one-shots in 1994. The supernatural guest stars, the ridiculously named Brother Voodoo and Son of Satan (35 and 53), mesh more comfortably. Dracula marries in 46 (reprinted out of context and rendered meaningless in the 1992 *The Wedding of Dracula*) and the marriage is consummated in 47, with Janus born in 54. Janus' destiny is hinted at in 51, while 59-61 deal with his transformation. That story told, the series, though it's never actually bad, meanders as Dracula becomes human, and must then face his successor as Lord of the Undead. The final story, reprinted in edited form as *Requiem for Dracula* in 1992, has the death of two regular cast members, but the lack of emotional impact typifies later issues.

Series two is a black and white magazine, better displaying Colan's art, which only graces 1 and 3. With Wolfman, Colan and the majority of the supporting cast gone it's on a par with *Giant-Size Dracula*, but fails the inevitable comparison with the previous series. The Epic issues reunite Wolfman, Colan and Dracula, picking up in 1991 and the resurrection of Dracula as if he'd been buried since *Tomb of Dracula* 70. The intervening years have seen the death of Rachel Van Helsing, and Frank Drake referred for depression. Blade's also on hand, and this is a more savage and brutal Dracula. Despite the introduction of the fascinating Inspector Golem it's an unwise return for Wolfman (and, eventually, Dracula), who's going through the motions with no real structure to the story.~FP

TOMB RAIDER

Image/Top Cow: *25 issues + 2000 to date*

Dan Jurgens writes 1-20 and provides exotic locations, mysteries and action as Lara Croft fulfils assorted quests. A little plot goes a long way, and characterisation is paper thin: Lara is single-minded and adaptable and fellow adventurer Chase, who moves on after 14, fancies her. The lack of complexity hardly matters to the audience for a well-promoted brand name, though. The art is predictably big breasted babe style with plenty of lines throughout, with Andy Park a superior exponent. 1-14 are collected, but perhaps the best sample of the Jurgens/Park style is in 16, 17, 19 and 20, starting with a motorcycle race in the USA, moving to the African veldt and ending in the future. In 21-24 new writer John Ney Rieber manages the trick of plotting a comic in video game style, then adds some pretentious commentary, particularly in 21, over artist Randy Green's ludicrous distortions of the female figure. Lara is transformed in 25, involving another teaming with Sara Pezzini and her Witchblade, here drawn by Michael Turner, which will appeal to some.~WJ

TOMB RAIDER: Journeys

Image/Top Cow: *8 issues + 2002 to date*

Fiona Kai Avery provides several linked stories concerning Lara Croft's meetings with privateer, Captain Kagan and the search for a Dream Spear. She helps him escape from a curse in the past, in 1, finds El Dorado in 2 and Gomorrah in 3, whilst both she and Kagan face black marketeers in 4. She's in a schoolgirl outfit for a clash with one of King Arthur's knight's in 5 and is given a tour of 10 Downing Street by 'Tony' and the ghost of Winston Churchill in 6, which sets the scene for a trip to the Outback (7) and then into the Dreaming (8). None of the artwork is dreadful, but there have been five artists over the eight issues, making the whole seem incoherent. 6 is probably one of the worst comics ever written, by the way.~NF

TOMIE

ComicsOne: *2 volumes 2001*

Tomie is a beautiful itinerant demonic Japanese teenager who makes practically everyone she meets fall madly in love with her. The males in particular feel compelled to knife her to death and cut her into pieces. New little Tomies grow from the pieces, or sometimes just as tumours from the head or chest of a full size Tomie, and encourage the men to kill the rival Tomies and/or themselves. The stories, each starting out mundanely and swiftly leading up to the inevitable blood-spattered and corpse-filled rooms, are certainly horrific, but the constant repetition of the themes of irresistible adolescent sexuality and rapidly invasive illness has a cumulative amusing effect, leaving the reader laughing out loud, perhaps with a hard-on too, by the end of the 500 little pages. Artist/writer Junji Ito may be the genius of manga.~GK

TOMMI GUNN

London Night: *3 issue miniseries 1996, one-shot ('Black Rain') 1996, 3 issue miniseries ('Digital Meltdown' 1-3 +½) 1997-1998, 4 issue miniseries ('Killer's Lust' 0, 1-3) 1998, annual 1998*

She's blonde. She's busty. She's bionic! Tommi Gunn is yet another blood-soaked, vengeance-driven, scantily clad – as often unclad – hell-bimbo designed to appeal to the lowest common denominator by getting naked – with or without other chicks – and messily slaughtering all and sundry for the flimsiest excuses imaginable. Utterly irredeemable rubbish by Everette Hartsoe and Georges Jeanty.~WW

TOMOE

Crusade: *3 issue miniseries (0, 2, 3) 1996*, one-shot ('Shi vs Tomoe') 1996, one-shot (Tomoe/Witchblade) 1996, one-shot ('Unforgettable Fire') 1997*

Tomoe is Shi's best friend. Neither is aware however that the other is an adherent of rival Japanese warrior sects who have been at war for over a thousand years. At the behest of her masters Tomoe 'kills' Shi. Discovering Shi's identity and having fulfilled her obligation to her masters, Tomoe takes over Shi's mission. This all occurs as *Shi* 4-8, *Tomoe* 0-3 and the *Shi vs Tomoe Special*. Tomoe's masquerade continues in Shi before the one-shots. She is recruited by a band of monks to join New York cop Sara (Witchblade) Pezzini in stopping a samurai amassing occult power, and 'Unforgettable Fire' serves as a prequel to a new series of Shi. Tomoe is transported back in time to meet her historical namesake and convert a demon to Buddhism only to end up in Hiroshima seconds before the Atom bomb is dropped. Beautifully illustrated by a variety of artists the stories are, however, ludicrously overwritten and are further complicated by the interminable crossovers, exemplified by Tomoe's first issue actually being Shi 6.~WW

TOMORROW KNIGHTS

Marvel/Epic: *6 issue miniseries 1990-1991*

In a future scenario where multi-national corporations are the real powers and elected governments merely puppets, the Tomorrow Knights are a freelance team recruited by the US President to break the corporate control. Written and drawn by Rod Whigham and Roy Richardson, *Tomorrow Knights* overcomes the contrived title to develop into a sound adventure series.~WJ

TOMORROW STORIES

America's Best Comics: *12 issues 1999-2002**

This anthology was the most frivolous of Alan Moore's ABC, but none the worse for that. 'Greyshirt', drawn by Rick Veitch, was basically *The Spirit* in all but name, but gave Moore ample scope to explore his noir tendencies. The Jim Baikie-drawn 'First American' was that most tired of genres, the superhero spoof strip, but incredibly Moore made it work with endless coruscating invention. 'The Cobweb', drawn by Melinda Gebbie, was a sapphic cross between 'Phantom Lady' and a Victorian adventuress, and somehow never settled down into anything substantial. By contrast, 'Jack B. Quick – Boy Inventor', drawn with exquisite aplomb by Kevin Nowlan, was a comic masterpiece with each vignette of scientific disaster revealing Moore's seemingly limitless imagination and mastery of the short story format. Sadly, 'Jack B. Quick' was only in six issues (1-4, 10, 12) and its replacement, 'Splash Brannigan', never quite worked despite nice Hilary Barta art. As a rule, if it has 'Jack B. Quick' in it, buy it. *The Tomorrow's Stories Book* collects 1-6.~DAR

TONGUE LASH

Dark Horse: *2 issue microseries 1996, 2 issue microseries ('II') 1999*

Inspired by Moebius, Randy and Jean-Marc L'Officier have created an alien world of animal-headed slaves, constantly masked men and under-dressed women. The plot involves political intrigue and an attempt by the Begetters (who create the animal-headed creatures) to gain access to the secrets of 'metatime'. It's all rather derivative, including the artwork of Dave Taylor, which, while not entirely following Moebius can't escape the comparison, but it's very easy on the eye. 'II' adds to the characters significantly and stretches the storytellng, including a more open attitude to the sexual decadence underlying the society on display.~NF

TOO MUCH COFFEE MAN

Adhesive: *14 issues +, 3 Specials 1993 to date*

Possibly the first existentialist costumed character, Too Much Coffee Man is gloriously designed by creator Shannon Wheeler as a paunchy guy with a massive coffee-cup helmet on his head and that permanently caffeinated bug-eyed look. Continuing from his début in *Jab*, Too Much Coffee Man contemplates his dull life and reasons for living it, with caffeine-stimulated rushes sparking his day. Until 9 there's also a back-up; a strange, possibly autobiographical, strip about a relationship, punctuated by bizarre interludes when a curiously Neanderthal-style Wheeler contemplates his work. In 9 there are strips by Paul Guinan and Kieron Dwyer, and illustrations by other known artists. Also appearing in *Dark Horse Presents* 92-95, *Too Much Coffee Man* won't be to everyone's taste, and immersion reveals a fatal repetition. Try the ludicrous death issue (5) and work back, or sample at TMCM.com. The colour specials reprint newspaper strips, whose one-note nature is highlighted by this presentation, and assorted book collections are available. As interesting as the strips throughout are the letters the comic receives.

With 11 the title became a magazine, increasing the pages count, but reducing the comic content, and placing it beyond the purview of this guide. 11-12 have Too Much Coffee Man in space, and there are short strips by other creators with Rick Geary in 12 the most notable.~FP

Adam McDaniel's TOOL

Northstar: *1 issue 1995*

A title like that induces a certain level of expectation, and admiration for McDaniel's fearlessness. Disappointment was inevitable, and it comes in the form of bog-standard gruesome horror stories drawn in sub-Berni Wrightson style featuring an avenger of the dead that fuses Swamp Thing and Predator. Originality? Zero.~WJ

TOOTH AND CLAW

Dead framed junkie ex-cops Rachel and Jake are possessed by were-creatures from the dawn of time, to fight space aliens from another dimension. Yes, it is as bad as it sounds, with a script so long-winded and hammy you don't know if the tears running down your face are from laughter or despair.~DB

TOP NOTCH COMICS

Fantagraphics: *1 issue 1998*

A flagrant knock-off of Chris Ware's groundbreaking *Acme Comics Library* title that cannot be excused simply because it was issued by the same publisher. Not only does writer/artist Ethan Persoff mimic many of Ware's storytelling innovations, he also sees fit to copy both *Acme*'s ornate designer look and its overwhelming air of misty-eyed melancholy. It only works as an object lesson in the creative dangers inherent in excessive imitation.~AL

TOP SHELF

Primal Groove Press: *4 issues 1995-1996*
Top Shelf Publishing: *4 issues (5-8) 1997-1999*

The anthology that gave birth to an eclectic and admirable publishing company, began long on enthusiasm, but with little to recommend it. In 1 Josué Menjivar builds up and twists expectations, while Steven Weissman is in 2 and James Kochalka's meanderings can be found in all early issues. And the cocktail recipes have a charm. Other than that, while the art improves, the stories are strictly from the "then nothing happened" school. It's with 5 that *Top Shelf* takes a big leap. It's the first squarebound issue with more pages and extra colour. The quantity of dull and impenetrable strips is drastically reduced from this point, and when present they're at least decently drawn. Rich Tommaso's bittersweet story of a restaurant manager whose life is falling to pieces, has moments in 5, as does his strip about flying in 7. 5's other highlights come from Lin Lucas, and the humour of K. Thor Jensen, who adopts a different, but equally effective tone in 8. The monologues of Carrie Golus in 7 and 8 are sharply observed, if static comics, there's a good Peter Sickman-Garner strip in 6, and Myra Goldberg and Jason Little produce a fine drama set in a theatre in 7. British Simon Gane's blocky art is a highlight of 6, while Robert Somerville and Andy Konky Kru deliver European style silent surrealism in 7 and 8 respectively. Those issues have no cover numbering, being titled *Top Shelf on Parade* and *Top Shelf Under the Big Top*. 8 is the best issue overall, with excellent colour work from members of the Israeli comics collective Actus Tragicus, an atypical Billy Dogma strip from Dean Haspiel, an astounding variety of very funny strips by Josh Simmons over thirty-two pages, and the oddity that is the work of Mack White, who won't be to all tastes. Nor will the depressing Mandy Ord strip, the perversity of Mike Diana, Jeff Levine's strange Popeye strip, and funny stuff from Jean Bourguignon, but they all have merit. 8 isn't an unqualified success, but over 175 pages there isn't a lot of filler. By the end *Top Shelf* had evolved into a title bringing to mind the quality and individual editorial vision of the early *Drawn & Quarterly* issues. Sadly, unlike that title, it remains dormant.~FP

TOP SHELF Graphic Novels

Top Shelf's stated aim is to "appeal to men and women between 18 and 40, in metropolitan centers, college towns, or otherwise culturally hip communities", which could seem patronizingly smug and ignorant to some. So could many of the artists they publish, who seem to believe that the minutiae of their urban or otherwise culturally hip lives are automatically interesting.

James Kochalka is one of their more prolific creators. *Magic Boy And Girlfriend* reprints very crude self-obsessed strips from his *James Kochalka Superstar* comic, full of adolescent pseudo-profundity and drug anecdotes, mixing a style as simple as possible with semi-realistic self-portrayals. *Perfect Planet*, in which he portrays himself and his wife as elves, with a cute talking cat, is in a more consistent and accomplished style, but is forgotten in the time that it takes to read. His work strains to be cute, sad, and loving, but is never funny. *Monkey vs Robot*, a pompous parable of nature and technology in disharmony, with nods to *2001: A Space Odyssey*, takes 140 pages to do what Bernie Mireault can do in five. *The Sketchbook Diaries* is exactly what it is says it is and documents not much more than Kochalka's compulsion to eat McDonalds fast food. Surely he is joking when he says "I think you'll find the reality of one human's life compelling enough". Pinky & Stinky, about two piglets on a mission to Pluto who crash on the moon, is amusing enough, if pointless, for twenty minutes, at $17.95. Movies are better value.

Craig Thompson's highly regarded *Goodbye Chunky Rice* also features cute little creatures who love one another, but he includes a few human grotesques too and has some flair for storytelling. Tom Hart's boring *Hutch Owen*, an angry rebel against big business, was not worth drawing, however lazily and charmlessly. His *Banks/Eubanks*, a pompous lecherous film buff who fantasizes an adventurous life, is a huge improvement, though the panels are slapped in odd numbers on often largely white pages for no apparent reasons. Here Hart has ditched the dodgy politics in favour of a lot of jokes about breasts, and the world is a happier place for it.

Scott Mills' quiet and sad *Big Clay Pot*, about a clumsy girl befriending an old widower in ancient Japan, is a small touching work with rather a lot of letratone on top of not much drawing. His later, disappointing, *Trenches*, a long ambitious time-jumping story about British soldiers in the First World War, is full of historical and other errors and a bit of a dog. *Abe – Wrong For All The Right Reasons* is a huge collection of Glenn Dakin's ruminative, sometimes autobiographical, strips done over ten years from the mid-eighties. Sadly, though competent, it's graphically and imaginatively sterile from the start and he never gets any better.

A lot of Top Shelf's output is strictly amateur hour stuff. Dean Haspiel's would-be satirical antihero Billy Dogma, is resolutely self-conscious, and Matt Kindt and Jason Hall's *Pistolwhip*, pretentious willowy noir detective tripe. Rick Pinchera's *Crust*, reprinted from his local paper, is most egregiously trivial, all personal computer failure, coffee overdoses, and corporate sponsorship woes for the hipsters; *Doublecross: More Or Less* by Tony Consiglio is the same lousy drawing again and again of a cartoonist's not 100% satisfactory homelife. *Creature Tech* is interminable government agency and aliens malarkey by Doug TenNapel, a TV cartoon developer who doesn't know anything about how to make comics work. Steve Lafler's *Baja* follows his *Bughouse* series, with insect-headed jazzers and dope-dealers are retro-underground spume; and *Three Fingers* by Rich Koslowski is an elaborately done joke about the history of animated cartoons as if the characters were real actors manipulated by producers such as "Dizzy Walters". A vast, ugly and unoriginal waste of time.

Speechless is a lavish large format review of esteemed graphicist Peter Kuper's career as modern underground editor, mass market paper and magazine editorial journalist, and (this IS Top Shelf) embarrassing confessional strip artist. The politics are wet knee-jerkalism but it all looks very striking and is well-produced, and the demonstrations of stages of production are fascinating.~GK

TOP TEN

America's Best Comics: *12 issues 1999-2001**

Alan Moore's first original superhero team since his seminal *Watchmen* of the 1980s. Moore's mainstream comic work has since, on the whole, become less portentous and structurally precise, although Top Ten is still a flawlessly executed exercise in genre storytelling that works as both robust entertainment and as a commentary on the form itself. It's simply a bit more relaxed, less anxious to connect every last dot or strike every symbolic note. The premise is simple but inspired: *Hill Street Blues* recast as a superhero soap opera, complete with multiple interlinked plotlines, overlapping dialogue and an extended cast of colourful characters, all wrapped up in one of Moore's most convincingly realised dystopias.

The series begins with focal character Robyn Slinger, aka Toybox, arriving in Neopolis for her first day working at the precinct house and meeting her extraordinary colleagues. There's the dog-headed Kemlo, the dour Superman analogue Jeff Smax, King Peacock the black magic detective, the winged Lieutenant Peregrine, Duane Bodine the cowboy Dust Devil, and many other similarly exotic superbeings. They attempt to maintain some semblance of law and order in the face of alien invaders, invisible perverts and general futuristic crim scum. Layout artist Zander Cannon and finisher Gene Ha have their work cut out for them depicting this densely packed universe, but they more than rise to the challenge, making a vast range of characters and locales visually distinctive and appealing. The main story arc is neatly wrapped up in issue 12, marking the "end of season one", but so far there's been no sign of a follow-up series; in the meantime this one is always worth a re-run, and let's be careful out there too.~AL

TOR

DC: *6 issues 1975-1976**

Marvel/Epic: *4 issue miniseries 1993**

Rarely can a story have taken forty years in the telling, yet Joe Kubert's tales of the caveman Tor began in 1953, and the DC series reprints the original issues in 2-6. 1 was a new story explaining how Tor came to be. The Epic series continues and expands the story of a man fighting alone in a hostile world. It's to Kubert's credit that although more fantasy-style creatures appear, Tor's existence remains credible. The art on the early stories is primitive compared with the splendour of the magazine-size Epic issues. Tor also appeared in the difficult-to-find tabloid-size *Sojourn*, and DC have recently issued two hardbound archive editions collecting most strips.~FP

TORCH OF LIBERTY Special

Dark Horse: *One-shot 1995*

Seemingly striving for authenticity while simultaneously being a pastiche of the Commie-bashing comics of the 1950s, John Byrne's script is altogether too knowing to succeed, and Kieron Dwyer's art too 1960s. That's not to say it isn't fun, though, but largely pointless.~WJ

Bill Ward's TORCHY

Innovation: *5 issues, 1 Special 1991*

Torchy Todd always seems to muddle through. Having a beautiful face and curvaceous body means she's a great distraction to men, so much so that criminals fall over themselves to get captured when she's around. Bill Ward's stories are full of tantalising fun if high heels and lingerie are your thing, but these days their mild fetishism doesn't seem that risqué. Reprinted in black and white from the 1950s, Ward's art is sharp and easy on the eye. With four or five stories in each issue things can get a bit repetitive (especially since one story appears in both 3 and 4!) but the light-hearted tone is engaging. The Summer Fun Special offers more of the same, plus an example of Gill Fox's work on the strip.~NF

TORG

Adventure: *4 issue miniseries 1992*

Other-dimensional cybernetic demons invade Los Angeles in this series based on a role-playing game. Not to worry, though, because another dimension that saw off the invasion have sent help. Just the one woman, mind. Perhaps it was a small dimension. The series is plotted in the manner of an action movie, so you don't have to think too hard. Given the dramatic potential, though, it should also be noted that the art is almost always as close-up as possible, the lazy artist's option (come on down Cariello).~FP

TORPEDO

Catalan: *6 volumes 1986-1993*

Hard Boiled: *4 issues 1993-1994*

The Spanish creative team of Sanchez Abuli and Jordi Bernet studied their Jimmy Cagney and George Raft movies. Torpedo is a truly ghastly and compulsive creation, a relentlessly brutal 1930s hitman without a hint of conscience for whom humanity is merely a tool to serve his needs. The only redeeming factor is that his victims are equally distressing specimens. His grim world is expounded via short stories three per issue for the comics, and up to ten in the books. Bernet's art is a curious amalgam – part Frank Robbins, part Alex Toth (who draws some stories in the first book) and part Milton Caniff – but very effective in creating the necessary grimy locations and characters. The presentation of the Catalan volumes is more appealing, but Gil Jordan's excellent translations in the comics are superior, making for a more satisfying experience overall. Issue 4 has material previously untranslated into English. Torpedo also appeared in *Vampirella* and, in ill-advised colour, in issues of *Echo of Futurepast*. Sample the comics first and work on from there.~WJ

Largely reprinted from comics with titles like *Realistic Romance* and *Teen-Age Temptations*, these stories apply the moral concerns of two decades prior to their original publication in the 1950s. As such, of course, they're kitsch treasure troves. The standout issue is 5, with some truly bizarre contrivances. There's the woman infatuated with the gangster who stands her up to rob a warehouse, an actress rehearsing a role who falls in love with a military man who sees her in uniform and believes her a fellow squaddie, and the woman assertive enough to set up and run a dating agency, but not to stand up to the crook she

TORSO

Image: *6 issue miniseries 1998-1999**

This terrific true crime series has all the ambience and ambition of a James Ellroy novel, yet works first and foremost as an exercise in experimental comics storytelling, with cleverly placed dialogue balloons and eye-catching photomontages helping to rush the compelling storyline along at a breakneck pace. Writer/artist Brian Michael Bendis, and collaborator Marc Andreyko, use the case of the Torso Killer, an unknown psychopath who committed a series of gruesome murders in Cleveland in the 1930s, as the springboard for a bleak meditation on the nature of ambition, discrimination and moral and political corruption. Elliot Ness, the 'Untouchable' who took on the mob in the 1920s, personally set out to catch the Torso Killer, and his failure to do so, as recounted here, effectively ended his political career. Throughout Ness is shown to be a somewhat ambivalent hero, a (self) righteous man with a lust for glory whose decision to torch a Cleveland shantytown during the course of the murder investigation provides the comic with one of its many memorable set-pieces. Reading the collected edition the sophistication of Bendis and Andreyko's plotting and pacing becomes all the more apparent.~AL

TOTAL ECLIPSE

Eclipse: *5 issue miniseries 1988-1989*

At a time when every comic company was issuing crossovers involving every character they'd ever published, this Eclipse team-up fest proved to be one of the most bizarre of the bunch. Eclipse had a wide variety of publications at the time, from relatively straightforward superheroes to surreal nonsense such as *Tales of the Beanworld*, and, though throwing them all together might have seemed crazy, it also, remarkably, worked. In fact, it works precisely because it's so ludicrous. As Valkyrie puts it in 5: "At last we're evening up the odds, even if our side is composed of talking ducks, beans, and Ninja hamsters." It's rubbish really, but it's mad enough to be fun.~JC

TOTAL JUSTICE

DC: *3 issue miniseries 1996*

Seemingly produced at five minutes notice as 'rushed' doesn't begin to describe both script and art, from three different artists. It's supposed to promote a new line of DC character "action figures" (toys to anyone but fans), thus throws together as many characters in the toy set as possible. Rather than encouraging purchase of the toys, the discerning buyer would surely have thought that if they were as crap as the comic they should be left on the shelf.~FP

A TOUCH OF SILVER

Image: *6 issues 1996**

Semi-autobiographical tales of young Timmy Silver, an introspective loner growing up in the 1960s in a family that's breaking apart. Against a backdrop of turbulent times, racial tension, puberty and his parents' separation, Timmy's one refuge is his comic collection. Evocative, if occasionally maudlin offering from Jim Valentino, and much of the resonance and verity was undoubtedly lost when his legal department advised against using actual period publications such as *Superboy* and *Spider-Man* in favour of the *1963* and *Big Bang* pastiche characters then being published by Image.~WW

TOUGH GUYS, WILD WOMEN

Eternity: *2 issues 1989*

There was a time pre-James Bond when Leslie Charteris' fictional detective The Saint was the last word in suave sophistication. You wouldn't know it, though, from these rough and ready strips reprinted from his 1940s Avon title. A variety of artists work on the reprints, none with any great distinction, and the stories are standard whodunnits.~FP

TOWER OF SHADOWS

Marvel: *9 issues, 1 Special 1969-1971*

The type of horror story that saw Marvel through the 1950s is produced by the contemporary freelancers with surprisingly good results, especially on the part of artists like Neal Adams, Gene Colan, Jim Steranko and Wally Wood. Unfortunately, the mixture is diluted with duff reprints from 6. The title changes to *Creatures on The Loose* with 10.~FP

THE TOWERS OF BOIS-MAURY

Titan: *2 volumes 1985, 1989*

Venture: *3 volumes • 2001 to date*

Belgian artist Hermann is revered throughout Europe, and it's easy to see why, looking at these masterpieces. They're set in the Middle Ages. Sir Aymar de Bois-Maury is a dispossessed knight with a sense of honour and justice lacking in many of his contemporaries, who view the peasants as little better than animals. The first volume, 'Babette', depicts the tragic events set in motion when a knight attempts to force himself on a peasant girl, and the second, 'Eloise de Montgri', tells of an attempt to restore a castle to the rightful owner. Both are named after the female lead. In both cases Hermann's plotting is meticulous, and his art is astonishing, seemingly effortless in evoking the Middle Ages in a simple ligne claire style and in conveying a wealth of emotion and exposition in a single panel.

With the unexpected appearance of the re-lettered Venture volumes in European style graphic album format, the guilty colourist is named as Fraymond. The vivid quality and lack of subtlety is the only failing of these stories. Thankfully he's gone for *Roderigo*, which is actually the twelfth volume in the series and issued under that name alone rather than The Towers umbrella title. The Venture design scraps the elements distinguishing the first two books, and neglects to mention it's part of the same series, which is a shame as it's a pivotal volume set in 14th century Spain providing the hitherto unrevealed background of Bois-Maury. Thankfully, the stories can be read out of sequence, and it's to be hoped that further books will now be made available in English.~FP

TOXIC AVENGER

Moronic drivel inspired by the allegedly cult film.~HS

TOXIC CRUSADERS

Marvel: *8 issues 1992*

Originating from the deliberately bad taste *Toxic Avenger*, *Toxic Crusaders* must have been the unlikeliest kiddies' cartoon show ever, but even the comic works. A nerdy janitor is transformed into a hideous but superstrong monster on contact with toxic waste. He's the only deformed inhabitant of Tromaville, but mutation is a common condition elsewhere in New Jersey, and there are enough comrades to protect the one unpolluted city from the designs of a malign alien cockroach. Never intended as anything more than a companion to the TV show, *Toxic Crusaders* betters many of Marvel's contemporary mainstream titles. There's a wealth of bad puns, stupid henchmen and knowing asides, and the anti-pollution messages are painlessly passed on. Don't expect anything deep and there'll be a lot to enjoy here. The best sample is 5, with the excellent art of Derek Yaniger, and a funny Steve Gerber script incorporating an *Archie* parody sequence amid the usual mess. Full marks also to the team of Jeremy Banx and David Leach in 8 for the first man-on-toilet-with-trousers-round-his-ankles scene ever in a Marvel comic. A second series was widely solicited and advertised, but never actually published.~FP

TOXINE

Nose Comics: *2 issues 1991-1992*

Toxine is a rebel of sorts in a state-controlled world of the near future. Medex K is a mental hospital where experiments take place involving a disembodied brain and a prisoner pardoned on condition he take part. Guard, Nena, is scared and turns to her friend, Toxine, when she begins to be stalked by a new weapon that appears to have developed a life of its own. Roger Licot's rough, but not unpleasant, artwork adds to the atmosphere of these pulp/noir adventures, produced with a very European feel.~NF

TOYBOY

Continuity: *7 issues 1986-1989*

Oh, this is so tedious. Toyboy is Jason Kriter, whose father is probably the richest man in the world. Twelve-year-old Jason has everything, and he's also an electronics genius who makes his own toys – exo-skeletons, etc. – which function in the plots on the level of magic, effectively removing any logic or tension. Avoid.~FC

TOZZER and the Invisible Lap Dancer

Ablaze Media: *1 volume 2002*

The unfortunate Tozzer's journey from trailer park to film school. The threadbare story is just an excuse to cram in as many movie-related jokes as possible, with transparent cameos. This can hardly be sustained over seventy-six pages, which makes the publication choice of full colour paperback an ambitious one. The jagged cartooning of Peter Lumby is very good, though. One to flick through in the shop, rather than buy.~WJ

TRACKER

Blackthorne: *2 issues 1988*

William Van Horn's funny private eye is a pussycat... in every sense of the word! Where VanHorn is concerned the charm and humour in a strip are practically guaranteed but his choice of the PI genre as a comedy vehicle is a little off-the-boil. For devotees only.~SW

TRAGG AND THE SKY GODS

Gold Key: *8 issues 1975-1977*

Taking their cue from the Von Daniken books popular at the time of publication, humanity is given a giant step forward when aliens endow two foetuses with intelligence way above your average caveman. Just as well, because twenty years later more aliens arrive, and they aren't as benign. A modicum of plot is stretched to breaking point. Don't bother.~FP

TRAILER TRASH

Tundra: *6 issues 1992-1993*
Fantagraphics: *3 issues + (7-9) 1996-1997*

Homing in on Middle America, Roy Tompkins delivers the zany goings-on of Harvey the Hillbilly Bastard and his colourful pals, such as Tony, the alien-obsessed schizophrenic who's receiving hidden messages in re-runs of *C.H.I.P.S.*, and Davy the drug dealer. Without question one of the most disturbed, repellent and unremittingly offensive comics ever published, *Trailer Trash* comes with the highest recommendation. Tompkins' Wolvertonesque art delights in detailing almost unimaginable scenes of degeneracy, reaching its apogee in 3 and 4's back-up strip 'The Lousy Bad Kid in Very Bad Times'. From 6 on the title has concentrated on equally appalling über-brat Billy Dalton, and has had a greater sense of continuity. 9 collects Tompkins' strips from elsewhere and is equally offensive. Recommended only for the very strongest of stomachs.~DAR

TRANCERS The Adventures of Jack Deth

Eternity: *2 issue microseries 1991**

The preposterous name of the lead character indicates the quality of the film and direct to video special on which this series was based. Deth is a cop in the future, who has his mind transplanted into an ancestor living in 1991 in order to stop a criminal able to transform people into zombies. It's not a bad action plot, but the jagged and spartan art drains any excitement.~FP

TRANQUILITY

Dreamsmith Studios: *3 issues 1998*

Tranquility was grown in a laboratory with her genetically identical sisters to serve as a prostitute for a moonbase's workers. Now a member of the Moon's Security Operations force, she has been secretly helping an underground resistance movement smuggle people off the Moon, but is assigned to eliminate all of her sisters after her DNA is found during a raid. This is a grim story only moderately lightened by Tranquility's talking pistol. Written by Fred Van Lente and drawn by Steve Ellis, it's done well.~NF

TRANSFORMERS

Marvel: *80 issues 1984-1991, 3 issue miniseries ('Movie') 1986-1987, 4 issue miniseries ('Headmasters') 1987-1988*

The toys were a brilliant concept: cars and planes that transformed into battle robots by some deft twisting about. Having comics to promote the toys was also a good idea. No, the problem was the execution. The basic plot is that the nasty Decepticons wage war on the Autobots before fleeing to Earth, where they exist disguised as cars and planes plotting to take over. Luckily the Autobots also arrive to save us. Aiming the comics at children, who'd have no complaints anyway, Marvel expended a minimum of effort, and art and story throughout were of a very low standard. Planned as a limited series, it ran for eight years, so in a sense Marvel were right. Notable creators are few and far between. There's early and anonymous inking from Kyle Baker on 7 and 8, while 33 and 34 reprint a John Ridgway illustrated story from Marvel's UK *Transformers* title. Otherwise, to apportion the blame, Bob Budiansky wrote most issues between 4 and 56, largely pencilled by Frank Springer, Don Perlin, then José Delbo, while Simon Furman wrote thereafter with Andrew Wildman offering slightly better art. It's Furman and Geoff Senior who produce the best issue with 75, set on Cybertron. Bizarrely, despite the poor quality, these are fondly remembered and highly sought after, but a quick glance at any of the recently issued collections confirms that what enthralled at seven, might not have the same appeal fifteen years later.~FP

TRANSFORMERS

Dreamwave: *4 issues + 2002 to date*

Adding credence to the idea that there's no such thing as a bad concept, just bad treatments, this was the best-selling new comic of 2002. Dreamwave's prescience in realising a market for a new *Transformers* title played a part, but this is a stylish and well considered relaunch with the art of Pat Lee a major factor. His pencils emphasise the sense of awe any human would have on seeing these creatures, and their relatively sparing use so far increases the effect. In terms of plot Chris Sarracini doesn't budge from the old standby of Autobot vs Decipticon and Optimus Prime vs Megatron, but he dresses it up nicely.~FP

TRANSFORMERS miniseries

Dreamwave: *6 issue miniseries ('Aramada') 2002, 3 issues + ('The War Within') 2002 to date*

'Aramada' by Chris Sarracini and James Raiz, is set during the Transformers distant past and tells of the battle between opposing camps for the strategically vital Mini-Cons. For 'The War Within' veteran *Transformers* scripter Simon Furman joins artists Don Figueroa and Elaine To four million years in the past to reveal the origins of the great war between the Autobots and the Decepticons. Impressive eye candy for the nostalgic kids of all ages.~WW

TRANSIT

Vortex: *5 issues 1987-1988*

Extraordinary début comic by Ted McKeever, reportedly written and drawn in a fortnight while the fledgling artist was under house arrest recovering from a contagious illness. Crooked Boss Traun is trying to use tele-evangelist Reverend Grisn as a puppet mayor, and graffiti artist Spud is the only witness to Grisn committing a murder. *Transit* is a confusing mix of metaphor and chase sequences, centred around a city's transport system, with wasted characters drifting through a nightmare urban landscape. Ideas spark off the pages, and if it is a little muddled in places it's worth the extra thought required to work out what McKeever's getting at. Unfinished, the last issue ends with Boss Traun ranting about the new

order as flames sweep through the city. Characters from *Transit* turn up in *Metropol*, where their story is resolved.~FJ

DC/Helix: *12 issues 1997-1998*
DC/Vertigo: *48 issues (13-60) 1998-2002, one-shot ('I Hate It Here') 2000, one-shot ('Filth of the City') 2001*

Spider Jerusalem is a writer with a problem. He ran away from the big city into the mountains five years ago but his publisher is finally demanding that Spider honour his contracts. Back in the city, Spider persuades an old friend, now editor of *The Word*, that he should be given a staff job and regular column, along with journalist insurance, an apartment and all modern conveniences. In his new hovel, the "voice-keyed physical cleaning unit" takes all his hair off and his household appliance is found to be on drugs. The first storyline establishes Spider in the city, reporting on riots between the police and a group of fetishists who have become part alien. In the process, he becomes famous again, something he'd claimed he wanted to avoid. Spider gets a two-headed cat and an assistant, Channon, assaults the President (4), surfs the TV channels (5) and makes a violent statement at the New Religious Movement Convention (6). In three vivid and thought-provoking issues (7-9), Spider takes Channon to watch her boyfriend download his mind into a cloud of minute machines, meets someone who, when freed from cryogenics, can't cope with the world of the future and investigates several reservations where ancient cultures are kept alive.

10-12 explain something of Spider's history when a cult, insulted by his ex-wife, seeks his death because his wife's had her head frozen. Along the way we learn why the French have sent a headless bomb after him and why an ex-assistant is tying to kill him. The rest of the series is pretty much a single story-arc, beginning with 'Year of the Bastard' (13-18), in which Spider decides to cover the Presidential elections, which resulted in his retreat from the city the last time he did it. He also gains a new assistant, Yelena Rossini. After presidential candidate, Callahan, has his press officer, Vita Severn killed to enhance his ratings, however, Spider takes it very personally, effectively setting out to bring down the Presidency, aided by Yelena and Channon, going on the run and in failing health. There are occasional digressions that offer examples of Spider's journalism and insights into the life of the city. 31, for instance, has guest strips by Frank Quitely and Eduardo Risso amongst others, while 40-42 are examples of Spider's journalism freed from the limitations of his employment. The two one-shots are single-page extracts from his articles, illustrated by about sixty-four different artists.

This is arguably Warren Ellis' finest work, literate yet vitriolic, intelligent but utterly 'in yer face'. The future world postulated has everything yet is still profoundly corrupt and full of fools. The artwork by Darick Robertson (ably inked by Rodney Ramos) is completely complementary, clean lines adapted to a bright yet crowded, hallucinatory future. Excellent. DC have been releasing collections of all issues.~NF

THE TRANSMUTATION OF IKE GARUDA

Marvel/Epic: *2 issues 1991-1992*

It's the future and we have teleportation technology, but Transit Authority has a monopoly with all the opportunities for corporate conspiracy plots that this implies. Ike Garuda is a private detective drawn into the plotting. It starts well, with very effective writing and artwork, but the goodwill from this beginning expires pages into the second issue. Here it's clear that the plot is hopelessly convoluted, and you suspect that it's going to be a lot of running around and, "Ah, but X was really working for Y". And so it proves. Most disappointing.~FC

TRASHED

Slave Labor: *One-shot 2002*

Subtitled "True Tales From the Back of a Garbage Truck", this contains three strips describing the nineteen-year-old author, Derf's true-life experiences during a year as a trash collector in his Ohio hometown. Everything that can make the job more objectionable is encountered, including heat, rain, split bags, maggots and rotting food, and the practical jokes played by the road crew (though the final strip depicts his revenge, when they're back on his route after he's left). Derf's artwork is knobbly, but his stories are well told and entertaining.~NF

A TRAVELLER'S TALE

Antarctic: *3 issue miniseries 1992*

It's a fatal, yet surprisingly common conceit among new comic creators to claim they were inspired to produce by the lack of good material available. Has anyone arrogant enough to make this claim produced anything of note within the same pages? Here we have a cliché-riddled and poorly drawn effort confirming the uninitiated's every negative preconception about fantasy comics. Perhaps divine retribution was responsible for issue 2 being numbered '16' on the cover. That or the evil General Tykor.~WJ

TREASURY OF VICTORIAN MURDER:

NBM: *1 volume 1987, 1 volume ('Jack the Ripper') 1995, 1 volume ('The Borden Tragedy') 1997, 1 volume ('The Fatal Bullet') 1999, 1 volume ('The Mystery of Mary Rogers') 2001*

Rick Geary's strips are characterised by rococo black and white linework, the formal use of language, and dry humour revealed through the ironic juxtaposition of the high-minded and the commonly vulgar. These celebrated 19th century crime cases and true life melodramas, have proved the perfect vehicle for his utterly distinctive talents. The first, initially published in a larger format than the later comic sized editions, contains three separate stories, rather than the one long narrative of subsequent volumes. Despite the relative brevity of each strip, Geary's obsession with the Victorian era's suppressed passions and dirty secrets is already firmly in place, as is his unerring instinct for the macabre image, or the surreal incidental detail.

'Jack the Ripper' inevitably suffers in comparison to the more exhaustive *From Hell* series. The idea of the story being narrated by a contemporary amateur crime buff is, however, a clever one, and Geary's woodcut-style artwork is appropriately dark and knotty. The third and fourth volumes are American tragedies sharing a muted sympathy for both killer and victim. 'The Fatal Bullet', the story behind the assassination of President James A. Garfield, is the finest volume to date. It sharply contrasts the life and fortunes of the saintly Garfield with his wretched assassin Charles J. Guiteau, and is full of fascinating historical details indicating the breadth of Geary's research.

'The Mystery of Mary Rogers', is the longest book so far. Set in a sleaze-ridden mid-nineteenth century New York City that inspires some of Geary's finest drawing, this chronicle of the unsolved disappearance and murder of "the beautiful cigar store girl" is enriched by the involvement of comically gloomy author Edgar Allen Poe, who penned his own solution to the crime. 'The Beast of Chicago' is promised for 2003.~AL

Bart Simpson's TREEHOUSE OF HORROR

Bongo: *8 issues + 1995 to date*

The comics equivalent of the annual *Simpsons Halloween Special*, this doubles as a chance for comic creators to dabble with the *Simpsons*. It's odd that they almost all come up short, most surprisingly Peter Bagge in 2, whose own comics obviously influenced The Simpsons. Among the better material is Evan Dorkin's script in 3, Geof Darrow's spectacular panorama in 4, a good issue overall, and the combination of Mark Hamill and Bill Morrison in 7, which also has Stan Sakai's well-worked *Wizard of Oz* pastiche. Mike Allred's 'Little Shop of Homers' in 1 captures the humour and offhand comments of the TV show perfectly, with a tale of Springfield plagued by a man-eating plant. With 5 extra pages are added, and for the first time the artists are permitted to bring their own style, which results in some interesting visuals. Troy Nixey's combination of Homer Simpson and Victorian imagery in 7 is notable, as is Peter Kuper's take on *Metamorphosis* in 6, with Homer as a

cockroach, and Ian Boothby provides a gag-filled script unappealingly drawn by Jim Mahfood in 6. It's comforting to note, though, that the best issues of *Treehouse* are the most recent. 8 features excellently drawn horror limericks from Hilary Barta, more well drawn poetry from Gail Simone and Jill Thompson, and Ty Templeton's tale of the Simpsons as ghosts.~FP

Spun off from *Dark Horse Presents* (4-6), Mercy St Clair, a licensed bounty hunter augmenting the police in a far future world. Underlying the stories of tracking smugglers and mad-dog killers writer/artist Ron Randall creates an atmosphere of paranoia around the government's mysterious actions. 4-6 encapsulates both the appeal of the series and its recurrent themes: Mercy's on-off relationship with a police officer and her tendency to take risks due to inexperience. The Dark Horse Special fills in most of Mercy's past with a framing sequence dealing with a past lover trying to kill her old mentor. The Image Special features an alien conspiracy and Mercy considering her own lack of trust in people. Randall's writing is roughly crafted and his artwork's a little too stiff and illustrative, but the character's well thought out, and if the setting's not particularly original, it's well delineated and growing in depth.~NF

Amazing Montage: *5 issues 1996-1997, One-shot ('Oracle') 1998*

Joe Zabel and Gary Dumm are the creators behind Known Associates and Amazing Montage, essentially self-publishing a series of stand-alone thrillers and mysteries. The first series of one-shots were published without reference to The Trespassers, but are effectively part of the same series. Only *Bulletproof* contains no recurring characters, being the story of a hospital security guard's plan to fake his own shooting in order to convince the authorities that the guards ought to be armed. *Wolf Run* introduces amateur sleuths, Raymond Fish and Delphinia (Finn) Morgan, who stumble across a murderous couple while on a hiking trip. Ray and Finn return for *The Green Skull*, which is a more traditional locked-room mystery, and *Runaway*, in which they're part of a larger team trying to locate a missing teenager. *The Trespassers* is entirely concerned with Ray and Finn, initially just solving murders together, but, as Zabel takes complete control of the strip with 4, the stories become more character-led, albeit with mystery elements. In 4, a young woman writer in an isolated house faces her own nightmares and in 5, a blind woman has a mystery agenda. *Oracle* is a return to the murder-mystery, for a lengthy story that includes the first meeting of Ray and Finn. Dumm's own 'Mr Grey', a story of revenge, runs as a backup in 1-5. All the Ray and Finn mysteries are well plotted and likely to be of interest to fans of the genre. Though the scripts and artwork display few frills, the clarity of the storytelling makes the complexities of the stories easy to follow. There is a also a long Ray and Finn story in *SPX '98*.~NF

TRIDENT

Trident: *8 issues 1989-1990*

Ambitious UK anthology that tried to offer something for everyone, from Neil Gaiman and Nige Kitching's 'cyberpunk' superheroes, The Light Brigade, to Grant Morrison and Paul Grist's downbeat 1980s fable 'St Swithin's Day' (1-4), in which an angst-ridden teenager sets out to assassinate Margaret Thatcher. Morrison has rarely matched the perfectly observed, faux-cynical voice of his young narrator in 'St Swithin's Day', and the strip is undoubtedly the highpoint of the title. The central ideas of many of the other contributions were often too ambitious for the space allotted, and many of the creators involved were not really ready for professional publication, but any title that featured Eddie Campbell's Bacchus, plus early efforts by the likes of Mark Millar, D'Israeli and Mark Buckingham, is worth a look.~FJ

II is an impressive anthology commemorating an expanded second convention tour. Smith contributes a Bone short and writes a Rose piece that Vess illustrates, while Medley concocts a Castle Waiting story, Stan Sakai produces a Usagi Yojimbo ghost story and Mark Crilley's first full colour Akiko on the Planet Smoo is also featured. Best gem in a field of little diamonds, though, is 'Tea For Orson', a delightful Scary Godmother tale from Jill Thompson. An absolute must for lovers of comics and storytelling in general.~WW

TRINITY ANGELS

Acclaim: *12 issue limited series 1997-1998*

There were few comics in the 1990s that were so much plain fun as *Trinity Angels*. Kevin Maguire begins with three women waking up in the woods with shortened memories, but increased mammaries and ludicrous costumes. That's fun. He then introduces a horde of monsters that creak like the rubber-clad b-movie cannon fodder they're intended to resemble, as the women learn to adapt to their new circumstances. More fun. Memories return, the Angels discover their purpose, more ridiculous monsters continue to appear, and there's some even sillier superheroes. How much fun can you have? Maguire's writing is sharp and witty throughout, and it's a shame he only draws 1-5 and portions of 12 in his glorious clean and expressive style, meaning it could have been even more fun. The other contributing artists are decent enough to varying degrees, and it's fun, fun, fun all the way.~FP

One of DC's perennial revamps, this time a retroactive continuity implant concerning a founder member of the Justice League who then vanished for decades without anyone noticing. So far we have something that's silly, but no sillier than many other superhero comics. Our bog-standard blond jock type must have motivation, though, so, inspired by his father's inglorious criminal career, he's determined to become a superhero. And whaddya know, after some intense training latent superpowers just happen to manifest themselves. Unbelievably, that's the better stuff, and it slides downhill from here with the nonsensical plot passed off with the explanation that the villain of the piece is a nutcase. *Triumph* is an all-time turkey – no TR7, rather a battered and rusting old Herald at the bottom of the junkyard.~WJ

TROLL

Image/Extreme: *6 issues (all number 1's!) 1993-1994*

Bartholomew J. Troll is a member Youngblood who happens to look a bit like a troll. The first number one, by Rob Liefeld with Jeff Matsuda pencilling, sees Troll fighting for possession of a Daemonite orb, concepts borrowed from Jim Lee. *Troll II*, by Robert Napton and Karl Alstaeter, involves Shaft and Badrock from Youngblood plus a bonus British superheroine called The Jack, which may or may not have anything to do with a British flag costume. A Halloween special has the Maxx playing Leather Apron in a Victorian setting. A Thanksgiving special and a "stocking stuffer" help bulk out the number ones, along with a story set in World War II. Occasionally funny but rarely rising above its clichéd origins.~NF

TROLLORDS

Tru Studios: *15 issues, 1 Special 1986-1987*
Comico: *4 issues 1988-1989*
Apple: *6 issues 1989-1990*

An odd, and strangely compelling for some, series, presumably an attempt to teach responsible behaviour to young readers, about Three Stooges-like playful monsters who live with a realistic suicidal female character and learn lessons about decent human interaction. It can be pious, though it's usually funny, but hanging around on the off-chance of the arrival of amusing little green chaps is a dubious hope for a cure for depression. Story and art, by Scott Beaderstadt and Paul Fricke, improve fairly consistently throughout the run but the late Tru Studios issues, in black and white, are the best representatives.~GK

TROMBONE

Knockabout: *1 issue 1989*

Given that Europe is awash with fine humorous cartoonists and there are precious few in Britain and the USA, this anthology was a sensible attempt to bring the best of them to an English-speaking audience. Quel dommage! It transpires that while the drawings are as funny as ever, the text is far from hilarious, struggling to raise even a smile on most occasions. There are redeeming Hunt Emerson pages, but even he's not enough to make this worthwhile.~FP

TROUBLE MAGNET

DC: *4 issue miniseries 2000*

Witlock is a robot with an artificial intelligence. When his memory bank is stolen, he and his friends, Gwen, Herkimer and Dr Auster, find themselves on the run from the army. Trying to stay one step ahead, they must discover the secrets behind a conspiracy that's apparently aimed at resurrecting a cryogenically preserved religious leader. This light-hearted, but intelligent science fiction tale is written by Ryder Windham and lovingly drawn by Kilian Plunkett.~NF

THE TROUBLE WITH GIRLS

Eternity: *Series one 14 issues, 1 Annual 1987-1989*
Comico: *4 issues 1989*
Eternity: *Series two 19 issues (5-23) 1989-1991*
Marvel/Epic: *4 issue miniseries 1993*

Will Jacobs and Gerard Jones' secret agent spoof follows the adventures of reluctant international playboy/spy Lester Girls, who would much rather have been living a quiet life in the suburbs, with 2.4 children, a friendly dog and Sunday mornings washing the car. Fate has other plans for poor old Les: he can never escape the glamorous women, fast cars, big guns, international agents and would-be world conquerors who are constantly on his trail. His friend Apache Dick is usually happy to relieve him of the burdens of unwanted wealth and half-naked nymphomaniacs. The basic joke is a funny one and almost all issues are well done, but it does wear thin quickly and seems a little too formulaic after an extended run. The only differences between the publishers are that the Comico and Epic issues are in colour, the others aren't. Pick up a few issues and re-read them when you've forgotten the plot.

The series is nonetheless popular enough to have spawned several spin-offs starring both Les himself (*Lester Girls* 3 issues, Eternity, 1990-1991) and other members of the regular supporting cast such as the Lizard Lady (Aircel one-shot 1991) and *Apache Dick* (Eternity, 4 issue miniseries 1990). During the short spell with Epic, a Lester Girls story appeared in the *Heavy Hitters* anthology, and the first nine Eternity issues were available in three collections.~JC

TROUBLEMAKERS

Acclaim: *19 issues 1997-1998*

A pharmaceuticals giant undertake illegal genetic research to modify four kids into something no longer human. From that woefully unoriginal starting point, Fabian Nicieza crafts a humane and thrilling series of tales that use superpowers to explore the human condition, without ever becoming pompous or forgetting that comics should be fun. The characters combine all the trials of adolescence in stories dealing with peer group pressure, isolation, parental break-up, underage sex, and loss with all the classic superheroics of the teen team genre. Zach, the youngest member of the team, is heartbreaking when he asks why, if the scientists can enable him to survive a two hundred mile drop from outer space, they have not yet found a cure for his friend, a boy dying of leukaemia. The characters are likeable, the situations exciting, dramatic and traumatic, and the stories themselves are an absolute joy. Not so much a superteam comic as a really cool brat pack movie.~WW

TROUBLEMAN

Image/Extreme: *3 issues 1996*

Heavy-handed references like 'Giraud Spaceport', Troubleman-5 and Troubleman-36 exist in a world of homage-ridden, scantily-clad sci-fi. It's not completely without interest, but far too dependent on superhero action rather than story, and was cancelled before completion.~NF

TRUE CONFESSIONS

Fox/Fantagraphics: *1 issue 1991*

Autobiographical story with odd digressions into space-opera parody from Dave Hodson. Primarily dealing with the death at birth of one of his twin children, Hodson's sketchy work neatly avoids dragging the reader down into depression, and, while it's visually inventive, there's a raw, minimalist feel to it.~NF

TRUE CRIME

Eclipse: *1 issue 1993*

A companion to Eclipse's series of *True Crime Trading Cards,* there was obviously little market for a continuing series. There are two stories, both drawn impeccably by Dan Spiegle. Jenny Proctor and Dave Robinson relate John Gotti's induction into the ranks of the Cosa Nostra, while Valerie Jones outlines the case against Aileen Wuornos, "the first female serial killer". The former works quite well as a story but the latter's really just a lot of exposition that, though nicely illustrated, doesn't really work as comics.~NF

TRUE LOVE

Jonathan Cape: *1 volume 1981*
Fontana: *1 volume 1983*

Janice is the homely secretary in an advertising agency given to romantic flights of fantasy. One is prompted when philandering executive Stanhope Wright, almost caught on the job, distracts Janice's attention by giving her a stilton cheese from the stack of Christmas presents delivered to the agency. From here Posy Simmonds takes us on a hilarious trawl through the illicit relationships of the middle classes. Delightfully absurd, keenly observant, very funny, and with great appeal to the wider word, why is it that Posy Simmonds has ploughed such an isolated furrow for twenty years?~FP

Peristaltic Press: *3 issues 1994**
Slave Labor: *2 issues (4-5) 1994-1995**
Alternative Comics: *One-shot ('Stoneground & Hillbound') 2001*

A refreshing variation on anthropomorphic themes, in which Lenny the frog endures the dangerous world of the swamp. There are encounters with humans and fairies and many references to 'folktales' amongst the various inhabitants of the swamp. Jon Lewis has an unpolished drawing style but his unsentimental stories are clever and (blackly) humorous.~NF

TRUER THAN TRUE ROMANCE

Watson Guptil/Ebury Press: *1 Volume 2001*

Jeanne Martinet re-dialogues hoary old DC romance stories, largely from the period 1958-1968, applying contemporary attitudes to great humourous effect. The original plots are presented in synopsis form, showing, for instance, how a story about a woman attracted to her brother's friend while believing he could only love her sister, has been transformed into that modern-day curse, the woman only attracted to gay men. For some the art will be an attraction, but by and large the material is by good artists coasting. It's an ideal toilet book, best read in short doses as repetition blunts the effect.~WJ

TRULY TASTELESS AND TACKY

TRUMP

HMH Publishing: *2 issues 1957*

Harvey Kurtzman, still smarting from being evicted from *Mad*, meets Hugh Hefner, loaded with *Playboy* millions. There has rarely been a more lavishly produced comic, but as accomplished as it was, it was also a slight disappointment. With a line-up including Jack Davis, Will Elder, Al Jaffee and Wally Wood, and features that included spoofs of *L'il Abner*, Madison Avenue and Hollywood it was all eerily similar to *Mad.* While that's not necessarily a bad thing, and the quality is certainly unquestionable, there's a sense that we might have expected more. That said, there's still much to enjoy, particularly the beautifully rendered strip by Davis and Elder, both of whom embraced the improved production, and guest stars like Russ Heath and Arnold Roth.~DAR

TRUTH: Red, White and Black

Marvel: *4 issues + 2003 to date*

Wonderful and powerful addition to the legend of Captain America, using politics and history to scare the willies out of, and turn the stomachs of readers that no amount of blood and gore could affect. In the early days of World War II, Negro Americans segregated from white soldiers meet up in Camp Cathcart, Mississippi. Newlywed Isaiah Bradley, Maurice Canfield, communist son of wealthy black parents and career soldier Sgt. Lucas Evans try to get on with their lives and training immediately following the attack on Pearl Harbor. They're unaware that they and three hundred other black recruits are about to "disappear" as the US government looks for suitable – i.e. expendable – guinea pigs to test the new Super-Soldier serum developed by the mysterious Dr. Reinstein. Mirroring recent revelations in US history on the secret and illegal testing of VD drugs on black sections of the populace, Robert Morales and Kyle Baker use a deceptively seductive soap-opera and cartoon style to deliver a dynamite punch. So far, compelling stuff brilliantly told.~WW

TRUTH SERUM

Slave Labor: *3 issue miniseries 2002*

This is a strange, bathetic comic offering disassociative vignettes of largely blue collar superheroes and villains in slim digest size pamphlets. Characters drift in and out, often to little purpose, and Jonathan Adams seems to have no clear story in mind; these are glimpses, take them or leave them. Visual ticks and storytelling elements are appropriated from Chris Ware, but Adams lacks Ware's facility for observation, and in isolation the design quirks are intrusive. For all this, the art is good, and while *Truth Serum* is not compelling, it's easy to become sucked in.~FP

TRYPTO the Acid Dog

Renegade: *1 issue 1988*

Given the title one might assume this is a joke that came up in the bar one night, then got out of hand. It's an oddly affectionate homage to the old Krypto stories in *Superboy*, throwing in some exaggerated ecological villains along the way. Nicely drawn by Steve Leialoha and charmingly written by Bill Mumy and Miguel Ferrer, Trypto is fun, but hardly essential. He reappears in early 1997 issues of *Dark Horse Presents*.~FP

TSUNAMI GIRL

Image: *3 issue miniseries 1999*

Ostensibly, Tsunami Girl is a DJ caught up in drug gang shootouts and falling in love with a dissolute journalist at the *Ministry of Sex* club in LA, in this foolish jump on the techno bandwagon. However, the back-plot crammed story reveals her history of DNA from ancient Japanese mythical figures, which explains why government agents are hunting her in helicopters utilising Roswell UFO technology. One might have guessed. The Waltrip brothers' art is hampered by writer Mark Paniccia's dull layouts and the insides don't look anything like Hajime Sorayama's slick cyberpunk/porno covers.~GK

TUESDAY

KRP: *2 issue microseries 2002*

Artist Henrik Rehr lives a couple of blocks away from where the World Trade Centre once stood in New York, and in Tuesday he recounts his experiences of the day it collapsed. With far more space than people relating events in the *9-11* collections, Rehr is able to recount the smaller details that heighten a personal perspective. He fears for the safety of his wife and son, while interacting with others evacuated from his area. This is well-drawn autobiography covering a chilling event, and should have broad appeal.~WJ

TUG AND BUSTER

Art & Soul: *7 issues 1996-1998*
Image: *1 issue 1998*

Mark Hempel's "lusty, zesty, four-fisted he-man misadventure", is the adventures of a pair of misbegotten losers, one a big, quiet lump obsessed with machismo, who never talks, the other a gibbering child who worships him. Most of the humour comes not from situations, but from Buster's incessant chatter, full of sexual innuendo and scatological humour, and that wears thin after a while. Hempel works hard to give it a different visual look to *Gregory* and *Sandman*. He's been studying O'Neill or Muñoz, probably both, and has roughed things up considerably. Like *Gregory*, this is initially engaging, features repeated jokes and catchphrases that soon become tiresome, suffers from a limited set of scenarios, but contains some brilliant cartooning and visual jokes to offset this. The characters return in shorter strips in *Marc Hempel's Naked Brain*.~FJ

TUMBLING BOXES

Eros: *One-shot 1995*

A sequence of hardcore episodes by Reed Waller, beginning with cheerleader, Connie and boyfriend, Bobby, who turn out to be on a video being watched by Janni and Honey, who are themselves on a video being watched by two couples just starting an orgy. At the end, it's revealed that they're all part of a video being watched by a final couple. Waller uses computer-generated backgrounds for his excellent cartooning, thought the faces are occasionally weak (probably not a problem for readers here).~NF

TUROK Son of Stone

Dell: *29 issues 1954-1962*
Gold Key: *62 issues (30-91) 1962-1974*
Gold Key/Whitman: *34 issues (92-125) 1974-1980*
Whitman: *5 issues (126-130) 1980-1982*

Turok and his younger companion Andar are two 19th-century Native Americans who chance on a tunnel leading them to a region populated by both humans and, more pertinently, dinosaurs. Unfortunately, there's no return trip, since the land is surrounded by sheer cliff walls, and Turok must adapt to a unfamiliar new world. As largely written by Paul S. Newman, exclusively from 8, *Turok* is a basic lost-land scenario, and, while individually fine, the stories tend to become repetitive with more thorough immersion. What raises the 1960s material above the remainder is the excellent artwork of Alberto Giolitti, replacing the pedestrian Rex Maxon from 24. Largely predictable, Newman occasionally surprises, and in 58 aliens from a crashed UFO are thrown into the mix. In testing the repairs Andar actually surmounts the cliffs to view his tribe. It came to nothing, though, and Turok and Andar never returned home here. As with other Dell titles, Turok was introduced in issues of *Four Color* (596 and 656 respectively) before starting his own title from 3. Oddly, *Turok* was published under both Gold Key's imprint and that of affiliated Whitman from 92, with the final Whitman issues very ordinary. This incarnation of Turok is best (and cheaply) sampled through Valiant's 1994 four issue *The Original Turok Son of Stone*.~FP

TUROK, Dinosaur Hunter

Valiant: *48 issues (0-47), 1 Yearbook 1993-1995, 2 issue microseries ('The Hunted') 1996*
Acclaim: *One-shot ('The Empty Souls') 1997, one-shot ('Spring Break in the Lost Land') 1997, 2 issue microseries ('Turok/Timewalker') 1997 one-shot ('Redpath') 1997, one-shot ('Child of Blood') 1998, one-shot ('Tales of the Lost Land') 1998, 4 issues 1998, one-shot ('Seeds of Evil') 1998, one-shot ('Adon's Curse') 1998, one-shot ('Evolution') 2002*

After Valiant's Unity crossover, Turok returns from the now named Lost Land into contemporary South America. Along with him come bionically enhanced dinosaurs, thus hanging a massive millstone around the comic's metaphorical neck. The dinosaurs are boring. Boring, boring, boring. A couple every now and then would be okay, but Turok comes across so many in 1-20 you'd swear they're mass-produced by General Dinosaurs. This all-action Turok bears little relation to his predecessor, and a selection of creators are mixed and matched, producing one story arc at a time. Tim Truman turns in the best scripts, recognising Turok is a 19th-century Kiowa Indian, whereas others treat him as The Punisher with a bow and arrow. Truman's is the best story of the run, in 20-23, set in a Jurassic Park equivalent as a couple of old adversaries return and a pair of unconventional bounty-hunters are introduced. Rags Morales consistently tops a respectable selection of pencil artists used, depicting a powerful and dynamic Turok.

There are frequent return trips to the Lost Land, and Turok wasn't the only person to become stranded there, leading to some interesting stories, not least the group of demented Nazi women in 37-38. Truman and Morales have them attemptimng to transfer Hitler's brain into Elvis Presley's corpse! It's followed by a good Paul Gulacy illustrated story in 39-40, with a far more serious approach. The series ends on a high, but very abruptly and the heavy-handed ecological preaching of Mike Grell, Simon Furman and Mike Deodato in 'The Hunted' is dull.

The Acclaim revival is a different Turok on another world, so drops the "dinosaur hunter" appendage, although it's equally applicable. It establishes Turoks are a dynasty sworn to protect Earth from evolved dinosaurs their ancestor inadvertently let loose from the Lost Land. The latest, and reluctant, heir to the power is college baseball star and all-round stud Joshua Fireseed. Fabian Nicieza opts for the lighter side of superheroics, well illustrated by Rafael Kayanan, their issues offering a diverse and likeable cast and diverting plots. The microseries, illustrated by Paul Gulacy includes three Turoks and assorted other heroes to ultimately unsatisfying effect. The magazine size 'Seeds of Evil' and 'Adon's Curse' tie-in to the Turok platform video games. Despite impressive colouring and art they were the weakest of the Acclaim issues until the wretched 'Evolution'. That ties-in with another video game, but by this point Acclaim seem content to let amateurs produce the comic.~WJ

2099

Marvel: *6 issue miniseries ('World of Tomorrow') 1996-1997, one-shot ('Manifest Destiny') 1998*

When *2099* titles were cancelled with plots unresolved these arrived to milk an ever dwindling audience. Earth is in a bad way. After flooding the only habitable portions seem to be Latveria, ruled with an iron fist by Doctor Doom, and The Savage Land in the Antarctic, and aliens have infected much of what remains of humanity with a techno virus. The entire 2099 cast (and the Fantastic Four in 1-2) battle to save the world. Those familiar with the characters may enjoy the interaction between a usually unrelated cast. Otherwise this sprawls. 'Manifest Destiny' neatly ties up all loose ends in optimistic fashion, and has the benefit of Mike McKone pencils, although a familiarity with the cast is desirable.~FP

2099 UNLIMITED

Marvel: *10 issues 1993-1996*

Although ostensibly an anthology of short features based in the Marvel Universe of 2099 this title is a sneaky attempt to publish some quality material on the back of standard fare. Lead features Spiderman 2099 and Hulk 2099 are substandard and forgettable, but much of the filler material is sharp, challenging and surprisingly good. Of special note are R-Gang by Bob Fingerman (2, 10), Metalscream 2099 by Warren Ellis and D'sraeli (4, 7) and Duke Stratosphere by John Moore and Kyle Baker (5).~WW

20 NUDE DANCERS 20

Tundra: *2 issues 1990-1991*

Collection of one-page strips originally published in Comic Buyer's Guide. With few limits on content and a great artistic talent, Mark Martin's imagination and invention is astounding, with the pages including ridiculous cartoon characters, fake Mexican comics, fake Marvel ads, full-page posters, brilliant autobiographical pieces, and lots more. And it's almost all very funny. That's just the first issue, by the way, which measures about 15 inches by 12 (and is called the Year One Posterbook). The second is conventional magazine size; it has more strips, which, although still magnificent, require a little knowledge of comics for the full effect.~FP

2020 VISIONS

DC/Vertigo: *12 issue limited series 1997-1998*

Four self-contained three-part stories, only tenuously connected, mainly by being set in 2020 (nice title pun, eh?). Writer Jamie Delano weaves some interesting, but downbeat tales, and the artists are excellent choices for the mood of story they portray. Frank Quitely illustrates 1-3, where in a sharply divided New York a now old former pornographer, tries to rid himself of a plague virus, but instead infects his old flame, and off they're whisked to a detention area. Good characters and excellent storytelling make for the strongest segment. Warren Pleece illustrates 4-6, as a moustached lesbian private eye who stumbles into a plot involving the kidnapping of young girls for breeding. It's not as corny as it sounds, with a compelling lead character. The same however can't be said of 7-9's hotch-potch religious intolerance and private militia drawn by James Romberger. Hollywood is the setting for 10-12, as illustrated by Steve Pugh about a young hunk whose sperm is sold to rich child-yearning women. He's kidnapped by poor women wanting children, but it all goes horribly wrong. At least this time Delano offers us some hope. Exaggerating facets of present day USA was a clever idea that only gelled completely for the first two stories.~HY

Snappy, sassy and fearless, the 22 Brides are a girl gang living a precarious existence involving them with mobsters. Artist Scott Lee has an appealing big-eye style and creates commendably grimy and realistic locations. He also knows which parts of girls he likes, and manages to emphasise them throughout. Let's hope he sees some real ones some day. Fabian Nicieza writes up a storm. There's wit and imagination and some very funny dialogue, especially from an erudite enforcer who quotes from Bertrand Russell, and a gangster who takes Huggy Bear as his inspiration. Don't expect much beyond girls and guns and you'll be pleasantly surprised, but come expecting anything more and you'll be disappointed.~FP

TWILIGHT

DC: *3 issue miniseries 1991*

The innocent and bland characters who populated DC's 1950s science-fiction titles are the focus of *Twilight*. There's no real nostalgic glow around them, so writer Howard Chaykin plays fast and loose to good effect. Everything necessary to the plot is explained along the way, while readers familiar with the cast can have a wry smile or rage at their progression. Thankfully there's little resemblance to the unsophisticated characters of old. Chaykin uses the worldly-wise and amusing Homer Glint of The Star Rovers to narrate events in hindsight. As the story begins, Tommy Tomorrow has become an Oliver North figure, popularised as a war hero and becoming powerful on the basis of his standing. By the end of 1 humanity is immortal, which proves both blessing and curse, and their religious conflicts spread throughout the galaxy. In the end *Twilight* is a simple story, very well told; the excellent art of José Luis Garcia-Lopez raises this well above average.~WJ

Twilight is the daughter of Zeus and the demon, Strife, newly awakened after centuries and sought by two groups as a weapon against the return of Zeus. The first series is a brief introduction little plot and straightforward, but not unattractive, artwork from Richard Pollard. It's then expanded, with added sex scenes, for 'Raw'. Unfortunately, 'Live Wire' was supposed to be two issues, so readers will never know whether Twilight managed to defeat her brainwashed, best friend.~NF

In 1937, Reece Chambers, looking for revenge after gangsters run down his girlfriend, joins forces with her father, Dr Herth, and dons a costume to fight The Centipede. The two Elite issues were intended as a four issue miniseries, but were never finished. The regular series introduces reporter, Joan Casey, whose life is endangered by Dr Warner Norwood's attempts to raise the dead. Other issues feature a giant vampire bat (2), a hypnotist out of his depth (3), a bank robbery by someone impersonating the Avenger, causing him to become a wanted man (5) and old-fashioned mayhem of gun-molls, Satan's Sisters (8). John Wooley has fashioned some quietly satisfying tales with a pulp feel and Terry Tidwell is a good storyteller, though the overall quality of the artwork varies depending on the inker.~NF

Set in 2002, *Twilight-X* is a survivalist, action adventure, with a heavy reliance on military machinery and terminology. Jed Saxon, ex-military Special Forces, and girlfriend, Toots encounter Richard Goldman after a breakdown of society and return to feudalism. 'Interlude' precedes this with Jed and Toots on a yacht, confronting the White American Nationalist Klan (satire, see). 'Ascension' has Dr Melissa DuVall join Jed, Toots and Richard in time for the yacht to sink and the group take to a submarine, the Sappho 3. 'Quarterly' continues the storyline, adding Nigel Thomas, who happens to have a nuclear submarine, the Neptune, which has attracted the attention of the Klan. '-tra' takes place between 'Ascension' 3 and 4, as the Sappho 3 is pursued by the Klan fleet, but the coloured art is a big improvement, over the normal, primitive manga style of creator, Joseph Wight. A new miniseries is due and a single volume collects the series to date, including new material and early strips from *Mangazine* and *Apex*.~NF

THE TWILIGHT ZONE

Gold Key: *91 issues 1962-1979*

The pattern was unwavering from start to finish: either three or four sting-in-the-tail stories featuring a generally high standard of script and art. Frank Miller allegedly contributed to 84 and 85, although you'd be hard pressed to recognise it.~WJ

THE TWILIGHT ZONE

Now: *One-shot 1990, Series one 16 issues, 4 Specials 1991-1993, series two 6 issues 1993*

Prompted by the generally inventive TV shows, this fails to spark the imagination. "As ye sow, so shall ye reap" is an all too common plot, closely followed by the last panel twist ending mined by comics for decades. In the first series TV writer J. Michael Straczynski turns the formula on its head in 2, a story diluted by duff art, and Steven Dorfman writes two unpredictable surprise-ending stories in 10. Gimmicks and variant editions are commonplace. The 1990 one-shot is available in a bewildering array of formats, all containing a decent Harlan Ellison and Neal Adams story, 9 has a long 3-D section and series three 2 is totally computer-generated, although not very well, so indicative of the remainder of the series.~FP

TWIN EARTHS

R. Susor: *Series one 9 issues (2-10), 1 Special 1990-1994, series two 5 issues 1993-1994*

This magazines collect the newspaper strip feature that ran ten years from June 13th 1952 to May 25th 1962. The story concerns another planet named Terra, in Earth's orbit but hidden from us by the Sun. Terra is greatly advanced scientifically and 92% of its population are women. When Vana, an undercover Terran, finds her life threatened by her fellow agents on Earth she surrenders to the FBI. Her case is taken by assistant director Garry Verth. Invasion from Terra is inevitable but there are unexpected factions on both sides. Written by veteran comics editor Oscar LeBeck and drawn by Al McWilliams at the peak of his abilities. The collections of daily strips are eighty pagers and cover roughly a year each from beginning with May 1953. The Special is the delayed first issue with early strips back to June 1952 completing the daily run. The second series covers the never previously reprinted Sunday adventures, each covering a year's continuity. The great charm of this story is how the technologies of Terra are compared to the carefully illustrated commonplaces of 1950s America.~SW

TWIN SPARK GIRLS

Redlight Manga: *1 volume 2001*

Explicit sex content is the main reason for this collection of stories, held together with slim plots. The longest of them, the titular Twin Spark Girls, are the teenage daughters of a wrestler who enact revenge on rapists and other unsavoury types. When they're not shagging them voluntarily, that is. The art is as undistinguished as the content.~WJ

TWIST

Kitchen Sink: *3 issues 1987-1988*

The only common thread among the strips in these comics is that they deal with things that aren't quite acceptable, whether it be Daniel Clowes' dangerous child Freddy Brown The Squirt, J.D. King's forthright 'Sammy' or Peter Bagge's 'Geniuses'. With short contributions from Robert Crumb, Richard Sala, Basil Wolverton and the Friedman brothers it certainly is an eclectic collection. As a bonus, 3 reprints Harvey Kurtzman and David Levine's 'Return of a Christmas Carol' from *Esquire*. As with most anthologies of this kind the stories are a little hit-and-miss but editor J. D. King tried hard to provide something a little bit different.~NF

THE TWIST

Dell: *1 issue 1962*

That's right, folks, a comic devoted to the dance Chubby Checker made world famous! In a "Why don't we do the show right here?" plot two rival establishments compete for the custom of young and old mad keen to twist wherever they can, even in the police station. Very much a daft timepiece: read and believe.~FP

TWISTED SISTERS Comics

Kitchen Sink: *1 volume 1993, 4 issues 1994**

The aim of promoting female cartoonists in a male dominated industry is admirable, not least because the topics interesting women have appeal beyond the comics ghetto. The diversity of approach is such, though, that little connects the material beyond the premise. Diane Noomin edits both the introductory 256 page volume and the magazine size series, and provides a career highlight with her strip for 4 about miscarriages. Humour is a priority for most contributors, and Carol Lay and Carol Tyler come up trumps. Would ,contributions from Fiona Smyth and the tedious Dame Darcy would be published anywhere outside such a display of solidarity project? Storytelling isn't a priority for either, yet the equally off-putting art of Aline Kominsky-Crumb is used to provide extremely moving stories in 4. There's something to enjoy in each issue, but no readers will agree on which those stories are.~FP

TWISTED TALES

Pacific Comics: *7 issues 1982-1984*
Eclipse: *3 issues (8-10) 1984, Graphic Album 1987*

Bruce Jones wrote just about every story in this horror anthology he edited with April Campbell. Modelled on the 1950s EC anthologies, as the series progressed the stories became longer. It allowed Jones to produce something more penetrating than an eight-page shocker, but also encouraged him to stretch thin suspense tales via unnecessary characterisation.

Twisted Tales benefited from some superb realistic artists, John Bolton and Richard Corben among them, maintaining a high artistic standard throughout. Probably the most notable story is 'Banjo Lessons' in 5, which Jones and Campbell managed to turn into a cause célèbre by writing an editorial about it to pre-empt any charges of racism that might arise from misunderstanding. Since stories of this type hammer you over the head with their morality their worries are particularly hard to swallow. The story has a very dull structure and the editorial completely ruins any element of surprise.~FJ

TWISTER

Harris: *1 issue 1992*

Twister murders serial killers by twisting their necks. Always a step ahead of the authorities in tracking the killers, he becomes both an FBI target and an acupuncture adept, using the vicious Animal as bait for his trap. The latter earns his name by eating his victims. James Hudnall explores a singularly unpleasant, yet riveting, mindset while Bill Koeb's art varies between great beauty on the panels he likes, to dashed-off on those he doesn't care about. The fainthearted can be relieved that only one of four planned issues saw print.~FP

Justin Hampton's TWITCH

Aeon: *One-shot 1994*

A collection that charts the artistic development of former Jim Woodring assistant Justin Hampton, with strips dated between 1991 and 1994. The star turn is the cover feature 'Fraidy Cat', which shows Hampton in full, lucid control of the storytelling and the graphic weight of each night-time panel. It would be impossible to match Woodring's back cover soundbite that *Twitch* "licks your eyes like frisky ectoplasmic weasles" although the stretched photo of Hampton thinning down an obviously chubby face does him no favours.~SW

Batman: TWO FACE STRIKES TWICE

DC: *2 issue microseries 1993*

Being in two parts and telling two stories each issue, this is a play on the duality of the Batman villain, of course also heavily featuring the Dark Knight himself. Mike Barr and Joe Staton do the Batman 1940s-style, complete with giant props and a proper detective story. Barr returns with Daerick Gross for the other half of the title, but few stories would be good enough to overcome the awfulness of the painted artwork, especially not this slight tale.~NF

THE TWO FACES OF TOMORROW

Dark Horse: *13 issue limited series 1997-1998**

Yukinobu Hoshino's adaptation of James P. Hogan's novel is both a simple action adventure and a complex 'hard' science fiction treatise on the nature of intelligence. Supercomputers running the World's affairs are becoming incapable of handling the complex decisions required. In order to test man's ability to control a new breed of intelligent computers an experiment is organised in space. Scientists will systematically antagonise a fast-learning computer, provoking it to defend itself against their assaults, and predictably the computer resists more strenuously than anticipated. The series starts slowly with a great deal of technical exposition and character build-up, but that stands the reader in good stead as the strip attempts to mirror the fast-paced responses of the computer. Hoshino seems to use too few lines, giving an impressionistic feel to some pages but overall, this is thoughtful and well-crafted.~NF

TWO-FISTED SCIENCE

G.T.Labs: *1 volume 1996*

Jim Ottaviani attempts to present scientific theory and biographies of famous scientists in populist fashion. Much of the volume concentrates on the life, work, and extra-curricular exploits of Richard Feynman, a Nobel Prize winner who contributed to the development of the Atomic bomb, dealt with in greater detail in *Fallout*. Feynman's capricious character is well portrayed, and the humourous touches applied to other scientific problems certainly sweeten the pill, particularly Sean Bieri's depiction of a heavyweight disagreement between Newton and Liebnitz, with a cameo from Sid The Sexist! Other artists contributing a significant amount of pages include Mark Badger, David Lasky, Bernie Mireault, and Scott Roberts, while there's a gorgeous back cover illustration from Gene Colan. If science mystifies you, you could do far worse than investigate this. Safecracker was an excerpt released as a comic detailing Feynman's hobby.~FP

TWO-FISTED TALES

EC: *24 issues (18-41) 1950-1955**
Gemstone: *24 issues 1992-1998**

Before *Two-Fisted Tales* war stories in comics had never developed beyond the "Eat leaden death you Ratzi goosestepper" school. As editor, chief writer, layout artist and often illustrator Harvey Kurtzman presented stories of ordinary people involved in conflicts through the ages. Continuing its numbering from *Haunt of Fear*, *Two-Fisted Tales* was conceived as an adventure title, but after a dreary first issue, and two stronger follow-ups, Kurtzman took full editorial control and war became the focus. By 21 the artists most associated with the series, Jack Davis, Wally Wood and the John Severin and Will Elder team, had arrived, with Kurtzman initially illustrating the fourth tale in each issue. Few other artists matched the consistently high quality of the regulars.

The initial publication coincided with the Korean War, and while using the conflict for stories Kurtzman never glamourised the action; indeed his stories often plotted the downfall of characters too eager to participate. He also detailed the effect of war on innocent Koreans, a poignant example being the story of the Chun family house in 24. Detailed research and historical accuracy characterise the title, particularly in stories concerning the day-to-day lives of those occupying submarines (32) or the biographical tales featuring Custer, Grant, Washington and others. It's also apparent in the Civil War issues (31 and 35), which depart from the template to encompass wider themes. 22-32 can be ranked among the best comics ever published, each containing four superbly written and illustrated stories. The often reprinted 'Corpse on the Imjin' (25) is a masterpiece that typifies Kutzman's approach to war stories. A G.I. sitting on the Korean riverbank notices a corpse floating down the Imjin and, as he begins his lunch, speculates on how the person died. The soldier is then ambushed by a Korean, and, having laid his rifle to one side, becomes involved in desperate hand-to-hand combat. Emerging victorious, the G.I. staggers away as the story comes full circle with his assailant now floating down the river.

Initially successful enough to spawn the companion *Frontline Combat*, sales eventually didn't match the quality. With 36 the format revived the original concept of an adventure comic under the editorial aegis of John Severin, switching the title to *The New Two-Fisted Tales* in recognition of the change. The previous attention to detail was absent under chief writer Colin Dawkins, who preferred a rollicking good yarn. 36-39 certainly aren't bad, in fact 36 is very good, but neither do they match the war era. Kurtzman returned for the final two issues, which stuck to the adventure theme and contain some great artwork, but still fall short of the earlier material, though they provide a template for the later Valor.

All numbering refers to the original EC publications, which were sequentially reprinted by Gemstone, who ran the numbering from 1 to 24. Any issue of *Two-Fisted Tales* stands alone, so sample these affordable reproductions of some of the best war comics ever produced. A slipcased set collects all issues in black and white.~WJ

The New TWO-FISTED TALES

EC/Dark Horse: *1 issue 1993*

It was a worthwhile idea to create a new version of what was arguably Harvey Kurtzman's finest achievement. Sadly, he seems to have had little to do with the day-to-day editorial duties, and died before the comic was published. While the stories are fine, the artwork for the new material would never have been acceptable to Kurtzman in the 1950s.~WJ

TWO-FISTED ZOMBIES

Last Gasp: *One-shot 1973*

A suitably demented tale living up to the title from Tom Veitch, with some plot and art from then very young younger brother Rick, who can't decide if he wants to be Jack Kirby or Jim Steranko. Tom has no doubts. He's read his *New Gods*, and recycles elements with the additional gore and nudity permitted by Last Gasp. Given their later careers, this is an amusing curiosity, but no more.~FP

TWO FOOLS

Last Gasp: *1 issue 1976*

Veteran underground creator Ted Richards collaborated with his peers Justin Green and Willy Murphy on this anthology of mostly silent gag strips about a pair of Laurel and Hardyesque buffoons who bumble through various historical settings in a mildly amusing fashion. By far the most interesting strip in this collection is Richards' autobiographical eulogy to the then recently deceased Murphy, which touchingly captures some of the long gone, freewheelin' fun of the early 1970s underground scene.~AL

TWO-GUN KID

Marvel: *136 issues 1948-1949 (1-10), 1953-1961 (11-59), 1962-1968 (60-92), 1970-1977 (93-136), 2 issue microseries ('The Sunset Riders') 1995*

Lawyer Matt Hawk secretly keeps law and order in the Wild West of the 1870s as the Two-Gun Kid. While notable artists such as Jack Davis, Jack Kirby, John Severin and Al Williamson worked on the title during the 1940s and 1950s, only Kirby gave anything resembling his best, and the stories are identikit Westerns with little resonance once the comics are closed. Stan Lee and Kirby revamped the masked man in 1962, giving him a revised origin in 60 and an extraordinary sidekick named Boom Boom in 64. The secret identity twist and comedy touches made entertaining reading throughout the 1960s, with the mid-period team of Steve Skeates and Dick Ayers producing the most noteworthy stories. From 99 it's reprints all the way.

The microseries presents Matt Hawk being his own murderer as Two-Gun Kid, effectively destroying both identities. Teaming with a Native American, a Canadian spy and a samurai, Two-Gun then has to stop a potential international incident sparking a global war in the 1890s. Nicely designed and decently created, but the cover price was extortionate.~SW/WJ

2,000

DC: *2 issue microseries 2000*

When T.O. Morrow changes the past by sending inventions from the present back in time, the JLA attempt to retrieve them. When they run into the newly formed JSA in 1941, however, the Spectre is convinced that the horrors of 2000 need to be prevented, imprisons the JLA and leads the JSA towards world domination in place of Morrow. This prestige-format series, written by Tom Peyer and drawn by Val Semeiks, is a better than average time travel adventure, if you enjoy that sort of thing.~NF

2000AD

Eagle: *6 issue miniseries 1985, 4 issues 1986*

Quality: *50 issues 1986-1988 (5-26 2000AD Presents), 1988-1990 (27-54 2000AD Showcase)*

Fleetway/Quality: *15 issues 1991-1992*

With their reprints from *2000AD*, Eagle tested the waters with a "mega-series". The Judge Dredd is by John Wagner and Ron Smith, who manages some of Brian Bolland's detail while retaining the looseness of Mike McMahon, though with static layouts. Wagner includes the usual mix of humour and action in 'The Black Plague' (1, 2, mutant spiders in the Cursed Earth) and Pirates of the Black Atlantic (5, 6). Alan Grant and Carlos Ezquerra send Johnny Alpha, Strontium Dog on a mission to bring back Adolf Hitler for trial (3-6), which about sums up the sophistication on show here. Fun, but neither of the creators at their best. 1-5 feature Alan Moore and Alan Davis' bad boys D.R. and Quinch*. These hooligans seem to ruin pretty much everything around them in their quest for fame and fortune, but it's very pretty and very funny.

The regular series dropped Dredd and Strontium Dog, who had their own titles, adding Judge Anderson of Psi Division, beginning with a rematch against her old nemesis, Judge Death (1-6), and Skizz, Alan Moore's *ET* in Birmingham (1-8). Anderson gives writers Wagner and Grant more room for characterisation and she's a strong lead. Jim Baikie draws a good scratchy Skizz, but it's not Moore's best. The transposition to England allows satirical digs at Thatcher's government, but it doesn't come across as a fresh approach to the subject. D.R. and Quinch last a couple of issues (and return briefly for 12) but the title is otherwise reliant on Tharg's Future Shocks for light relief (with an early Grant Morrison piece in 13). With 7, the page-count increased to add Dan Dare. Written by Gerry Finlay-Day and drawn by Dave Gibbons, it's not good. Finlay-Day also wrote 'Harry Twenty on the High Rock', drawn by Davis, an unconvincing escape from prison plot, set in space. Judge Anderson appears again for a story of demonic possession (9-12), with art again by Brett Ewins, which has its moments. By the time Zenith begins (31) we're left with a number of long-running strips of little merit. 'Return to Armageddon' is about the discovery of a frozen planet that was once Hell, 'Inferno' is a Rollerball rip-off and 'Meltdown Man' features an ex-SAS sergeant thrown into an alternate universe where animals have been engineered into human forms. They all suffer from poor pacing and quickly become tedious. Zenith*, by Grant Morrison and Steve Yeowell, is an okay attempt at serious superheroes, but highly overrated.

The Quality issues are poorly printed on cheap paper. After S.Q.P. Inc. starts to appear in the credits there are no dates (bearing in mind that 5 is dated 1985 according to the indicia) and little editorial content. The final issue concludes 'Meltdown Man', but 'Mean Arena' ends without explanation mid-episode.

The final attempt to reprint from *2000AD* in a regular series is on expensive paper and in colour to show off the painted artwork. Rather than cover several characters it concentrates on one main story with various one-off back-ups. It begins with 'Below Zero', by John Brosnan and Kev Hopgood, and features Zero City's bionic taxi-driver, Tanner, in a case involving frozen bodies but wandering minds. It ends with the ABC Warriors' Khronicles of Khaos, in which Kevin Walker's painted artwork is surprisingly effective. However, there's still no editorial content or dates.~NF

2000AD Graphic Novels

The first to issue collections of 2000AD material were Titan Books throughout most of the 1980s, with an admirably broad choice. Most are dealt with in separate entries (*Halo Jones, Robo-Hunter, Slaine, Zenith* etc). D.R. and Quinch, though, never had their own American comic title, due to the finite amount of material. Most of it, though, is in the Titan collection. When presented with damning evidence, Alan Moore admitted to appropriating the characters and their attitude from a *National Lampoon* feature, but the plots are his. D.R. and Quinch are alien hoodlums, using all the means available in the future to cause mayhem. It's very funny, and graced by some fine Alan Davis art. *Hewligan's Haircut* from the short-lived 2000AD Books imprint, is the addled minds of Peter Milligan and Jamie Hewlett with very little, if any, editorial constraint.

* Available in a collected edition

Escaped psychiatric patient Hewligan's haircut changes the universe. There are some nice images from Hewlett, but nothing else worth bothering about.

Mandarin published *Killing Time* with some stylish early art by Chris Weston, but John Smith's initially engaging plot of proper Victorians falls to pieces amid bloody satanic goings on. Thereafter Hamlyn dispensed with the Mandarin imprint. In the volume of the same name Nikolai Dante is a swashbuckling Russian rogue fighting Tsarist control in 2666. Robbie Morrison's introductory run relies entirely too much on convenient coincidence, but Simon Fraser's detailed art is a joy. Both improved as Dante became a *2000AD* regular, but nothing since has been collected. Only the earliest *Missionary Man* stories are collected as well, which are at least those with Frank Quitely art. Gordon Rennie writes a character dispensing the Lord's vengeance in small outback communities in The Cursed Earth, known to Judge Dredd readers. He adopts a faux-Western style for a diverting read featuring mutants, ghosts and aliens. Durham Red was a popular latter-day Strontium Dog, but her collection propels her a millennium away from a familiar environment. The item of wonder here is Mark Harrison's art, mixing painting with computer wizardry for an effect that still impresses six years later, rare for computer technology. Unfortunately writer Dan Abnett is on autopilot, but he's far better on *Sinister Dexter*, possibly his best work to date. The improbably named Finnegan Sinister and eccentrically named Ramone Dexter are guns for hire in a sprawling future central European city. They're also the classic buddy act so beloved by TV and film, yet rarely seen in comics. Abnett's dialogue is sharp and witty, served well by the imaginative elements to his plots and outlandish leads. It's very well painted by S.B. Davis, Simon to his mother, in a splattered, blotchy fashion that's heavily photo-referenced. The static effect this produces, though, adds to the overall style. The strip became even better in *2000AD*, but, again, later stories remain uncollected.~FP

2001: A Space Odyssey

Marvel: *One-shot (Treasury Special) 1976, 10 issues 1976-1977*

After a spectacular and faithful adaptation of the visually stunning, if plotless, Kubrick film, Jack Kirby embarks on a procession of intriguing variations on the theme of forced evolution. Proto-hominids (1-2), prehistoric conquerors (3-4) and even thinly disguised comic geeks (5-6), all get a boost towards destiny by the mysterious Monolith. The obvious restrictions of the story format soon force Kirby to expand beyond the limitations. 7 shows the cosmic wanderings of a Star-seed, the usual result of a human encounter with the Monolith, and the last issues tell of X-51 (Mr Machine, and eventually Machine Man) a robot that must evolve or die. It's everything Kirby fans love, but also a good casual read for the dilettante.~WW

2001 NIGHTS

Viz: *10 issue limited series 1990-1991**

A comic deserving the term 'epic' as mankind journeys to the furthest reaches of the universe to gradually colonise the stars. The title harks back to both *2001: A Space Odyssey* and the *Arabian Nights* format of vignettes: together they're used to tell the story of how mankind pushed further into space. It's a wide-reaching and complex science-fiction saga that initially seems disjointed and somewhat ethereal, but it rewards careful reading when the pieces start falling together with 3. The stories thereafter show glimpses of continuing progress. Yukinobu Hoshino's art is astounding, but his tendency to dwell on the technical aspects denies the warmth that's definitely there. 6 is probably the best sample, as humanity discovers there are forces of nature it can't control, but 8's heart-wrenching tale of love's longevity is the best single chapter.~FP

2000 MANIACS

Aircel: *3 issue miniseries 1991*

No-Budget auteur Herschell Gordon Lewis pioneered hardcore gore flicks. *2000 Maniacs* was a gothic hillbilly horror that had innocent tourists offed by inbred psycho rednecks. Kids went to see it for full-on gutpuke in livid Technicolor, and that's what they got. It's therefore hard to imagine a more pointless exercise than this turgid black and white adaptation, but even the remotest chance of fun is scuppered by the monumentally lousy artwork of one Nigel Tully. This geezer is so slapdash he can't even be arsed to draw a large rock properly.~AL

Daredevil's foe Typhoid Mary manifests multiple personalities. While Mary Walker, detective, investigates the murder of prostitutes, Typhoid has a more direct manner. Simultaneously the third personality is a shy artist. Complicating the plot are two film students who want her to star in a movie. That Ann Nocenti and John Van Fleet are attempting something out of the ordinary is to be commended. This aspires to be more than a simple punch-'em-up, but peel away the affectation and obfuscation and there's very little left. A triumph of style over content.~WJ

UFO FLYING SAUCERS

Gold Key: *13 issues 1968 (1), 1970 (2), 1972 (3), 1974 (4-5), 1975-1977 (6-13)*

The giant sized 1 concentrated on adapting actual UFO sightings to comic strip form with artists such as Alberto Giolitti, Luis Dominguez, Joe Certa and Dick Giordano. Thereafter the series carries on with abduction tales and alien encounters in a more traditional, though not particularly inspiring, anthology format with occasional 'factual pages'. The title changed to *UFO and Outer Space* with the 14th issue. Competent but dull.~WW

ULTIMATE ADVENTURES

Marvel: *2 issues + 2002 to date*

Ron Zimmerman writes an extremely well worked twisting of the Batman mythos, as rich guy with a secret Jack Danner adopts smart, but troubled and troublesome teenage orphan Hank Kipple. As samples of the current Marvel renaissance as well as very good comics in their own right, you can't try better than these.~WJ

ULTIMATE MARVEL TEAM-UP

Marvel: *16 issues 2001-2002*

The title's a misnomer; this series is really *Marvel Bendis Showcase* with the significant team-ups being between star writer Brian Michael Bendis and a parade of artists. Bendis gradually works his way through Marvel's cast of characters, reshaping their origins and motivations for a contemporary audience. In 1, drawn by Matt Wagner, Spider-Man meets Wolverine who leaves a strong impression on the youngster. The fight with the Hulk in 2-3 has appropriately dynamic art from Phil Hester and Ande Parks, while the meeting between Iron Man and fan Peter Parker in 4-5 is handled with a suitably awkward feel by artist Mike Allred. The team-up idea is sidestepped completely during the following three issue Punisher/Daredevil story where Spidey appears in just a few panels. Bill Sienkiewicz's artwork is remarkably consistent and complements Bendis' dialogue strings excellently. This is followed by Jim Mahfood's tongue-in-cheek depiction of a team-up with the Fantastic Four in 9. The meeting with Man Thing in 10 is really a story about Spider-Man villain The Lizard, but features great sewer artwork by artist John Totleben. 11's encounter with the X-Men in a shopping mall is fun, but the semi-manga style and poor colouring don't really sell the script and the Doctor Strange story in 12-13 is a bizarre rewrite of 1965's *Spider-Man Annual* 2. Spidey then encounters distinctly teenage versions of The Black Widow drawn by Terry Moore in 14 and Shang Chi, Master of Kung-Fu in 15-16. With Bendis being the prime mover, the crux of each team-up presented becomes "does this artist's work mesh well with the script?" In too many issues this is not the case and the results, and the colouring in particular, are disappointing. A collection gathers 1-5~SW

ULTIMATE SPIDER-MAN

Marvel: *30 issues +, 1 Super Special 2001 to date*

This re-boots *Spider-Man*, starting with his origin and continuing through early adventures and first encounters with allies and foes, unveiling a fresh character devoid of the baggage carried by his counterpart. The eleven pages that introduced Spider-Man in *Amazing Fantasy* 15 are expanded upon to occupy 1-5 (without crediting Stan Lee or Steve Ditko), recreating the character and cast for the 21st century. This occasionally means tinkering with the expectations of *Spider-Man* readers. Mary Jane Watson is present from the off and a redesigned Green Goblin from 6, while Gwen Stacy, one of Marvel's greatest casualties, is re-cast as a rebel who's no stranger to school expulsion. After 5, other than reintroducing villains, the comic wends its own way, quashing all accusations of retreading a familiar path with 13. Marvel President Bill Jemas had a strong hand in devising the initial direction, but it's the snappy dialogue of Brian Michael Bendis that's most effective in establishing the contemporary nature of the comic from 1. Bendis writes alone from 8, while the teaming of Mark Bagley and Art Thibert for the art results in career highs for both. They're not as successful on the covers, which strive to accentuate Spider-Man's physical dexterity, but sometimes look plain bad. This is a minor caveat regarding what is otherwise a successful and enjoyable superhero comic. Highlights include Peter Parker's initial meeting with newspaper proprietor J. Jonah Jameson in 8, a bruising first encounter with Dr Octopus in 14 and a return in 18, teen life and the rabid Norman Osborn in 22, followed by the Green Goblin in 24-27. During the latter Bendis toys with the minds of long-time Spider-Man fans, and throughout he excels at providing a fresh twist on familiar scenarios, even down to the likes of Parker having to escape school to fight a villain in 28.

The instant popularity of this title caught everyone by surprise, meaning any of the first half dozen issues are relatively scarce. Those just wanting to read the stories can purchase books collecting story arcs, and 1-3 were also collected in a cheap format. The Super Special is a codicil to *Ultimate Marvel Team-Up*, and has Spider-Man considering his new career in the course of encountering numerous other Marvel characters. There's a surprise in seeing the likes of Frank Cho, Craig Thompson and James Kochalka among over twenty contributing artists, but after a decent start the script resorts to accommodating pin-ups to the detriment of any story.~FP

ULTIMATE X-MEN

Marvel: *19 issues + 2001 to date*

Mark Millar and Andy and Adam Kubert adjust *X-Men* continuity to cash in on the success of the movie with creditable results. The first story arc, 'Tomorrow People' (1-6*), sets the scene with a granite-hard Professor X gathering a team of young superpowered freaks as President Bush's Sentinel Robots burn down mutants in the streets and Joe Public is sanctioned to lynch anyone considered different. The greatest threat to the safety of the planet is the professor's old partner Magneto, who has gathered his own band of followers promoting an agenda of terror and death amongst their genetic inferiors. After the dust of the inevitable showdown settles, the X-Men are very public heroes waging a political and PR battle to win the hearts and minds of the populace, as well as their more traditional roles as crimefighters. 7-12 explores the early days of Wolverine via the return of a covert government agency that has been kidnapping mutants for years to use as living weapons. It's an obvious attempt to introduce a truckload of other mainstream "X" characters into this universe. Chuck Austen and Essad Ribic then produce a warm, yet chilling tale featuring Gambit and his efforts to save a kidnapped child. ' World Tour' sees the X-Men visit England to promote Professor Xavier's new book on human/ mutant integration, as a body hopping monster escapes to menace the world.

Slowly though the novelty gives way to the continuity soap-opera that was the bane and blessing of the regular series as Xavier threatens to disband the team. He changes his mind just in time for another go-round with the Brotherhood of Mutants (21-25) as Kitty Pride joins up and Jean Grey starts to lose her sanity. For long-time fans it must feel awfully familiar if not a little ominous. Generally of a high quality, the major failing of the series thus far has been the gratuitous shoe-horning of seemingly every X-property that Marvel owns into the narrative rather than concentrating on plot and character development. A solid read for newer fans, but die-hard X-Fans probably don't approve.~WW

The ULTIMATES

Marvel: *7 issues + 2002 to date*

General Nick Fury, in response to the changing world of superheroes and with the backing of the government, assembles a team to address threats to the world consisting of Captain America, Iron Man, Giant Man, and The Wasp. After trying to recruit a hippy-ish Thor, Dr Bruce Banner, embittered and depressed by his failings, becomes the Hulk after mixing his serum with super-soldier blood. The Ultimates' first mission is therefore to defeat the Hulk, who's pursued Betty Ross to a restaurant in New York (1-5). Thereafter Giant Man goes into hiding, and is hunted by Captain America. This superior soap opera that just happens to be an alternate version of the Avengers, comes courtesy of Mark Millar and Bryan Hitch.~NF

ULTRA GASH INFERNO

Creation Books: *Graphic Novel 1999*

A compilation of 9 short stories by outlaw Ero-Guru ("erotic-grotesque") artist Suehiro Maruo dwelling on the dark and tainted world of sexual violence, bondage and fetishism. Images designed to shock in a blend of mixed media including drawing, photography and collage use many of the icons of erotica from uniforms and Victoriana to Punk Rock to tell stories of degradation and debauchery. Revoltingly beautiful product but only for the strong-stomached and open-minded.~WW

ULTRAFORCE

Malibu: *11 issues (0-10) 1994-1995*
Malibu/Marvel: *16 issues (∞, 1-15) 1995-1996*

The zero issue reprints a two-part preview that ran in *Wizard* magazine. Written by Gerard Jones and drawn by George Pérez, it ought to have been a promising team comic mixing new and existing Ultraverse heroes, but the selection of members and the first villain, Atalon (from an underground kingdom), didn't bode well. Most of the character subplots were so dull that readers were more likely to be asleep than paying attention to the action. 8-10 were part of the countdown to 'Black September', which merged the Marvel universe with the Ultraverse. This was pretty much the death knell for the latter as its writers, attracted by independence and a new world with which to work, mostly found themselves with no further control of the characters. 10 isn't even the end of a story, continuing as it does into *Ultraforce/Avengers Prelude*, *Avengers/Ultraforce* and *Ultraforce/Avengers*.

The infinity issue preceding the second series is a forgettable 'Black September' tie-in with an alternate version of the Avengers. The new series proper was started by Warren Ellis and drawn by Steve Butler (1-3). Now led by the Black Knight and government-sanctioned, the team gained a headquarters, but, as far as characterisation went, nobody seemed to know who was going to be in the team anymore. If the writers weren't really putting their best into it, it was a minor miracle to get the same artist one issue after another until those journeymen the Deodato Studios came on board with Len Wein from 10. Two back-up strips, though short, are worth mentioning: 'A Lonely Place' (10), featuring Lament, drawn by the Kelley Jones-influenced Kyle Hotz, and a Ghoul story, drawn by the Pander Brothers (11), but don't go out of your way for them. All in all, a terrible waste of effort.~NF

ULTRAFORCE/SPIDER-MAN

Malibu: *1 issue (1A) 1996*

Written by Marv Wolfman but drawn by committee. Spider-Man and the Green Goblin team with Ultraforce to try to prevent their two worlds declaring war on each other as events are manipulated by a mysterious, pointy-fingered alien. Oh dear.~NF

ULTRAGIRL

Marvel: *3 issue miniseries 1996-1997*

Marvel finally joined the grim-and-gritty backlash with this cross between *Gen*^{13} and *Impulse*. Suzy Sherman, trying for a modelling job in Los Angeles, is attacked by a Sentinel that claims she's both mutant and alien (specifically Kree). In a nice touch, Suzy beats the robot and then dismantles everything but the head so that she has someone to talk to about what's happening. Written by Barbara Kesel, with artwork by Leonard Kirk and Bob Almond, it could have been a cult hit but presumably fell foul of Marvel's financial problems.~NF

ULTRAMAN

Harvey: *3 issues 1993*

UNCANNY ORIGINS

Marvel: *14 issues 1996-1997*

A schizophrenic series re-presenting the origins of Marvel's superheroes in a low-priced package. 1-7 are cartooned by Dave Hoover, and thereafter Marc Campos moves towards a more traditional approach. Origins of characters previously detailed in bite-size chunks over several years are presented in their entirety, and while concentrating on assorted X-Men – Cyclops (1), Angel (3) Beast (6), Storm (9) – commendably, more obscure characters are also spotlighted – Quicksilver (2), Black Cat (10), Iron Fist (14) – alongside the more obvious

Hulk (5) and Daredevil (13). Some issues offer previously unknown facets of the characters, such as Firelord in 4, Nightcrawler in 8 and Doctor Strange in 12. Most are competent (although 11's Black Knight is dire) rather than spectacular, making them essential only for staunch fans of the characters concerned.~WJ

UNCANNY TALES

Marvel: *12 issues 1973-1975*

THE UNCENSORED MOUSE

Eternity: *2 issues 1989*

Early 1930s Mickey Mouse daily newspaper strips by Floyd Gottfredson portraying a character yet to metamorphose into the wholesome corporate symbol, and therefore never previously reprinted. While the racist caricatures are offensive, completists will probably still want to investigate.~FP

UNCLE SAM

DC/Vertigo: *2 issue microseries 1997**

Uncle Sam, the superheroic personification of the American Dream, goes on a journey through the USA's dark past in this confused and confusing piece of liberal heart bleeding. Such a generally downbeat and disgusted take on American culture and politics is rare in a comic, and writer Steve Darnall certainly doesn't shy away from accusing his country of racism, corruption and exploitation – it's difficult to imagine DC publishing this post-September 11th. The problem is that the structure is far too fragmentary and pretentious to ever amount to a coherent argument, and the final showdown offers a form of symbolic redemption far more trite than the standard superhero fistfights it appears to disdain. On this occasion Alex Ross' painted artwork, as ever derived from models and photographs, also seems far too literal and concrete to do justice to the script's impressionistic sweep.~AL

In terms of quality Carl Barks' *Uncle Scrooge* stories stand alongside *Asterix* and *Tintin* as the greatest childrens' comics. In common with the European strips, *Scrooge* works almost instinctively on two levels, appealing to the young with stories opening the imagination and by the simplicity and humour of the artwork, and additionally to adults with impeccable plotting, research and a repertoire of fine comic touches. Unlike the creators of *Tintin* and *Asterix*, Barks crafted a wealth of material, but Scrooge is corporate property and has therefore been sullied by lesser hands until being rescued in the 1990s by the more than capable Don Rosa.

Scrooge is fabulously wealthy, yet resents spending a dime more than he has to unless his status as the world's richest duck is challenged, in which case he becomes a spendthrift. He keeps his money in a giant structure known as the money bin, through which he dives like a porpoise and burrows like a gopher in a memorable sequence of creative inspiration that opened Scrooge's first issue. Beneath the miserly front, though, Scrooge has a better nature that's readily appealed to. Despite the often-repeated work ethic, materialism is a central theme to Barks' Scrooge, yet the most fondly recalled aspects of his stories are the exotic locations. Scrooge, often accompanied by Donald Duck and nephews Huey, Dewey and Louie, travels the globe, if not in search of some fabulous treasure, then for a way of increasing his fortune by a business opportunity or other means.

Scrooge débuted in 1947's *Four Color* 178, a Donald Duck Christmas tale, and proved popular enough to return again and again. His first solo outing was 1952's 'Only A Poor Old Man' in *Four Color* 386 (reprinted in 1965 as *Uncle Scrooge and Donald Duck*), followed by *Four Color* 456 and 495. The series title Four Color only appears in the indicia, and it's an Uncle Scrooge logo on the cover, so these issues are commonly referred to as *Uncle Scrooge* 1-3. Scrooge's own title picks up the numbering with 4. Barks writes and draws every issue to 70 (although 67 reprints 10), and writes 71, and while they stagger off a little towards the end, this is a fabulous run of comics. A 1995 comic titled *Uncle Scrooge in Arabia* reprints 'The Mines of King Solomon' from 19, as good an example as any of how Barks excels. Scrooge decides to inspect his properties throughout the world, accompanied by Donald and by Huey, Dewey and Louie, who've been practicing their bird and animal calls for the Junior Woodchucks. The combined tickets stack up to Donald's shoulders. Assorted attempts at attracting wildlife go comically wrong, and Scrooge learns the location of the legendary lost diamond mines of King Solomon. Unfortunately local gangsters have arrived first, so Scrooge and Co. must outwit them, eventually succeeding by surrendering portions of the tickets to Arab ruffians who've always wanted to travel. Comedy, action, adventure, excellent art and an unexpected ending add up to a great story, and Barks pulled this off almost every issue. The assorted schemes of the criminal Beagle Boys to separate Scrooge from his wealth, and of the sorceress Magica De Spell to acquire the first dime Scrooge ever earned, are plentiful in later Barks issues. Magica believes possession of the dime will spark her good fortunes, and the Beagle Boys are just out to steal. Except in cases where Barks produced an extra-long lead story, issues also have a shorter back-up strip and a one-page Scrooge gag strip. Additionally, almost all issues between 13 and 48 also have a short story starring nutty inventor Gyro Gearloose, equally immaculately crafted by Barks, and collected in six volumes by Gladstone.

Barks seems to have lost interest towards the mid-1960s, and while never poor, most of his later stories lacked the spirit of earlier work. He retired in 1966, after writing 71 for his successor Tony Strobl, but his replacements were unable to capture the essence or scope of his best work. Between 1970 and 1979 *Uncle Scrooge* consisted almost entirely of Barks reprints before Whitman began running stories originally prepared for the European market. They're mediocre, indistinguishable from the feeble gag material produced for other Whitman titles and shown up by the occasional Barks reprint. Stories produced by the Europeans themselves are better, but tend to concentrate on Scrooge's wealth more than any other facet of his character or the exotic adventure tales that continue to thrill. The Italian Romano Scarpa grasped Scrooge, but his work is all too rarely reprinted, although 241 and 242 are good samples. The latter introduced Brigitta MacBridge, the woman who wants to marry Scrooge. The Barks stories are all reprinted in later issues, most in several. Dell marked the splash page of each story with the original issue number, so it's easy to piece together a run without having to pay premium prices. 9's 'The Lemming with the Locket', for instance, has been reprinted in 104, 179, and 250, with 179 considered particularly rare, having only been circulated in packs with two other Whitman Disney titles.

Gladstone, who'd had some success producing expensive hardbound editions of Barks' work, inherited the Disney license in 1986 and dispensed with five decades of anonymity by running credits. More significantly, they began running new material from American creators, a practice continued for Disney's run. William Van Horn is good (see 252), but better in the pages of *Walt Disney Comics & Stories*, while Don Rosa is the spiritual heir to Carl Barks. Rosa fashions his stories to the Barks template, but isn't a mere copyist. Even when drawing heavily on Barks's work for his excellent 'Life and Times of Scrooge McDuck' (285-297*, 306 and 318) Rosa displays his own touches. There are background visual gags aplenty, his new characters are memorable, and he's confident enough to show a developing Scrooge rather than presenting the familiar character from day one. Rosa's stories, here and in the other Disney duck titles, are all worth finding. Look for his work in 219, 220, 224, 235, 261-263, 268, 276, and 314. He's also in 226, 227 and 242, but only with a page or two. Rosa's contribution to 311 is particularly outstanding, a quest in the best Barks tradition, and 310, with a fine Rosa story about Gladstone Gander's annual unlucky day, is extremely rare. Also of note is 216, with a previously unused Carl Barks plot commissioned from Disney's Danish licensee and illustrated by their anonymous artists. It's not the best Barks, but is nonetheless a decent story.

* Available in a collected edition

Sadly, while the European market for Disney duck comics remains undiminished, with Rosa, Van Horn and others now commissioned directly from Europe, the home market proves problematical. Gladstone ceased publishing citing the difficulties of working with the Disney organisation, and attempts to continue selling the comics to a young audience had instigated several format changes. Prices were kept down between 294 and 303 by dispensing with the traditional glossy cover, but eventually Gladstone stopped all other *Uncle Scrooge* titles in favour of a single squarebound comic aimed at collectors. This sixty-four page package was adopted with 309, and the final issues of the run are thoroughly entertaining comics, packed with Barks, Rosa and fine contributions from Van Horn (318) and Romano Scarpa (315-316). Since Gladstone there have been no Disney titles published in the USA, while Rosa has continued to produce fine stories abroad. Such is his standing that most are available translated into English on web sites, or if you can read another language, collections of his and Van Horn's work are available throughout Europe.

Uncle Scrooge is well served by collections, with Gladstone reprinting the entire Barks run chronologically in fifty-six books, having previously dipped in for volumes of their *Gladstone Comic Album* series. Hardbound and slipcased reprints are available in black and white as *Carl Barks Library* volumes 3-5, and a good, if poorly coloured, sampler is the 1981 Celestial Arts collection *Uncle Scrooge His Life & Times*. Gladstone also collect Rosa's early stories in four volumes, and the Disney published *Donald and Scrooge* reprints 261-263 and 268.~FP

The Adventurous UNCLE SCROOGE McDuck

Gladstone: *2 issues 1997*

A short-lived series, meant to take over from *Uncle Scrooge Adventures*, but cancelled with Gladstone's cutbacks. The first issue contains '24-Karat Moon' by the ever-reliable Carl Barks and 'Time Bandits' by Daniel Branca. The second issue's main story is 'A Little Something Special' in which Duckburg celebrates Scrooge's 50th Anniversary, but his most persistent enemies, Glomgold, Magica and the Beagles unite to try to spoil the occasion. Don Rosa's love of the material is evident and his rich, detailed artwork is a joy.~NF

Walt Disney's UNCLE SCROOGE ADVENTURES

Gladstone: *54 issues 1987-1990 (1-21), 1993-1997 (22-54)*

Vintage Carl Barks Uncle Scrooge stories occupy the majority of issues, with European reprints filling most of the rest, particularly towards the end of the run. That alone would make a quality package, but the occasional new stories by Don Rosa are the highlights. In 5 he provides a sequel to Barks' story of how Scrooge made his fortune, resurrecting the cast of 'Back To The Klondike'. He contributes full length stories to 14, 27 and 51, with shorter contributions in 9 and 20. 'Horsing Around With History' in 33 was a considerable coup, a new Carl Barks script illustrated by William Van Horn. It possesses all the elements of the classic Barks, and the issue also reprints Uncle Scrooge 1. 21 is of note as a curiosity, containing a Gyro Gearloose story started and abandoned by Barks, completed by Rosa thirty years later. The European material falls short of the Barks and Rosa stories, although is never poor and always well drawn. For the best of it try Romano Scarpa's stories 'The Man From Oola Oola' in 28-29, 'Lentils from Babylon' in 30-32, or 'Colossus of the Nile' in 37-38.~FP

Walt Disney's UNCLE SCROOGE GOES TO DISNEYLAND

Dell: *One-shot 1957*
Gladstone: *One-shot 1985*

Two years after Disneyland opened Dell published this one-shot anthology featuring some odd teamings of Disney characters. Mickey Mouse and Goofy, and Donald Duck with Huey, Dewey and Louie are straightforward, but how about Daisy Duck alongside Alice from Wonderland, or Pinocchio with Pluto and Mickey's nephews Morty and Ferdy? Carl Barks drew a fine twenty-pager pairing Uncle Scrooge with Gyro Gearloose, but this is more a curiosity than a must-have. The Gladstone issue reprints the Dell comic.~FP

Andrew Vachss' UNDERGROUND

Dark Horse: *4 issue miniseries 1993-1994*

Stories by various creators using a setting devised by crime novelist Vachss, some in comics form, and some in prose. It's a short time in the future, after some sort of social breakdown, and almost everyone is living in gangs in tunnels underground, with the Rules and the police imposing a degree of order. Most of the stories are well done, but there is little variety in tone or plot. 1 is the best, with 'Pooch' by Phil Hester and 'Way Down' by Bill Crider (a prose piece with subtlety and surprise). 2 has a humorous piece by Bob Fingerman, 3 has stories by Jason Lutes and Al Davison, and 4 is mostly forgettable prose.~FC

U.N.D.E.R.S.E.A. AGENT

Tower: *6 issues 1966-1967*

This sixty-eight page title stars Lt. Davy Jones, a Navy pilot seconded to Atlantis, the secret underwater base of U.N.D.E.R.S.E.A. (United Nations Department of Experiment and Research Systems Established at Atlantis). The director dubs Davy U.N.D.E.R.S.E.A. Agent number 1 and allows him to work with kid sidekick Skooby Doolittle and lovely marine biologist Ramona Delmar. In 2 Jones is fitted with a belt that gives him magnetic powers. Another agent, codenamed Merman, is given super-strength and the ability to breathe underwater, and appears in 5 and 6. Most of Davy's strips are drawn by Ray Bailey with stories in 2 and 3 by Mike Sekowsky and in 3-6 by Gil Kane. Bailey's syndicated strip style makes for dull colour comics, not helped by pedestrian scripts. Kane's stories stand out as the most exciting on offer, the best being 'Doomsday in the Depths', in 6, scripted by Gardner Fox, which centres on a lost underwater civilisation. The Merman/Davy Jones story in 5 by Manny Stallman includes a visit to the Planet Venus – barmy stuff. Davy Jones also appeared in *T.H.U.N.D.E.R. Agents* 13.~SW

THE UNDERSIDE

The Underside is the magical realm in which investigators Beck and Caul operate, and this is a poorly drawn and ponderously written fantasy about a demon escaping to wreak revenge on a magical society. UNDERSTANDING COMICS

Kitchen Sink: *1 volume 1993*
Harper Perennial: *1 volume 1994*
Paradox Press: *1 volume (Reinventing Comics) 2000*

Here Scott McCloud attempted to provide an in-depth appreciation of comics' structure, reasoning the synthesis of words and pictures is a separate and unique artform. The irony is that he does so by borrowing heavily from established sources. It's presented by a cartoon McCloud in witty and accessible fashion, and a major victory is that the book doesn't disappear up its own arse. It could be argued, though, that given much of our appreciation is instinctively acquired, was it really necessary in the first place? There's a reserved "yes" to that question because no matter how long you've read comics, McCloud has something new to tell you. He dissects exactly how comics work, methods of presentation, and explains our responses to them. Eventually, though, his theories, while entertaining and thought-provoking, are no more valid than anyone else's, and woolly liberal that he is, he'd agree. Except no-one else has pulled themselves from the armchair to provide an alternative, so McCloud's ideas, or more accurately, people's interpretations of his ideas, have seeped into the more erudite comic reading audience. Ultimately, it's likely that the most enduring legacy has been as a rallying call for creators, because your average *X-Men* reader couldn't give a toss. And there's no reason why they should, which is the book's inbuilt failing. Still, in a field of one, it's number one.

Understanding Comics was released to almost universal acclaim among the comics community, leading to the Harper reissue for a more general audience (libraries, probably). McCloud then produced *Reinventing Comics*. While linked by author and method of presentation, this is an altogether more personal and unwieldy beast. By and large, it's an evaluation of the recent and prevailing status quo in the comics industry at the time of publication, with McCloud maintaining a website updating topics discussed. The best aspect is that while he elaborates the many faults of the comics industry, he's not short of viable suggestions on how to improve matters. Over half the book is occupied with McCloud's proselytising about the potential of computers relating to comics, encompassing a brief history, and it's too soon to say whether he's right or not.

Something seemingly irrelevant to the message of both books, but surely a factor in their success, is rarely mentioned in the rush to discuss the topics presented. McCloud's cartooning throughout is wonderful. It's simple, expressive, and a joy just to look at. Anyone just flicking through the book will be immediately captivated by the skill and charm, and the multitude of effective symbols. If you want a deeper insight into the mechanics of comics, these are the places to start, although by now it'll probably be www.mccloud.com.~FP

UNDERTAKER

Chaos!: *10 issues 1999-2000*

Series based on the character of the WWF wrestler and his assistants, casting our lead as "the guardian of hell's prison". It's all pretty much what one might expect, although unaccountably popular when first released in a bewildering array of covers. UNDERWATER

Drawn and Quarterly: *11 issues 1994-1997*

Underwater doesn't immediately appear to make sense. By following the pictures, the reader can tell that a woman is giving birth, but any language that appears is gobbledygook, a mixture of nonsense words and odd sounds. As the story progresses it becomes clear that you're experiencing the world through the eyes and ears of the woman's new-born twins, and nothing makes sense because they don't yet understand it. The dialogue starts to become clearer as the babies start to recognise more words, one or two to start with, more as the series goes on, and the twins understand each other more than they do the adults, who don't always understand them either. Chester Brown's idea is interesting and nicely presented, but it's really only a one-issue joke and the continued package isn't all satisfying, especially in such small doses. All but issue 1 also contains Brown's adaptations of Bible stories; 4 has a short piece on his thoughts regarding the nature of schizophrenia. Publication was suspended to enable Brown to work on another project, but six years on there's no sign of a revival.~JC

UNDERWORLD Unleashed

DC: *3 issue miniseries 1995*, one-shot ('Abyss – Hell's Sentinel') 1995, one-shot ('Apokolips – Dark Uprising') 1995, one-shot ('Batman – Devil's Asylum') 1995, one-shot ('Patterns of Fear') 1995*

In the miniseries, the demon, Neron, tempts DC's supervillains and sends them off, powers enhanced, to battle throughout DC's titles. At the same time, he tries to tempt the superheroes – with some success. The final issue reveals Neron's true plan, which is only thwarted by a group of heroes invading Neron's hell. Mark Waid has written a clever story that, though contrived and rather unappealing in its treatment of the supervillains, at least makes better use of a large number of heroes than most crossovers. The art by Howard Porter and Dan Green is, unfortunately, stiff and gimmicky. As well as the crossovers in the regular monthly titles, several one-shots are also connected to the miniseries. In 'Abyss', Alan Scott (Sentinel), gathers a group of supernatural heroes to rescue his wife's soul from Neron. Darkseid's lieutenants are seduced in 'Apokolips' and in 'Devil's Asylum' Neron promises the world to an inmate of Arkham Asylum, as long as he can make Batman kill one of the other inmates. 'Patterns of Fear' is more of a 'who's who' than anything else as Neron visits Oracle to inspect her files (and tempt her, of course).~NF

Coming at the end of R.Crumb's hippie period, *Uneeda* reflects his growing lack of interest in the counterculture. The centrepiece, 'Honeybunch Kominsky, The Drug Crazed Runaway', is a very unconvincing procession of counterculture clichés that even seems to have bored Crumb. Rounding out the comic are a short Mr Natural strip and a few Bo Bo Bolinsky shorts that have far more power (even poetry) than the lead strip. Middling Crumb.~DAR

UNEXPECTED

DC: *118 issues (105-222) 1968-1982*

Originally titled *Tales of the Unexpected*, this continued the numbering and, initially, the somewhat half-baked mystery stories. The very uninspired Johnny Peril (106-117) and the very odd Mad Mod Witch occupied the comic, but the first items of any note were a few early Berni Wrightson strips (116, 119, 121, 128). By 120 the title had become a typical DC horror comic, but with far fewer contributors than others, relying on George Kashdan, Carl Wessler and editor Murray Boltinoff for almost all its stories, and George Tuska and Jerry Grandenetti for most of its art. Consequently, though never less than professional, *Unexpected* never lived up to its name.

Packed with Filipino artists, 140-165 are the best of the run, with the hundred-pagers (157-162) the ideal jumping-on point. Along with Alfredo Alcala and Rico Rival, Nestor Redondo drew some nice strips (133, 155, 195), as did token non-Filipinos Lee Elias and Ralph Reese (145). The single best story was a swamp-based Michael Fleisher/Alex Niño tale in 152, and Niño had other strips in 159 and 162.

The last few years were a very mixed bag, with the occasional delight (such as lovely Noly Panaligan jobs in 186, 187, 189 and 214) surfacing among much grade Z hackery. 189-195 were dollar comics and amongst the eighty pages of new strips were a few nice surprises from Vincente Alcazar (189, 191), Marshall Rogers (191) and Doug Wildey (193). They also featured material commissioned for the cancelled *House of Secrets*, and *Witching Hour* and *Doorway to Nightmare* stories in 190, 192, 194 and 195, the last of which, 'Deadly Homecoming', by Denny O'Neil and Johnny Craig, was actually quite good. With 200 Mike Barr and original artist Jack Sparling revived Johnny Peril, though only the very brave are advised to sample it. Far more exciting was some lovely artwork by the hopelessly obscure Arthur Geroche in 202. In retrospect the most unexpected thing about this comic was how it managed to outlive most of its competition.~DAR

Tales of the UNEXPECTED

DC: *104 issues 1955-1968*

The 1955 introduction of The Comics Code Authority, whose stringent guidelines had to be observed in order to obtain the parent-assuaging stamp of approval, resulted in the collapse or disembowelling of many early 1950s horror titles. DC stepped into the gap with several Comics Code-approved anthologies. The predominantly science-fiction-flavoured stories here were by editor Jack Schiff's crew of writers, including Ed Herron, Otto Binder, Jack Miller and Ed Hamilton, with fine if conservative artwork from the likes of Ruben Moreira, Bill Ely, Mort Meskin, Nick Cardy, Bernard Baily and, in some early issues, Jack Kirby.

With August 1959's 40 the title became home to Herron and artist Bob Brown's 'Guardian of the Space Lanes' – the Space Ranger who had débuted in *Showcase* 15-16 the previous year. The Ranger was Rick Starr, who patrolled in his rocket ship The Solar King in a yellow and red outfit complete with salad-bowl helmet. He operated out of a secret asteroid base with the assistance of his blonde 'Girl Friday', Myra Mason, and a little pink shapeshifter called Cryll, who resembled nothing more than a walking pair of testicles. The stories managed a drab mix of private eye and Western lawman in outer space. The Ranger ran until 88 in 1964, when the title was shaken up by Schiff, with the story content becoming more farcical, typified by the new feature, a wish-fulfilling cloud known as 'The Green Glob'. One of DC's obscurest heroes, Automan, a sentient bop-talking robot, also appeared in 91, 94 and 97, drawn by Bill Ely. In 1968 the title continued as simply *Unexpected*.~SW

UNICORN ISLE

WaRP: *4 issues, 1986-1987*
Apple: *1 issue (5) 1987*

It was supposed to run to twelve issues so didn't even get halfway, but is still worth a look if you like lively, imaginative fantasy. The people of Unicorn Isle have custody of the two sacred unicorns, the last of their kind. But some baddies want the power of the unicorns, manage to abduct one, and the young twins Nils and Nola are sent on the rescue mission. Your standard soft-fantasy quest, but Lee Marrs brings a fresh touch to the writing, making the unicorns distant and strange and the other characters thoroughly human. The black and white artwork is suitably otherworldly (and particularly strong on costume), though the storytelling tends to fall apart during the action sequences. Not perfect, but a story that deserves to be finished.~FC

UNION

Image/WildStorm: *4 issue miniseries 1993, 10 issues (0-9) 1995-1996, one-shot ('Final Vengeance') 1997*

Written by Mike Heisler and drawn by Mark Texeira, the Union miniseries establishes the character on Earth after he's accidentally passed through a dimensional gate during a battle with the Directorate. As a Protectorate soldier Union confronts a group of his enemies resulting in the destruction of a whole town. Believing himself responsible, he decides to stay on Earth and with the help of a woman called Jill becomes accepted as a superhero. 0, published as a precursor to the regular series, provided a background to the war between the Protectorate and the Directorate and explained Union's appearance on Earth. Lack of a regular artist can't have helped sales, and while overall it's unimpressive, Heisler's interest in the characters shines through. The one-shot concludes the three-parter begun in 8. Of note, Union meets Savage Dragon in issue 3 of the second series and Majestic in 4 (as part of the 'WildStorm Rising' crossover). 5 and 6 are the best of the series, as Union is kidnapped into a parallel world to be its champion and meets an alternate Fairchild (from Gen^{13}).~NF

UNION JACK

Marvel: *3 issue miniseries 1998-1999**

British flag-wearer Joey Chapman in his own series, once again battling the vampires that have been the patriotic hero's nemeses since his boyfriend's grandfather first donned the mantle in WWI. The entertainment that could be gleaned from this is ruined by the incipient homophobia of couching AIDS in metaphors of obscure blood diseases. Even then the guts are lacking to come out and say the lead characters are gay in case some rednecks in the bible belt are offended. Marvel, not to mention the usually reliable John Cassaday and Ben Raab, ought to be ashamed of themselves.~JC

Lady Death/Chastity/Bad Kitty: UNITED

Chaos!: *One-shot 2002*

Dedicated "to the victims and heroes of the 911 tragedy", Brian Augustyn's tale concerns a woman looking for her husband and attracting the help of Bad Kitty, Lady Death (fortunately, during her period as a human) and Chastity. As a celebration of heroism and resilience, it's as unsubtle as you'd expect, with plenty of flag-waving and inspirational dialogue. Despite the dedication, there is no evidence that this was published to raise money for any charity associated with September 11 2001.~NF

UNITY

Valiant: *2 issues (0-1) 1992*
Acclaim: *3 issues 2000*

The Valiant issues bookended the first big crossover story involving the then fledgling line. Each title contained two chapters of an eighteen-chapter ongoing crossover. Read in its entirety it's a well plotted, if sometimes meandering, story of every major Valiant character involved in the machinations of The Mother God. She originated in the Solar series, and here unites past, present and future in a land out of time. Barry Windsor-Smith illustrates, and although these issues won't make much sense on their own the larger picture is worth a look, best absorbed via four Unity collections. Not all company crossover sagas are bad.

Given his seemingly shoddy ousting from a company whose characters he'd largely created, it was astonishing to see Jim Shooter return to write the sequel. It reunited the original Valiant heroes rather than Acclaim's reboots, and the plot stems from Solar's guilt regarding the plethora of alternate realities he spawned and a determination to rectify them. Meanwhile Master Darque (reboot version) has an agenda of his own. Shooter sets up a decent moral conundrum and drops a few pointed comments amid an okay plot, and artist Jim Starlin makes more effort than he has in years, but the series only ran half its projected span.~WJ

UNIVERSAL MONSTERS

Dark Horse: *4 issues 1993*

In partnership with Universal Studios, Dark Horse commissioned these adaptations of four of the most famous horror films of all time. The best is *Creature from the Black* Lagoon, by Steve Moncuse, Art Adams and Terry Austin – bright, detailed artwork contrasting with the dark human emotions that are at the heart of the tale. Tony Harris and Dennis Beauvais make distinctive visual attempts at *The Mummy* andI respectively, but *Dracula* is less successful. The advertised adaptation of *Wolfman* was never published.~NF

UNIVERSE

Image/Top Cow: *8 issues 2001-2002*

Lapsed priest Tom Judge acquires a power known as The Rapture. It's an essential step in a forthcoming war between demons, during which hell will literally burst loose while Satan attempts to gather more power by becoming mortal. With The Rapture, Tom can enter hell, consort with dead souls and give demons a fair jolt. It all starts decently enough in 1-3, as Judge meets the predictable glamourous female co-star, and a lounge-lizard Satan, but then Paul Jenkins introduces a largely redundant supporting cast, a bog standard all-powerful adversary, and having introduced the premise, does little to progress it. The art team of Clayton Crain and Jonathan Glapion is more impressive, and a rushed conclusion was provided in the *Tom Judge* one-shot.~WJ

Titans/Legion of Superheroes/UNIVERSE ABLAZE

DC: *4 issue miniseries 1999*

Reasonably fresh from a stint as regular *Titans* scribe, Dan Jurgens joins penciller Phil Jimenez on this entertaining miniseries. It has a team of time-tossed Titans ganging up with the 30th Century's Legion of Superheroes to stop a conglomerate of their arch villains from taking over the universe. The prestige format's extra pages provide the space needed for the story to avoid being swamped by its huge cast, and Jurgens' skill at pacing team comics ensures the action is fast and furious. The result is a surprisingly readable romp that never descends into the pointless fight scenes that so often plague crossovers. That said, there's no really useful reason for this series to exist and unless you're a die-hard fan of one or the other of the teams involved, no real reason to go near it.~JC

UNIVERSE X

Marvel: *13 issue limited series (0-12) 2000-2001*, one-shot ('Beasts') 2000, one-shot (4) 2000, one-shot ('Cap') 2001, one-shot ('Iron Men') 2001, one-shot ('Spidey') 2001, one-shot ('Omnibus') 2001, one-shot ('X') 2001*

Unnecessary sequel to *Earth X*. Jim Kreuger and Dougie Braithwaite expand the tale of an Earth still reeling from the physical shock of mass mutation, and the psychic trauma of discovering that the human race had been built by Celestial aliens to act as savage junkyard dogs for an alien embryo gestating at the world's core. What's left is a world of superbeings trying to make sense of the mess that remains. Reed Richards has devised towers to cure the populace of their superpowers whether they want a cure or not, but the planet has been destabilised by events in *Earth X* and a new Ice Age is coming. Meanwhile the mystic beings gather to fight for position as it's revealed that all the dead of the world are not at peace but are trapped in a perpetual state of battle in the world beyond. Mephisto who might actually be the Devil is making his play to take over creation. Beautiful artwork fails to lift this dreary dystopic montage of doom and despondency, which feels like a deconstructed Gotterdamerung played at half speed. Didn't entertainment used to be fun?~WW

UNKNOWN QUANTITIES

Funny Valentine Press: *One-shot 1999*

Charity anthologies, such as this black and white one in aid of an anti-poverty group, tend to have to take what they can get and so we end up with the didactic, the pious, the dashed-off, the mad, reprints, and leftovers. Exceptions here include Jay Stephens' sweet Jetcat, an elegant O. Henry adaptation by Gary Gianni, and a funny strip about Betty Page and Tor Johnson by Mitch O'Connell and Hilary Barta. Wooden spoons for Alan Moore's unreadable text piece and a horrid drawing by Donna Barr. Alex Ross produces a heavily symbolic cover of Uncle Sam with a blindfold on.~GK

UNKNOWN SOLDIER

DC: *64 issues (205-268) 1977-1982, 12 issue limited series 1988-1989*
DC/Vertigo: *4 issue miniseries 1997*

This anonymous allied agent with the bandaged head finally inherited his own title when *Star-Spangled War Stories* was renamed in 1977, having starred there since 151. A watered-down World War II version of G8, the famous pulp master of disguise and espionage from the 1930s, the Soldier had been facially disfigured in the Philippines by a hand grenade that also killed his brother Harry. Thereafter, the Immortal GI pledged to stay officially dead, operating on the principle that "one man in a pivotal position can exert an influence on hundreds, even thousands, of others". His wartime impersonations had settled into something of a rut by the late 1970s. Filipino artist Gerry Talaoc, aided by veteran war artist Dick Ayers for much of the title's run, reduced the Soldier to a hackneyed cartoon character, and scripter Bob Haney's stories were definitely off the boil. The title also featured other DC war series, including Robert Kanigher's Enemy Ace, drawn here by John Severin, (251-253, 260, 261, 265-267), and an elegant interpretation of Captain Fear (last seen in *Adventure Comics*) by David Michelinie and Walt Simonson in 254-256. The many single stories by young artists included Frank Miller in 219.

After an absence of six years, our redefined bandaged hero returns courtesy of Jim Owsley and artist Phil Gascoine. 1-2 contain, in flashbacks, the Soldier's childhood and the story of how he virtually became immortal. The series begins in the 1970s and ends in the late 1980s, with each issue

* Available in a collected edition

involving the Soldier in an international conflict of the time. Cambodia 1970 is the setting for 1, the US Embassy in Iran in 1977 is featured in 2, and for 3 in 1982 it's off to Afghanistan, and so on. It misses the Gulf War by two years, or you can be certain that would've featured too. It's a very well produced series with entertaining period pieces, which sadly highlights how little peace there's been in the world for the past few decades. It's interesting to see the Soldier's supporting cast grow older, while he remains young. We even apparently meet his grown-up daughter in 10. His first assignment is recalled in 6, which particularly stands out as it delves deeper into his origin. A worthy action and espionage successor to the earlier series.

The Vertigo revival was written by Garth Ennis writes for artist Kilian Plunkett. Set in the present day, CIA agent William Clyde's impromptu enquiries lead him to a taboo subject – Codename: Unknown Soldier. Ennis is kind enough to show us the Soldier's dirty tricks activities after VJ Day in places like Iran, Cambodia and Nicaragua. Clyde is all too aware of what a morally compromised anachronism the role would be. When the Soldier elects Clyde as his successor he meets with fierce resistance. It's left up to the reader to interpret who's left standing to "make a difference". Really excellent reading.~SW/HY

UNKNOWN WORLDS

ACG: *57 issues 1960-1967*

What can one say about a comic whose cover for 28 boasted "4329 Gasps"? *Unknown Worlds* was ACG's third mystery anthology of the 1960s and as such resembled all their others content-wise. No one wrote stories quite like Richard E. Hughes (some might add "thank goodness"). The hokey O.Henry on medication flavour of Hughes' science fiction and mystery is, admittedly, an acquired taste. Nevertheless, his work does have an undeniable old-fashioned charm. By the early 1960s ACG had evolved a functional mythos for its fantasy tales, centred on an all-green afterlife called The Unknown. Familiar to regular readers of *Adventures into the Unknown* and *Forbidden Worlds*, this realm was inhabited by various light green ghosts, objects and supernatural entities. The ACG milieu is, in essence, a mixture of these verdant idiosyncrasies with the sentimental and the downright wacky.

Despite authors such as Shane O'Shea, Zev Zimmer, Ace Aquila, Lafcadio Lee and Kurato Osaki getting story bylines, everything was in fact written by Hughes. Once you know this, the mini author/artist portraits that preface many of the early 1960s stories are particularly amusing. Highlights of the distinctly conservative artwork came courtesy of Ed Ashe, John Rosenberger, Pete Costanza, Paul Reinman, John Forte, Chic Stone and the incomparable Ogden Whitney. Later in the 1960s occasional stories by Johnny Craig (Jay Taycey) and Steve Ditko also cropped up. Several classic ACG stories appeared here, the most famous being 'The People Versus Hendricks' in 36, a courtroom drama involving artificial humans, romance, jealousy and murder. '1000 Years Ago... in 1962', in 20, was an alien invasion story with a difference and featured a guest appearance by ACG's oddest protagonist, Herbie Popnecker. Other well-received stories include 'Witch Boy' in 38, '100 Year Witch' in 43 and 'Goodbye Johnny' in 48. The further, less than inspiring, adventures of ACG's supernatural superspy John Force, Magic Agent, appeared in 35, 36, 48, 50, 52 and 54.~SW

UNKNOWN WORLDS OF SCIENCE FICTION

Marvel: *6 issues, 1 Special 1975-1976*

One has to assume the marketing department vetoed the title *Largely Familiar or Predictable Worlds of Science Fiction.* Attempting to carve a slice of the black and white magazine market mined so well by Warren in the early 1970s, Marvel hired away Warren contributor Bruce Jones, who's responsible for writing approximately a third of the run, although adaptations were cover-featured. In selecting and commissioning largely twist-ending stories the editors (and there are four credited by the final issue) resisted the opportunity to move on from an anthology formula in place since the 1950s. There's nothing bad here, but beyond the art there's nothing very good either. Artists of the calibre of Neal Adams, Howard Chaykin, Mike Kaluta and Gray Morrow are used among the more formularised selection of Filipino draughtsmen. The best issue is the first, which could pass for a Warren comic, with art from Angelo Torres, Wally Wood, Al Williamson and even a Frank Frazetta reprint.~WJ

UNLIMITED ACCESS

DC/Marvel: *4 issue miniseries 1997-1998*

The fourth Marvel/DC crossover event featuring Access, who is the guardian of the gate between the respective universes. This time he discovers one of the secrets of his powers and gains the ability to travel backwards and forwards in time. Which is just writer Karl Kesel's trick for teaming up the Legion of Superheroes, the X-Men and Avengers from 1963, the contemporary JLA and the electric-costumed Superman. Darkseid and Magneto are the bad guys this time out, and it's all lavishly illustrated by Pat Olliffe and Al Williamson. Surprisingly enjoyable.~WW

UNNATURAL SELECTION

Active Images: *One-shot 2002*

Currently the premier computer lettering company in comics, Comicraft's advertising often featured a humanoid hippopotamus called Hip Flask. Here's an origin, a puzzling affair indeed, in which he's barely featured. He was created and raised as part of a warrior society featuring other humanoid animals, and this would be instantly dismissible were it not for the stunning art of Jose Ladronn. He's surely been noted elsewhere as a fusion of Kirby and Moebius, and his imaginative rendering astounds.~FP

THE UNSEEN HAND

DC/Vertigo: *4 issue miniseries 1996*

Terry LaBan's script for a secret-society-who-run-the-world thriller is a let down. There's too little scepticism at work, as our student hero, Mike, accepts in a flash that his dying father isn't his 'real' father, and that the Bildenberg-like group of superfinanciers are out to get him. LaBan writes like we can't handle anything very complicated, although there are some deft touches of student dialogue. Mike sets out to find his lost sister in Russia and, after falling foul of some rock'n'roll-obsessed militia crossing Serbia, stumbles upon a cult of White Russians who've built a new city under Moscow, where they're growing the foetus of Czar Nicholas III with the help of the midget, Siamese-twin descendant of Rasputin. On paper it sounds like a ridiculous piss-take, and it's like that when you read it, too. Ilya illustrates this ludicrousness with aplomb, turning in clean, cartoony artwork and concentrating on getting expressions right. He is surprisingly well-suited to drawing panoramic scenes of urban life and destruction, although he falls back on a 1960s cliché for Mike's drug experience. Overall, very unsatisfying.~FJ

UNSTABLE MOLECULES

Marvel: *4 issue miniseries 2003*

A glimpse into the lives of the real people on whom Stan Lee and Jack Kirby supposedly based their *Fantastic Four* cast. It's a clever manipulation presenting one Sue Sturm as a discontented housekeeper looking after a teenage brother heading towards delinquency. She has an unsatisfactory romance with scientist Reed Richards, whose old college room-mate Ben is now a boxer. A further layer of enjoyment is provided by contrasting Sue and Johnny's life with the fictitious 1950s comic *Vapor Girl*. Writer James Sturm delivers an insightful glimpse into a past ideally rendered by Guy Davis. Very satisfying.~FP

UNSUPERVISED EXISTENCE

Fantagraphics: *6 issues 1990-1992*

An infuriatingly inconsistently written slice of bohemian life, with consistently excellent underground style cartooning from Terry LaBan. The primary cast are cab-driver Danny, who dreams of a writing career, his partner Suzy, whose career is indolence and staring into the middle distance, overweight performance artist Bob and the bisexual object of his unrequited love, Annadette. Intertwined stories of their lives switch back and forth, soap-opera style, over 1 and 2, and while passing the time they're hardly compelling. A leap forward is achieved by cleaving Bob off from the remaining cast and sending him on a world tour. His naïvety and depression lead to some very funny moments, primarily 3's arrival in Greece and 5's Bob solo, the highlight of the run. Danny and Suzy also benefit from the extra attention, with some fine farcical concepts thrown into the Danny stories, particularly the idea of the cab-drivers' writing collective. Overall, though, the cast is too flawed and irritating to retain long-term interest, and freed from the shackles of continuity with *Cud* LaBan blossoms. The final two issues were conventional comic-size, while 1-4 were magazine-sized. The Bob stories are collected as *International Bob*, the remainder as *Love's Not A Three Dollar Fare*.~FP

The UNTOLD LEGEND of the BATMAN

DC: *3 issue miniseries 1980*

Len Wein's potted history of then definitive Batman, succinctly summarises the origins of Batman and his friends, allies and enemies (including such snippets of information as who builds the Batmobiles). This is despite a rather undemanding framing sequence that has someone sending Batman messages about how all that he holds dear will be destroyed. Though John Byrne pencils 1, with inks by Jim Aparo (who then draws and inks 2-3), it's Aparo's moody style that stands out.~NF

UNTOUCHABLES

Eastern: *4 issues 1988*

This was published on a weekly schedule and the covers claim it's "Korea's #1 Comic". It's difficult, however, to see why this tale of a baseball player, Haesong, and the conflicts with his team manager and other players, should be popular, on the evidence of the choppy narrative and overwrought emotions displayed here.~NF

UNTOUCHABLES

Caliber: *4 issues 1997*

A not intolerably bad alternative history premise, that prohibition was so successful that Chicago had to legalize gambling to raise some revenue. It's played out by writer Joe Pruett's seemingly dice-rolled excuses for characters, thus a waste of some impressive chunky woodblock-like art by John Kissee.~GK

UNUSUAL TALES

Charlton: *49 issues 1955-1965*

One of Charlton's late 1950s wave of mystery anthologies that began as a quarterly. Gill, Hart, Memling and Newman's stories were drawn by inept Charlton regulars like Molno, Mastroserio, Nicholas and Alascia as well as the more bearable jobs by Ditko in 7-15, often behind one of his covers. 1950s highspots include the atmospheric 'Night of The Red Snow' in 9 and 'Charmed I'm Sure' in 11 guest-starring Abe Lincoln. In 1960 Ditko returned to do some masterful five-pagers with Gill in 22-27 and 29, these include 25's 'The Confederate Girl', about a broken promise of marriage, and the beatnik comedy of 29's 'Way Out, Man!' The title limped on to 1965 with nothing further of any interest and then became *Blue Beetle* with 50.~SW

UP FROM BONDAGE

Eros: *One-shot 1991*

Eros apparently felt that while heterosexual porn needed no purpose other than titillation, their first gay comic should have an 'agenda'. Thus this strange comic. It's disturbing and thought-provoking, but to market it as a simple gay stroke book is wildly misleading.~HS

URTH 4

Continuity: *4 issues 1989-1990*

An elemental supergroup consisting of, yes, you've guessed it, Urth, Ayre, Fyre and Watr, Urth 4 specialised in righting environmental wrongs. Beyond this quirk, though, it was a typical superhero title. The writing is absolute tosh, but the comic looks nice enough, courtesy of Trevor Von Eeden (1-3) and, amazingly, Ron Wilson in 4, with the inevitable visual tinkering from Neal Adams.~DAR

Insubstantial tale, heavy on action, done in a Manga style by Chuck Austen.~WW

USAGENT

Marvel: *4 issue miniseries 1993, 3 issue miniseries 2001*

The first series is hoary superheroics from Mark Gruenwald, again trying to tie up loose threads in the Marvel universe. This time he pits the one-time successor to Captain America against a group of vigilantes and along the way he retells USAgent's origin, brings back an old hero and tries to make the title character seem a little more innovative. A second series follows in the wake of one of Marvel's company crossovers. Jerry Ordway produces a story of mind-controlling parasytes, the Superhuman Tactical Response Squad (S.T.A.R.S.) and corrupt politicians. Throw in an attitude and some costuming derived from Judge Dredd and a guest-appearance by Captain America, and you have an incredibly tedious comic with surprisingly unsympathetic artwork from Ordway himself and Karl Kesel.~NF

USAGI YOJIMBO

Fantagraphics: *1 special 1986, 38 issues, 3 specials 1987-1993*
Mirage: *16 issues 1993-1995*
Dark Horse: *63 issues +, 1 special (4) 1996 to date*
Radio Comix: *2 issue microseries ('The Art of Usagi Yojimbo') 1997-1998*

The rabbit bodyguard was first introduced in *Albedo* 2 and then had some adventures in *Critters* before a one-shot collected the early stories as a prelude to the regular series. Stan Sakai's lettering on Groo, much praised by Mark Evanier in an introduction, would not, however, have prepared anyone for the quality of his storytelling.

Usagi is a ronin (masterless samurai), allowing Sakai the freedom of having his character wander through an anthropomorphic Japanese landscape that's full of mystery, intrigue and the occasional supernatural demon. There's obviously a heavy debt to Japanese comics like *Lone Wolf and Cub*, both in the choreography of the sword fights and in the way that the background to many stories is based on specific Japanese traditions or professions. Sakai uses an underlying humour to lessen the brutality of death (of which there is a great deal), much as Kurosawa did in *Yojimbo*; he has an emotional awareness that allows the characters to be more than just stereotypes in another adventure strip. In a similar fashion, his artwork is composed of simple lines, but never seems short of detail.

The story of Usagi's early life and the death of Lord Mifune, which led to his becoming a ronin, is told in flashback to the bounty hunter Gennosuke (1-4). 'The Dragon Bellow Conspiracy' runs through 13-18, featuring all major characters so far. Tamakuro plots to seize the Shogunate and rival clans are drawn together to help prevent civil war. Tomoe, Lord Noriyuki's retainer, is an old friend of Usagi's and the romantic potential between them is one of the constants of the series. 'Blood Wings' (21-22) features the Komori Ninja, bat-like, flying and very dangerous, and 24 is called 'Lone Goat and Kid', a tribute, of course, as the Lone Goat is deceived into accepting the job of killing Usagi. 'Circles' (28-31) harks back to Usagi's youth and then switches to the present as Usagi helps an old friend, now married to the mother of his son. The colour specials feature Tomoe's story (1), Tomoe and Usagi fighting a supernatural attempt on Lord Noriyuki's life (2), Tomoe rescuing Usagi from the spell of a fox-woman (3) and Tomoe and Usagi solving the mystery of the Green Persimmon (4). Most of the Fantagraphics issues also had back-up strips by alumni of Critters and Albedo.

The Mirage series picks up where Fantagraphics left off, with Usagi and Gen still wandering together, but now in colour (by Tom Luth). 1-3 co-star the Teenage Mutant Ninja Turtles as Usagi meets Chizu, a devious woman who has plans to become leader of the Neko Ninja, old sparring partners of Usagi's. 'Slavers' (9-12) is the story of a renegade general, Fujii, whose outlaw band has enslaved a whole village. In freeing the villagers, Usagi has his swords stolen and sets out to track down Fujii. In 'Runaways' (13-14), a tale of Usagi's past, he has to escort Princess Kinuko to her wedding but political intrigue means the Neko Ninja have been hired to kill her. Left for dead, Usagi and Kinuko have to make their own way to safety on foot. It's a classic tale of impossible love. At this point, Mirage stopped publishing and Sakai, as had many others before him, found a new home at Dark Horse, though it meant a return to black and white. Chizu returns in 4 as the Komori and Neko Ninja vie for possession of a scroll that contains the secrets of gunpowder, and Usagi seems to have met his match in Nakamura Koji (7), who is really looking for a fight with Usagi's old teacher. Major storylines include 'Grasscutter' in 13-22, in which the Conspiracy of Eight (from 9), decide to recover the sacred sword, Grasscutter, in order to further their claims to political power. Usagi and Tomoe are separately involved in an excellent extended story. 'Grasscutter II' concerns Usagi's journey to Atsuta Shrine with a small group of friends in order to hide the sword, but the Neko Ninja are determined to stop him (38-45). The Lone Goat and Kid return in 54, while 56-60 revolve around a duel between Nakamura Koji and Usagi's master, Katsuichi, who's now training Usagi's son, Jotaro, but first they must all overcome some bandits threatening a small town in a homage of sorts to the *Seven Samurai*. Each issue of the 'Art of Usagi Yojimbo' contains mostly sketches and pinups, but each also has a strip about how and where Sakai works. This is an intelligent adventure series, drawing heavily on Japanese and comic traditions, but always individual and never short on ideas. All issues to Dark Horse 52 are collected in sixteen reprint volumes.~NF

Universally derided on publication, it now stands as the last time for about fifteen years anyone at Marvel apart from Peter David had fun. Writer Al Milgrom packs in aliens, ghostly truckers, highwaymen, Germans with Zeppelins and down-to-earth redneck folk. His tongue is planted firmly in the vicinity of his cheek, and lead Ulysses Solomon Archer is so wholesome, Peter Parker is Richard Nixon in comparison. You're not getting Dostoevsky here, but it's nowhere near as bad as you've heard.~FP

V

V

DC: *18 issues 1985-1986*

V the TV series was a none too subtle Nazi analogy in which nice friendly humanoid aliens offered technological advances in exchange for a few minerals, all the while plotting to subjugate humanity. Furthermore, they were really lizard-like creatures. TV budget restrictions made the latter aspect a surprise revelation, but lacking those restrictions and able to supply armies of lizards, the comic is surprisingly dull. Initially concentrating on the resistance movement, particularly the resilient Diana, V might spark fond memories in those who enjoyed the TV show as kids, but is otherwise best forgotten.~FP

V FOR VENDETTA

DC: *10 issue limited series 1988-1989*

Alan Moore's dystopian look at a near future England in the grip of a totalitarian government was written when Margaret Thatcher was British Prime Minister and rioters were burning cars on council estates. It reflects a bygone age of political activism, and appears to be a fiercely left wing comic (albeit spotlighting one highly individual renegade). Nowadays Liberal tendencies flood the genre, but twenty-five years ago they were hardly common. Originally serialised in short chapters in the British monthly, *Warrior*, in black and white, the DC edition controversially coloured David Lloyd's striking, blunt-lined artwork.

V is very much a young man's work, full of radical passion, cleverness, hoarded tricks that can finally be demonstrated and game playing, packed into short British comic style episodes with a climax every six or eight pages. However, it remains a favourite among Alan Moore's oeuvre for all of the above reasons and because it is charged with emotion. It is both wild and incredibly tightly plotted and, as the story unrolls, you become aware that almost nothing in the strip, from things glimpsed in the background to the misquoting of a reference, are without meaning. It's also a strikingly English story, with its roots in the gloomy tradition of British SF, and a hero whose unlikely costume echoes the explosive radical tradition of Guy Fawkes.

V is a living nightmare for the repressive regime isolated from Europe, and suffering food shortages and civil unrest, after, Khmer Rouge-like, destroying the clever lefty elite and relocating anyone who might prove a threat to the clean white future. V barely appears human, darting out of shadows and appearing to kill without effort, putting his fingers through his targets, popping up where no-one can be and ambushing them. Moore rapidly explores V's world, immensely rich and colourful in contrast to the stark style in which it's illustrated, through the eyes of Evey, an orphan match maker he rescues from a couple of bent coppers. He introduces her to the country's repressed rich popular culture, now replaced by an endless round of manufactured pop and substandard sitcoms, and at first seems to want nothing of her, but her company. It's a classic structure that Moore exploits to quickly set up the parameters of his world and the scope for his social commentary. He offers teasing multiple explanations for V's origins, while filling in the characters of many of the police and government officials chasing him. He shows allegorical conversations between the country's leader and the statue of Justice before we all get carried away by socialism, and demonstrates how the tiny, unplannable events in history can set off huge chain reactions. And yet they all tie back to V.

Then Moore really messes with our heads. Evey is captured and interrogated, facing her worst nightmares under torture, only to discover that it's not the police who've been doing it to her. *V* is a subtle and engrossing exploration of volition, part a debunking and part an exoneration of the "one man can make a difference" ethos. The denouement, highly symbolic, appeals to the adolescent radical in all of us. Once you've got over it you can go back for a second, well-deserved read and start unpicking some of the more deeply buried subtexts, clues and patterns and the numerous literary references (from Victor Hugo to Enid Blyton!).~FJ

Star Wars VADER'S QUEST

Dark Horse: *4 issue miniseries 1999**

A curious title for a series set shortly after the destruction of the Death Star, contrasting new hero Luke Skywalker, vengeful Darth Vader and a jealous hotshot pilot. Beginning with the battle of Sekigahara in 1600, which established the Tokugawa clan as rulers of Japan, Shinmen Takezo and his friend, Matahachi, from the village of Miyamoto, are survivors. After an adventure with thieves, Oko and her daughter, Akemi, Shinmen returns home, but without Matahachi, whose mother helps set the village and authorities against him as an outlaw. Captured by the monk, Takuan, he's left to die, but fate comes to his aid and he resolves to become "invincible under the sun" by taking on the best fighters in Japan. Written and drawn by Takehiko Inoue, this is based on Eiji Yoshikawa's novel, *Musashi*, which is a fictional account of the life of Miyamoto Musashi, master of the sword, and revered as a 'sword-saint' in Japan. It is a terrifically told and deliberately paced story, brutal, brash, haunting, and yet full of delicate images when it wants them. The series is being collected as it progresses, with four volumes to date.~NF

This much-loved French science-fiction strip débuted in *Pilote*'s in 1967. Valerian and his companion Laureline are spatiotemporal agents operating in 2070, by which time humans occupy the entire galaxy. Pierre Christin's scripts are based on the thrill-a-minute adventure reels of 1940s cinema, with exotic locations, inventive ideas and last-gasp escapes, well suited to children's fiction. The strength of J.C. Mézières' art lies in his imaginative, other-worldly landscapes and creatures, but beyond that his work lacks distinction. English language Valerian is ill served by uninspired translations and shoddy colouring. The best of four translated volumes is *Heroes of the Equinox*, in which Valerian competes with heroes from other civilisations to father a new generation for a humanoid race that undergoes a mass reproduction only once each generation. If you enjoy that, sample *Ambassador of the Shadows, Welcome to Alflolol* and *World Without Stars*.~FP

VALOR

EC: *5 issues 1955**

Gemstone: *5 issues 1998-1999**

Considering this wonderful series of historical tales only ran five issues, maximum mileage was eked out of ancient Rome, as illustrated by Al Williamson in 1-3. Other recurring themes were the Crusades, with gorgeous art by Reed Crandall (3, 4), and the Arthurian legend, illustrated by Wally Wood (1, 2). France was also a popular setting, with stories concerning the French Revolution (1, 5) and the Napoleonic era (2), expertly rendered by Graham Ingels, while Bernie Krigstein and Joe Orlando chipped in other beautiful period pieces, making the entire comic a visual delight. None of the stories, many written by Carl Wessler, are bad, but on occasion they tend to be heavy on the narrative. This sometimes restricts the art, and the twist at the end of stories isn't always that surprising. On the whole, though, the diversity of material presented provides a flattering contrast with the superhero-dominated market of today. It's a great pity that distribution problems ended the series. The Gemstone editions are reprints also available in one bound edition, and a hardback black and white collection is also available.~HY

VALOR

DC: *23 issues 1992 -1994*

Once upon a time in the twentieth century, there was a hero named Valor, destined to live a thousand years and play a pivotal role in future history, including helping to settle the homeworlds of many of the Legion of Super-Heroes. Sadly, things didn't work out that way. This started out, courtesy of Robert Loren Fleming and sundry artists, as an attempt to establish the former Mon-El as a "Johnny Appleseed of the Cosmos", wandering the universe and helping new cultures flourish and develop. Unfortunately, both stories and art were uninspired, until Mark Waid had the brainwave of tying in with *Legion of Super-Heroes* and *Legionnaires*, two titles, which, like *Valor*, were going to have their reasons for existing undermined by the time-rewriting *Zero Hour* series. The series begins with the 'D.O.A.' story-line (12-17), in which Valor, suffering from a nameless malaise, consults his colleague Vril Dox of L.E.G.I.O.N., who informs him that he's suffering from a form of poisoning. It's untreatable and terminal. Meanwhile, in the thirtieth century, the Legionnaires discover that Valor's name has been erased from history, including his role in their founding. And Lori, Valor's companion and lover, turns out to have a secret plan of her own. These strands are deftly tied together (aided by the striking art of Colleen Doran from 14) into a heady mix of romance, drama and tragedy, which ends, at the conclusion of 17, with the Legionnaires looking on awestruck as Valor dies. Who steps in to fulfil his role in history, and how the fabric of time is prevented from unravelling...well, unless you're familiar with about thirty years of *Legion of Super-Heroes* history, it'll make rather a less enjoyable read, but they're still nice to look at.~HS

VAMPI

Harris: *8 issues 2000-2001*

Anarchy Studios: *17 issues (9-25) 2001-2003*

With litigation imminent over the ownership of their cash cow Vampirella, Harris created a re-boot, later transferring ownership to an associate company. Given the circumstances it's a surprising artistic success. Vampi is an attractive female with a need for blood, but otherwise there's little to connect her with Vampirella. She depends on martial arts skills, wields a sword and rides a motorcycle, and although still improbably dressed, it is more conservatively so than her inspiration. The influence of Japanese action comics and animation is apparent from the start in both the stylish artwork of Kevin Lau and the plots of David Conway. This is often gratuitously violent, but equally thrilling in small doses as over 1-18 Vampi battles for a cure to her addiction for blood while attempting to obtain a DNA strand from a corporation headed by a sinister individual known as Archangel. This is spliced throughout with confusingly inserted pages detailing an incident from her past. 16-18 shift the status quo and give Vampi some idea of who she is, but in the best tradition of such matters, leave her with more questions. 1-6 are collected, and although part of an ongoing story to 18, most stories within that break down to three issue segments. Read as a whole, there's little variety, but fans of fast-moving adventure comics might want to try any individual story arc.~WJ

THE VAMPIRE LESTAT

Innovation: *12 issue limited series 1990-1991**

Apart from the John Bolton covers, this adaptation of Anne Rice's cult vampire novels has little to recommend it. Sub-professional painted artwork and uninspired scripting make it unlikely that the elevated prices back-issues command are due to anything more than fans of the books or the film buying it for the name.~JC

VAMPIRE MIYU

Antarctic: *6 issue miniseries 1995-1996*
Ironcat: *7 issue limited series ('Volume One') 1997-1998*, 6 issue miniseries ('Volume Two') 1998*, 7 issue limited series ('Volume Three') 1998-1999*, 7 issue limited series ('Volume Four') 1999*, 7 issue limited series ('Volume Five') 1999-2000**

Miyu is a vampire whose role is to retrieve the demonic Shinma that have strayed into the human world, attracted by spirits in distress. The Antarctic issues introduce Miyu and her assistant, Larva, an enslaved demon. Her other role, examined in the Ironcat series (*The New Vampire Miyu*), is as defender of Japanese Shinma from other Shinma. Eight Occidental Shinma invade the Japanese realm, led by Cait Sith, who wants to resurrect his mother, Quarl, defeated in the past by one of Miyu's ancestors. Larva is released from his slavery and Miyu is killed, but her friends work towards her resurrection for a final battle with Quarl's family. Written by Toshihiro Hirano and drawn by Narumi Kakinouchi, Miyu is very minimalistic, with little dialogue and almost ethereal pencils at times. The storytelling does require close attention as this creates an appropriately ghostly, fragile atmosphere, interrupted by flashes of violent action, but the characters are too underdeveloped to be persuasive.~NF

VAMPIRE TALES

Marvel: *11 issues, 1 Annual 1973-1975*

Marvel s black and white magazines usually have something to keep your interest even if, overall, they lack the consistency that makes for a must-buy title. In the case of *Vampire Tales* it's Don McGregor and Doug Moench's scripts that save the day. McGregor writes the Morbius series (1-5, 7, 8), while Moench is responsible for some short stories and the two final Morbius episodes (10, 11). Morbius is a self-made, scientific vampire from the pages of *Spider-Man*, but McGregor, while flinging him into supernatural action, uses wit and humanity to guide Morbius' search for salvation. Moench's stories have clever twists in the tail. His anti-heroic 'Shards of the Crystal Rainbow' (9), drawn by Tony DeZuniga, marks him out as an expert storyteller. The quality of the artwork is variable, with many of the artists coming from Filipino studios. Yong Montano, Virgilio Redondo and Vincente Alcazar compare unfavourably with Pablo Marcos, Tom Sutton, DeZuniga, Alfredo Alcala and Sonny Trinidad. Other occasional artists of note include Russ Heath (9), Joe Staton (8), Paul Gulacy (5) and Howard Chaykin (5). Apart from Morbius, Blade the Vampire Hunter (8-10), Satana (2-3) and Lilith (6) were all featured. The annual contains reprints from the early issues and is a good place to start.~NF

VAMPIRELLA

Warren: *112 issues, 1 Annual, 1 Special 1969-1983*
Harris: *1 issue (113) 1988*

Another black and white anthology title, though uniquely it featured a regular strip starring the comic's eponymous heroine. Conceived by Forrest J. Ackerman as a camp *Barbarella*-style science-fiction strip, Trina Robbins conceived the costume, and Frank Frazetta sealed the visualidentity. It almost immediately lost direction, something that was to plague the strip for much of its life, and disappeared after 2. She was back in 8 along with original artist Tom Sutton and new writer Archie Goodwin, who wrote unquestionably the best stories in the strip's run. He placed Vampirella very much in the horror milieu and introduced the supporting cast of the vampire hunters, Conrad and Adam Van Helsing, and the drunk magician Pendragon. With 12 Goodwin was joined by Spanish artist José Gonzalez, whose beautiful draughtsmanship came to define the look of the strip. Goodwin's successor, T. Casey Brennan (17-21), concentrated on a romantic tryst between Vampirella and Dracula, to little effect, and following a number of fill-ins British writer Mike Butterworth (under the pen-name of Flaxman Loew) took over. All notions of continuity and characterisation were discarded, but visually it was getting better and better. Initially very inconsistent, Gonzalez really hit his peak from 31 on, though the increase in quality was matched by a decrease in productivity, and consequently other artists pitched in. The best of these were José Ortiz (35, 36) and Leopoldo Sanchez (39-41), although it was Gonzalez Mayo who eventually took over the strip. With 43 editor Bill Dubay became the character's principal writer, and for a while proved as clueless as his predecessor. One bright spot was a sequence in 61-66 which returned Vampirella to her homeworld of Drakulon, but this brush with decent writing was short-lived, and subsequent Hollywood-based tales were utterly risible. 82 was Gonzalez's final issue, and it wasn't until the arrival of the excellent Rudy Nebres (88-96) that Vampirella became noteworthy again. 100 contained a nice one-off story by Goodwin, with terrific art from Anton Caravana, but all other issues after 90 were written by Rich Margopoulos, and it's a brave man who claims they're any better. Gonzalez returned better than ever with 103, and it's a real shame the comic was cancelled when it was.

The strength of *Vampirella* was the accompanying stories. Following a period of substandard material typical of late 1960s Warren titles, the first works of note were a number of fantasy strips by Wally Wood (9, 10, 12) that sparked off a lengthy period of quality. Other fine artists contributing included Barry Smith (9), Frank Brunner (10), Neal Adams (1,10), Ralph Reese (10) and Mike Ploog (14), but Spanish artists dominated the comic from 15. Unusually, it developed its own roster of artists, who rarely drew for other Warren titles. Foremost were Felix Mas, José Bea, Esteban Maroto, Ramon Torrents and the exceptionally gifted Fernando Fernandez (28-32, 35, 36 and 40-43). 30-33 featured Steve Skeates' seedy Pantha, a ghetto variation on the werewolf legend, drawn by another regular, Raphael Auraleon. The best of the occasional American artists featured were Richard Corben (30, 31, 33, 54) and Jeff Jones (5, 12, 32), who drew Berni Wrightson's chilling masterpiece 'Cold Cuts' in 34. Towering above everyone else, however, was the nowadays obscure Spanish artist Luis Garcia, whose ultra-realistic art has yet to be bettered in the comics medium. While all his strips are excellent , of particular note is 'Wolves at Wars End' in 43, which contains possibly comics' finest-ever artwork.

20-60 are a cornucopia of quality not matched by later issues, though *Vampirella* never plumbed the depths of other late Warren comics. Notable later strips were a pair by the comic's best writer, Bruce Jones: 'Yellow Heart' in 58, the story of a young tribesman's rite of passage, exquisitely drawn by Russ Heath (also in 61, 67, 76-78), and 89's 'Sight Unseen', about a blind girl, drawn by José Ortiz. Alex Niño's 'Fishbait' in 67 was a treat, as was a nice Anton Caravana strip in 90, but from 93 a change of direction replaced the short stories with regular continuing strips. Cassandra St Knight and the revived Pantha were joined by The Fox with 101, an unusual series about a shapeshifter, by Nicola Cuti and Luis Bermejo, set in turn-of-the-century China. Even better were a pair of European strips, Jeremy of the Isles (104, 106, 108, 110) and Torpedo, by Sanchez Abuli and Alex Toth (108, 110, 112), though the title's final year was bedevilled by reprints. Warren regularly produced entirely or part reprint issues of its best material (18, 27, 37, 46, 55, 63, 74, 81, 83, 87, 91, 100, 105, 107, 109, 111) and these may be the best jumping-on points for new readers. There are also numerous collections and miniseries published by Harris in the 1990s. The 1972 annual contained a new origin story among choice reprints, and a 1977 special reprinted some of Gonzalez's early Vampirella stories in colour. In 1988 Harris published a one-off small-print-run issue that was largely reprint, and is now almost impossible to find. Finally, it's worth mentioning the superbly iconic covers by the Spanish painter Enrich, whose sultry depiction of Vampirella for much of the run was as much a selling point as any of the strips inside.~DAR

VAMPIRELLA

Harris: *Series one 26 issues 1997-2000, series two 15 issues + 2001 to date*

A little more cohesion returned to *Vampirella* with the start of what was optimistically cover labeled "Monthly:. Guest creative teams work on different story arcs, as she becomes embroiled in a war between super scientific, anti-magic secret societies rife with gun toting holy nuns, black popes and shadow Vaticans. Kicking off with 'Ascending Evil' (1-3) from Grant Morrison, Mark Millar and Amanda Conner and Jimmy Palmiotti, followed in 4-6, by 'Holy War' with Steven Grant joining the writers and Louis Small Jr. taking over the art, Shi appears in 'Queen's Gambit' (7-9). 'Hell on Earth' brings a new costume (10-12), and 'World's End' (13-15) reintroduces Pantha. A couple of shared issues (16-17) confusingly have Pantha covers but Vampi returns for 'Rebirth' (18-20) written by David Conway and Grant, with extra material by Jeph Loeb and Tim Sale in 18, Christopher Priest, Alan Davis and Mark Farmer in 19 and Bruce Timm draws a seven page stand alone tale written by Ty Templeton in issue 20.

Once again the stories start to fall behind the art, and not for the first time it seems that the core concept carries a built-in redundancy. 'Dangerous Games' by Conway and Small sees the beginning of the end, followed by two awful team-ups with Lady Death (23, 26) and one last mindless pose-fest, 'Death Valley' drawn by Kevin Lau in 24-25, before cancellation. As one of the most popular icons of modern comics and with an absolute wealth of top-talent working on the series it's a total mystery why the material is so insubstantial and unmemorable. It just is.

The current *Vampirella* series hits the ground running as Mark Millar and Mike Mayhew take a few liberties with the back-story and generate some well produced thrills, with their first story to 3 collected. There's more plot progression, more action, less cheesecake and a genuine attempt to make this a horror title not an exploitation mag. In short order Vampirella goes on the road, taking on supernatural threats around the world, from cultists to haunted houses to the ever popular Nazis. Worth a look. At last.~WW

Vengeance ofVAMPIRELLA

Harris: *25 issues 1994-1996*

The Harris Vampirella is a far more active succubus than her Warren predecessor. Wisely deciding a passive character wouldn't work in the 1990s, all-out action was the order of the day. Unfortunately, there was very little else for most of the run, and the downside of the more aggressive Vampirella was discarding the subtle sexuality of the original (in as much as anyone wearing that costume can claim subtlety). The six-part 'Mystery Walk' (14-19) is the highlight. It modifies Vampirella's origin, introduces several interesting characters and explains the bizarre costume, and there's an origin of sorts in 22, but all in all there's very little substance. Come to leer, by all means, but you'll grow out of it one day.~FP

VAMPIRELLA Miniseries and one-shots

As the 'bad-girl' craze of the 1990s slipped into high gear, Harris ensured their major asset was ubiquitous. Vampirella team-ups, one-shots and miniseries proliferated, including many retailer inducements and limited edition comics whose restricted circulation places them beyond the brief of this guide. Some promote comics that never actually appeared. As for the rest, it's worth pointing out that the nudie magazines with pictures of real women that Michael Bair copied (badly) for Hemorrhage are likely to be cheaper. The best art is on 'Blood Lust', where Joe Jusko's static paintings in the Frazetta tradition illustrate a very dull James Robinson story returning Vampirella to a transformed Drakulon. The collection adds pages for greater tedium. The poor 'Death and Destruction' continues from the *Vengeance of Vampirella* series, and, despite the order of publication, leads into 'Blood Lust', and then *Vampirella Lives*. Warren Ellis writes that with his characteristic nasty touches and evidence of some thought, which raises it above most Vampirella material of the period.

'Classic', 'Legendary Tales', 'Retro' 'Silver Anniversary Collection' and *Vampirella of Drakulon* all reprint stories from the first forty issues of the Warren run. The 'Drakulon' and 'Silver Anniversary' stories are coloured, while 'Retro' also presents Auraleon drawn Cassandra St Knight stories from 93-95. New versions of old stories are found in the 25th Anniversary Special under a Frank Frazetta cover, while 'The Crossover Gallery' features pin-ups teaming her with other characters drawn by their creators. The unlikeliest are contributions from Michael Allred and David Mack. Despite most team-ups being two issues they are not always connected stories, and contractual necessity ensures one portion published by the owners of each character and the billing alternating over the two issues, hence *Vampirella Shi* and *Shi Vampirella*. That proved popular enough for a reprise as 'Queen's Gambit' in the regular series. Don't be conned into buying *Vampirella vs Pantha* if you've already got *Pantha vs Vampirella*, or vice-versa. The contents are the same under different covers. It's gratuitously sordid, but Mark Millar provides a plot and artist Mark Texeira is admirably restrained in providing a gloomy palette. It's the best of the team-ups. Of the others, *Wetworks Vampirella* at least has interesting art with Richard Bennett inking Gil Kane. So does anything in the category pass muster? Surprisingly, yes. The one to get is *Vampirella: Dracula the Centennial*, celebrating a century since the publication of Bram Stoker's *Dracula*. Stoker and 1960s *Vampirella* writer Archie Goodwin star in a sentimental story by James Robinson, and Alan Moore and Gary Frank produce a terrifying modern day Dracula piece. Vampirella's not in it, but then Dracula's missing from the weakest contribution, turned in by Warren Ellis on autopilot. This and, Frank apart, artistic deficiencies preclude wholehearted recommendation, but it will surprise.

At first glance many miniseries may appear to be missing from the heading, but these are found under the Harris *Vampirella* entry. The series promoted the titles of story arcs with the designated number of individual issues on the cover with a bat wing motif.~WJ

VAMPIRELLA STRIKES

Harris: *8 issues, 1 Annual 1995-1996*

Yet another short series featuring the adventures of comics' most famous girly-vampire. It's an uninspiring run of cheesy nude shots and wanton bloodletting from a mixed bag of creators. 5 is a team-up with the Eudaemon by David Quinn and Rudy Nebres, and 7 is a flip-book with new material by Ian Edgington and Nebres and a specially coloured Warren reprint by Bill Dubay and José Gonzalez. One of the poorest showings since her revival.~WW

VAMPS

DC/Vertigo: *6 issue miniseries 1994-1995*, 6 issue miniseries ('Hollywood and Vein') 1995-1996, 3 issue miniseries ('Pumpkin Time') 1998-1999*

Hot babe book with an attitude starring five vampire tarts. Our bike-riding sirens wreak a carnage-littered, blood-splattered, semen-drained trail of mutilation across America. Unlike the blood, plot and character background are thin, yet it is hard to label the book gratuitous since it sets out to provide sensationalist titillation, and Elaine Lee and William Simpson achieve this aim admirably. The slightly inferior sequel by the same creative team is more wet-dream stuff as the biker vampires relocate to Hollywood to star in... a biker

vampire movie. Pity vampires don't photograph. 'Pumpkin Time' is the uninitiated in pursuit of the unknown on a unilateral course of uninformed insipidity whilst uninspired creators unwind a uniform monotone of uncultivated uncouthness.~APS

VAMPYRES

Eternity: *4 issues 1989*

Formula vampire stories by artists no more or less than competent, reprinted from Skywald's 1970s horror magazines, unsurprisingly look no better when poorly reproduced on smaller pages.~GK

VANDALA

Chaos!: *One-shot 2000, one-shot ('II') 2001*

Plotless tale of Vandala, a homeless valkyrie (and sister of supernatural demi-goddess Lady Death) as she flies about wearing little more than dental floss and a winged hat, trying to remember who she is. God-awful. Peter David writes the second one-shot but its still just eye-candy for adolescents of all ages.~WW

VANGUARD

Image: *6 issues 1993-1994, 4 issue miniseries ('Strange Visitors') 1996-1997, one-shot ('Ethereal Warriors') 2000*

Vanguard is an alien defender, created when still a fan by Erik Larsen, but written by co-creator Gary Carlson and drawn by a different artist each issue during the first series. All feature some interesting ideas, but they're largely subsumed by the overused 'superheroes misconstrue each others motives and fight' plot. The final issue is the best, but fans of Jason Pearson and Joe Madureira might want to see their pencils on 2 and 3 respectively. The second run, pencilled by Scot Eaton throughout, extends a sliver of plot over four issues. The one-shot has a would-be planetary conqueror arrive on Earth for a distinctly Kirbyesque story illustrated by Frank Fosco. It's the best of the bunch.~WJ

VANGUARD Illustrated

Pacific: *7 issues 1983-1984*

Vanguard succeeds in allying very good art with generally poor stories. Tom Yeates provided some nice Al Williamson stylings in 1-3, also featuring Peter Milligan and Brendan McCarthy's imaginative 'Freakwave', which preceded *Waterworld* by a good decade, but Mike Baron and an undeveloped Steve Rude's plain daft encyclopedia-salesman story was very tiresome by its conclusion in 4. Michael Gilbert's Mr Monster débuts in 7, and there's nice Rick Geary pontification on his early career in 5, but on the whole the covers are the best thing with a Mike Kaluta beauty on 5.~FP

VANITY

Pacific: *2 issues 1984*

Vanity is a cave-girl who finds a spaceship and ends up fighting aliens on the moon. Will Meugniot's attempt to recreate the light-hearted 'good girl' strip is only partly successful. The artwork's fine if a little flat, but the humour is very forced and the story not particularly thrilling.~NF

VAULT OF EVIL

Marvel: *23 issues 1973-1975*

Another title reprinting Marvel's seemingly inexhaustible supply of horror, mystery and monster shorts from the 1950s. There's the usual mixture of Steve Ditko and lesser artists, and only a muddy reprint of a Bernie Krigstein-illustrated story in 20 is of any note.~FP

The VAULT OF HORROR

EC: *29 issues (12-40) 1950-1955**
Gladstone: *6 issues 1990-1991*
Russ Cochran: *5 issues 1991-1992*
Gemstone: *29 issues 1992-1997**

The immediate popularity of the gore comics like *The Vault of Horror* and its companion anthologies permitted EC publisher William M. Gaines to underwrite less popular titles with greater merit. At the same time their violence and Gothic melodrama outraged parents, politicians and psychologists like Fredric Wertham. EC comics, totally forbidden in post-war England, were the 'video nasties' of the 1950s, killed off by moral panic, jittery distributors and the pusillanimous Comics Code Authority.

Inheriting the numbering of *War Against Crime*, a routine cop comic that introduced a *Vault* story from 10, the first issue proper (12) has host The Crypt Keeper in place. Early artists Harvey Kurtzman (12, 13) and the Wally Wood/Harry Harrison team (12-14) gave way to the regular quartet of Jack Davis, Graham Ingels, Jack Kamen and Johnny Craig.

Johnny Craig drew all covers and many lead strips, most of which he also wrote (and he even edited the last five issues of the title). He returned to favourite scenes and themes again and again, helping to define *Vault of Horror*'s identity through numerous stories about "voodoo, zombies, personality transference and above all the psychological aspects of fear", as John Benson puts it in his notes for the boxed set. Many of Craig's covers were among the most gruesome images EC ever published, but his strips were comparatively restrained, emphasising internal terror over the violent retributions doled out by Al Feldstein in *Haunt* and *Crypt*. 32's 'Whirlpool' is both typical and exceptional. Over eight brilliantly designed pages, Craig plunges an unnamed woman into a terrifying nervous breakdown, where she is haunted by demons and then (another recurring horror) buried alive. There is no twist ending. The nightmare is circular, as reality and fantasy have become indistinguishable. However, Craig's best drawn strip is 35's Christmas story 'And All through the House', another psychological masterpiece adapted for the 1971 movie *Tales from the Crypt*, where Joan Collins is menaced by a mad Santa. Craig's version is blacker, wittier, and much more scary.

The large size and crisp black and white reproduction of the Russ Cochran boxed sets do wonders for the artwork of modernists like Craig and Bernie Krigstein, a late contributor, with stunning stories in 36 ('Pipe Dream', an opium-drenched horror much admired by Gaines), 38 ('The Catacombs'), 39 ('The Purge') and 40 (a savage strip entitled 'The Pit'). Of course, Krigstein was something of a rare treat, unpopular with readers used to the more full-blooded work of an Ingels or a Davis. Graham Ingels was the master of ugliness and putrefaction, his style perfect for scripts about rotting zombies, creepy carnivals (see the truly vile 'Out of Sight' in 38), witches, and all things Gothic. Jack Davis was, like Craig and Jack Kamen, an extremely versatile artist, equally adept at horror, crime or humour. His frantic, cartoony style undercut the scripters' more ponderous moments, and emphasised the absurdity and black humour hiding under the surface of most EC comics. It's also worth noting how consistent all these artists were. It's rare to see a below-par job from any of the regulars, and Craig and Davis actually improved with every issue, both reaching an absolute pinnacle around issues 35-40. It's inspiring to see these artists giving their all at a time when the horror comic was considered indistinguishable from pornography. At the same time, prolonged exposure to the often overwritten scripts makes clear the limitations of EC's beloved revenge formula. Still, when read in small doses *Vault of Horror* remains one of the most varied and blackly entertaining horror comics ever published. All 1990s issues are reprints, with the Gemstone series representing each issue in original format.~AL

THE VAULT OF WHORES

Eros: *One-shot 1998*

As with Eros' other EC parody comics, the joke doesn't really last beyond the title and the cover, but if you like your necrophilia and sado-masochism to feature preposterously large breasted women this may be the comic for you after all.~WJ

original hasn't been continued. Creator Christopher produces charming short stories that are always a little surreal. Characters, for instance, include Chaland the cat, Kurt Cobain, Death, Alexander Dumas, Michelangelo and Bono the clown. There are traces of Little Nemo in Slumberland in dream-like sequences, accompanied by a light-hearted but more cynical view of human nature. Note that the second issue has 'Boulevards' on the cover rather than Vauxhall.~NF

THE VC'S

Fleetway Quality: *5 issue miniseries 1990*

This science-fiction series from the British *2000AD* was repackaged for the American market. Told through the first-person narrative of a new recruit sent to replace a dead member of the VC's, a platoon in an intergalactic conflict, the story focused as much on the horror and futility of war as on the glory and action one might expect. The saga's ending was particularly downbeat and far from happy, rounding off one of the stronger of *2000AD*'s long-running series.~JC

VECTOR

Now: *4 issues 1986-1987*

Author and technophobe Henry Vector gets a computer for a birthday present from his wife, but unfortunately it's second-hand and the previous owner was a Druid. The computer has a mind of its own which it promptly transfers to Henry, precipitating a series of chases and battles as the Druids send big monsters called Modems to retrieve the computer's contents by lopping off his head. This was the second comic title to use the fledgling computer graphics systems to produce artwork. Notable only in that the computer pages are hideous beyond belief, but the drawn pages are even worse.~WW

VEENA

Eric Thériault Press: *4 issues 1999-2001*

'Veena and the Time Machine' (1-3) concerns tracking down the origin of some sunglasses that create visions of Native American ghosts. 1-2 contain short backup strips with Luis Neves, while, in 3, Veena investigates the ghost of a suicidal young man and 'The Expanding Spiral' (4) is the story told to Veena of a man granted his wish by a genie to relive life with his memories intact. Major Valor (4), a World War II hero, meets Frankenstein's monster establishing that the same serum created both of them. The ongoing John Star strip is a science fiction adventure told (slowly) in newspaper strip format (though there are multiple episodes in 4). Thériault is a good cartoonist (4 shows a greater maturity and command of line and inks), and produces some thoughtful writing about serious issues all wrapped up in genre stories.~NF

VEGMAN

Checker Comics: *3 issue miniseries 1998*

A lightweight comedy about a self-appointed urban hero. The two-fisted vegetarian's adventures are presented like an underground comic, complete with a cod R. Crumb finish to the very basic artwork. Sadly, with the humour being zany rather than challenging, there is a danger that readers may lose the will to live after reading more than a few pages. Tastefully humble but throw-away.~SW

VELOCITY

Pleece Brothers: *5 issues 1988-1989*
Eclipse: *2 issues (6-7) 1991*
Pleece Brothers: *1 issue (8) 1996*

A collection of idiosyncratic features and tone pieces and text stories written by Gary Pleece and drawn by his brother Warren. A distinctly English feel abounds and the American issues even sport the cover blurb "Mad in the UK". Features like 'The Higsons' in 1-3 read like whimsical television documentaries, a connection borne out somewhat by 'God Box' in 1. The scope extends to period pieces like the 1940s 'Look Who's Listening' in 2, and the high seas of the 18th century in 3's 'Scurvy ...or is it?' 'Master Twaddlethwaite's Malaise' in 6 makes sure the period scenery is part of a set as an actor gradually goes bonkers. 6 also features twenty-two pages of the unfinished 'Montague Terrace', which promised to follow in the footsteps of 'Dead Souls' in 4 and 5 and the brilliant 'Great Unwashed' in 4-5. These cosmopolitan dramas hint that Warren has been looking at some of José Muñoz's work. 'The Higsons' and 'Hope I Die' in 5 are reprints from 1. Wonderful and all over too soon.~SW

VELOCITY

Image/Top Cow: *3 issue miniseries 1995-1996*

Velocity is the speedster of the superhero group Cyberforce, here on her own, targeted by the serial superhuman-killer Charnel and having to conquer her fears and self doubt if she's to survive. Kurt Busiek's script provides much more to enjoy than the premise above might suggest as Velocity's fear of conflict is explained and her predicament forces her to do more than simply run or fight. Anthony Chun provides some solid artwork and there are guest appearances from Cyberforce and the Savage Dragon.~NF

VENGEANCE SQUAD

Charlton: *6 issues 1975-1976*

The Vengeance Squad are ex-con Eric Redd, beautiful policewoman Candy Orr and burly Vietnam vet Tulsa Coyle. The Vengeance Squad will duff-up baddies for mucho dinero. The Vengeance Squad are a lot like TV show *The Protectors*. The Vengeance Squad are not very good. After a first issue drawn by Frank Bolle, Joe Gill's characterisation-free scripts were illustrated by Pete Morisi in his typically enjoyable style. Far better, however, was the Mike Mauser back-up, fresh from the pages of *E-Man* by Nicola Cuti and Joe Staton. The series featured short, well-plotted tales that mixed humour and drama in much the same way that Will Eisner had managed several decades earlier with *The Spirit*. Any of the six issues are worth searching out for the Mauser stories alone. Only the brave need read any further.~DAR

VENGER ROBO

Viz: *7 issue limited series 1993-1994*

Crazily fast-paced Manga by Go Nagai and Ken Ishikawa. The distorted faces are funny but the frantic robot action sequences are really quite abstract and almost impossible to follow. This one really is for psychotic speed freaks only.~GK

VENOM

Marvel: *6-issue miniseries ('Lethal Protector') 1993*, 3 issue miniseries ('Funeral Pyre') 1993, 3 issue miniseries ('The Madness') 1993-1994, 3 issue miniseries ('The Enemy Within') 1994, 4 issue miniseries ('Nights of Vengeance') 1994, 4 issue miniseries ('Separation Anxiety') 1994-1995*, 4 issue miniseries ('Carnage Unleashed') 1995*, one-shot ('Venom Special') 1995, 5 issue miniseries ('Sinner Takes All') 1995, 4 issue miniseries ('Along Came a Spider') 1996, 4 issue miniseries ('The Hunger') 1996, 3 issue miniseries ('Tooth and Claw') 1996-1997, 3 ssue miniseries ('On Trial') 1997, 3 issue miniseries {'License to Kill) 1997, one-shot ('Seed of Darkness') 1997, 2 issue microseries ('Sign of the Boss') 1997, 3 issue miniseries ('Finale) 1997-1998*

A monthly publication from the start, splitting *Venom* into miniseries avoided permanent creative staff while serving the feeding frenzy of the early 1990s with a new first issue every few months, initially with a glow-in-the-dark/sparkly/embossed covers. Venom is the unity of a symbiotic alien and the human Eddie Brock, with the resulting character resembling Spider-Man because the symbiote first attached itself to Peter Parker in years gone by. Formerly decidedly the villain, for his own series, if not quite transformed to benevolence, Venom works from the best of intentions, seeing himself as protector of the weak. There's little inspiration over the first six series, as fight scenes and guest stars substitute for plot, although the art is competent enough. 'Nights of Vengeance' is the best of a mediocre bunch. Larry Hama's appointment as writer for three miniseries with 'Carnage Unleashed' improves matters to the point of including a story each month, and he writes more of the remaining issues than anyone else, but *Venom* remains poor. The one redeeming issue of this largely turgid run is the one-shot 'Seed of Darkness', featuring Brock before he was Venom. There's an encounter with the alien symbiote with whom he will one day be joined, and the whole story is a pastiche of the Marvel monster short stories produced in such abundance during the 1950s and early 1960s.~FP

VENTURE

Image: *1 issue + 2003 to date*

A mysterious superhero, looking nothing like the chap on the cover, and holding down a day job as a teacher, deals with a few problems. Jay Faerber knows his way around this sort of material enough to intrigue, and while the mixture of Jamal Igle's art and on-screen inking is a little muddy, the story does its job. One to watch.~FP

VENTURE Graphic Novels

Venture is a joint project between Dark Horse and Strip Art Features, a company syndicating graphic novels throughout Europe, presenting English language versions of European material. To launch the line they couldn't have picked better than *Blood Ties*. Belgian artist Hermann's American publication has been sporadic, but his work is lauded throughout Europe. Here Hermann collaborates with his son, credited with the labyrinthine script for this tale of a naïve junior detective sucked into a plot beyond his understanding. Hermann draws a gloriously evocative damp and grimy 1950s New York that practically drips off the page, even finding time for an Edward Hopper homage. His characters are beautifully drawn, his sense of colour magnificent, and the plot keeps you guessing until the end. Hermann's *Jeremiah* and *The Towers of Bois-Maury* (including *Roderigo*) graphic novels are dealt with in separate entries.

Carlos Trillo is obviously a major Strip Art client, as fully a third of the Venture product to date features his scripts. *Zachary Holmes*, child detective in a pseudo-Victorian Britain stars in two brightly coloured volumes of children's fantasy stories, the first involving him proving the innocence of Frankenstein's Monster, the second having him save the Queen from the ghost of Moriarty. They'll just about charm children, but no more, although there's a definite improvement in Juan Bobillo's art for the second volume. Any child buying the introductory volume of *Bird*, 'Tattoo', another Trillo and Bobillo collaboration, is in for a shock, as it's the sexually explicit year in the life of a delusional drug-addict following a family schism. It highlights a problem for the nascent line, that of design. Usually a Dark Horse strength, here it's all over the place, with nothing to differentiate childrens material from adult. Bird has a compelling perversity as it unfolds, but the paperback size *Video Noire* by Trillo and Eduardo Risso is very disturbing. Also explicit, it involves the blackmail of a wholesome kiddies TV presenter and a down at heel investigator, and throws up surprises to the end. Risso's black and white art is an astonishing visual treat: detailed and joyful, while the postures convey life and emotion.

Domingo Madrafina's art for Trillo's *The Big Hoax* and *The Iguana* also impresses, continuing the tradition of Milt Caniff and Frank Robbins for stories of death and corruption in 1960s South America. *The Big Hoax* concerns the difference between the perception of the supposedly virtuous niece of the President, publicly beloved as "The Intact Virgin", and the horror of her reality. When a disgraced, but virtuous, ex-cop agrees to facilitate her escape, a relentless killer known as The Iguana is set on their trail. It's a commendable adventure novel packed with memorable characters. *The Iguana* is an earlier episode in the killer's life, also returning camp writer Melitón Bates. Slimmer in page count and content, Madrafina modifies his style, often emphasising cartoon elements in the wrong places, thus disrupting the mood. Two paperback volumes of *Otto Porfiri* each present three stories of an overweight middle-aged private detective. Italian creator Franco Saudelli may deliberately vary his style for each story, or these volumes gather stories produced over a long period. Either way, however he's working, it's with a naturalistic easy line seemingly capable of illustrating people with poise whatever the activity, be it the hallucinations of a drunken Porfiri in 'Drama on the Cliff' to the caricatures of well known football players in 'Red Moon' He also loves his naked women. Porfiri contrasts well with the glamour he investigates, although he's very much the stone-faced cipher secondary to the plots. It's not worth attempting to second-guess these, as capricious elements often intrude, so just go with the story.

Four volumes offer the traditional comic versions of a ghastly future. *Genetic Grunge* looks ugly. The preposterously proportioned and heavily stylised figures are ugly, the layouts are ugly and the colouring is ugly. Luckily the story's not much cop either, so you don't have to bother at all. Gordon Rennie writes *Glimmer Rats* and *Rain Dogs*, both of which premiered in the UK's *2000AD*. The first is basically *Platoon* in Hell, relentlessly grim and negative as convicts and revolutionaries are slung through a dimensional warp to combat monsters big and small in an environment where technology designed to aid becomes a hindrance. Mark Harrison draws this splatterfest in dull and gory fashion. *Rain Dogs* is illustrated by Colin Wilson, and more resembles a traditional European adventure album. It's set in New York populated by scavengers and zealots as civilisation has devolved after a flood of biblical proportions. When an exploration vessel from outside crashes, the survivor teams with an eighteen year old scavenger looking to escape. *The Darkness Behind* is a little more imaginative. Evolved technology permits memories to be downloaded into storage while the brain is refilled with data, or someone else's memories, for an almost foolproof method of transferring information. If large amounts of absorbed memories are not dumped quickly, the consequences can be fatal, and there's always the concern about personal memories not being restored. Stefano Casini's art is functional rather than decorative, and his bleak thriller is horribly coloured, but has a proper plot that engages quickly.

The Four Killers features Tex Willer, a Texas Ranger who's been appearing in Italian comics since 1948. When a family of his friends is wiped out by outlaws, Tex trails the killers. It's very much a standard Western plot from Claudio Nizzi, but the treat here is ninety pages of gorgeous art from Joe Kubert, obviously relishing the subject matter. It's unfortunate that an artist of Kubert's stature has to look abroad to draw the material he wants, but at least there's an opportunity to see it in the USA now. Let's hope his later *Tex Willer* stories are also translated.

The wealth of top class material available to Venture makes the imprint an exciting proposition, but a seeming lack of editorial vision pervades. Without that the chances of building a vibrant list with desirable back stock are very slim indeed.~WJ

VENUS

Timely/Atlas: *19 issues 1948-1952*

Well, here's one of the strangest series ever published. *Venus* told stories of the Goddess of Love, bored with her immortal existence, coming down to Earth to seek adventure. Intended as a 'funny career girl' title, Venus meets Whitney Hammond, publisher of *Beauty* magazine, who assumes Venus' claim to goddesshood is a publicity stunt, and awards her the editorship of the magazine, falling in love with her almost as a by-product. Venus' editorship and her romance are looked on askance by Della, Hammond's secretary, who had eyes on both the job and the man for herself. That was the setup in 1-5, which followed the basic template of heroine, boyfriend, heroine's rival – with only the twist that Venus had vast supernatural powers and a pantheon of celestial chums to help her out, really stacking the odds against poor old Della.

In 6 Loki (the writer cheerfully cross-pollinated pantheons) wanted Venus for himself, and he became a recurring character, usually helping Venus out despite her do-gooder nature. 6-9 were less comedy and more adventure, but with appallingly overwritten slushy dialogue, and titles like 'The Love Trap!' Presumably the aim was to retain female readers while appealing to a wider audience, but the title switched to science fiction with 10. A romantic component was still prominent, as "The Son of Satan!" threatened to destroy the world (and demonstrated how it would happen) if Venus spurned his advances.

From 13, Bill Everett wrote and drew most stories, introducing a dreamlike, hallucinatory quality, immense atmosphere and appeal, but providing only the barest nod to logic or cause and effect. Hammond, Venus and Della were played more as investigative reporters turning up at the scene of bizarre occurrences, probably because whenever you have an invasion of giant stone men, of course the first people you call are beauty magazine writers. The stories developed a breathtaking range, but not much depth; Venus thwarted a plan to conquer the world with an army of zombie chorus girls, the depredations of Adonis, the Queen of the Gargoyles, the rampaging daughter of Neptune, Satan himself (who seems to forget that Venus was once almost his daughter-in-law...) and giant marauding pansies. No, the flowers. The all-Everett issues (16-19) are outstanding pieces of work. The best sample would be 17's tale of cartoonist Jimmy Rogers, who finds himself plagued by his own villainous creations, sprung alive from his inkwell, until Venus delivers an innovative solution. Still fantastical, it has a more linear plot than most of the stories, and Everett's always-innovative art is superb.

18 and 19 switched gears again to pure horror, with Venus now having forgotten, seemingly, her supernatural abilities and becoming just another tough-talking broad on the trail of a story. Despite her remarkable willingness to adapt to whatever genre was in vogue, after cancellation Venus languished in limbo until Everett himself revived her in *Sub-Mariner* 57. Since then, she has retained a vague presence, most prominently in issues of *Champions*, *Avengers*, and the *Marvel Valentine Special*.~HS

VENUS WARS

Dark Horse: *14 issue limited series 1991-1992*, 15 issue limited series (Venus Wars II) 1992-1993*

In stories set towards the end of the twenty-first century, Venus is an Earth colony where two large countries co-exist uneasily. When Ishtar attacks Aphrodia, dirt-bike rider Ken Sano joins the élite bike corps that appears the only hope against superior forces. That's about the story for around 400 pages of the first series. Creator Yoshikazu Yasuhiko nods towards political and ecological allegory, but long, silent action sequences, no matter how spectacular, are no substitute for a plot.

The second series is immeasurably better. It switches from battle action to political intrigue, from Aphrodia to Ishtar, and without sacrificing the action contains more story in the first two issues than in the entire first series. Soldier Matthew Radom is a pawn in a power struggle, but his manipulators have reckoned without his depth of resolve, and the series is his quest for revenge and justice. Having set up an action thriller, Yasuhiko diverts into astonishing farce with a cartoon scientist, in 9 and 10, but the final chapter is extremely powerful (owing more than a little to *All Quiet on the Western Front*).~FP

VERBATIM

Fantagraphics: *2 issues 1993-1994*

The dullest kind of autobiographical commentary imaginable, where even the potentially interesting aspects of Carl Belfast's confessions are buried in so much introspective verbiage they cease to engage. The irony is that the cartooning is great, with jagged distortions and imaginative use of black and white providing a memorable disturbing quality.~WJ

The VERDICT

Eternity: *4 issue miniseries 1988*

The idea of an urban vigilante was being worked to death when *The Verdict* was published, yet despite inconsistent and sometimes poor art it succeeds. The primary reason is the work put in by writer Martin Powell in evolving a background and a history for his feature. For twenty years a serial killer has been operating in Thermo City, and for twenty years the Verdict has attempted to put an end to his killing. Along the way he's prevented many crimes, but has only recently approached his aim. The verdict? Okay.~WJ

VERMILLION

DC/Helix: *12 issues 1996-1997*

Science-fiction writer Lucius Shepard brings his talents to the comic field with an epic concerning the city of Vermillion, which is a living entity so large it occupies the entire universe. How it became that way is explained in the story of Jonathan Cave, the only man with the memory of how things were previously. There's also a mysterious religious sect with a strange agenda. The story centres on a spaceship called the Marcus Garvey (nice touch), and is a complex plot still unfolding from the early issues: anyone wanting to sample should start at the beginning. It's certainly well conceived, and Al Davison's intricate art brings out the weirdness that is *Vermillion*.~HY

VERONICA

Archie: *132 issues + 1989 to date*

As the rich, but selfish rival to Betty for Archie's love, Veronica Lodge's life is very different from that of Betty, though there are some obvious similarities. The series begins with single-issue tales of Veronica's travels around the world (1-18), a theme that reappears later for 50 (Tonga) and 100 (the Moon). Apart from travelling, Veronica is often concerned with the latest fad or fashion, and her selfishness, attention-seeking and tempestuous nature are often at the heart of episodes, but the most common plot revolves around some aspect of her (or her family's) conspicuous consumption. Her father, Hiram, always finds, to his cost, that it's cheaper to let Veronica spend money freely, than try to make her find another way to achieve the same thing. Veronica can be good at sports (basketball, bowling), but only if properly motivated (an idea so good it's been repeated for each of these activities), and tennis seems to be the only sport at which she consistently excels. One recurring plotline has Veronica dressing as superhero,

Powerteen, and accidentally managing to stop criminals (111, 118) or finding an unwanted sidekick (127). A magical pendant appears in 109 and 122, and a cursed idol is at the centre of Veronica's trip to Adventure Island (129-130). Generally, Veronica seems more prone to be involved in a supernatural or science fiction event than Betty (though neither are common). Veronica always has her eyes open for a good-looking boy to date, but will stop at nothing to prevent Betty winning a date with Archie. This rivalry with Betty extends to everything they do, and yet throughout, it's clear that Betty and Veronica are incredibly close, spending far more time with each other than with anyone else, and Veronica frequently falls back on this defining friendship when beset by troubles.

Dan Parent has been associated with the title from the start, first with just artwork, then as a writer (from 44), and finally as both (from 79, and with almost every issue from 107). Other writers include Kathleen Webb, Hal Smith, Michael Gallagher, Frank Doyle (from 26), Bob Bolling, Mike Pellowski, Bill Golliher and George Gladir. Tim Kennedy and Stan Goldberg have been the most regular other artists, but Dan DeCarlo appeared irregularly between 26 and 103, and Jeff Schultz has worked on the title regularly since 60. There is inevitably a sameness to the issues, and none of the artists or writers are especially distinctive here (DeCarlo being a possible exception), but Veronica's personality and the strength of the background characters are enough to make this worth at least an occasional indulgence.~NF

VEROTIK ILLUSTRATED

Verotik: *3 issues 1997-1998*

A showcase for Verotik's assorted characters, drawn badly by the likes of Martin Emond, Duke Mighten and Alex Horley along with some of Simon Bisley's sloppiest ever art. Breasts, monsters and gore abound, while plots are unaccountably absent. 2 has a Dave Stevens cover, and Richard Corben contributes five pages to 3's jam story.~WJ

VERSION

Dark Horse: *15 issues (1.1-1.8 and 2.1-2.7) 1993-1994*

Version consists of two parts. Firstly, a search for Dr Higure, the inventor of a living biochip named EGOS. On the trail are his daughter Eiko, Hap Happo, a private detective, and Black Echo, the head of a secret organisation with a hidden interest in the chip's development. By the end they've realised that EGOS is a new 'version' of life which might supersede humanity. In part two Black Echo kidnaps the others and takes them to an undersea lab, Black Tokyo, where he is transformed into a monster by communicating with EGOS. Hisashi Sakaguchi has created a somewhat worthy strip examining artificial intelligence and the threats posed to our current ecosystem by man. Despite lots of explanations that bog the plot down, the visual storytelling is excellent, and there's enough adventure to make you wish the planned third part had been published.~NF

VERTIGO Graphic Novels and one-shots

Established to differentiate titles with greater appeal to an older audience from the standard DC superhero line, the Vertigo imprint was initially dependent on horror, fantasy and more offbeat treatments of superheroes, but has evolved into a broad church, although remains very much a writing-led list.

Vertigo's greatest success was Neil Gaiman's *Sandman*, and it's been relentlessly strip-mined with even minor supporting characters processed into their own miniseries or one-shot under a 'Sandman Presents' banner. Janitor Merv Pumpkinhead arrived via *The Dreaming*, dispatched to Earth to retrieve a potent stolen item. Mark Buckingham and John Stokes can't be faulted for the art, but Bill Willingham's strained plot basically places a toned-down Mask in a *James Bond* scenario, and it rapidly outlives any small welcome. Willingham is on far better form for *Everything You Always Wanted to Know About Dreams... but Were Afraid to Ask*, possibly the longest comic title ever. Using Gaiman's throwaway characters, it offers whimsical answers to questions about dreams by taking as its premise that they're staged in the manner of theatre plays. Well drawn by the likes of Mark Buckingham, Duncan Fegredo and Jason Little it's a pleasant removal from the po-faced nature of most *Sandman* spin-offs. A far more substantial effort is *Furies*, as yet only available in hardback. John Bolton's art will be a surprise, combining what appear to be computer manipulated photographs with painted artwork. Writer Mike Carey draws from the same sources as Gaiman, marching through Greek myths, and he approximates the naturalistic and portentous quirks of Gaiman's writing style. *Furies* stars deeply troubled former superheroine Fury attempting to purge her demons by joining a theatre troupe performing Greek tragedy in Athens. Cronos, among the eldest of the Greek Gods stirs the pot, and in the best traditions of classical literature Sandman makes a deus ex-machina appearance. It's a little too glib in places, and in others Carey has trouble connecting the dots. Wait for the paperback.

Totems was published to coincide with the millennium. A conspiracy theorist crashes a party attended by Vertigo characters, most of whom no longer host their own title, so if the idea of *Vertigo Team-Up* appeals take a look. Duncan Fegredo art is always welcome, but it's otherwise very ordinary. In *I Die at Midnight* Larry pops pills that will kill him at midnight because Muriel has dumped him. When he's offered another chance, he needs to survive, but can't reveal what he's done. Add the necessity to cross a Manhattan celebrating the millennium, a jealous, violent ex-boyfriend and Muriel intent on visiting her grandmother and you've got Kyle Baker's updated version of a classic 1940s studio comedy. The cartooning and writing are great, but one can't escape the feeling it comes all too easily to Baker, and wish he'd stretch himself. Perhaps he's so good it just seems that way. A similar headlong rush through Manhattan features in the book sized *You Are Here*. Baker again supplies a varied cast and screwball comedy scenario, this time Noel Coleman's past coming home to roost and his desire to conceal it from his innocent nature-loving girlfriend. Again, it's top-notch and superbly drawn. *King David* is problematical. It's a sardonic interpretation of what the bible tells of the ancient Israelite king. The anachronisms jar, as do the vivid colours, the sometimes strange page layouts and the dips into computer-generated backgrounds. This is all a shame as Baker's art throughout is superb, recalling Mort Drucker and the better Disney animation.

A persistent Vertigo problem is emperor's new clothes syndrome, whereby favoured creators produce incomprehensible or self-indulgent rubbish. Caveat emptor prospective purchasers of *The Mystery Play* by Grant Morrison and Jon J. Muth, and the J. M. DeMatteis written *Mercy*, although Paul Johnson holds his artistic end up. Special mention in this category must be made of *Doctor Occult* written by Dave Louapre with wretched art from Dan Sweetman. He must have been having a laugh. The Peter Milligan written *Rogan Josh* may elicit a similar reaction, but possesses a kinetic energy, and fine art from Brendan McCarthy, influenced by Indian comics he'd seen. In its dealings with magic and reincarnation it encroaches into areas where mood supplants narrative, but is ultimately rewarding, if not exceptionally so. The same applies to *Menz Insana*, set up to enable John Bolton to indulge himself by painting an attractive woman in any pose and clothes he wants, but also to broaden his range into exaggerated comedy. It's a collection of whimsical pieces about a pair of minds on the mental plane, having departed the sanity of their bodies. Christopher Fowler provides plenty of music hall-style verbal gags in a discursive script with one excellent mood changing switch to reality. He's a horror novelist by trade, as is Nancy Collins, whose Vertigo effort is a gruesome trawl through teenage angst and vampire psyche. Humourless, unimaginative and resolutely unpleasant, *Dhampire: Stillborn* is a contrived button pushing exercise aimed at intelligent disaffected teens and retarded affected adults. Post-Columbine *Dhampire* probably wouldn't have seen publication, and thankfully the proposed series was also stillborn.

Another puzzling obsession of the Vertigo editors is the use of Stephen John Phillips' digitally enhanced photographs for *In The Shadow of Edgar Allen Poe*, *Veils* and *I, Paparazzi*, all first released in expensive hardcover formats. Far from being the technological breakthrough they're presented as, they're very much a limiting factor. *Veils* is the best of them. Pat McGreal's story has a 19th century western woman trapped in a marriage of convenience gradually coming to terms with what she wants from life as she is inducted into the mysteries of the harem. The stiff art of Rebecca Guay on illustrated pages is no respite from the mannered poses adopted by some models. The incorrectly titled *I, Paparazzi* (it should be 'Paparazzo') is dull, with an odious celebrity photographer stumbling into trouble, and the demons that beset Edgar Allen Poe are explained in a literal and obvious sense in the volume bearing his name as it explores his private life. In *The House on the Borderland* Richard Corben adapts an old gothic horror story, adding a framing sequence. There's rarely bad Corben art, although he's not to all tastes, but as long it remains exclusively an expensive hardback it's only the converted who should sample.

Tim Truman illustrates *Dog Moon* written by Grateful Dead lyricist Robert Hunter with every word a monosyllable, folks. There's a well-rendered mood and sparse quality to this story of a man who ferries the souls of the dead in a giant truck, but it bears the inbuilt deficiency of all dream recollection: if you're not tuning in it'll never work for you, particularly the duality of the ending. A dream-like quality also infuses *Toxic Gumbo*, a thin, moody stitching of assorted revenge fantasies written by Lydia Lunch. It's immensely lifted by Ted McKeever's jagged and disturbing art, which can be the only reason for purchase. Hallucinatory moments also occur in *Seven Miles A Second*, Vertigo's single step into autobiography. It's snapshots from the disturbing life of David Wojnarowicz from teenage prostitute to artist dying of aids. The exercise isn't intended to elicit sympathy, but does so nonetheless, and would have been a far stronger piece without the pretentious articles attempting to attribute meaning to Wojnarowicz's art. His rage and frustration adequately accomplishes this within the comic.

The Vertigo Voices and Verité sub-imprints were attempts to propel the perception of Vertigo beyond stock in trade fantasy material into reality based drama. Voices was an artistic success, with all four issues very readable, although the weakest of them was also the most successful, *Kill Your Boyfriend* running to a reprint. It's neither Phil Bond nor Grant Morrison at their best, with Morrison reprising his isolated teenager narrative as a modern day Bonnie and Clyde scenario, splicing it with a bizarre middle section pointing towards his later Invisibles. *Tainted* is a view into the claustrophobic world of a middle-aged voyeur and his past. Al Davison brilliantly portrays the seediness of Jamie Delano's script, which follows the template of how to make a cheap movie: compress a varied cast into a confined space and kill most of them. Delano's triumph is the gradual unpeeling of his cast en route to what becomes an inevitable conclusion. Excellently illustrated by Duncan Fegredo, *Face* concerns David Scholem, an arrogant plastic surgeon summoned to the island home of a reclusive artist to ply his trade. Peter Milligan ruminates on art and the universal fixation with beauty, as Scholem comes to understand the nature of what he's expected to carry out. It's horrifying and compelling, with excellently characterised leads, and may be the peak of Milligan's career. What comedy there is to be found in *Face* is of a cruel and bleak kind, whereas Milligan writes *The Eaters* as broad black farce casting a group of cannibals as a 1950s American TV family. Were that all, it would be a funny comic, but Milligan takes the opportunity to make observations about America's heartland. While not necessarily trenchant, neither are they as forced as his previous steps into that territory in *Shade the Changing Man*, so serve as gravy. Dean Ormston's fine jagged art, a blend of Sean Phillips and Ted McKeever, adds to the recipe. For the Verité one-shot *Hell Eternal* Jamie Delano and Sean Phillips present an intwined trio of outsiders. Sarah is seduced by imagery, David by Nazism, and Annie, the strongest of them, is single-minded and adaptable, although eventually also seduced. British by birth, they find themselves on the run in the USA having lived a fantasy that sours. By no means bad, it is very dependent on believing the cast, established as intelligent, would act like naïve idiots at every turn.

Serialised in the British comic *Crisis* (29-38), *True Faith* provoked outrage when collected in the UK, was rapidly withdrawn from sale and unseen until the Vertigo reissue. It's Garth Ennis' second published work, concerning a teenager embroiled in events beyond his control as two parties determine to kill God, a plan executed by burning churches. Artist Warren Pleece holds his end up, but even pitched as black comedy, it's hardly subtle, and Ennis would later address the issues raised far more adroitly elsewhere. Some of them in *Heartland*, a superior tale of domestic fracture, proving Ennis can write a good soap opera. The focus is Kathy, one time partner of *Hellblazer*'s John Constantine, although that's not required knowledge. Ennis divests himself of some thoughts regarding the troubles in Northern Ireland, and delivers some good anecdotes, and characters so well drawn that the story would survive without the background or the diversions. Steve Dillon, with an under-rated talent for facial expression, is ideal for drawing this type of material.

Sleepy Hollow was released to coincide with the recent film version of Washington Irving's story of a demonic headless horseman. Kelley Jones does his best Berni Wrightson, but comics adaptations are seldom successful, editing text to a page count and thus devaluing it, and this is no exception. *Bigg Time* was Vertigo's first monochrome project, and has Ty Templeton taking a scattershot poke at fame and the obsessions of early 21st century society. The cartooning is excellent, but with no real point to make over a dozen vignettes, and an unappealing lead in the fame-obsessed Lester Bigg, it's an overlong gag-vehicle.~FP

VERY VICKY

Meet Danny Ocean: *10 issues 1994-1998*

An eclectic, engaging series about a circle of friends dedicated to Style. Vicky always dresses in black and wears a cute black Fedora (that's a hat, folks). The requisite cigarette and cocktail are ever at hand as she dispenses wisdom and judgement in equal measure. It began as a floating strip, appearing in numerous anthologies and magazines including Cerebus. Interested parties should find *The Very Vicky Junior Hepcats Funbook*, which collects most material published between 1991 and 1996 from sources other than the comic. Despite not being as clever as it thinks, it's actually a lot of fun, if a little easy to overdose on. Moderation is advised.~WW

VEXT

DC: *6 issues 1999*

Heaven clears out lesser deities no longer worshipped. Off they go scattering around the cosmos, with one, Vext, the God of mishap and misfortune, landing on Earth. The king of calamity has a hard time adapting to earthly ways, much to the frustration of his helpful next door neighbour who provides romantic interest. Then the sexy Paramour, the deity of relationships gone hellishly wrong, turns up and fireworks begin to fly. Elsewhere in subplot land, rogue archaeologist Aaron Caldwell and his two buxom cohorts search the globe for icons and fallen deities to help them in their evil deeds – hence, enter Rypta Gud'n (oh dear) the god of ill-timed flatulence! No subtlety here from Keith Giffen who's on top wacky-writing form ably abetted by artists Mike McKone and Mark McKenna. The black humour is especially dastardly, and if you're decent-minded you should feel ashamed at finding some evil scenes humorous – but hey, you're only human. A superb series, but only six issues? Now that's bad luck!~HY

VIC AND BLOOD

Mad Dog: *2 issues 1987*

Adaptation by Richard Corben of Harlan Ellison's famous story about a boy and his telepathic dog struggling to survive in a post-holocaust wasteland. It's a good story, which plays to Corben's strengths, and the artwork is more restrained than his usual pneumatic stuff.~NF

THE VICTORIAN

Penny Farthing: *13 issues 1998-2001**

A bizarre vigilante frozen during the 1890s stalks the streets of present day New Orleans in a frock coat and a stovepipe hat. In 1-5 we meet historical researcher Winston Fitzrandolph, in New Orleans because he's traced some historical anomalies there, and a British nuclear submarine, goes missing due to master intriguer Claude Ballaré. In 6-13 more characters are caught up including NOPD detective Leviticus "Doc" Shumpert, taxi driver Transclair "Trace" Babineaux and the mysterious photographer Eudora Kincaid. The attempts at Trace's Cajun patois result in some of the most ridiculous word balloons in comics. As it's all so difficult to comprehend, there's 'The Sourcebook', a story-so-far of 1-13. The proposed third story arc is due to deliver more cod surrealism, lumpen artwork and dubious references to Nietzsche shortly. This is, for the most part, improbable dross.~SW

VIDEO GIRL AI

Viz: *5 volumes 2000 to date*

High school student Yota thinks he's in love with his classmate Moemi, but she's attracted to his best friend, Takashi. When Yota plays a video featuring the cute Ai Amano, she promises to cheer him up, emerging physically from the screen, and though she isn't as sweet as her packaging suggests, she decides to help Yota with his love life, naturally becoming a focus for his heart herself. Originally (and still) serialised in *Animerica Extra*, Masakazu Katsura's attractively drawn strip is something of a cross between *Oh My Goddess!* and *Maison Ikkoku*, but with a darker and more serious tone. Yota's indecision can be annoying, and there are plenty of unfortunate coincidences to keep him unsure of his own and others' true feelings, but the threats to Ai and the challenges both she and Yota face help keep this interesting.~NF

VIDEO JACK

Marvel/Epic: *6 issue miniseries 1987-1988*

A very underrated writer, Cary Bates spent most of the 1970s turning in consistently imaginative short-story plots for *Superman* and *Flash*. Keith Giffen is given more credit for imagination, so the combination of the two, with art by Giffen, should be worthwhile. Well, yes and no. Jack's a bit of a sad case, obsessed with television to the extent of repelling reality. His fixation prevents a relationship and most social intercourse. Some old hocus-pocus transforms him, though, enabling him and his more outgoing pal Damon to interact with any currently broadcasting TV reality at the touch of a remote button. The wilful wackiness can be off-putting. Giffen enjoys drawing the snippets of assorted TV programmes, but this seems to be the total raison d'être of *Video Jack*. It's a novel trick, but it's a trick that wears as thin as the thread connecting it to a murder plot. 4 presents some contrasting scenarios if you'd prefer not to work your way through the first issue's extended set-up.~WJ

VIETNAM JOURNAL

Apple: *16 issues 1987-1989*, 6 issue miniseries ('Tet '68') 1991-1993, 4 issue miniseries ('Bloodbath At Khe Sanh') 1993, 2 issue microseries ('Valley of Death') 1994*

Picking up with the escalation of hostilities in 1967, these are well researched and detailed stories about the Vietnam war, written and drawn by Don Lomax. His focal point and narrator is a war correspondent cornily referred to as "Journal", whose occupation allows attachment to different combat units. Set against an admirably passionate depiction of the ordinary soldier's missions in hell, there's little questioning of the rights or wrongs of US involvement in Vietnam, and the portrayal of the Vietnamese is rarely more than silent gook killers. If this doesn't bother you, *Vietnam Journal* is recommended, although an abundance of expository dialogue sometimes bogs it down. Every issue is self-contained, and packs a lot of detail, with 3's story of a manipulative TV journalist, or 10's raid on a NVA outpost, good examples of the style and content. 1-8 were reissued in two collections. Other commitments prevented Lomax from maintaining a regular publication schedule, so succeeding stories were released as self-contained miniseries. 'Tet '68' effectively relates the story of the New Year offensive, but the highlight is the first issue, concerning a rogue CIA agent previously seen in 4 and 10. The historical-reportage narrative renders the remainder of 'Tet '68' and 'Bloodbath At Khe Sanh' far drier and wordier than the more anecdotal and personal-experience-based parent title, although matters marginally improve with 'Valley of Death'.~FP

Arvin Loudermilk and Mike Iverson craft an engaging tale that is an effective blend of police show, vampire shocker and conspiracy thriller. Greg Tonell is a Hollywood leading man, but when he appears on a late night talk show his life changes forever. When she was alive Grace Kimble was a cop's cop. Now that she's a vampire who can't always control her emotions she spends her time tracking the elite society of undead Glitterati that killed her. When she tears the head off a talk show host, all the world can see when the carnage is over is Greg with the head in his hands. For reasons she can't comprehend she abducts Tonell, telling herself that she's ruined his life and must make it right ('Fall from Grace').

He becomes her lover as they go on the run, he from the charges that he's a homicidal maniac and Grace from the influential foes who control the police of two countries. They flee to Mexico and he becomes an accomplice in her schemes to destroy the debauched cabal of bloodsuckers who secretly run the world. They're also seemingly intent on disrupting the balance of power between the living and the undead ('The Golden Parts'). As Greg is bitten by a Nazi vampire he loses his fears of the condition, and asks Grace to turn him. Whilst hiding out from the undead elite they seek out a legendary vampire, purportedly the oldest on Earth, who exerts an overwhelming influence over the country. He may also hold the secret of a cure for Grace's condition ('Kukulkan'). In 'Vamporum Animaturi' the cult La Rubia tries to co-opt a scientist's research on the causes and effects of the Vampire virus and offers Grace the chance to lead them.

The series survives the disruption of switching publishers twice as the saga unfolds with calculated precision. They return to America and become involved with various factions of the vampire underworld ('Road Trips', 'Desert Foxes') before all the various conspiracy strands converge, building to a climax in 'Bloodline' The story material is not fresh but the calculated patience with which it unfolds puts it into a class few horror comics, or any other media can touch. A class act well worth catching.~WW

VIGILANTE

DC: *50 issues, 2 Annuals 1983-1988*

Introduced in *New Teen Titans Annual* 2, Vigilante begins as DC's answer to the Punisher. Former District Attorney Adrian Chase feels that the system enables too many criminals escape punishment, so he costumes himself to dispense a little extra-curricular justice. To his credit, creator Marv Wolfman doesn't sidestep the complex issues raised by the character, and 2 partially explores his justifications. Oddly enough, considering the character was his creation, the series doesn't really go anywhere until Wolfman's departure. The Alan Moore-written story in 17-18 is only a little better than average, after which Paul Kupperberg and Tod Smith develop Wolfman's plots rather better than he had. Chase becomes a judge, but a psychopath adopts his costumed identity. When this plot concludes in 27 there's immediately a third Vigilante, also taking his cue from Chase, but with a more reasoned approach. 28, despite little costumed action, offers a good feel of this period. With 37 Chase is back in costume, now officially sanctioned, but by this time he's a man balanced precariously on the edge of sanity. This leads to a surprising and brave conclusion in 50. By and large the second half of the run is better than the first.~WJ

VIGILANTE City Lights, Prairie Justice

DC: *4 issue miniseries 1995-1996*

This is the original Vigilante, introduced fifty years previously in *Action* 42. When crimefighting the Vigilante disguises his identity as Greg Saunders, country singer, by wrapping a red scarf over the lower portion of his face. Writer James Robinson wisely sets the story in the 1940s, having the Vigilante confront both his traditional nemesis, the Dummy, and powerful gangster Bugsy Siegel, attempting to set the foundations for what would become Las Vegas. Robinson's pacing is very jumpy: he often chooses to depict the prelude to violence, and then leaps to the consequences, with the action occurring off-panel. This leaves plenty of talking heads for Tony Salmons to draw, and he's already having to produce too many abstract montages and illustrate captions updating events rather than a story. Too detached to engage any emotion, this is one of Robinson's lesser works.~FP

Phil Elliott's VIGNETTE COMICS

Harrier: *1 issue 1988*

A hotchpotch collection, with Phil Elliott in largely wistful or whimsical mode, and lacking his 1980s crowd-pleaser Gimbley. The Last of the VIKING HEROES

Genesis West: *12 issues*, 3 Specials 1987-1992*

Any pretence at historical accuracy disappeared long ago during this strip's début as a back-up in Silver Star 1, 5, 6. Four friends – a barbarian, a swordsman, a prince and a bumbling sorcerer's apprentice – indulge in light-hearted romps through wine, women, song and brawl, not to mention a few monsters, wizards and demons thrown in to flesh out the pot. The medieval setting is clearly located in some tropical Nordic land, judging by the number of scantily clad lovelies frolicking about. Michael Thibodeaux composes most of the creative aspects and delivers some dynamic fight sequences; on rare occasions the gentle touches of humour actually work. 4-12 form a continued story. Improbably, those Mutant Turtles show up in Summer Special 3 and sort of muscle-in on Special 2 as well. Overall verdict: undemanding.~APS

VILLA OF THE MYSTERIES

Fantagraphics: *2 issues 1996-1997*

In years to come, historians will look back and marvel that there was ever a time when a comic like *Villa of the Mysteries* was presented to an unsuspecting audience. Created by Mack White, the comic mixes Greek mythology, conspiracy theories, old-time religion, the Waco shooting, and surrealism, yet somehow makes it all seem possible. Titles such as 'Stigmata Sunrise', 'Cindy the Tattooed Sunday School Teacher' and 'The Nudist Nuns of Goat Island' probably tell you all you need to know. If any sound tempting, then, boy, this really is the comic for you. *Villa of the Mysteries* brings together several of White's strips from comics such as *Zero Zero* along with lengthier new features, and is undoubtedly the cartoonist's definitive collection. Of course, it is also his only collection!~DAR

VIOLENT MESSIAHS

Image: *8 issue limited series 2000-2002*, one-shot ('Genesis') 2002, 2 issues + ('Lamenting Pain') 2002 to date*

Cheri Major and Earnest Houston head separate serial killer investigations. They discover a possible connection between the killers and start to suspect that they may be the same man, as both sets of crimes have a vigilante dimension. Citizen Pain targets criminals and the Family Man pursues abusive parents. Are these the two sides of one man? After an interesting premise and introduction this is a comic that very quickly starts to make the wrong turns. Which is a shame. It becomes less crime thriller and more conspiracy nonsense, including a secret organisation with world domination as its aim. There are enough nice touches in the dialogue and staging of events to keep the pages turning, and Citizen Pain has a stylish outfit, but on the whole, the interior art is average, particularly compared to the covers, which have a wonderful eerie feel. 1-8 conclude a first story arc, so make a great jumping-off point. 'Genesis' reprints a promotional comic, set just before the series started and also includes previous self-published versions of 1 and an unpublished 2. It's an appealing package for those who love the series. The second series extrapolates on the consequences of the conclusion to the first, but so far seems to be retreading old ground.~DB

VIRTUAL BANG

Studio Ironcat: *5 issue miniseries 1998*

This translates Japanese girls' comics by Ippongi Bang. Her first in 1-2 makes you long for the old British equivalents where one-legged girls overcame their disablities to become world-famous ballerinas. Here, in what's presumably considered cute, fourteen year old Maria divides her time between attending school and taking contracts from the Mafia. There are no further continuing stories, but the frenetic pace and jumps in plot often give the impression something is missing. Although later an improved artist, her college diary strips from the early 1980s reprinted in 2-4 will be more engaging for many.~FP

VIRUS

Dark Horse: *4 issue miniseries 1993**

A rescue barge comes across a deserted Chinese research ship, but once it's been boarded the machinery begins to operate independently and strange robotic creatures attack crew members. Even more disturbingly, Chinese jets attempt to bomb the ship, despite having seen that it's inhabited. *Virus* is *Alien* at sea: classic horror material, predictable all the way, but fun with it.~FP

The VISION

Marvel: *4 issue miniseries 1994-1995, 4 issue miniseries 2002-2003*

In the first miniseries writer Bob Harras starts well with an intriguing plot concerning a few of Marvel's sentient machines displaying odd personality traits. The robotic Ultron as good ol' Texas boy is a laugh, as is the Vision as Sam Spade, given his distinctive red appearance. There is, naturally, an explanation in the final issue, by which point it's been dragged on too long. Artist Manny Clark favours design over technique, and he's an exponent of the everyone-speaking-through-gritted-teeth-or-pouting lips style. Miss out the pointless 3 and pick up the rest for a quick, fun read. The more recent series is a dull story concerning a menace activated at the Vision's creation, the retelling of which contradicts the established past. It's well drawn by Ivan Reis and Joe Pimental, but won't go down as Geoff Johns' finest hour. It also involves Reis redesigning the look of the translucent android, with a complicated mesh of gears and cogs now showing through as he dematerialises. Aren't those the features of a robot, not an android? How long will it be before lazier artists revert to the original look?~WJ

VISION and the SCARLET WITCH

Marvel: *4 issue miniseries 1982-1983, 12 issue limited series 1985-1986*

Controversial married superheroes take a leave of absence from the Avengers and go domestic in the suburbs. Naturally, supervillains follow, and normal service is quickly resumed, with Avengers and other guest stars galore. The four issues are only loosely related, improve as the series progresses and feature revelations about the stars' origins. The final issue confirms the identity of Wanda and Pietro's father.

Back to the suburbs for take two at the domesticity routine. Although Steve Englehart expends plenty of effort at turning in a fully-fledged soap opera, the end-product is cloying and twee, and Richard Howell's pencils are monstrously pedestrian. The second series centres around Wanda's pregnancy and the eventual birth of her and Vision's twins in the final issue. All their kinsmen drop in throughout the series to reasonable effect, but the new supporting characters are duff and the choice of villains lamentable (are three issues of the Toad really necessary?). The series starts with a crossover to *West Coast Avengers* 1 and 2 and has its epilogue in *West Coast Avengers Annual* 1. By a short head, issue 6 is the pick of the bunch, featuring Wanda, Pietro and their father's first steps down the rocky road to reconciliation.~APS

The VISITOR

Valiant: *2 issue miniseries (vs The Valiant Universe) 1995, 13 issues 1995-1996*

This introduces the Visitor, who is allegedly a non-human alien would-be superhero, in what boils down to a slugfest against all the Valiant heroes. The Visitor span off into his own series thereafter.The hook for the second series was that the Visitor was a character who had previously appeared in the Valiant Universe, but operating under another identity. The secret was kept until the final issue, by which time this lacklustre story had long since run out of steam.~HS

Dracula:VLAD THE IMPALER

Topps: *3 issue miniseries 1993*

Once again, the secret origin of the vampires, but handled with unexpected flair and panache by Roy Thomas and Esteban Maroto. For some strange reason it was reprinted two years later as *Dracula Chronicles*.~HS

VÖGELEIN

Fiery Studios: *5 issue miniseries 2002*

Vögelein is the product of master watchmaker, Heinrich, who intended her to be a dancing automaton, but she turned out to be so much more. Since her making in the Seventeenth Century, she's always needed someone to wind her, daily. Now her latest guardian, Jakob, has died and Vögelein must find someone to take his place, meeting a real fairy, the bitter Duskie, who's opposed to the use of machines, and street cleaner, Ezrael, as she searches. Painted over four years by creator, Jane Irwin, there is a visible improvement in the fluidity of the artwork as the series progresses. This is an unusual story (a variation of sorts on *Pinocchio*), concerned primarily with the nature of life and friendship, and utterly charming too.~NF

VOGUE

Image/Extreme: *3 issue miniseries 1995*

Another multi-creator title from Extreme Studios, as Brian Witten and Cy Voris (writers), Marat Mychaels (layouts) and Andy Park (penciller) tell the tale of Nicola Voganova, model by day, superheroine by night. Vogue's a member of Youngblood, on a mission that takes her back to Russia to fight Stroika and his superterrorist team, Redblood. Lots of shots of scantily-clad women in action poses ensue.~NF

VOID INDIGO

Marvel/Epic: *Graphic Novel, 2 issues 1984-1985*

Marvel pulled the plug on this prematurely, apparently in a dispute over the strong nature of the material, but Vertigo now publish far 'harder' comics without much fuss. It's certainly an unremittingly bleak view of late 20th century life – as one character puts it, "Nobody makes anybody happy anymore. Why should they? What's to be gained?" The series is full of gruesome torture scenes, ritual murders and polymorphous perversity, but this isn't some chic attempt to be shocking, this is Steve Gerber's fully rounded vision of millennial collapse. He's as downright loopy, cosmic and funny as his best 1970s work, and like much of that *Void Indigo* suffers from inadequate artwork. Val Mayerik's decision to paint the graphic novel reveals his limitations, and he appears to have coloured the comics with old felt-tip pens.

Gerber packs these three instalments with enough ideas and plot threads to sustain a hundred lesser comics. The graphic novel begins with the cruel murder of barbarian Ath'agaar by evil sorcerers The Dark Lords of Kur. This routine barbarian opening segues into a long psychedelic sequence, where Ath'agaar enters the void indigo ("blue emptiness") and merges with an alien called Jhagur, from the planet Gebura. Got all that? Jhagur lands in LA, where he assumes the human identity of Michael Jagger (!) and shacks up with a tart with a heart. By 2 Jhagar is seeking his reincarnated enemies to avenge his terrible demise, and to prevent humanity descending into "barbarism and cataclysm".

The abrupt cancellation makes it impossible to tell if the initial intensity could be sustained, but what remains still deserves rescuing from the blue emptiness of critical neglect. Sadly, but understandably, Gerber hasn't written anything half as stimulating since.~AL

VOLCANIC REVOLVER

Oni Press: *3 issue miniseries 1999**

Stylish crime thriller from Scott Morse set in New York City in 1929. Easy going artist Vincenzo runs a little bakery, but his real job is making counterfeit bills for the mob. When a woman comes to collect some funny money he discovers a bomb in her bag and kills her with an antique gun called a Volcanic Repeater. This slowly leads to a confrontation between Italian and Irish gangs, experienced through the eyes of a number of ordinary people. A prologue appeared in *Oni Double Feature* 7. Excellent and enthralling.~WW

Magic Carpet I VOLTAR

Comics & Comix: *1 issue 1977*

Originally published in the Philippines, Alfredo Alcala's Voltar was much like Conan, whose comics he predated. Voltar was an all-conquering warrior, and the scripting, by Manuel Avad, is typical sword-and-sorcery, but merely an excuse for Alcala to show off his incredible art, and the intricately etched linework here is absolutely bewitching. The wash-delineated 'Buccaneers of the Skull Planet' rounds out a lovely showcase of top-quality artwork.~DAR

VOODOO

Image/WildStorm: *4 issue miniseries 1997-1998**

Late of *WildC.A.T.S*, Voodoo takes a job as a dancer in New Orleans, and becomes involved in the club owner's attempt to resurrect his dead father. Along the way she learns something about her namesake. Alan Moore's script is educational and enjoyable, but this is slight, with only the playfulness of the villain Rada evoking any freshness. 1and three pages of 2 are drawn by Mike Lopez with lush detailed textures, but the remaining issues are by Al Rio and Trevor Scott who are serviceable only. As a whole, disappointing.~NF

VOODOOM

Oni Press: *One-shot 2000*

Crossover uniting Jim Mahfood's Zombie Kid and Scott Morse's Little Grey Man. Mahfood and Morse share creative duties, enjoying themselves producing hip cartoony figurework and lots of solid blacks. The Little Grey Man is relocated to Freak City, home of Zombie Kid, where they meet and fight a voodoo doll. It's style over substance and not very funny.~DB

VORTEX

Vortex: *15 issues 1982-1988*

Despite a broad range of material, *Vortex* never delivers anything of real note. Occasional work by Ty Templeton, Dan Day and Ken Steacy raised individual issues to an acceptable level, but the lack editorial vision hampers the series. Some early work by the Hernandez Brothers is of note, Gilbert in 7 and Jaime in 11, and they stand head and shoulders above anything else. Steacy's contributions to 3-5 are reprinted in a one shot titled *Ken Steacy's Summer Rerun*.~NF

VORTEX

Comico: *4 issue miniseries 1991-1993*

A member of the Elementals, Vortex has flying powers. This begins on the environmental moral high ground – greedy corporation threaten to destroy sacred Native American reservation – before quickly descending into bog-standard superhero clichés, ineptly served up by writer Roland Mann and artist Steven Butler.~AL

VOX

Apple: *6 issues 1989-1990*

This begins deceptively as a good-natured buddy science-fiction comic before opening into a tense story of intergalactic espionage and possible war. The heart of the plot concerns a matter transporter tested by transporting living beings to remote worlds, invented by humans, but coveted other races. Escalating tensions provide unpredictable situations, and the whole is very nicely conceived.~FP

VOYAGE TO THE DEEP

Dell: *4 issues 1962-1964*

The Proteus is an experimental "telescopic" submarine that can change its length by a factor of eight (I can hear your gasps of wonder from here). The Enemy keeps trying to use the Earth's natural forces to destroy the US and the Proteus keeps coming to the rescue, pausing midway through the issue to escape the clutches of a giant sea creature, with the lobster in 4 a gem. The stories are technobabble taken to genius level: in 1 The Enemy has injected helium into the Earth's core and this has tilted the planet out of orbit, tipping the Atlantic so it's flooding the US; Proteus draws out the helium using "a gas possessing a molecular structure exactly opposite that of helium", to which the helium is, of course, irresistibly attracted, and the world is saved. Inspired! You will laugh yourself sick.~FC

Children of the VOYAGER

Marvel UK/Frontier: *4 issue miniseries 1993*

Novelist Sam Wantling is plagued by terrifying nightmares of being consumed by an all-powerful being. His work suffers and his relationship collapses as he becomes convinced these dreams have a basis in reality. They do, but editorial page teasers give the entire game away when Nick Abadzis constructed a slow-release plot. The full implications aren't revealed until 3, by which time Sam has found help. Paul Johnson's scratchy art effectively conveys Wantling's uncertainty and terror, and while both creators would progress to better things, this is a worthwhile read.~FP

VOYAGES

Nautilus Dreams: *1 volume 1983*

The cover contributor listing promises much, but too many artists provide pin-ups, studio discards and stilted set-pieces, although Trina Robbins and Rick Geary are innocent. The jewel is twenty-one Alex Toth pages, reprinted in *Toth Black & White*. The hallucinogenic dreams of unconscious pilot Jesse Bravo form an astounding sequence, with every panel a gem, but almost always wildly different from its predecessor. Some are nothing but a single squiggled line, others skywriting, a starkly contrasted Masai warrior or a lightning effect. Playful experimentation rather than structured narrative, it's stunning, and one hopes Howard Chaykin was thoroughly ashamed when his contributor copy arrived.~FP

VOYEURS INC

Pulp: *1 volume (Voyeur) 1999, 3 volumes + 2000 to date*

Originally serialised in *Pulp*, *Voyeur* has teenage Ko forced to confront his voyeuristic tendencies by a soulmate. After monitoring Ko's girlfriend, they form *Voyeurs Inc* ostensibly as a service. Hideo Yamamoto's return to the subject five years later was more lighthearted with the company is under new management. Their inaugural case is watching a teenage girl believed to be engaged in casual prostitution, and the sordidometer rises from there. Yamamoto presents some potentially distasteful topics, but handles most with a subtlety not often found in Japanese comics dealing with sex explicitly. Sadly, though, in the generally superior *Voyeur* he has no qualms about offering rape as just retribution for infidelity. The art has the big-eyed look common to manga, but incorporates many Western techniques, particularly the fast-paced storytelling. If you won't blanche at the subject matter, these are well-crafted adventure stories.~WJ

WACKY SQUIRREL

Dark Horse: *4 issues, 2 Specials 1987-1988*

Cartoon comedy transferred to comics is hindered by animation's manic action being slowed by the printed page, and without the speed the gags fall flat. The best here is 4, in which Wacky and Kal-El's spaceships each arrive at the wrong planet. Wacky ends up pushing cream pies in Lois Lane's face, and Superman can't understand why every time he feels angry an oversized mallet appears. Some readers caught similarities between this and Tex Avery's *Screwball Squirrel*, and ironically Dark Horse eventually published the original.~WJ

WAHOO MORRIS

Too Hip Gotta Go Graphics: *3 issues 1998-1999*
Image: *1 issue 2000*

The title is the name of the band featuring the central cast, and from this dynamic Craig Taillefer conjures an endearing jumble of human life, largely concentrating on shy singer Alicia and confident guitarist Sebastien. A distracting occult subplot tantalises, but isn't brought to fruition. Taillefer's dialogue is sharp, his observation fine, his characters the type of people you fancy and want to hang out with, and his artwork an expressive fine-lined joy, making *Wahoo Morris* ideal for people who love *Strangers in Paradise*, a title it betters. Bizarrely, Image reprinted the first issue at a higher price on poorer paper, but included a strip from the Blip sampler.~FP

THE WAITING PLACE

Slave Labor: *Series one 6 issues 1997, series two 12 issues 1999-2002*

A high school soap opera set in chilly Northern Plains. A broad cast is well characterised by Sean McKeever, who nails variations on a small town mentality, and problems both sexes face in late teens and just beyond. The first series art by Brendan and Brian Fraim is not quite the finished article, but doesn't hinder the nuances of the plot. The improved second series has David Yurkovich layouts for Mike Norton's pencils until 6, from which Norton draws everything. This entire run is heavier on detail with more fluidity and subtlety, and McKeever has become a better writer, thinning the cast to concentrate plots, and not telegraphing his surprises. The best issue, 5, has two men united by love and tragedy play out a drama to an unpredictable conclusion. The series ends as the year turns, and McKeever defies everyone's expectations. 9-12 also feature a back-up strip 'Tower', a confusing metaphorical affair drawn in claustrophobic style by Jason Alexander and later a Sirius one-shot.~WJ

WAKE

NBM: *3 volumes + 2000 to date*

Thousands of spaceships housing a multitude of races travelling in convoy is a setting enabling many stories amid a vague mission for the central character, Navee, to discover others of her kind: humans. She's one of the few inhabitants of a green planet earmarked for terraforming and colonisation by a race whose transport is failing in the first volume. Once amid the convoy, she's unique in being able to resist telepathic probing. The second volume is set among the communities of Wake, and in the third Navee investigates a steampunk society that's evolved far more rapidly than is natural. Jean David Morvan's scripts raise philosophical points, one of which should be why clumsily applied black strips defacing Phillipe Buchet's art are considered necessary for the more prudish American audience. It's equally a shame that the nudity, along with a few adult references, appears a forced way of elevating what would otherwise be good adventure comics for teenagers into something for adults. Adults who've grown beyond rejecting everything aimed at children should find much to enjoy in *Wake*.~FP

WALDO WORLD

Another of Kim Deitch's intricately intertwined fantasies of old cartoons and vaudeville. This time Deitch explores the mythical cartoons starring his most famous creation, Waldo, and how his early days led to the creation of Disneyworld (sort of). As always with Deitch, there's a rich collection of supporting characters, reflecting the glory days of old, and palpable sense of longing for the past. And again as always Deitch's art is a joy to behold.~DAR

WALK THROUGH OCTOBER

Caliber: *1 issue 1995*

There was once a boy, a storyteller and Mr Balloon, who is Evil. That's pretty much all Matthew Smith manages to convey in this first issue of an intended three. More an illustrated story than comics, especially as the minimalistic artwork is mostly single images and whole pages of prose shortcut the narrative to avoid (seemingly) the need to draw any of it.~NF

WALKING DEAD

Dave Hodson's WALKING WOUNDED

Fox/Fantagraphics: *1 issue 1990*

Dave Hodson was one of several *Fox Comics* artists whose pages incorporated bottom of panel text beneath often almost disassociated illustrations to tell tales of little consequence. His art possesses a fine cartoon charm, but his chosen form of narrative rapidly distances without the whimsical qualities of Rick Geary, purveyor of sometimes similar work. The title refers to strips about Hodson's band, a free single from whom, is bound in, and there are other autobiographical strips along with some fiction. None of it makes a compelling read.~FP

WALL OF FLESH

Of their genre, these are all fine stories but to modern readers, there is a sense of déjà vu about the horrors presented.~NF

An overwhelmingly popular and influential series that from its inception promoted the Disney philosophy of wholesome entertainment, whilst producing some of the finest ever children's comics tales. Viewed in the right light it also holds a few records for longevity. The first Disney strip publications actually predate the acknowledged birth of American comics. After the success of the *Mickey Mouse Book* in 1930, a Mouse magazine was created as a giveaway. Their popularity led to *Mickey Mouse Magazine* (1933), followed by another series of giveaways, before a regular *Mickey Mouse Magazine* débuted in Summer 1935. Contributors included Otto Messmer and John Stanley, and new cinema features were previewed, with Snow White serialised a month before cinema release in 1937. In 1938 the success of Action Comics and its landmark all-new strip Superman prompted a gradual change from magazine to comic. Puzzles and features were replaced by more strip reprints, particularly the Mickey Mouse newspaper dailies produced by Floyd Gottfredson for over twenty years. The transition to comic was completed with Volume 5 issue 12 (September 1940) and the next month it became *Walt Disney's Comics and Stories* 1, with Gottfredson's 'Mickey Mouse Meets Robinson Crusoe' serial, begun in the magazine, continuing sequentially.

The format of reprinting newspaper strips continued until 31 (April 1943) when the first story created specifically for the comic appeared. It was ten pages of Donald Duck by a young man named Carl Barks. He'd substantially improved the script he'd been given, and was asked to write the next one himself. For the next twenty-three years Barks was the principal Duck creator (alternating mostly with comics veteran Jack Hannah, whose first Donald strip appeared in 37). Donald, and later Uncle Scrooge and a wealth of other characters flowed from Barks' pen into the hearts of the world's children. When he retired in 1966, he'd written over five hundred stories, (just over half of them starring Donald) which would be reprinted continuously until the comic's cancellation in 1999. The stories he wrote for survive in fifty-one paperback volumes published by Gladstone collecting five to a book.

Barks originally joined Disney as an animator, and his feel for sight gags and great narrative drawing skill made his work instantly recognisable in an era when credits were not given. Every kid knew the work of "the good duck artist", even if they didn't know his name. He produced a new ten page story for most issues between 31 and 297, then 308 and 312, and many are landmarks. Barks created Gladstone Gander (88), and Uncle Scrooge originally appeared as a minor character in his story for 1947's *Donald Duck Christmas Special* , with his first feature appearance in 98. The Junior Woodchucks (125) were followed by the Beagle Boys (134) and Gyro Gearloose (141), but Barks wasn't the only star of the comic. Walt Kelly produced many strips, starting with 'The Gremlins' (34-41, based on a wartime propaganda animated short), and was the leading cover artist from 40. He contributed most until 118, when the pressures of producing his own newspaper strip, Pogo, forced him to quit. Barks' first cover was 95, and he was the regular cover artists from 129. Floyd Gottfredson's reprints were phased out during the late 1940s, as the characters screen appearance had gradually altered and no longer matched his original strips. Classic tales were redrawn by a new crop of artists, many of whom had worked on Disney newspaper strips. Dick Moores would later draw Gasoline Alley, and had been producing the 'Uncle Remus' Sunday page since 1946. His redrawn 'The Phantom Blot' began serialisation in 107, while Gottfredson's assistant Bill Wright redrew 'Monarch of Medioca' which began in 112, and he was replaced by Paul Murry and latterly Tony Strobl and Jack Manning. In the comic's last years, despite much resistance from the Disney licensing division, many classics shelved due to the characters developing beyond their original depictions were reprinted. Gottfredson serials were featured in 562-563, 568-572, 581-583, 586-599, and another Taliaferro production in 584.

New tales of regulars Mickey, Donald and Goofy were supplemented with further adventures of Disney's latest film and latterly television productions. Within months of theatrical release, *The Three Little Pigs, Pinocchio, Brer Rabbit, Dumbo, Chip'n'Dale,* and Mad Madam Mim (the wacky witch from The Sword in the Stone) would appear in the comic. Al Taliaferro was a prolific mainstay, another newspaper strip artist who made the move to comics. His Silly Symphonies newspaper strip, which featured Disney's non-Duck or Mouse cartoon creations, was reprinted in 5, starring the Three Little Pigs, with a sequel in 16. There were also adaptations of 'Birds of a Feather' (13), 'The Boarding School Mystery' (14), 'Cookieland' and 'Three Little Kittens' in 15, 'The Ugly Duckling' and 'Ambrose, The Robber Kitten' in 17 and 'Penguin Isle' in 19. His first regular – if unorthodox – series, again reprinted from the 'Silly Symphonies' strip was Bucky Bug in 20-28 (excluding 24 and 27), reprinting a serial from 1932-1934. It returned in 1944 and continued uninterrupted until the end of the decade as one of a number of strips experimenting with narrative style. Bucky's adventures were all delivered in rhyming quatrains and couplets, a literary device adapted for 'Little Hiawatha' (143-151, 159) scripted in the same rhythmic cadence as Longfellow's 'The Song of Hiawatha' and, more pertinently, in the manner of the narration of the popular Disney Cartoon it was adapted from. Bucky Bug was revived in Disney-friendly Europe, and Dutch originated material was printed in 623-625, 627, 629-630, and a Taliaferro reprint 'The Wise Little Hen' appeared in 580.

A number of secondary features achieved great quality and impressive longevity during what are considered the golden years, 1945-1956. In 52 Li'l Bad Wolf began, and barring 55, ran until 204 when it moved to *Mickey Mouse* to be replaced by Scamp, the son of title characters in *The Lady and the Tramp,* usually drawn by the greatly underrated Jack Bradbury. Initially written by Chase Craig and drawn by Carl Beuttner, Li'l Bad Wolf was the son of the Big Bad Wolf, who despaired of ever teaching his goody-two-shoes offspring the family business of roguery and the general eating of everyone. Buettner also wrote from 54, when the strip absorbed the Three Little Pigs, to establish a format wherein the adult wolf tried to catch his boy's best friends only to be thwarted by the noble cub. Buettner's last story was 67, and the most notable artist on the feature from that point was Gil Turner from 85, who often wrote the strips and frequently featured other Disney guest stars. The strip returned between 248 and 288, and in very occasional new stories in the late 1970s, before a new William Van Horn tale in 581. Grandma Duck began in 121 and ran until 168 (except for 135, 142, 146 and 155) either in her own strip or with Donald and Daisy. 'Daisy's Diary' was another occasional strip, later replaced by the mischievous chipmunks Chip 'n' Dale (who had first appeared in 89).

In 1952, *Walt Disney's Comics and Stories* was selling in excess of 4,000,000 copies a month. As the Disney Company marketed the stories globally, Marxist governments considered the stories subversive attempts to seduce their young into US Capitalist/Imperialism, and the take-charge heroics of Donald and Mickey as symbolising interventionist politics. Uncle Scrooge was seen as a mask for Uncle Sam. Maybe so, but they wouldn't have been so worried if they weren't so readable. As the 1960s progressed, greater emphasis was placed on properties from Disney's burgeoning TV output such as the awful 'Adventures of Annette (Funicello) and Merlin Jones' (Vol. 25, #1) or 'Walt Disney Theatre Presents'. With Barks' retirement, things changed. From 313, a policy of reprinting of early stories was instituted, and the title devoted itself to tales from the cartoon favourites. It muddled along until Whitman's demise, hastened by their policy of largely only distributing the comic bagged with two other Disney comics. Their last issue is a sad indictment of how far the title had fallen, being nothing more than an extended ad for the Disney Studios latest property, the saccharine and derivative *Wuzzles*.

Two years later Gladstone was formed, to revive Disney comics, and naturally Carl Barks' timeless stories played a large part. The company took its name from the preternaturally lucky Gander, cousin of Donald Duck. They immediately reinstated the tradition of a serialised Mickey Mouse strip, dropped with 394, and along with Barks and other American reprints, they ran the best strips from Disney's overseas studios. European audiences had never lost their taste for the characters, and Barks and his contemporaries were revered, with new luminaries such as Daan Jippes, Fred

Milton or the numerous members of the Gutenburghus studio a second tier. Jippes and Milton's duck stories, either collaborating or apart, were featured in most issues to 530, and Gladstone also commissioned new material. Most notably this was from William Van Horn and the excellent Don Rosa (523, 524, 526, 528, 531, 547), who comes closest to recapturing the style, verve and charm of Barks.

With 548 Disney launched their first ever comics imprint, but the company's priorities were geared towards the promotion of newer properties such as Roger Rabbit or the TV tie-ins like *Chip'n Dale Rescue Rangers.* New Duck material was reserved for their own titles, and Mickey Mouse was temporarily dropped. An early Disney issue worth finding is 550, with the first printing in comics of a Carl Barks Donald Duck story rejected in the 1950s as too violent! It also reprints the first appearance of Chip'n'Dale and the second of Li'l Bad Wolf. As Disney continued publication editors became more careful about selecting the reprints from the goldmine available, and concerns about trademark appearance gave way to historical verity. For example 580 reprinted Donald Duck's first appearance in Ted Osbourne and Al Taliaferro's adaptation of the animated short *The Little Red Hen,* originally a 'Silly Symphony' newspaper strip from Sept. 16 to Dec 16, 1934. There was also Mickey Mouse's 'The Brave Little Tailor' by Gottfredson and Manuel Gonzalez, a 'Silly Symphony' strip from Aug 28 – Nov 20 1938, as well as numerous other shorts.

Gladstone resumed publishing with 586 and William Van Horn began a run of new Donald Duck yarns in the next issue. He'd found his style by this point, and his strips are distinguished and amusing, drawing on the Barks template, but with more frenetic art. With 601 the comic went giant-sized and presented some of the best issues in the entire run. Not only were the reprints very carefully selected, featuring much historically significant material, there were memorable new tales in almost every issue. Don Rosa duck stories, now commissioned directly from Europe were serialised in 601-616, with further new work of his in 618, 619 and 622. Issues in the 620s are a step down, with the reprinted European material, although new to America, not as good as the now missing Rosa and not compensating for sometimes very short Van Horn contributions. The quality of the reprints remained choice, though, providing great comics reading for the young and invaluable – and oft-longed for – reading experiences for the legion of older Disney fans who finally saw material they'd waited most of their lives to read.

632 reprints for the first time a Barks story drawn by Bob Gregory, but particular mention must be made of the final issue. By this point Gladstone publisher Bruce Hamilton had tired of the administrative problems of dealing with Disney, and the restrictions placed on what he could print. Knowing he was ceasing publication he published a long Don Rosa story Disney had long put the block on. The pointed environmental concerns were apparently considered too political for their American readers, and the rendition of pygmy native Americans, although taken from a Barks story, were now politically incorrect. It's a gem with a message, and among Rosa's best stories. This issue also has a fine new Van Horn story returning classic Barks characters, a rarely seen Barks reprint and an excellent Uncle Scrooge story by Vicar.

Throughout its long history, the provision of quality comics that stay with the readers all their lives ought to be considered as the book's greatest strength and most valuable achievement. An irresistible comics landmark.~WW

WALT KELLY'S...

Eclipse: *One-shot (Christmas Classics) 1987, one-shot (Springtime Tales) 1988*

These reprint 1940s seasonal Walt Kelly strips. The ultra cute 'Christmas Comes to Woodland' is from *Four Color's Santa Claus Funnies* 91, and is followed by a Peter Wheat fairytale. He's also the lead in the *Springtime* issue, reprinting a comic given away by bakeries in 1948. The remainder of that issue, 'Goblin Glen', is from the 1946 *Four Color* 114, 'Fairy Tale Parade'. The Santa and Goblin stories are fluid and charming as Kelly an early peak in his illustrative career. That doesn't mean these Peter Wheat pages are anything more than some commercial art; equivalent to some 1970s *Hostess Twinkies* strips.~SW

WALTER Campaign of Terror

Dark Horse: *4 issue miniseries 1996*

Walter is big. Walter is silent. Walter is strong. Walter was once possessed by The Mask. Walter is brutal and Walter is up for mayor. This doesn't sit well with the incumbent, who hires a hitman, but Walter's not easily killed and also has powerful friends, so events escalate from there. John Arcudi and Doug Mahnke's series starts slowly, but comes to incorporate several eccentric characters and their individual foibles. Particularly memorable is the midget millionaire who's constructed a scaled-down city where he's a giant. By 3 *Walter* has developed into a fine satire of political expedience, with all the apparently anomalous elements gradually locking into place. A sadly undervalued series.~FP

THE WANDERERS

DC: *13 issues 1988-1989*

Created by Jim Shooter in the 1960s for *The Legion of Super-Heroes*, twenty years later DC killed them, cloned them and gave them new appearances and powers. You wonder why they bothered. Doug Moench dashed off scripts on his tea break, and there was no saving grace of polished art. After thirteen issues it was cancelled, unlucky for it, lucky for us.~HY

WANDERING STAR

Pen & Ink: *11 issues 1993-1996*

Sirius: *10 issues (12-21) 1996-1997*

Casandra Andrews, daughter of the President of Earth she escapes an alien invasion on the spaceship, Wandering Star. The plot thereafter takes in a period of capture before another escape and a daring plan to appeal for help. All the while, they're pursued by the deadly warship, Kekakopolous and it's captain, Narz. Lacking action, this is a thoughtful and appealing exploration of the lives of its main characters and their relationships with each other and the world around them. That it's set during a war in some far-flung future, allows for some very dramatic situations, but creator Teri Sue Wood always comes back to motivation – there's a lot of dialogue and exposition. Wood's artwork owes something in the inking to Matt Howarth, but it's her own style that stands out and makes this worthwhile.~NF

WANDERING STARS

Fantagraphics: *1 issue 1987*

Projected science-fiction series that never had the chance to reach the audience it deserved. A strange woman, Magen, is injured in battle with government forces and is aided by the wealthy Amelia. An assassin is dispatched to kill Magen, while Amelia tries to understand what drives her to rebel. Written by Stuart Hooper and drawn by Sam Kieth, it's a promising début but unfinished and in isolation it's just a curiosity.~NF

WANDERLUST

Antarctic: *1 issue 1999*

Chiseled Comics: *4 issues 2000-2001*

After an abortive start in black and white, Bryant Shiu opted for full colour self-publishing with a seemingly different story. Set when humanity has colonised many planets, then split into two opposing factions, they're about to get a jolt when an alien species enters the mix. The focus of is hotshot pilot Jacob Sumner, whose past is revealed in 3. Shiu is prone to the odd expository infodump, but had an ambitious plot in mind, of which this is only the start, and expressive action artist Brett Weldele far removed from the dull stylist he developed into. Fans of character-driven space adventure should find plenty to enjoy here despite the premature cancellation.~WJ

WANTED

DC: *9 issues 1972-1973*

Issues of *DC Special* (8, 14) used the Wanted cover design to obviously good response, hence this series. Old-style Wanted posters covered largely standard superhero reprints, but it was a cheap way of obtaining very old stories. 2, for example, contained the first teaming of the Joker and the Penguin from Batman 25 along with an early 1960s Flash story. It's the 1940s material that pressed the right buttons with the readership, and from 3 there's only a Gil Kane Green Lantern strip dates from later than 1949. There's an undeniable spirit to the material, but most is crudely drawn, with even the more renowned artists like Jack Burnley on Starman (6) not wearing well. The most interestingly plotted stories originate from companies DC later took over, with Kid Eternity in 4 and Doll Man in 5. The Sandman, by Joe Simon and Jack Kirby, in 9 tops the 1940s DC material.~FP

WAR

Charlton: *49 issues 1975-1976 (1-9), 1979-1984 (10-49)*

One of the last and probably the least of the war anthologies from Charlton featuring the usual blend of gung-ho imperialism and down-home idealism, although occasionally a piece of quality work does find its way in. Most issues have Sam Glanzman, many have Pat Boyette and 43 has a rare Steve Ditko war story.~WW

THE WAR

Marvel: *4 issue miniseries 1989*

The conclusion to Marvel's well-considered but unsuccessful 'New Universe' titles, set on an Earth with only a restrained selection of superheroes. Or that, at least, was the original concept. With sales never high, more superpowered characters were introduced, to the point of revealing even Ronald Reagan had been affected. Following *The Draft*, most remaining New Universe characters are involved in a plot about one superhuman doing his best to engineer World War III. Does he succeed? Do you really care? It's a perfunctory series dragged on too long and cynically published in an unnecessarily expensive format for any remaining New Universe fans.~WJ

WAR AGAINST CRIME

EC: *11 issues 1948-1950*
Gemstone: *11 issues 2000-2001**

Before changing its name to *The Vault of Horror*, *War Against Crime* told "real stories from police records", cashing in on a very popular genre at the time. The stories are normally of modern gangsters and criminals with occasional western tales, but from 10, a story from 'The Vault of Horror' is included, marking the development of the series and its writers towards the psychological suspense strips that characterised EC's New Trend. Johnny Craig and Al Feldstein provided visual consistency, with Craig supplying all covers from 3 and strips in 1, 5-7, 9-11, Feldstein having stories in 3-11. Other artists include Lee Ames, Ed Moore, Stan Asch, John Alton and George Roussos. The main writers were original editor, Ivan Klapper, Gardner Fox and Bill Gaines, with Craig and Feldstein who mostly illustrating their own scripts. Whilst not as gripping as the 'classic' EC titles, there's much to enjoy in watching artists (and companies) develop.~NF

WAR DANCER

Defiant: *7 issues 1994*

Co-created by the erratic Alan Weiss and Jim Shooter, *War Dancer* is a baffling mixture of standard superhero antics, pseudo-Eastern mysticism and tongue-in-cheek humour. Our time-travelling hero defeats his many enemies by dancing on them, or as he puts it in issue 1, in a typically flowery monologue, "I dance to the rhythms of the universe, one with the energy." Pompous and overblown, there are only two redeeming features: the constant use of the phrase "Org's Phlegm", and a scene in 3 where a villain grows and grows until he literally bursts!~AL

WAR IS HELL

Marvel: *15 issues 1973-1975*

The first eight issues reprint 1950s war stories and a couple of tales from *Sgt Fury and his Howling Commandos*. With 9, Chris Claremont was handed the scripting chores for his first regular series. John Kowalski, the cursed spirit of a dead soldier, was forced by Death to temporarily animate the bodies of the recently dead. Destined to repeatedly relive the horrors of World War II, he served as a perfect focus to depict the grisly nature of war. One of the better war comics, the strip avoids the glorifications and clichés that are usually so prominent.~APS

WAR MACHINE

Marvel: *25 issues 1994-1996*

A tiff with his former employer left James Rhodes, former substitute Iron Man, at a loose end, but with a powerful armoured flying suit. In spurious justification of his name, he decides his mission is to steam in where political angels fear to tread, sometimes manipulated into acting as in 1-4. As a civilian Rhodes heads WorldWatch, an organisation exposing injustice and abuse of power. It's a competent set up, but only the final issues address a major problem. Once in armour there's little differentiates War Machine from Iron Man, and even out of armour both run companies with far-reaching, enormous influence. Dan Abnett's plotting from 11 is more imaginative, and he solves the Iron Man clone problem by having Rhodes bond with a more organic armoured suit from 18. By that time the art has degenerated beyond all redemption. Don't bother.~FP

WAR MAN

Marvel/Epic: *2 issue microseries 1993*

An arms dealer has to lead a politician through the Amazon after a plane crash and fight off mercenary troops while doing so. Could be any two issues of *The Punisher*.~FP

WAR OF THE GODS

DC: *4 issue miniseries 1991-1992*

1991 was the fiftieth anniversary of Wonder Woman's début, and all we got was this sprawling, incoherent series crossing over into other titles, with chapters misnumbered, unidentified or appearing in the wrong order. The Greek and Roman pantheons declare war on each other, and Earth's superheroes, led by Wonder Woman, are caught in the crossfire. Good luck following the chapter order.~HS

WAR OF THE WORLDS

Eternity: *6 issues 1988-1990*

1-3 tell the story of Rebecca, her husband, John, and Stanley Boyd, who comes to her rescue when her highland village is destroyed by Martians. In 4-6 Boyd is sought by Meat, son of Rebecca and an Aarach (Martian), whose brother hybrids are determined to conquer the world. Scott Finley's take on the H. G. Wells classic is initially confusing, but in providing a different person's view of the well known story becomes interesting and is well supported by Brooks Hagan's scratchy artwork, which is suitably dark and atmospheric. Unfortunately, 4-6 seem tagged on and, in departing from the original, less believable.~NF

THE WAR OF THE WORLDS

Caliber: *4 issue miniseries 1996-1997*

So the events related in the H.G. Wells novel actually happened, and having overcome their susceptibility to germs, the Martians are back for another try a century later. It's enjoyable hokum with German artist Horus showing great promise.~WJ

WAR STORY

DC/Vertigo: *4 issue miniseries 2001-2002, 4 issue miniseries 2002-2003*

of war on a series of self-contained, stand alone tales. The style and the sentiment are heavily influenced by the British comics of Ennis' childhood. The stories are competent, but fall rather too much into stereotypes of honest Germans becoming disgusted at what they're doing, and innocent working class lads sent to their deaths by bumbling chinless officers. War wasn't all *Boys Own* games, but it wasn't as grey as it's sometimes painted here, either. In the safety of the 21st century, it's all too easy to look back and ignore that World War II was a war that had to be fought, and that the men who fought it did the best they could in circumstances we cannot possibly imagine. In attempting to show a 'different' side, *War Story* sometimes cheapens that in a way that an adventure comic trying less desperately to be relevant might have avoided.~JC

WARBLADE: Endangered Species

Image/WildStorm: *4 issue miniseries 1995*

Warblade (WildC.A.T.S) and Ripclaw (Cyberforce) team up to thwart a Daemonite scheme to rule the world. In the meantime, an old friend now possessed by a Daemonite, provides the "is he on our side or not?" twists. Writer Steven Seagle lays his character-driven piece over a slim plot while Scott Clark draws lots of full-page panels for that 'dynamic' affect. It's not bad, but there's nothing to distinguish it.~NF

WARFRONT

Harvey: *39 issues 1951-1958 (1-35), 1965-1967 (36-39)*

War stories all pretty much identical: much rushing around and shooting and standing up to interrogation and cursing of Commies. Towards the end regular characters appeared in more far-fetched stories: Dynamite Joe ("the blast-crazy marine"), and Half Mask, a disfigured Nazi with "death ray lenses". The bulk is unreadable, but there are occasional treasures, such as the following speech from 36: "Thank you for saving me from losing my confidence in us Americans! If a dope like me can bamboozle a Commie officer, our scientists can out-think their eggheads!" There's notable artwork from Bob Powell in most 1950s issues, and 36-39 have Wally Wood. And, of course, there are the adverts: the 3-Way Hurricane Lantern, the Electronic Computer Brain, the Automatic Firing Tripod Machine Gun, the Glamorous Dress for your Barbie Doll, and Rupture-Easer Hernia Belt. It makes you wonder what picture Harvey had of their typical reader.~FC

WARHAMMER

Black Library: *64 issues (0-63) + 1998 to date*

Impressive, if single minded anthology series set in the various universes of the Games Workshop role playing games. The Tolkeinesque fantasy worlds of Warhammer and Mordheim and the grandiose if derivative science fiction universe of Warhammer 40,000 and Necromunda provide familiar backdrops for action adventures in the manner of *2000AD*, often by veterans and alumni of *2000AD*. It all kicks off with the Elric-like elf-warrior Darkblade* from Dan Abnett and Kev Hopgood, Hive City bounty hunter Kal Jerico* by Gordon Rennie and Karl Kopinski, Rennie and Colin MacNeil's space-opera Bloodquest, topped off with a horror short from Rennie and David Pugh. It pretty much cements the format for all future issues.

18, 20 and 22 starred Redeemer* by Pat Mills, Debbie Gallagher and Wayne Reynolds, and were cover promoted as a *Warhammer* miniseries, telling the tale of a warrior-cleric. He took his own brand of bloody-handed missionary ministration to the mutant and devil haunted wastes of the Hive planet Necromunda. Despite Mills' trademark black humour and surreal violence, unfavourable comparisons to Nemesis are unavoidable and the character has only reappeared infrequently since.

Better series include the barbaric Mordheim by Rennie and Paul Peacock, the manic but excellent Giant Robot Titan* from Abnett, Anthony Williams and Andy Lanning, space war epic Inquisitor by Abnett and Simon Colby, and the moody psychic thriller Daemonifuge* (various including Kev Walker, Jim Campbell, Rennie and Karl Richardson). Many others all alternate as short run serials (swiftly repackaged as graphic novels), with complete shorts and little features. Again like *2000AD*, *Warhammer* proves a valuable training ground for many newcomers, and as the requisite quality of the work is high it may well be the first published work of tomorrow's superstars. The target audience is well supplied with exactly what it wants, but despite the aforementioned consistently high quality, the lack of narrative variety may deter casual readers.~WW

WARHAWKS

TSR: *9 issues 1990-1991*

Ambitious, but second-rate series from games publisher TSR in which each comic also contains the rules and makings of a board game. The lead story boasts the writing skills of Roy and Dann Thomas (1-6), but their tales is plodding and unattractive despite settings that include Gallipoli, Troy and the Battle of Britain. In the back, 'Bad Boys' (1-6) begins as a crime series with American Special Forces agents pursuing the outlaw president of Bananama (sic) before veering wildly into insanity when the characters are transformed into super powered plants by a mad scientist. The best that can be said is that Dan Spiegle delivers his usual professional artwork. Another over-informative, time travelling do-gooder, The Mystorian, fills out the last three issues.~NF

WARHEADS

Marvel UK: *14 issues 1992-1993, 2 issue microseries ('Black Dawn') 1993*

The tagline "Mercenaries across time and space" had potential largely unexplored as the time-travelling protagonists mainly get lost in limbo and fight Marvel US guest stars rather than doing much in the way of time-travelling. Listlessly written, formlessly illustrated, it seems no one involved could be bothered to fake it. The microseries had a new creative team, but the same old ennui.~HS

WARLANDS

Image: *12 issue limited series 1999-2001, one-shot ('Three Stories') 2001, 7 issues ('Age of Ice' 0, ½,1-5) 2001-2002*
Dreamwave: *4 issues + (The Age of Ice 6-9) 2002*

It has been centuries since Malagen the Black withdrew his vampire armies from the lands of the East due to a prophecy involving legendary DarkLyte Armour bringing about Malagen's defeat. The story commences the night of the vampire forces new invasion. A knight named Jerell is sent to inform the king, accompanied by feisty elfgirl Elessa, Delezar the wizard and a young seer called Zeph. Various stock fantasy trials culminate in battle between the East's General Atrilegis and Malagen in 12. The one-shot provides biographical accounts of Malagen, Jerell and Elessa, and 'The Age of Ice' is set almost two centuries later. It's narrated by now Archmage Zeph, who is reunited with an old friend named Marisana who has come to take him back to his people. Along the way they run into Aragon, a former comrade in arms, and the winged ruler Aeteua. 'Age of Ice' 0 is set in a Ryotian prison cell and consists of an interrogation of an unnamed rebel – it leads into the raid on a rebel arsenal in Age of Ice ½. The first series is pencilled and plotted by the prolific Pat Lee with Adrian Tsang scripting, with Tsang taking over the writing completely during 'Age of Ice', and Lee surrendering the pencilling later as well. The colour in these comics is a key part of the rendering, and it gets darker and more indistinct as the series progresses. The whole concept is sub-Tolkein dross, but was instantly popular resulting in 1-6 being reprinted in two issues of *Warlands Chronicles* before the entire first story was collected.~SW

WARLOCK

Marvel: *15 issues 1972-1973 (1-8), 1975-1976 (9-15), 6 issue miniseries 1982-1983, 6 issue miniseries 1992, 8 issue limited series (The Warlock Chronicles) 1993-1994, 4 issue miniseries 1998-1999*

Warlock's history can be found in Thor 134-135, *Fantastic Four* 66-67, *Thor* 165-166 and *Marvel Premiere* 1-2. In the last of these, the High Evolutionary creates Counter Earth, a perfect world hidden from our view by the simple expedient of being on the other side of the sun. The Man-Beast subverts his plan by precipitating war, and Him offers to rid Counter Earth of the Man-Beast. The High Evolutionary gives him a powerful gem and Him, now calling himself Adam Warlock, sets off to fulfil his promise. The first run starts from this point, introducing various characters with counterparts in the regular Marvel Universe (Reed Richards, Doctor Doom). Despite several changes of writer, parallels with the story of Jesus remained apparent, although they became more subtle as the series progressed until the storyline was concluded in *The Incredible Hulk* 176-178, with Warlock being crucified and resurrected! Originally drawn by Gil Kane (1-5), Warlock looked good until Bob Brown took over.

*Available in a collected edition

Warlock then appeared in *Strange Tales* (178-181) as part of Jim Starlin's Thanos saga, which continued into the revived *Warlock* series. Warlock faced his evil future self, The Magus, in 9-11. Thereafter a story concentrating on Pip the Troll, is followed by Warlock fighting the Star-Thief. In the final issue, Warlock struggles to retain his power over the gem he's been using, which contains the souls of all those he's killed with it. Starlin concludes the story in *Marvel Team-Up* 55, *Avengers Annual* 7 and then *Marvel Two-In-One Annual* 2, with Warlock's third death and the end of Thanos. Starlin's early version of Warlock is powerful and mysterious, with intelligent scripts and dynamic, detailed artwork, tightly inked. Much of his work since has been over-indulgent, but don't let that put you off seeking this out. All the Starlin issues were reprinted in both the 1982 and 1992 miniseries.

The Warlock Chronicles 1-5 are an extension of the *Infinity Crusade* series whilst 6-8 are 'Blood and Thunder' crossovers. Tedious and very poorly drawn, none are worth reading. The second miniseries, by Tom Lyle (with Robert Jones inks), begins with the death of Captain Marvel III's mother, Elysius, and then reunites Warlock with Gamora, Pip the Troll and Drax before pitting them all against Syphonn in the Negative Zone. After the Infinity 'epics' from Starlin, this is a much more palatable portrayal of Warlock, but still too much of a simplistic superhero combat.~NF

WARLOCK

Marvel: *9 issues 1999-2000*

This Warlock was an alien form of artificial life memorably introduced in New Mutants 18, and revived as part of a line of titles starring robotic life-forms. Louise Simonson plots are unwisely dependent on X-Men related back history, but using Warlock as a sort of techno-Plastic Man, at least gives artist Pascual Ferry the opportunity for amusing visuals. He rescues a girl in 1, and they spend the remainder of the series attempting to evade capture, as that would lead to a techno-virus enabling control of the world to fall into evil hands. The word count is enormous, and Warlock fails to engage on any level.~FP

WARLOCK and the Infinity Watch

Marvel: *42 issues 1992-1995*

Carrying on from *Infinity Gauntlet*, Warlock and friends (Pip the Troll, Gamora, Moondragon, The Destroyer) are made guardians of the six Infinity gems. To ensure no-one can use them again the team relocates to Mole Man's Monster Island. You just know that that's not the end of it, and the series is dominated by tie-ins to *Infinity War* (8-10), *Infinity Crusade* (19-22), 'Blood and Thunder' (23-25) and 'Atlantis Rising' (41-42). The whole thing's written by Jim Starlin, but he's lost the inspiration that made his original *Warlock* worth reading.~NF

WARLOCK 5

Aircel: *Series one 22 issues 1986-1989, series two 7 issues 1989-1990*

Sirius: *4 issue miniseries 1998*

Five warlocks guard the gates of the Grid, a nexus of alternate realities, each striving to either maintain a balance or usurp the power of the Grid for themselves. 1-13 are by Gordon Derry and Denis Beauvais, whose airbrush and watercolour effects make this visually impressive. It's violent and sexy, but as science fiction fantasy goes, this is a reasonable attempt at something different. 1-10 were reprinted in two collections.

Barry Blair's *Warlock* 5, begun after a creative dispute. It retains some of the basic premise, but has to use completely different characters. Blair's simpler cartooning is a shock after the sophistication of Beauvais, although replacement Dale Keown on 16 and 17 was already showing promise. The second series continues the story from the first. Blair's more straightforward scripts aren't a patch on Derry's, but he does tie up the loose ends for the final issue. The Sirius miniseries appears to offer a completely fresh (and downbeat) start as dancers, Chispa and Heather are possessed by magic talismans and start a ritual designed to bring a demon into the world. Blair's storytelling takes a dramatic stride forward with the help of Colin Chan, but he's still too fond of elfin features and hard-nippled women to entirely cast off the faults of the past.~NF

WARLORD

DC: *133 issues, 6 Annuals 1976-1988, 6 issue miniseries 1992*

This continues from Warlord's début in *First Issue Special* 8, written and illustrated by Mike Grell. Adventurer Travis Morgan finds himself in a strange world beneath the Earth called Skartaris, populated by various beasts, and where sorcery still exists. Grell's artwork suited sword-and-sorcery far better than superheroes, and he was able to come up with, if not original, certainly entertaining ideas. Skartaris is well conceived, and eventually revealed to be in another dimension accessed through Earth. There's permanent daylight, and time passes at a considerably slower rate, as Morgan discovers whenever he returns home. Grell also merges Earth science with the fantasy elements, an example being chief villain Deimos, whose mystical scrolls of power are actually computer manuals.

Morgan adapts well to Skataris and a skimpy furry jock-strap, and Grell provides an interesting cast. Companion Machiste, dates from 2 when he and Morgan were sold as gladiators, Morgan leading a subsequent revolt that earned him the title Warlord. Partner Tara is rescued from a voracious dinosaur in true sword-and-sorcery fashion in the debut, but her frailty disguised her being quite a dab hand with the sword. Shakira, introduced in 32, is a warrior woman who can transform herself into a cat, yet retain her human intellect.

Warlord rapidly makes his way back home, but he chooses to return to free Skartaris from occupation by Deimos and his forces. He's accompanied by a former lover, Mariah, conveniently also a former fencing champion. Deimos is a hardy old mystic though, and returns from the dead. Several times. Each time he's nastier, culminating in a plot where he makes Warlord believe he's killed someone very dear to him. Morgan is actually knocking on a bit, old enough to have served in Vietnam, and has an adult daughter, Jennifer, who comes looking for her father in 38. Intending a once-only visit, through circumstances beyond her control Jennifer stays, eventually becoming Skataris' premier sorceress. Fantasy fans should find most Grell issues enjoyable. A decent sample is 28, in which Warlord has to defeat an alluring cobra woman.

Grell stops drawing *Warlord* after 52, and Mark Texeira is an acceptable artist between 53 and 58. Dan Jurgens pencils from 63, but once Grell stops writing with 71, it's downhill. Cary Burkett doesn't have the necessary imagination for the long run, and while Michael Fleisher, from 100, certainly has the imagination, he's on autopilot. Attempts to boost sales by having assorted DC heroes pop in and out (from 116) destroys the unique aspects of *Warlord*. It all ends in tears, with DeSaad and the forces of Apokolips attempting to take control of Skartaris, the Atlanteans having had a good try in the issues leading up to 100. After Jurgens the most notable artists are Andy Kubert (100) and Adam Kubert (95, 99). Father Joe obviously took a hand as well, since many graduates from his School of Cartoon Art work on back-up features.

The most successful of these was Arion, Lord of Atlantis in 55- 62, drawn by Jan Duursema, before moving into his own title, and Ron Randall's Conquerors of the Barren Earth has a lengthy run from 63. 'Saga of Dragonsword' in 51-54 by Paul Levitz and Tom Yeates, is a nice series with a talking ape, long a DC tradition, and 48 has an insert previewing *Arak*, and the first of two Claw the Unconquered stories. The light-hearted 'Wizardworld' can be found in 28, 29, 40 and 41, and Omac is the back-up in 37-39 and 42-47, the first and best run by Jim Starlin.

Grell returned to write the miniseries, illustrated by Damon Willich and Rick Hoberg. A wandering minstrel tries to discover the legend that was Warlord, and in doing so seeks out various people who've shared Travis Morgan's adventures, eventually meeting Morgan himself. Warlord is disillusioned with the myth that's grown around him, but with old enemy Deimos resurrected once again he's forced into action. The story is almost a tribute, and those who enjoy Grell's previous *Warlord* will find much to their liking here.~HY

WARP

First: *19 issues, 3 Specials 1983-1985*

Warp began life as a 1971 stage play parodying fantasy and superhero clichés. First's version, by Peter B. Gillis and Frank Brunner, eradicated all trace of satire, making this another third-rate cosmic dust-up. It begins when mild-mannered bank clerk David Carson discovers he's the host body for potential universe saviour Lord Cumulus. Cumulus' mortal enemy Lord Chaos intends to steal a magical crystal that will allow him to rule the galaxy. By 2 it's revealed that Chaos and Cumulus are brothers, and by 6 they've put aside their differences to fight side by side in a series of interminable battles. Brunner's sub-Neal Adams artwork on 1-9 is at least vaguely appropriate, as Adams designed the costumes for the stage production, but the poor finishing of Bob Smith, Bruce Patterson and Mike Gustovich (who also slaughtered Jerry Bingham's pencils on 10-18) makes this a chore to look at as well as to read. The specials are no better, featuring Lord Chaos in 1 and 3, and the daft Sargon, Mistress of War in 2, drawn early in his career by Marc Silvestri.~AL

WaRP GRAPHICS ANNUAL

WaRP: *One-shot 1986*

In 1986 WaRP was beginning to expand beyond publishing just their immensely successful *Elfquest* material, and this acts as a showcase for their newer titles. There's inevitably an *Elfquest* chapter, and *Myth Adventures* and *A Distant Soil* fans might consider it worth sampling, otherwise it's a selection of competently produced but long-forgotten fantasy strips.~WJ

In the dimension of Cornucopia, civil unrest between Humans and Daemonites results in open warfare, and half-breed Dzhon Do, a TV God (a faith healer who gets results), flees through a space warp to Earth, treating us to a few overlong, maudlin flashbacks from his poverty-stricken past. Competent, but unsatisfactory.~WW

Quality Communications: *26 issues 1982-1985*

This represented a renaissance in English comics, chiefly offering the young Alan Moore to an audience unprepared for anything so intelligent but effortlessly entertaining in a mainstream comic. Editor Dez Skinn pulled in old friends and found strong new talent, and was therefore able to give Moore's scripts to the likes of Garry Leach, Alan Davis, Steve Parkhouse and, most significantly, David Lloyd. Moore and Lloyd's 'V For Vendetta', the only strip that ran in every issue, was a unique, harrowing and creatively successful attempt at a political story. The politics were not token ornamentations for the superheroics, they were intrinsic and dealt with in a balanced manner. Lloyd's moody, shadowed art suited the story of a near-future Fascist Britain to a 't'. Moore's other great contribution was a revamping of the 1950s Marvelman. In Moore's hands Marvelman behaved just like you imagined someone who'd just realised they had almost unlimited power, increased sensitivity and the ability to fly would: buzz a few planes until the novelty wore off and go home for some fabulous sex. Garry Leach's ultra-detailed art helped convince until episode 6, where Alan Davis took over with his cleaner, elegant pencils. Marvelman appeared in every issue except 12, which had a Young Marvelman story, 19, 20, and 22 onwards, and the episodes in 9 and 10 have never been reprinted. Moore also contributed the perplexing Warpsmiths, indescribably alien aliens doing peculiar things to keep the universe in check (illustrated with great verve by Garry Leach in 9-10) and 'The Bojeffries Saga', a nutty English take on The Addams Family, with Steve Parkhouse (11-12, 19-20). A collection gathering Bojeffries tales from here and elsewhere was published by Tundra.

The diverting Laser Eraser and Pressbutton, far future assassins, by Steve Moore and a variety of artists, most notably Steve Dillon, appeared in the majority of issues. So did 'Father Shandor', by Steve Moore with art by John Bolton or John Ridgway, an interminable old-fashioned fantasy about a monk fighting demons. Magical fantasy 'The Spiral Path', written and drawn by Parkhouse, appeared in 1-12. Very good art, very dull story.

Without Marvelman *Warrior* went downhill as Skinn introduced reprint material and filled out the magazine with features and self-penned strips such as Big Ben. This 'Man With No Time For Crime' notionally existed in the Marvelman universe, but badly drawn by Will Simpson, he was no substitute. Nor was Bogey, the old hard-boiled detective in a far future routine. The last couple of issues were truly dismal, including such forgettable nonsense as 'Cyril Tompkins, Chartered Accountant' by Trillo and Altuna (who should have known better) and 'The Black Currant', a barbarian parody so limp Julian Clary would ask for a refund. Most of the good material (and quite a lot of the bad) was reprinted in America, including 'V For Vendetta' (coloured but thankfully concluded), Marvelman (as Miracleman, but also continued), 'The Spiral Path', 'Laser Eraser and Pressbutton' (leading into a series of new stories) and 'The Bojeffries Saga' (reprinted in *Flesh & Bones* and continued in *A1* series 2).~FJ

WARRIOR NUN BLACK & WHITE

Antarctic: *21 issues 1997-1999*

The potential of the Warrior Nun Earth, where church, state and military are intertwined and clergy combat demons, is such that there's plenty of out of continuity stories to be told. And here's a venue. The changing creative teams ensure varying quality, with the best sequence being 4-6, encompassing Japanese gangsters and a ninja nun, written by Derek Kirk. Artist Michel Lacombe follows up this tale in the Onigami miniseries. It's the art that's notable here, and while Lacombe is the only fully developed artist, pencillers Patrick Blaine (9-11, 14), Lee Duhig (3, 8) and Langdon Foss (12, 13, 15, 17) all display great potential, the latter imitating Frank Quitely.~WJ

THE WARRIOR OF WAVERLY STREET

Dark Horse: *2 issue microseries 1996*

WARRIORS OF PLASM

Defiant: *14 issues (0-13), 1 Special 1993-1994*

Every now and again a comic comes along that's so appallingly bad you have to see it to believe it. *Warriors of Plasm* is one. What ruins any chance of redemption is the hackneyed dialogue. Meant to emphasise the other-worldliness of the title, it instead just sounds ridiculous. On a world composed mostly of what looks like snot, the Holy Inquisitor Lorca decides the best way to man a rebellion against the High Gore Lord Sueraceen is to kidnap some dweebs from Earth and give them snot-powers. Dweebs escape, get back to Earth, get chased by more aliens, go back to snot-world, fight rebellion... but the dialogue doesn't improve any. Incredibly, there were later spin-off series, *Prudence and Caution*, which was almost as bad, and *Dogs of War*. Jim Shooter, what were you thinking?~JC

WARSTRIKE

Malibu: *7 issues, 1 Giant-Size 1994*

Brandon Tark is a successful businessman and a private detective with superhealing powers. This is fortunate, since he's beaten up a lot. In fact, in 6 he's murdered by a killer after all superpowered beings. Fortunately for him it doesn't take. Dan Danko tries hard to make this more than "big man, big gun, lots of mayhem" and manages some creditable characterisation, but, apart from 1-3, the series lacks enough plot to go round. The giant-size returns villain Blind Faith, previously seen in 4, in a prelude to the *Godwheel* crossover.~NF

WARWORLD

Dark Horse: *One-shot 1989*

Slim science fiction from Gary Davis, a man who would be Moebius. He wasn't there yet, and this is an empty imitation.~FP

WASHOUTS

Renaissance Press: *One-shot 2002*

Chasing Stargate Sally, Squinch and Freeda of the Washouts are forced to crash-land on a planetoid. Unfortunately, their ship lands on a temple, annoying the locals, who decide that one of them must be sacrificed at their upcoming festival. Michael Cohen's comedy spin-off of sorts from *Strange Attractors* (the girls are dropouts from that series' Rangerettes), is an offbeat little misadventure, but the payoff isn't as satisfying as it needs to be.~NF

WASTELAND

DC: *18 issues 1987-1989*

DC's last, pre-Vertigo attempt at a horror title that was both adult and genuinely scary. The latter was never likely but, written by Del Close and John Ostrander, *Wasteland* does approach the downright twisted. With the sound idea that readers would prefer to have a known, if rotating, group of artists, Don Simpson, William Messner-Loebs, David Lloyd and George Freeman were hired. One would do the cover and then one of the three stories in each issue. Although comparatively unknown at the time, this eclectic collection of styles proved very effective in providing a consistency, variety and, given the quality of the contributors involved, a diversity of effective storytelling techniques.

Del Close's pseudo-autobiographical stories and Ostrander's more traditional, but still thoughtful and rarely obvious takes on the genre are always entertaining and often funny. They were both spotted the horrific in the mundane, so you won't find many real monsters, aliens or supernatural beings. Of particular note is Close's parody of *American Splendor* in 3, drawn in the style of Robert Crumb by Simpson, and Ostrander's 'Dead Detective' (8, 12, 17), in which a detective proves more successful dead than alive. From 10 George Freeman dropped out and guest artists Tim Truman (10), Ty Templeton (11), Joe Orlando (12, 13, 15) and Rick Magyar (16 on) replaced him. Bill Wray replaced Lloyd from 13. The final issue is a retrospective of sorts, featuring elements from most previous issues. Playful and well worth reading, *Wasteland* was perhaps a little ahead of its time.~NF

The WATCH

Phosphorescent Media: *4 issue miniseries 2000, 5 issue miniseries 2001-2002*

Ambitious, post-*Watchmen* take on global superheroes, from writer Christian Read. Thousands randomly develop superpowers, which leads to the creation of the United Nations Special Association for post-humans (UNSAP). A mysterious telepath called Jack gathers the Watch to oppose UNSAP, recruiting Sera and Xenia, who are both amongst its targets, leading to a confrontation between the Watch and the Damned over information incriminating UNSAP in the deaths of several super beings. The second miniseries continues from this point as the Watch lay low and try to make the evidence public, but Jack's own secrets cause problems (1-3), after which a more legitimate Watch become heroes for hire. A further miniseries is expected in 2003. This is very much plot-driven and occasionally overly convoluted. Artists Andrew Phillips and Stewart McKenny, display some manga influences, with McKenny being more polished and yet less fluid. Both are occasionally jarring, but are good storytellers.~NF

WATCH OUT COMIX

Last Gasp: *1 issue 1986*

One page strips commenting on San Francisco gay culture are combined with longer episodes featuring Stan Stone, the repressed gay character Carl Vaughn Frick used in *Gay Comics*. As an observer Frick doesn't move beyond the obvious, and while his cartooning improves over the course of time (most of the strips date from 1983 and 1984) the satire is very gentle and very much of the period. There must be better and funnier gay comics than this.~FP

WATCHMEN

DC: *12 issue limited series 1986-1987**

It's several years since costumed adventurers had their heyday. An Act of Congress outlawing vigilantes has put a stop to their role as enforcers and moral avengers. Some, like the shy, retiring Nightowl, and Ozymandias, the smartest man in the world, have mothballed their cowls and gone quietly. Some, like the Comedian, a wisecracking warmonger, and Dr Manhattan, a scientist irradiated in a freak accident, have returned to the warren of counter-intelligence agencies and government projects whence they came. Others, like the sociopathic Rorschach, have carried on a one-man crusade against crime. When the Comedian is killed Rorschach is the only one who senses that time is running out for his old team-mates; in fact, time is running out for everyone.

Watchmen looks long and hard into the dark corners of the superhero psyche. It asks what kind of people want to dress up in funny costumes and beat the shit out of villains. It examines the practical ramifications of a traditional superhero story dynamic, where a character like Dr Manhattan, who can control matter and exists in serial time, where past, present and future are laid out in front of him like frames in a film, brush up against cheerful boy-scout vigilantes who just want to help people and guys who get a kick out of dressing up and doing violence. And it looks at why society might condone and support this behaviour, and how the presence of such people, from ordinary thrill-seekers to god-like beings, affects that society. Writer Alan Moore examines each character one by one, peeling back the layers slowly, turning over the familiar elements of the superhero team until all their glitter has rubbed off. Each one becomes a real person (or a real demi-god) as they slowly reveal their deepest anxieties. At the same time he writes an intriguing murder mystery that works on multiple levels and leads into a massive conspiracy, as the Comedian's old comrades (many of whom hated his guts) begin to wonder if there's something going on behind the scenes. There's also a counter-plot in which a young boy is reading a strange pirate comic whose psychological story points up the horrors being faced by the 'heroes', and additional information in the form of memoranda, features and newspaper reports at the back of each issue.

The telling of much of the story is left to the pictures. Not only does Dave Gibbons create a cohesive world, subtly different from our own, he also builds up a web of symbols and icons around which the story is built. His clean, detailed style is perfectly suited to a story that shakes up how we look at superheroes forever, because it's exactly what we expect a good superhero comic to look like. Nothing is taken for granted in *Watchmen*. The view down a street behind a character's head is there for a reason, and is consistent with a view from the other end of the street shown eight issues previously. If only all comics were crafted and polished like this.

Originally supposed to be a reworking of old Charlton characters whose rights had just been bought by DC, *Watchmen* had a huge impact when it was published. It didn't generate many direct imitations (too much like hard work, one suspects, more's the pity), but it altered the whole approach to superhero comics taken by many writers, encouraging them to deconstruct the myth of superbeings. It remains a superb read that will keep you on the edge of your seat, while enriching your understanding of humanity.~FJ

WATERWORLD Children of Leviathan

Acclaim: *4 issue miniseries 1997*

It would seem an odd decision to publish a *Waterworld* comic well over a year after the most expensive movie ever made had run its course, particularly when Kevin Costner likenesses weren't on the agenda. Having long believed himself alone, the Mariner comes across two civilisations, each leaving something to be desired. By the end he's discovered his origin, but it's a throwaway after four issues of battling. What might have served an action movie is tedious on the page.~WJ

THE WAY OF THE RAT

CrossGen: *7 issues + 2002 to date*

A departure for CrossGen, as this appears to be medieval oriental adventure rather than other-worldly fantasy. It bears the hallmark of The Quest, though, as thief Boon Sai Hong comes to terms with artefacts he's stolen and their worth to him, while his previously formidable city comes under assault from a mighty warlord with a massive cannon. Chuck Dixon, not previously known for comic touches, provides plenty here, not least Boon's talking monkey companion, and Jeff Johnson's art provides humanity, spectacle, scale and grandeur.~FP

WAY OUT STRIPS

Tragedy Strikes: *4 issues 1992*
Fantagraphics: *4 issues 1994*

Carol Swain's artwork is very simple, and her characters all look like pit-bull terriers. The stories are anything but simplistic, though. There's a crooked antique dealer who says she sold her soul to the devil, but the devil's name is Brian and he lives in a bedsit, and he's disconcertingly tentative when he asks if he can see her again. There's a woman who returns to her home town and makes some disturbing discoveries about her friend Sam. There are days, and gigs, in the life of a stand-up comic. Driving narrative, no, but she records states of mind that most writers seem unaware of, and brings a haunting clarity to every scene. Possibly an acquired taste, but worth the effort.~FC

However, from the start things go wrong as Sabretooth, their star weapon goes AWOL, stealing all their files and sabotaging all their missions. WEAPON ZERO

Colonel Tyson Stone is infected by T'srri biotechnology and learns the evil T'srri leader N'Golth has taken people from different time periods to create an army of T'srri/human hybrids. The human side of three of these hybrids has retained control, and together with Stone they confront the T'srri in their Moon-base (T4-T0). The ongoing series sees the team adjusting to a new world as well as coming to the attention of a secret US agency that believes they're aliens (1-3). They visit Japan, battle armoured insects and journey into space to begin the war against the T'srri. Walt Simonson and Joe Benitez's cross between science fiction and superheroes owes much to Japanese robot comics. Simonson keeps the whole reasonably light-hearted (bowing out with 13), establishing the relationships between the team members that are the focus as they conclude the battle to save Earth.~NF

WEAPONS OF THE GODS

Comics One: *1 volume + 2002 to date*

Another Tony Wong kung-fu comic, bearing all his inventive trademarks. For the casual reader, it's the one to sample as someone pulls out all the stops for the art. Graceful action sequences are combined with beautiful and detailed designs and they don't shirk from stunning panoramas with dozens of figures. Ying Hsiang Lin is credited as "production artist", so perhaps it's down to him, but with credits other than Wong rare in the comics he markets abroad it's difficult to know for sure. The story is populated by Wong's usual larger than life cast of kung-fu superheroes, this time the main plot concerning hero Tian's search for Heaven's Crystal, a magical sword, although he hardly starts in this volume. If it follows other Wong comics it'll meander forever, but every comics fan should sample at least one Tony Wong comic, try this.~FP

WEASEL

Talented writer/artist Dave Cooper largely abandons his smoothly rendered, deeply surreal cartooning style for a more realistic, scratchy pen line, at times reminiscent of underground legend R. Crumb's gnarly crosshatchings. The Crumb comparison extends to the lead strip, 'Ripple, a Predilection for Tina', with its sexually explicit dialogue and voluptuously uninhibited pictures. A tale of reckless obsession and mutual cruelty, 'Ripple' is brought to a satisfyingly bleak conclusion in 5. Every issue also contains a 'Television Program X-32b' back-up story, a bizarre science fiction comedy that finds Cooper back on more familiar, but no-less entertaining ground, plus an assortment of doodles, flights-of-fancy and other visually impressive ephemera. With lush painted covers and high production standards, Weasel is one of the most aesthetically pleasing 'alternative' comics to appear in recent years, and one can only hope that Cooper's announced hiatus doesn't last too long.~AL

WEAVEWORLD

Marvel/Epic: *3 issue miniseries 1991-1992*

Despite a generous 192-page allocation this adaptation of Clive Barker's doorstop suffers from contraction. The WEB

!mpact: *14 issues, 1 Annual 1991-1992*

One of the !mpact imprints' relaunches of the old Archie/MLJ concept, this Web, unlike previous versions, is an organisation rather than a person, an U.N.C.L.E.-like network of agents and operatives, several of whom wear armour and have weapons giving them virtual superpowers. In the 1960s, the Web agents used one identity, deceiving the public into thinking there was only one hero called the Web. Covert for twenty years, the organisation responds to a new flood of superhuman activity by surveying a new group of agents in training to determine who will now assume the public persona of the Web. Len Strazeswski handles the set-up engagingly, but Tom Artis' artwork looks skimpy and inattentive, and a rapid succession of 'guest artists' and fill-in writers blurs the appeal that the rather clever concept had.~HS

WEBSPINNERS: Tales of Spider-Man

Marvel: *18 issues 1999-2000*

Hit and miss series recounted by a variety of creators, doing much the same for Spider-Man as *Legends of the Dark Knight* does for Batman. 1-3 is written by J.M. DeMatteis and set immediately after *Amazing Spider-Man* (first series) 38, involving special effects trickster Mysterio trying to find out where his life took that wrong turn. It's lavishly illustrated by Michael Zulli in his best Barry Windsor-Smith style but the writing is DeMatteis at his worst, maudlin and preachy with none of his strong characterization or plotting. Next up (4-6) has Keith Giffen and Andy Smith doing their best Kirby impression to tell a long unfinished story as scripter Eric Stephenson explains why the Silver Surfer didn't destroy humanity after his series was cancelled in 1968. After that Joe Kelly and Bart Sears reveal the secrets of Peter Parker's Prom night before Paul Jenkins and Sean Phillips try to tell a chilling tale as the Chameleon attempts to drive Peter Parker insane (10-12). That was the halfway decent material. Beyond 12 it's a long slide down to cancellation.~WW

Creator, Raff Ienco, tells the first stories about Nina Hoffman, part of an arctic expedition, and infected by the Spider Nation to repopulate their race. The 'War' Prelude is by Ienco, but 1-2 are drawn by Bill Maus. Thereafter Tim Vigil adjusts the concept so that the Spider Nation's Queen is now an alien, unable to produce a King, who would be able to create further Queens. WEIRD FANTASY

EC: *22 issues (13-17, then 6-22) 1950-1953**

Gemstone: *22 issues 1992-1997**

Continuing its numbering from *A Girl, A Moon, Romance*, the first story in *Weird Fantasy*, 'Am I Man or Machine', stiffly illustrated by Al Feldstein, was a romance, sort of. A seemingly normal man looks up his old girlfriend, two years after he's been declared dead in a car crash. His brain has been preserved in a robot body. The script extrapolates what it's like to be isolated in a glass jar for months, and how various receptors can replace senses. When the man realises his sweetheart has married another he pretends it was a joke, and leaves. This story sets the agenda of weird science more than fantasy. Later there's more of a "don't meddle with nature" message, but early issues are packed with time-travel conundrums. None really bettered Harry Harrison's 'Only Time Will Tell' from the first 13 (1), with art assists from Wally Wood.

A regular line-up of artists was soon established, with editor Feldstein producing the lead story and slick, rather mechanical covers on the early issues, often concentrating on hardware rather than people. Wally Wood was in his element, Jack Kamen's fine-lined, reliable artwork appeared in most issues, and Harvey Kurtzman wrote and drew a handful of wry, twist-in-the-tale stories that concentrated on character during the first year. They stand out a mile from the rest of the comic's largely Feldstein-plotted efforts, not just because they only have half as many words and panels. 'Atom Bomb Thief', from 14 (2), is a typical Kurtzman tale of a janitor who smuggles plans for an atom bomb, is double-crossed, murders his buyer and ends up, after a plane crash, being shipwrecked on Bikini Atoll. It's not particularly clever, but it's economically done, emphasising human emotion rather than scientific discovery, drawn in a style halfway between his humour work and the tighter line he used for his war stories. More inventive is 'The Dimension Translator' from 6.

Apart from slight shifts in tone, one issue of *Weird Fantasy* doesn't really differ from another in story content. There's usually something about a matter transmitter, time machine or duplicator going terribly wrong, something about aliens (either they walk among us or "I've discovered they're about to attack and no one will believe me") and something about space exploration (they're our lost comrades we've come to this planet to rescue and, oops, we just shot 'em because they looked like dangerous aliens). One of the funniest alien tales is 'The Thing in the Jar', from 11. Illustrated by Joe Orlando, who was a semi-regular from 9 onwards, it starts ingeniously with a strange pond that turns out to be a living creature. A sample from the pond starts talking to some researchers, suggesting it's part of a group mind and that it has come to help mankind. Naturally mistrusting it (this is the Cold War, after all), the researchers hit upon the novel idea of pouring a bottle of gin into the sample, so that, in a pissed state, it will reveal its hidden agenda, which is indeed the invasion and domination of the world. After a while this persistent paranoia can get boring for the modern reader.

14 featured the first Al Williamson art on the title and he fitted right in alongside Wally Wood. Together Wood, Williamson and Frazetta created the busty space-babe-in-a-bubble-helmet image that came to typify the comic, but was in fact entirely untypical of the first half of its run. Later issues featured one or two more menacing space monsters and sexy girls, as the popularity of the horror titles encouraged it to become more gruesome. There remained a feeling, however, that *Weird Fantasy* didn't quite know where it fitted in the EC line. The 1990s reprint issues more sensibly start the numbering from 1, and collect issues five to a special. Connoisseurs will prefer the hardbound and slipcased black and white volumes.~FJ

WEIRD SCIENCE

EC: *4 issues (12-15) 1950, 18 issues (5-22) 1951-1953**

Gladstone: *4 issues 1990-1991*

Gemstone: *22 issues 1992-1997**

For reasons concerning postal regulations applying to subscription copies, the first four issues of *Weird Science* are numbered 12-15, continuing the numbering of the defunct *Saddle Romances*. They're easily distinguished from the later 12-15, which all open with a Wally Wood-drawn story. There's one issue with no cover number, and the succeeding issue is numbered 6, the total number of issues to that point.

Long recalled as the classic science-fiction comic, time hasn't been kind to *Weird Science*. The art is still impressive, even outstanding in places, but the majority of stories are distinctly of their period. Typical early plots have a nutty scientist making a great breakthrough, but not living to pass on the knowledge, using it for petty revenge, or, for some reason, the world never knows what they've discovered. Another wrinkle has the human cast revealed aliens or other-dimensional beings, often invading Earth. William Gaines and Al Feldstein wrote most stories, and other favourite plots concern the then topical effects of the atom and hydrogen bombs, flogged to death in early issues. Feldstein was prescient in relating the alleged events of Roswell wholesale in the first 13, and he adapted Orson Welles' famous War of the Worlds broadcast in 15 (which also has the only EC science-fiction story drawn by horror maestro Graham 'Ghastly' Ingels). Harvey Kurtzman wrote and drew the early highlights, either eschewing the shock ending altogether or being far more imaginative in getting there with stories that stand the test of time. 'Man or Superman' in 6 is an amusing tale of a bodybuilder and his scientist brother-in-law, while 7's charming 'Gregory had a Model T' predates *Herbie* by over a decade with its tale of a sentient car.

The artist most associated with EC science-fiction is Wally Wood, and while some argue his war stories were slightly superior, there's no doubt of a master at work. Wood himself would later (misguidedly) cite *T.H.U.N.D.E.R. Agents* as his personal best, claiming his EC work was "compulsively and neurotically overdetailed". Maybe so, but in the 1950s no one was more convincing with the nuts and bolts of spacecraft, or capable of depicting more alluring humans. 'Gray Cloud of Death' in 9 features spacesuits that inspired a generation, and there's a second Wood-drawn story, 'Invaders', sadly a rather dated script. Wood's best known science-fiction strip was 'My World' in 22, an absorbing narrative detailing the vistas and possibilities of science-fiction. It's become so personally associated with Wood (and was parodied by him in *Big Apple Comix*), so it's ironic to note that the story was written by Feldstein, and the narrative voice is his. Wood also illustrated some of the more audacious material to appear in 1950s comics with a trans-gender special in 10, and a tale of hermaphrodites in 14. 20's stunning tearjerker 'The Loathsome', distressingly based on a true story of an ugly young girl tormented and rejected by everyone, should raise a lump in all but the most cynical of throats, and 'He Walks Among Us' in 13 (an issue also containing Ray Bradbury's astonishingly downbeat 'A Weighty Decision') is blatantly "the story of Christ transposed to another planet", according to Feldstein. It received surprisingly little critical attention at a time when the entire EC line was under fire for its content. 20's 'The Reformers' takes an obvious sideswipe at their critics, with crusading zealots attempting to reform heaven.

Having been pulled up for swiping, EC began cover-crediting adaptations of stories by known science-fiction writers, most notably Bradbury (although future science-fiction favourite Harry Harrison drew stories in the first two issues). Al Williamson débuted in 16, and quickly became an artist only surpassed by Wood, his peak being 19's ambiguous and ethereal 'One Who Waits'. *Weird Science* hits its stride with the second issue 12, by which time the content is less predictable. With 23 the title is merged with EC's other science-fiction comic to become *Weird Science-Fantasy*. The Gladstone reprints are random (containing 9, 16 and 22), while the Gemstone series reprints every issue sequentially in the original format, sensibly instituting a new numbering system that begins with 1. The rich may prefer the boxed set of hardbound monochrome reprints.~WJ

WEIRD SCIENCE FANTASY

EC: *7 issues (23-29) 1954-1955**

Gemstone: *7 issues 1992-1994**

Behind fantastic covers by Wally Wood (23, 27), Al Feldstein (24, 26, 28) and Frank Frazetta (29), the stories concentrate on ideas about what makes society work and the relationship of man to his environment, rather than the grotesque endings for which EC is best known. Wood is in every issue, all good examples of his style, as is Joe Orlando, who, strangely for EC, draws a continuing character. Otto Binder's Adam Link, a robot with human feelings who survives a trial to establish his right to citizenship, features in three strips (27-29). Orlando would later redraw the series for Warren.

26, written by Feldstein and drawing on notes from Major Donald E. Keyhoe, a leading popular writer on the subject, is given over to the "actual facts" about flying saucers. It's drawn alternately by Wood and Orlando, but is the least interesting issue, simply because the "facts" leave no room to tell stories. Al Williamson's exotic artwork (backgrounds reputedly by such diverse hands as Angelo Torres and Roy Krenkel) graces 'Fish Story' (23), the famous 'A Sound of Thunder' (25), adapted from Ray Bradbury's tale of dinosaur hunters tampering with time, 'Upheaval!' (24), written by a young Harlan Ellison, 'Lost in Space' (28) and 'Vicious Circle' (29). The latter is one of several stories in which mankind has degenerated and some evidence of past technology provides the focus for the plot – see also Orlando's 'Fair Trade' about aliens buying Manhattan Island in 23.

Jack Kamen (27, 28) and Reed Crandall (27, 29) both produce some fine work but the other major artist is Bernie Krigstein. 'The Flying Machine' (23) is another Bradbury story, illustrated in a highly stylised manner, drawing on Chinese art for inspiration. 'The Pioneer' (24) grimly contrasts a space trip with a man's journey to the electric chair. His final story here is 'Bellyful' in 25. 27 emerged during the controversy over Wertham's *Seduction of the Innocent* and, even more than the other issues, contains stories that plead the cause of tolerance and fair-mindedness. Far from corrupting the youth of America, EC strove for enlightenment; if one were cynical that would be enough to explain why they had to be stopped. With 30 the title changed to *Incredible Science-Fiction*, and the 1990s run is reprints numbered 1-7. As with other EC titles, a hardbound black and white collection was published in the 1980s.~NF

WEIRD SEX

Eros: *One-shot 1999*

Using the alias 'DeMentia', Tom Sutton tosses off a trio of EC-style stories with a high sex content. Parodying a science fiction comic, he's forced to use his imagination a little, but imagination isn't what the comic's for. Rest assured all women's breasts are larger than their heads and all space creatures are capable of multiple ejaculation, sometimes simultaneously!~FP

WEIRD WAR Tales

DC: *124 issues 1971-1983*

DC/Vertigo: *4 issue miniseries 1997, one-shot 2000*

Largely featuring stories about World War II, reprints by editor Joe Kubert and Mort Drucker were framed by new sequences from Kubert (1-4, 7) and Alex Toth (5 and 6). Additional new strips from Reed Crandall (2), Russ Heath (3 and 5) and Frank Thorne (6) made a really nice package. Joe Orlando became editor with 8 and the title became a more typical horror comic, with all-new material. Scripts from veterans Robert Kanigher, Sheldon Mayer and Arnold Drake were always competent, but never exceptional. Artistically, though Weird War featured fine material, almost exclusively from Filipino artists like Tony DeZuniga and Alfredo Alcala, with brief appearances from Nestor Redondo (13) and Noly Panaligan (45) for good measure. Notable other artists included Neal Adams (8), Alex Toth (10), Walt Simonson (10) and an inspired Frank Robbins (21, 27, 35, 36). The comic's artistic highspots, however, were provided by Alex Niño, whose unfettered imagination was at its peak here, with mostly science-fiction-themed stories in 11, 13, 16, 23-25, 31, 36, 55, 61, 69 and 70. José Luis Garcia-Lopez made an early DC appearance in 41 and 44, as did Marshall Rogers and Terry Austin on Jack C. Harris' 'Canterbury Tail', originally intended for *Kamandi* and somewhat incongruous here.

* Available in a collected edition

After 50 *Weird War* is extremely patchy, though a Russ Heath strip in 59 is worth looking out for. Howard Chaykin (61, 62, 76) and Frank Miller (64, 68) both crop up, neither in the least bit inspired. In an attempt to stem the title's malaise J.M. DeMatteis' Creature Commandos débuted in 93, pitting Frankenstein, Wolfman, Medusa et al. against the Third Reich. The series never lived up to its (unintentional?) comic potential, and the Pat Broderick artwork was no help. Robert Kanigher's G.I. Robot was introduced in 101 to little acclaim, though Kanigher's other series, 'The War That Time Forgot' (revived from *Star Spangled War Stories* in 94, 99, 100 and 103), at least boasted fine artwork from Dave Cockrum and Jerry Ordway. More interesting was Mike Barr's Jasper Pepperdyne (108), notable for some lovely Garcia-Lopez art and for being a breathtakingly blatant *Dr Who* swipe. For those wanting an introduction to *Weird War Tales*, 36 was a sixty-eight-page giant that reprinted a lot of the best early material.

The miniseries is more a Vertigo title than the *Weird War* of old, but is a credible updating with much soul searching and agonising over the iniquities of war. Each issue has at least one stand-out story from the likes of Ian Edginton and Eric Shanower (1), Sam Glanzman (2), and Paul Jenkins and George Pratt (3). 4 is the pick of the bunch with Pete Milligan and Duncan Fegredo's 'War and Peas' a telling story of an old soldier's war memories, and Phil Winslade's staggeringly detailed art on 'Bad Day on the Sajo' about a lonely Mongol warrior. The giant-sized one-shot was a quality collection of the best contemporary talent, including Paul Pope, Jim Lee, Bob Rodi, Bruce Jones, Alcatena and the great Edvin Biukovic's last strip. The emphasis is on the horrors of war rather than the supernatural, but nevertheless this excellent issue showed that the title still had a lot to offer.~DAR

WEIRD WESTERN Tales

DC: *59 issues (12-70) 1972-1980*

DC/Vertigo: *4 issue miniseries 2001*

Inheriting the numbering of *All-Star Western* with 12, there was initially little difference. Bounty-hunter Jonah Hex retained lead feature, backed up by El Diablo, reprints, and occasional extra new strips (Alex Toth's in 16 is a beauty), but by 21 Hex occupied the full page count. Writer John Albano cast him as an enigmatic stranger, universally feared unless a gunfighter was required, vindictive and mean, although with a noble sense of justice. Artist Tony DeZuniga rendered grubby realistic locales and well-worn people. Their run was standard Western plots with a propensity for crooks to be dealt poetic justice in the form of their own iniquities. For their best story see 'The Hanging Woman' in 17. Michael Fleisher from 22, though, honed Hex, transforming him into a fully rounded character. His largely single-issue plots were inventive and he fleshed out Jonah's past, revealing life-long enemies made during the Civil War (plot temporarily resolved in 29-30). De Zuniga left with 24, with Noly Panaligan and George Moliterni handling most remaining Hex stories here in equally suitable fashion. The entire Fleisher oeuvre is good, but for the best try the Doug Wildey-drawn 26, which shows the depth of resentment against the incursive railroad, an early take on feminism (27) or Jonah in a town where hanging is a public festival (35).

Jonah Hex moved to his own title after 38 and *Weird Western* was inherited by Brian Savage, Scalphunter, a white man raised by Indians. Strong social concerns permeate the stories, but he's dull, and the only weird thing is how he lasted thirty-one issues. If you're desperate to see them again, El Diablo turned up in *Jonah Hex* 32, 48, 56-60 and 73-75 and Scalphunter was in 41,42 and 45-47.

Following the Joe Lansdale instigated vogue for Westerns with anomalous elements, Vertigo's miniseries was truer to the title, although pleasingly found space for more traditional material, with Lansdale tossing off a piece for Sam Glanzman in 3. The best issue is 4, with Duncan Fegredo and Dave Taylor respectively illustrating a piece of whimsy by Peter Milligan and Jen Van Meter's tragi-comedy, and old hand Bruce Jones teaming with Cully Hamner. The best story overall, though, is Greg Rucka's engaging piece in 1, aptly drawn by Rick Burchett. Those who like their westerns weird will find even more to admire.~FP

WEIRD WONDER TALES

Marvel: *22 issues 1973-1977*

Another round of 1950s reprints. 7 featured the individual stories of the characters who were to comprise the Headmen in Steve Gerber's *Defenders* stories, Bill Everett's Venus occupies 16-18 and Doctor Druid 19-22. Be warned, though, it's mundane stuff. This outlived the other Marvel horror reprint titles, and perhaps the occasional diversity provided by maverick artists helped. There are Doug Wildey (2), Angelo Torres (7), Bernie Krigstein (19) and Joe Kubert (22), in addition to the usual suspects.~FP

WEIRD WORLDS

DC: *10 issues 1972-1974*

An artistic treasure trove, 1-7 had skilful adaptations of Edgar Rice Burroughs' *John Carter* and *Pellucidar* stories (previously seen in DC's *Tarzan* and *Korak* comics) with art from the great Murphy Anderson, Mike Kaluta, Sal Amendola and Al Weiss, to name a few. 8-10 featured Ironwulf, a Howard Chaykin creation (scripted by Denny O'Neil). It was a wonderful sword-and-sorcery saga with all the ingredients of great space opera: an empire headed by a beautiful evil empress, vampire warriors, family feuding, a wooden spaceship and lots of marvellously designed characters. A shame we had to wait twenty years for the continuation of in the *Ironwulf* graphic novel.~HY

WEIRDFALL

Antarctic: *2 issues 1995*

This is set in a divergent present where the Earth has been beset by unpredictable phenomena known as the Weirdfall for several decades. Our heroine is a saboteur working against the various alien races who seek to dominate Earth. Creator Matt Howarth doesn't spend much time on exposition and this leads to vast chunks being incomprehensible. The artwork is functional with very little page-turning impetus. A waste of time to all but the Howarth devotee.~SW

WEIRDO

Last Gasp: *28 issues 1981-1993*

Weirdo kept the spirit of the underground alive through lean years until it was absorbed by a new generation. As such its importance is both vast and unquantifiable. Editorially, though, it's a mixture of the inspired and downright unreadable, but tipping the scales in its favour is the vast quantity of Robert Crumb work.

1 is almost entirely untempered Crumb – not a pretty sight. His editorial stamp dominates that and succeeding issues. They're populated by dull illustrated articles, weak one-panel

cartoons and bizarre photostrips acting out Crumb's sexual obsessions. They're nonetheless saved by one good (often great) Crumb strip every time (except 2). A particularly poor issue, 4, is redeemed by five pages of Crumb waxing nostalgic about the 1960s (and two Drew Friedman one-pagers). Crumb's *Weirdo* strips have a broad sweep. Underground whimsy is set off by startling adaptations of Boswell (3) and the arcane psychological imperatives of Krafft-Ebbing (13, possibly an ironic response to reactions about his own predilections). He turns in engaging and passionate diatribes, plain silliness and one lapse into bizarre racist conspiracy theory in 28, inexcusable even if intended as ridicule. If his tirades on the superficial nature of fashion and society in Mode O'Day (9, 10, 12, 18 and 26) became overworked and repetitive, they're balanced by his outstanding autobiographical strips. 'Uncle Bob's Mid-Life Crisis' in 7 and the complementary 'I'm Grateful, I'm Grateful' in 25 are the work of a major talent on top form, as Crumb analyses his circumstances in typically introspective fashion. Also surprisingly effective are strips about domestic bliss drawn by Crumb and his wife Aline Kominsky-Crumb (16, 23), with the material ensuring that the wildly contrasting artistic abilities don't jar.

Crumb quickly published new cartoonists, and, although he wasn't faultless in his selection, the fact that Drew Friedman, Kaz, J.D. King, Dori Seda, Dennis Worden and Peter Bagge all débuted here is sufficient to overlook poorer judgements. Also in the Crumb-edited issues are Terry Boyce's forgotten (which is apparently how she now wants it) but oddly charming 'Peter the Penis' strips, satirising the male attitude to life. They were dropped when Peter Bagge became editor with 10. He also discontinues the puerile photostrips, uses more Kaz and King, and publishes J.R. Williams, Mark Zingarelli and classic underground artists like S. Clay Wilson and Bill Griffith. Bagge's own strips introduce the Bradleys (14) and Ken Weiner (13), but his best is 'The Reject ' (10), alienation and childhood torment presented without apologies. It's a theme also explored in the truly bizarre 'Fishlips' stories in 15 and 16.

Outside the editors, Kim Deitch and Spain are the most frequently published creators. Deitch mainly submits his strange strips of the Ledecker Carnival (15, 16, 19, 23). Despite an open, if static, clear style, his art disturbs on an almost primal level, prompting unknown fears lying within us all. Spain is an acquired taste. While capable of brilliance, his Weirdo strips generally feature the tiresome Big Bitch. Begun as a joke (one hopes), it's a one-note joke worked to death after a single appearance yet returns again and again, with plots that would seem slim to an anorexic.

Aline Kominsky-Crumb becomes editor with 18, and again broadens the contributor base, returning Spain and operating a positive-discrimination policy with regard to women. Carol Lay, Julie Doucet, Mary Fleener, Phoebe Gloeckner, Penny Moran, Leslie Sternbergh and Carol Tyler all contribute top-notch material to what is the best editorial selection of the run. The amazing Lindsay Arnold and Michael Dougan hold up the male end. Kominsky-Crumb's own autobiographical strips, appearing from 2, work well, presenting a generally positive and coping attitude towards a strange childhood, and always raising a laugh. Three years after 27, the final issue was titled *Verre D'Eau* to reflect the large contingent of French contributions.~WJ

WELCOME BACK KOTTER

DC: *10 issues 1976-1978*

WENDY WHITBREAD, UNDERCOVER SLUT

Eros: *2 issues 1990-1992*

"Get that cock back in your trousers, fella! There won't be any pussy where you're headed!" As Anton Drek, Undercover Cartoonist, Don Simpson created the most notorious Eros comic, about a policewoman posing as a prostitute, her badge fastened to a g-string. It's very silly indeed as Wendy and her Untouchables – "As gorgeous a group of carnal courtesans as you'll find on this side of law and order" – go into battle against the forces of evil. Or they would, if they could stop having orgies with each other and their fellow police officers. It certainly doesn't short change you on spunk action, but that's about all that can be said for it. *The Collected Drekbook* collects both issues along with other Simpson sex material.~FJ

WEREWOLF

Dell: *3 issues 1966-1967*

Of the trio of Dell heroes named after screen monsters this is the most pathetic. Major Wiley Wolf of Secret Defence Unit One's adventures are the worst-drawn comics of the 1960s. Tony Tallarico, take a bow.~SW

WEREWOLF

Blackthorne: *4 issues 1988-1989, one-shot ('in 3-D') 1988*

Adapted from TV scripts, these are unassuming tales of modern werewolves drawn competently, but not in any exciting fashion. In 2, a wounded werewolf, given aid by a small boy, who loves monsters, returns the favour by helping the boy against an abusive stepfather. In 3-4, published also as the 3-D issue, Ted is accused of murder when his best friend asks for help after becoming a werewolf, and must then seek his own cure.~NF

WEREWOLF AT LARGE

Eternity: *3 issues 1989*

Mild mannered rent detective Martin Cross becomes, by night, the lycanthrope of the title. Essentially a superhero comic in which the protagonist, rather than slipping into Spandex, must get naked and hairy in order to fight crime, assisted only by his precognitive grandmother. Tolerably entertaining, might have become a great deal better given a chance to run. Those who miss him should check.~HS

WEREWOLF by NIGHT

Marvel: *Series one 43 issues, 5 Giant-Size 1972-1977, Series two 6 issues 1998*

The first series' greatest achievement was to survive for forty-three issues. Owing to an ancient, hereditary curse, Jack Russell (yes, really) turned into a werewolf during the three nights closest to the full moon every month after attaining his eighteenth birthday. Marvel decided that the strip was most suited to the supernatural/fantasy vein. It wasn't actually suited to anything. As the entire series is related by the hirsute star, a cynical American teenager, his narration produces a grating contrast to the mood of the stories. Gerry Conway was the only scripter to display any feel for the strip. He wrote the first three appearances in *Marvel Spotlight* (first series) 2-4 and the first four issues of this series, but all his successors contrived utterly ridiculous plot coincidences and a sense of pacing that would shame a legless corpse. The first Giant-Size issue, titled *Giant-Size Creatures*, guest-stars Tigra and scrapes a pass. Mike Ploog contributes acceptable pencils in some of the first sixteen issues, and 31-33 (the latter two introducing Moon Knight) by Doug Moench achieve mediocrity. Further compliments are impossible.

In the second series, Paul Jenkins and Leonardo Manco deliver a noire interpretation of Jack's struggles to control his time of the month. The story gushes swiftly through a horror vein and Jenkins serves up the obligatory dream sequence (3) and journey through Hell (4). The best issue is 5, Lump's Story, which teeters between touching and sentimental. Manco's art is dark and scratchy but does have appealing moments. Cancelled mid-flow, the story continues in *Strange Tales* (third series).~APS

WEST COAST AVENGERS

Marvel: *4 issue miniseries 1984, 102 issues, 8 Annuals 1985-1994*

Hawkeye sets up a West Coast franchise of the Avengers, and the initial miniseries is an entertaining piece of superhero soap opera, with some decent ideas in the plotting, from Roger Stern, and perfunctory art from Bob Hall and Brett Breeding.

The main series had 1-41 written almost entirely by Steve Englehart, with uninspired layouts from Al Milgrom, usually finished by Joe Sinnott. Although responsible for a golden era on *The Avengers*, Englehart's plotting here starts out silly and gets sillier – and the dialogue is no better (e.g. from 14: "It's the one thing that's made the loss of his robotic son bearable"). 1-10 still work as soap opera, but after that the characterisations collapse under the weight of the daft storylines. The most preposterous has the team time-travelling in 17-23, which at its peak (if 'peak' is the word) splits the action across seven timelines, and involves love potions and a spectacular string of coincidences to deliver a message from those stranded in the past. Read it, and recalibrate your definition of chutzpah. From 42-57, John Byrne is writer and penciller, bringing some discipline and imagination to the plotting, and producing some striking images and changes, not least of the title, which became *Avengers West Coast* from 47. It's an enormous improvement, but it still only brings the comic up to the level of forgettable superhero yarn. After Byrne, the main writers were Roy and Dann Thomas, artwork mostly by Paul Ryan and Danny Bulanadi (63-69) and David Ross and Tim Dzon (76-100). The only glimmerings of interest centre around USAgent, foisted on the team by the government and whose failure to fit in comes to a peak in 69. It's a huge relief at 102 when all those giant robots can go back to the lab for an overhaul.

The annuals are both frustrating and surprisingly rewarding. In most, at least half the pages are occupied by chapters of a story continued from other Marvel annuals. However, the remainder was occupied by three or four short stories, some quite strong. The 1989 annual has an interesting stream-of-consciousness treatment of USAgent, the 1991 annual has Wasp discussing her *Avengers* screenplay with a Hollywood producer (amusing) and Living Lightning paying a visit to his old gangland neighbourhood, and the 1992 annual has a similar encounter with the past for Spiderwoman and a humorous piece ranking supervillains.~FC

WESTERN GUNFIGHTERS

Marvel: *33 issues 1970-1975*

The giant-sized 1-7 each ran a lead story featuring the original Western Ghost Rider by the inevitable and very ordinary combination of Gary Friedrich and Dick Ayers. The back-up strips and the last twenty-six issues reprinted a variety of 1950s Western stories, including Apache Kid, Wyatt Earp, Tex Dawson and Kid Colt. Some notable artists feature: Angelo Torres (26), Joe Kubert (4), Jack Kirby (1, 10, 11), Doug Wildey (8, 9) and Al Williamson (18), but only Kirby and Williamson are anywhere near on form. 4 also has a curiosity in the form of the first story which Barry Windsor-Smith, or plain Barry Smith as he was then, drew for Marvel. Don't waste time looking for it.~APS

THE WESTERN KID

Marvel: *5 issues 1971-1972*

The Western Kid was Tex Dawson, and these 1950s reprints are illustrated with no particular distinction by the likes of John Romita and Al Williamson. Someone must have liked them, though, because Tex was promoted into his own title.~WJ

WESTERN TEAM-UP

Marvel: *1 issue 1973*

Seemingly pointless reprint title, with only Jack Davis' Gunsmoke Kid of any interest.~FP

WESTSIDE

Antarctic: *3 issue miniseries 2000*

As an artist there's a lot of Paul Pope about creator Dean Hsieh's work, and this story draws its inspiration from the 1970s *Kung-Fu* TV series as blind oriental vigilante Ash sets about righting wrongs in the old West. It's a fun read and promises better.~WJ

WET SATIN

Kitchen Sink: *1 issue 1976*

Published in the wake of *My Secret Garden*, the standard text on the topic, and subtitled "Women's erotic fantasies", this is a strangely subdued and unarousing collection of stories from assorted underground cartoonists. The whole affair is rescued, though, by Joyce Farmer's absolutely delightful 'A Mature Relationship', showing that sex doesn't stop once you're collecting your pension.~FP

WETWORKS

Image: *43 issues 1994-1998, One-Shot ('Sourcebook') 1994*

Created by Whilce Portacio and Brandon Choi, scripted by Francis Takenaga with pencils by Portacio for 1-9, Wetworks is a superhero team led by Jackson Dane. Sent on a suicide mission by Miles Craven, in order to survive the team have to don symbiotic suits owned by Prince Drakken of the Vampire nation, form whom they're protection from the sun. Both the vampiric Blood Queen and Armand Waering of the Were-Nation have been plotting to create just such a team, subverting the plans of Craven and Drakken. Wetworks agree to help Waering in his fight against the Vampires in return for a chance to pay Craven back for his treachery.

The series initially concentrates on the introduction and internal power struggles of the Night Tribes, with the symbiotes causing changes in the bodies of team members. In later issues new members are introduced, while various others die, though not all for long. Distrusting Waering's motives, Wetworks sever ties in 24, leading to a wrap-up of the old plots by new writer Steven Grant (from 32) in time for a new direction. The final issues desperately pile on the guest stars, but too late to save the title.

After Portacio left, *Wetworks* suffered under numerous artists, few lasting many issues. Jason Johnson's manga-influenced art (20-27), although completely different from Portacio, was well suited to the comic, but subsequent artists were distinctly routine. Takenaga's storytelling kept the series going despite a frustratingly slow pace, which actually added a great deal to the atmosphere. The Night Tribes (also the title of a related one-shot) are an excellent device and the characterisation of the team members was subtly handled, at least initially, making Takenaga's issues worthy of investigation, if you like team comics.~NF

WHA..!?

Bruce Hershenson: *1 issue 1975*

One of Steve Ditko's mid-1970s solo comics, *Wha..!?* contained a number of short strips, all of them suffused with his philosophy of rampant individualism. It was a mixture of superheroes (The Void, Masquerade), science fiction ('Premise To Consequence') and crime stories (Sgt Kage), all drawn with great vigour and enthusiasm. None of the strips are exactly memorable, though, and Ditko's obsessed invective manages to get in the way of the stories without there being enough of it to make it interesting. Too much action, not enough ranting.~DAR

WHAM-O GIANT COMICS

Wham-O: *1 issue 1967*

Having flooded America with hula hoops, Wham-O tried their hands at comics in an attempt to reap some of those 1960s Bat-dollars. It's not the best, but it is one of the strangest comics ever, and at almost two foot high was undoubtedly the biggest. The contributing creators were drawn largely from Gold Key's West Coast talent pool, so include John Stanley and Warren Tufts, and Hot-Rod magazines, which provide Nelson Dewey and Dennis Ellefson among others.

There are all manner of styles and genres here. Many strips feature fathers and sons saving each other from flying saucers, gladiators or cavemen, while others, like 'Flabby and Gabby' or Stanley's charming 'Bridget' were clearly aimed at a younger female audience. None of the strips are classics, but they are generally well crafted, and while Wally Wood's 'Radian' and 'Goody Bumpkin' and Lou Fine's last comic work 'Tor' are curiously characterless, they are undeniably beautiful to look at. Touchingly, *Wham-O* seemed to have their hearts in the right place, since the fifty odd pages are largely free from ads (save for Virgil Partch's charming Wham-O factory feature) and each strip was full to bursting with panels. Melvin The Magician's single page includes a staggering ninety-four of them! Even the colouring, which rather overpowers some strips, is carefully painted, but let down by the printing. A curio certainly, but not without merit.~DAR

WHAT IF?

Marvel: *Series one 47 issues 1977-1985, one-shot 1988, series two 114 issues 1989-1998*

What If? had the potential to be an inventive and entertaining series providing new outcomes from generally known events in Marvel's already convoluted superhero universe. Unfortunately, writers Roy Thomas (who had a few moments), and particularly Don Glut, in the company of assorted hack artists, ensured that inspiration was minimal. The most off-the-wall concept of the entire run was series one's 11, in which Jack Kirby had a ball bestowing the Fantastic Four's abilities on the Marvel office staff. Even so, it typified the idea being far more enticing than the execution, a common flaw throughout. A less pertinent, but equally annoying aspect of most early stories was a predestined outcome ensuring an Earth left much the same as that in the regular version. The series found a home for the Watcher, perennial Marvel guest star, who, er, watched, acting as mine host opening the curtain on alternate universes.

The best of the first ten issues, oddly, was later accepted as part of Marvel's official canon. Thomas and Frank Robbins' 4 explained Captain America's appearance in post-1945 tales when his 1960s re-emergence established him frozen in a block of ice since the dying days of World War II. Thomas triumphed again in 13, with regular *Conan* collaborator John Buscema illustrating 'What If Conan the Barbarian Walked the Earth Today?' For once the actuality matched the concept, although a reprise in 43 stretched the idea too thin. Some stories later occurred in the 'real' Marvel universe, such as 2's 'What If The Hulk Had Bruce Banner's Brain?' (although Thomas and Herb Trimpe provided a less satisfactory sequence than Peter David would), and 30's 'What If Spider-Man's Clone Had Lived' (handled with considerably more economy in 1979).

Frank Miller reworked his Daredevil and Elektra concepts in 28 and 35, although both are slim in content, while there's a spirited alternative to *Uncanny X-Men* 137 in 27 and a humour special, 34, packed with still funny shorts. Beyond that John Byrne's glimpse of a universe where the Fantastic Four never gained superpowers in 36 has its moments, drawing heavily on *Fantastic Four* 1, with some fine extrapolation on how their lives and humanity progressed. Peter Gillis writes many later issues, and while never stunning, he provides a semblance of originality. His best concerns Spider-Man parlaying his abilities into a showbiz career in 19. Inevitably, alternatives worth covering decreased by the issue, and the idea had run out of steam by cancellation. The 1988 one-shot is a leftover, twisting Iron Man's origin.

Redundancy degrades the second series from the start, with alternative presentations of then recent events lacking the freshness a few years' distance may have provided, produced by largely second-rate talents. Additionally, some premises are so slim that there's little to distinguish them from a regular title. 7's 'What If Wolverine Were an Agent of S.H.I.E.L.D.?' (by Jim Valentino, Rob Liefeld and Scott Williams) is a prime example, although far from the worst story. The malaise of complacency afflicting Marvel throughout the late 1980s and 1990s is woefully highlighted here. Much of the first run was poor, but this largely standard-comic-length series is woeful. There was seemingly little, if any, editing, resulting in bland stories – step forward, Danny Fingeroth, Roy Thomas and Jim Valentino – with poor characterisation. A further fault was the proliferation of tales merely reversing the result of a fight, then holding a re-run with different characters.

On the plus side, from the earliest issues the second series had one or two pages of humorous suggestions for What Ifs, and the all-humour issue (once again 34, with Galactus as Elvis) is a highlight, although doesn't match its predecessor. Amid the pile of mediocrity that comprised 1-86, there's little of note. Greg Capullo drew 2's Daredevil issue and the Iron Man story in 8; the two-part Captain America story in 28 and 29 at least shows some inspiration and twists although padded with too many fights. The loosely connected 'Timequake' stories ran through 35-39, as Roy Thomas returned to a few previously glimpsed realities, and Ann Nocenti, along with artists Steve Carr and Deryl Skeleton, turned in a decent Storm story in 40, which leads off a collection of X-Men What If's titled 'Alternative Visions'. Daredevil as ally of the Kingpin in 73 has its moments, and there's some fine Alcatena art in 78.

87 marked a change shifting away from lighter material that provided a desperately need stab of inspiration. Thereafter most issues to 100 are readable with 87 itself the best of the run. Again, it might easily have occurred in the regular titles (were the X-Men not such cash cows), as Sabretooth decimated the X-Men. Dan Abnett and Andy Lanning delivered a tense script illustrated by Frank Teran in disturbing fashion, although it's not for the squeamish. Also decent are 91 with a different transformation for Bruce Banner, and 92, investigating the possibility of a teenager in control of a Sentinel. The gloomier tone was occasionally leavened with lightness (Impossible Man in 104), and kudos are due for acknowledging that a decent story can be told without an obvious headliner each issue. This makes room for the likes of 97's story about the medieval Black Knight and Doctor Doom, another highlight, with distinguished Leonardo Manco artwork (and sympathetic colouring from Marie Javins). Even Manco can't save 98's X-Men related nonsense, though.

The introduction of Spider-Girl in 105 is decently handled by Tom DeFalco and artists Ron Frenz and Bill Sienkiewicz. The issue also introduces the A-Next and J2, both promoted to their own titles on the basis of cameos. The final issue is a spirited alternative future where many superheroes never returned from Secret Wars, but by that time the title had sunk below the quality line again.

Over twenty years it never seemed to have occurred that the best alternate reality stories might be produced by more imaginative creators who didn't regularly work for Marvel, an idea whose time had come by *Ultimate Marvel Team-Up*. Overall *What If?* almost always opted for the obvious when the possibilities were boundless.~WJ

WHAT THE... ?!

Marvel: *24 issues 1988-1992*

A latter-day successor to *Not Brand Ecch*, parodying Marvel characters. John Byrne has Superbman battling the Fantastical Four in 2, the best issue, also containing Knick Furey, ex-agent of S.H.E.E.L.D., by Fred Hembeck and John Severin, with the Hydra Ladies Auxiliary. Also featured are Phil Foglio's Dr Deranged, and Mike Mignola and Al Williamson illustrating an Al Milgrom story lampooning Wolverine. Other choice items scattered throughout the run include Don McGregor's Black 'n' Blue Panther in 9, and, also in that issue, 'Hotel Galactus', featuring the Imperial Guard, by Scott Lobdell, and a special Goon Knight story illustrated by veteran Win Mortimer. Doc Samson and Homer Simpson merge to form Doc Simpson in 18, while 7 offered one of the most eagerly awaited battles of all time, the Revengers vs Just-a-League. This may not make you giggle throughout, but pick and choose for the occasional smile.~HY

Neil Gaiman's WHEEL of WORLDS

Tekno: *2 issues (0-1) 1995-1996*

Two disparate issues. 0 is a pivotal anthology in the Tekno Universe featuring all the Neil Gaiman characters – Lady Justice, Mr Hero, Teknophage – and passably chronicles the history of the latter. A year later, Bruce Jones' issue 1 is essentially a Lady Justice story of mad scientists creating the perfect woman by pick 'n' mixing body, mind and soul from three unwilling contenders. 'Nuff said.~APS

WHEELIE And The CHOPPER BUNCH

Charlton: *7 issues 1975-1976*

Earlier in his career John Byrne was known to have cited this as among his favourite work. The reason may have been that it's among the first he had published. Based on a Hanna Barbera cartoon show, Wheelie and his sentient car mates have the usual kiddie cartoon adventures.~SW

WHEN THE WIND BLOWS

Hamish Hamilton: *1 volume 1982*
Penguin: *1 volume 1982*

When first published, Raymond Briggs' gentle warning about nuclear war was described as chilling and terrifying, and received praise from a slew of prominent commentators in the UK. Previously known for his charming children's books, illustrated in soft pencil crayons, with chubby folk and singing snowmen, it was a bit of a jolt when Briggs changed focus, but kept his cosy visual style. *When the Wind Blows* presents a nuclear strike via the eyes of a hopelessly misinformed retired couple, who resolutely wait for the government to come and rescue them, and assume that even if the TV's gone off, milk will still get delivered. They bumble around, the bomb goes off, they develop radiation sickness, they die. Briggs tries to use his characteristic gentle humour to underpin their predicament and touching faith in the powers that be, but it's just too cute and repetitive. No doubt a middle-aged couple in middle England at the time would have been touched and shocked by the way war is presented so close to home. However, for modern readers it lacks bite, despite its contemporary impact.~FJ

WHERE CREATURES ROAM

Marvel: *8 issues 1970-1971*

Yet another title tapping into Marvel's seemingly endless reservoir of 1950s horror tales. There's plenty of Jack Kirby and Steve Ditko, but little inspiration.~FP

WHERE MONSTERS DWELL

Marvel: *38 issues 1970-1975*

Admittedly reprinting 1950s horror material meant a comic with reduced overheads, but just who bought this lacklustre stuff? This was the longest running of Marvel's reprint horror titles, 12 is giant-sized, there's a Reed Crandall strip in 4 and the usual quota of Ditko is peppered throughout.~FP

WHERE'S IT AT SUGAR KAT?

Slave Labor: *3 issue miniseries 2000-2001**

As introduced in *Sugar Buzz*, Sugar Kat is universally adored and admired, while her smarter sister Rebecca is ignored. Here they stumble into a town where the population are either grossly overweight, or supernaturally thin. The influence of 1970s *Scooby-Doo* seeps from the pages, helped by Woodrow Phoenix's stylish art. As with *Scooby-Doo*, though, after a while the jokes wear thin and the pay-off fails to satisfy. Each issue also contains a strip conceived by writer Ian Carney's young son Jake and drawn by Jonathan Edwards, Andi Watson and Evan Dorkin (in 1, 2 and 3 respectively) that are the equal of many recognised properties.~WJ

WHISPER

Capital: *2 issues 1983*
First: *Special 1985, 37 issues 1986-1990*

Whisper begins in distinctly unpromising fashion. Rich Larson's ugly art makes it hard to find any merit in Steven Grant's story of Alexis Devlin, the reluctant ninja. On a visit to Japan she is thrown into the middle of a Yakuza power struggle, and takes to a masked costume for a plan of rescue and revenge. Nothing here makes her convincing as a character. Many of her heroic stunts break the laws of physics, and the background that we're given on her screams 'gimmick', the flatmate who's a model, the flatmate's senator lover, the childhood polio... You can skip these. The 1985 special completes the story with equally ugly artwork, and plot not improved by the introduction of the CIA. Again, feel free to avoid.

Whisper returned to her own title via the *First Adventures* anthology, and was transformed. Grant's plotting was tight, complex and demanding, but rewarding effort, and the characters are suddenly real people, reacting as real people would to the eruption of violence in their lives. Most impressive is the way that aspects of Alexis that at first seemed only gimmicks become more and more convincing, not just lines on a resumé, but burdens she still carries. The story still concentrates on organised crime, the CIA and international conspiracies, which can make for lazy and boring plotting, but Grant manages it all beautifully. He keeps the focus on the human level throughout, yet still faces up to the chilling implications of covert operations. The entire series is well above average, but the peak occurs around 23. Thereafter, there are signs of exhaustion in the writing, with more effort expended on reviving old characters than in introducing new ones, and with conspiracy subplots becoming ever more convoluted. The artwork was transformed as well, for a dramatic, inventive, and intelligent read through several changes of artist, with Norm Breyfogle (3-11) and "Spyder" (13-24) producing the most issues, although look for the debut of Steve Epting (29-31).~FC

WHITE DEATH

Les Cartoonistes Dangereuse: *Graphic Novel 1998*

You're not going to enjoy this, but you should read it anyway. It's a distressing, nihilistic story set in the trenches of the Great War, involving an Italian soldier returning to his childhood home, up in the Trentino mountain range, to find that it has become a place of death and desolation. The ferocious climate is as great a menace to the soldiers as the enemy is, and when a way is found to turn the elements into a deadly weapon, the situation only gets more bleak. Robbie Morrison's entire story is despairing, the only flashes of warmth and laughter occurring in the local bordello, but even they are bitter and transitory. Charlie Adlard's art is uniformly grey and disheartening, entirely appropriate to the subject matter and skilfully underplayed. Dramatic overstatements would have been easy to make, and both writer and artist must have been tempted, but they show commendable restraint and make the work all the more powerful. It's a depressing, austere story with no trace of pleasure in it, but it's bloody good.~HS

THE WHITE LAMA

Humanoids: *6 volumes 2000*

An aged Tibetan Lama sacrifices himself to be reincarnated and so better equipped to deal with forthcoming troubles he senses. The monastery is left to the corrupt Migmar, knowing he is tainted, with instructions to locate the Lama's new identity. Migmar fraudulently selects a moron he can control, while the Lama is reincarnated as Gabriel, born of occidental parents, but raised in the East. Writer Jodorowsky strives for a coming of age epic, but the story never comes alive, and Gabriel is just a peg on which to hang adventure clichés. Without the composed storytelling of Georges Bess, this would fall apart much sooner, but make it all the way to volume five and you're presented with tosh as mediocre as any superhero comic. The conclusion is predictable and far overdue after six books.~FP

WHITE TRASH

Tundra: *4 issue miniseries 1992-1993**

Teenage metalhead Dean is picked up by a barely disguised Elvis Presley (pseudonymously named The King) in a pink Cadillac, and four issues of glorious cartoon violence follow. The King intends to make a Las Vegas comeback to show folk what being a real American is all about, but continuous mayhem means that an ever-growing band of assorted distressing examples of humanity are on his trail. There's no little irony that it's taken a Scottish writer and an artist from New Zealand to produce comics' first road movie, a distinctly American proposition. Martin Emond's grotesquely exaggerated painting and facility for throwaway visual gags propel Gordon Rennie's observational script, the pair taking their chance to lampoon American culture and stereotypes with rapier accuracy.~FP

WHITE WHORE FUNNIES

Last Gasp: *3 issues 1975 (1), 1987 (2-3)*

Larry Fuller (as Wiley Spade), provides, in these underground strips of sexual and racial politics, some heavy-handed satire in a crude cartoon style. If anybody likely to be offended by such things, did happen to pick these comics up, they certainly would be. The western, 'Kid Cunt' in 1, however, reads like a *Mad* parody and is all the better for it. The first 1987 issue is a reprint of the 1975 issue.~NF

WHITEOUT

Oni Press: *4 issue miniseries 1998*, 4 issue miniseries ('Melt') 1999-2000**

The first series introduces Carrie Stetko, a U.S. Marshall stationed in Antarctica where she's found a way to hide from her past. When a murder's committed, that seems to be of interest to British intelligence in the person of Lily Sharpe, Carrie must find the murderer whilst avoiding an international incident. 'Melt' sends Carrie on a race across the ice to catch a group of Russians, who have illegally brought nuclear weapons to the continent. Greg Rucka does a great job of characterising both Carrie and the hostile environment in which she works, seamlessly integrating them into the essentially hard-boiled mystery plotlines. This is made easier by Steve Lieber's gritty illustrations, scratchily inked with a telling use of white space.~NF

WHIZ COMICS

Fawcett: *154 issues (2-155) 1940-1953*

One of the most popular and influential titles in the history of comics as the comic that introduced the original Captain Marvel to the world. Beginning as a straight blood and thunder anthology title, it soon evolved into an unbeatable blend of humour and thrills spearheaded by C.C. Beck and the team of writers and artists he gathered to craft the adventures of the "World's Mightiest Mortal". The quality of the work was matched by the innovations of the editors. Covers were eye-catching; even photographic images were used (107-109, 112), and clever gimmicks such as a four issue crossover wherein Spy Smasher is brainwashed and Captain Marvel must halt his destructive rampage (15-18) fired readers imaginations in an era where heroes hardly acknowledged each others existence. After this experiment crossovers and cameos were frequent, an idea used with great effect by Marvel Comics many years later.

As Captain Marvel mania overtook Fawcett's publications, many back-up strips were lost or reallocated. The other features, Spy Smasher (Crime Smasher after WWII seen in 76), Golden Arrow, Lance O'Casey, Ibis the Invincible, Dan Dare, Scoop Smith, and even Mac Raboy's Dr Voodoo (7-22) were lacklustre when compared to the "Big Red Cheese". Only the first five lasted into the post war years, and despite artists such as Bernard Krigstein (Golden Arrow 75, 78, 91, 95, 96, 98-100) and Basil Wolverton's ½ page "Culture Corner" (most issues from 65 to 146) the magazine remains a Marvel Family title to most readers and collectors.~WW

Nathan's on the Demon Guild's wanted list, but makes himself useful by thwarting a plot to overthrow its leader Kaliveult (2-3). 5-7 concern the last of the Knights Templar, Cristof, who allies himself with Nathan and Wendy. In 'Medusa's Tale', the two are pawns in a battle between two demons, whilst the Medusa herself threatens them all. Writer, Francis Takenaga provides an interesting variation on the vampire hunter/exorcist theme perfectly complemented by artist, Roy Martinez' photo-realistic approach, although Cristof's origin in 6 is drawn by Lan Medina.~NF

WIINDOWS

Cult Press: *21 issues 1992-1994*

Subtitled "The anthology of the bizarre", *Wiindows* is, in fact, largely only an anthology when considered en masse, since each issue is a complete story by different creators. The exceptions are 6's poetry special and 21's autobiographical strips. It's not particularly bizarre either, with only the shoddy and pretentious 20 earning the appellation, the remainder being reassuringly traditional in espousing solid stories and art. A broad selection of themes are employed on a welcome diversity of stories, most relying on strong plots and characters for emotional resonance. While sometimes obvious (12, 17), sometimes too abstruse (3, 5) and sometimes saying nothing (10), almost every issue is rewarding in some fashion. Uniquely in comics there are attempts to illustrate poetry, with many drawn to Tommy Berg's adaptation of Neil Gaiman's 'Luther's Villanelle' in 16, but it's weak, and the accompanying text and illustration piece about youthful pride and a desire to supplement the family income is far better. The art encompasses a variety of styles with the photo referenced realism of John Grigni (10, 17) likely to have the widest appeal. Wayne Reid's storytelling (3, 11) is pleasingly traditional, but the toned painting of Berg (6, 16) is more promising than his merely acceptable pen and ink work (1, 9, 18), although it improves throughout the run. For three very different stories try St Peter sitting in judgement of a life in 3, 9's examination of teenage nihilism, or 15's religious parable.~WJ

WILD ANIMALS

Pacific: *One-shot 1982*

Though this was meant to be a showcase for Scott Shaw's You-All-Gibbon (The Junk-Food Monkey), the funny-animal genre is better served here by Larry Gonick's Bronty, Sergio Aragones' prequel to King Kong and Jim Engel's Krazy Kat homage, Bungalow Bill Bunny. Worth a look.~NF

WILD CARDS

Marvel/Epic: *4 issue miniseries 1990*

This ties into the popular series of books where science-fiction and fantasy novelists handle superheroes. The stories are set in a world struck by a strange virus in 1946. Of those infected, 90% died, 9% were horribly deformed, and 1% (the Aces) gained a superpower. The main writer is Lewis Shiner, who contributed to the prose stories from the start, and the better artists include Barry Kitson (providing framing sequences), Gray Morrow, David Roach and Tom Yeates. The comic concentrates on a detective investigating bomb attacks related to the virus, which is a way of giving a history lesson and an introduction to the main Aces. It's entertaining while it lasts, but an hour later you'll struggle to remember the first thing about the characters or the plot.~FC

WILD DOG

DC: *4 issues 1987, 1 Special 1989*

Writer Max Collins and artist Terry Beatty tried their hands at real-life superheroics with this series, which went from the miniseries to a run in *Action Comics*, then to the special. The 'real life' tag stems from the fact that all of Wild Dog's crimefighting equipment is available over the counter, with no science-fiction technology or supernatural elements involved. The original series offered several candidates for the hockey-masked, taser-wielding vigilante's real identity. By the time of the special, Wild Dog's ID is known to the readers, but still a keen source of interest to investigative reporter Susan King, a hard-nosed manipulator who makes Lois Lane look like Tessie the Typist. This fast-moving series doesn't have the emotional involvement of Ms Tree, but it's readable, and worth picking up if you find it cheap.~HS

WILD LIFE

Antarctic: *12 issues 1993-1995*

Having cornered the furry animal adventure market with *Furrlough*, Antarctic branched out into anthropomorphic slice of life. It wasn't as successful, possibly because the animals are superfluous to the form. Regular features include John Nunnemacher's college soap 'Buffalo Wings', which also had its own title, and meanders in harmless fashion without ever grabbing here. Not as well drawn, but more appealing is 'Sarah and Ginnie', two flatmates having the problems that girls do. The standout strip, though, is 'The Sophistikats' from 7, ploughing a similar field to Green Acres, with a simple unemployed cat winning the lottery and mixing with the elite. It was later collected as a one-shot.~WJ

WILD LIFE

Fantagraphics: *2 issues 1994*

"My Life is an Open Comic Book!" says writer/artist Peter Kuper, in this more engaging than most entry in the overworked autobiographical genre. WILD STARS

Collectors Edition: *1 issue 1984, 1 issue ('First Marker') 1988*
Little Rocket Publications: *7 issues 2001-2002*

While Erlik gambles with Carthage for the deed of ownership to the Planet Earth, Daestar learns that a Brothan ship is on a suicidal path towards Vhan trying to destroy Erlik. In 'First Marker', Erlik vows revenge as another world is destroyed by the Brothan. What follows is a complex tale of time travel and alternative worlds, clones, aliens and drug-smugglers and the hunt for Hitler's body. Michael Tierney's storytelling style doesn't help any of this make sense with huge gaps in the narrative, but Dave Simons' pencils (on the Little Rocket issues) make the artwork more palatable than Tierney's own amateurish first efforts. All credit to Tierney for seeing it through, but the whole is just too fragmentary for caring.~NF

Nikki Doyle: WILD THING

Marvel UK: *9 issues 1993*

Able to infiltrate computer systems, Nikki Doyle encounters virtual-reality versions of Marvel's mainstream heroes and villains. It's a clever way of using popular characters while avoiding continuity problems, but the comic's average. Best issues are fill-ins 7 and 8.~WJ

WILD WEST SHOW

Mojo Press: *1 volume 1996*

Beginning with an editorial bemoaning the departed Western comic, this continues with an eclectic contributions, largely from people who've merely dabbled in comics. The alternate Wild West is a common theme, best represented by a train meeting between desk clerk James Hicock and Ambassador Bill Cody in a Joe Lansdale story adapted by John Garcia. There is also a fine silent Sam Glanzman strip, a poignant tale of the world not being ready for rock'n'roll, and some nice Marc Erickson art on a horror story. Almost a quarter of the ninety-six pages are occupied by a well drawn, but dull story commenting on western clichés. At only $5.95, it represents very good value overall and is worth hunting down if you enjoy a Western.~WJ

WILD WESTERN ACTION

Skywald: *3 issues 1971*

This fifty-two page comic mixed formulaic new material with formulaic old stuff. 'The Bravados' by Len Wein and Syd Shores, "five bitter misfits who bury their pasts in shallow graves" was *The Magnificent Seven* minus two (and with worse inking), but staggeringly proved popular enough to get its own title. The rest of the comic starred the likes of The Django Kid by Fred Guardineer, and Fred Meagher's bizarrely camp 'Swift Arrow' among others for publisher Israel Waldman's dusty archives.~DAR

WILDC.A.T.S. Covert Action Team

Image/WildStorm: *Series one 51 issues (0-50), 1 Annual, 1 Special 1992-1998*
WildStorm: *Series two 28 issues, 1 Special 1999-2001, 5 issue miniseries ('Version 3.0') 2002-2003*

WildC.A.T.S. was Jim Lee's pet project, so early issues are an art-led abundance of spreads and full page action shots as the superhero team move from one fight to the next. For Lee fans that's probably enough, but he and co-plotter Brandon Choi keep all else to a minimum, so the arrival of Chris Claremont to turn in a proper (although average) story in 10-13* is welcome. And that's it for Lee apart from brief returns in 19, 31, 32 and 50. An Erik Larsen guest slot in 14 is followed by the team of James Robinson and Travis Charest. Charest's cinematic style evolves engagingly over the course of his increasingly sporadic contributions (The Special, 14-18, 20, 21, 25, 26, and portions of 28-30), but Robinson is far from top form.

The best writing of the first series is by Alan Moore from 21*. He assumes the title with the main cast lost in space, constructs a new Earth-based team and juggles the stories of both over following issues. Moore adroitly sidelines the by now overplayed alien problem that initiated all plots and applies a previously absent logic and depth to the cast, best sampled with 29, as the team disintegrates amid the 'Fire From Heaven' crossover. Pencil artists Ryan Benjamin (23, 24, and portions of 29 and 30), the fine Kevin Maguire in 22, and Matt Broome (32-34, 38-42) are all adaptable, providing action-packed art while never permitting talking heads to become boring, and Ed Benes (44-50) is closer to the spirit of Jim Lee than any of them. Choi returns in the company of Jonathan Peterson from 38, dispersing a team of *WildC.A.T.S.* through time. This takes forever to arrive at an admittedly decent pay-off, then stretches that as well, grinding the title into the ground. 50 has Robinson producing his best work on the series, and Lee, Moore and Charest return for the wake.

Overall, the large amorphous cast and frequent references to other titles can deter the casual reader. Easy jumping on points are 21, 29, 38 and 41. Both the special and the annual are disappointing. For those who can't get enough WildC.A.T.S., there are two Sourcebooks, featuring pin-ups and background information on the cast before 20. The second is the better drawn, with the first notable for Jeffrey Scott's appalling distortions of the human figure.

The second series starts in spectacular fashion with lush art from Travis Charest and decent stories from Scott Lobdell, but the wheels rapidly come off. After only two complete issues Charest draws portions of 3, 4 and 6, and Lobdell is gone by 8. Thereafter Sean Phillips delivers his usual professional and under-rated artwork, but incoming writer Joe Casey repeats the mistake that killed the first series by providing stories lacking the plot to fill the many issues they extend over. Seemingly bent on suicide, appallingly designed covers are a feature from 22, while George Tuska's art is a real surprise in the 'Mosaic' special. "Version 3.0" also has good art, by Dustin Nguyen and Richard Friend, which doesn't disguise another dull Casey story. This time the abuse of corporate power is the theme, and only Grifter and Jack Marlowe remain from previous incarnations, with the active cast now consisting of assorted people duplicating Grifter's talents and attitude.~FP

WILDC.A.T.S. ADVENTURES

Image/WildStorm: *10 issues 1994-1995*

A cartoon series was based on *WildC.A.T.S.*, and this is the comic version of the cartoon. It simplified the characters' backgrounds, keeping the team's raison d'être (namely to defend Earth from the alien Daemonites), but limited the stories to battles involving this purpose. The first issue sees Warblade join the team and during the series many of the other concepts (the Kherubim, noble enemies of the Daemonites, Coda, quasi-religious amazons and daemonite possession) introduced by the original comic are reintroduced. Written by Jeff Mariotte from the cartoon scripts, the stories work hard to create a sense of character rather than concentrate wholly on action, but the changing rota of artists undermines their appeal from issue to issue.~NF

WILDC.A.T.S./ALIENS

Image/Dark Horse: *One-shot 1998*

You'd be forgiven for expecting a pointless extended fight scene between Image's flagship superteam and Dark Horse's ultraviolent extra-terrestrials. In fact it's a genuinely shocking tie-up to the first *Stormwatch* series. WildC.A.T.S. desperately try to save StormWatch from their Aliens-infested orbiting HQ as regular writer Warren Ellis clears out the characters he's not transferring to *The Authority*. It's a truly surprising story, and one that you'll enjoy even more if armed with a good understanding of both teams' continuity. The unlikely art combination of Chris Sprouse and Kevin Nowlan works remarkably well, too. It's collected with the final issues of Stormwatch.~JC

Marvel: *One-shot ('The Dark Age') 1998*

'The Golden Age' set in the 1940s features Wolverine and Zealot behind enemy lines. Plotted by Scott Lobdell, it's of note for some of Travis Charest's finest illustration work to date, and only a hair from being monochrome. Lobdell also writes 'The Silver Age', set in the late 1960s and drawn by Jim Lee with plenty of tips-of-the-hat to Steranko and Neal Adams, and featuring Grifter and Marvel Girl. James Robinson writes 'The Modern Age', set in the present, pitting both teams against the Hellfire Club. Adam Hughes' very sexy pages are slickly inked by Mark Farmer. 'The Dark Age', is set in the future, perhaps the reason it only turned up almost a year later. It's a disappointment from Warren Ellis before he got the hang of turning out this kind of material. As the artwork by Mat Broome and Sean Parsons slavishly impersonates Jim Lee, it's strangely the most Image-like of all the issues.~SW

WILDC.O.R.E.

Image/WildStorm: *10 issues 1997-1998*

A second chance for WildStorm's Backlash, formerly star of his own title, here a team member, as his circle of 'super-friends' form an informal alliance. Our hero rapidly becomes lost in superheroes-by-the-numbers, but they're perfectly competent and entertaining adventures. If you like the original incarnations of *WildC.A.T.S.* or *Stormwatch*, then you'll find nothing to object to in the first half-dozen issues. Strangely, though, there's a sudden change in the creative team with 7, and the group go on an extended sojourn to a parallel world, which, since we hadn't really had time to become acquainted with them in their own environs, could only be regarded as ill-advised. Interest fell off correspondingly rapidly.~HS

WILDSTAR

Image: *4 issue miniseries ('Sky Zero') 1993*, 3 issue miniseries 1995-1996*

The first story is a self contained timeloop, excitingly mixing in-your-face Image action and Jerry Ordway's solid storytelling habits. Starting in a post-apocalyptic future Wildstar is on the run from mercenaries including the blousey Jumpstart. They all have starfish-like creatures clamped to different bits of their bodies, which impart super powers. When Wildstar manages to send himself back into his own past the mercenaries follow, leading to some dangerous temporal anomalies. Jerry Ordway co-plots with inker/scripter Al Gordon, who really needs an interpretative editor, and it remains entertaining despite Gordon's verbal diahorrea. Chris Marrinan pencils the sequel, written by a more experienced and concise Gordon. It follows a similar theme but starts in the present with Wildstar's younger self, Micky, becoming the new Wildstar and immediately having to duke it out with Erik Larsen's Mighty Man. An alternative version of Jumpstart appears in 2, but with a lack of real closure, the second series is a complete waste of time.~SW

WILDSTORM

Image/WildStorm: *4 issue miniseries 1995*

Short-lived inventory title containing six to eight-page short stories. The quality varies, but there's usually at least one goodie per issue. Some issues have unrelated stories, others focus on solo-stories featuring characters from the same team. The latter tend to be more worthwhile. The Union story in 3, by Mike Heisler and Randy Green, is the best of the bunch.~JC

WILDSTORM RISING

Image/WildStorm: *2 issues 1995**

The two issues top and tail a ten-part story running through the WildStorm titles cover-dated May and June 1995. When one of the keys to a spaceship believed to belong to the evil alien daemonites is discovered it's up to the good alien Kherubim and their friends to stop two other keys, needed to power the vessel, from falling into the wrong hands. Well-structured for a multi-part team-up, the story set up events for both Alan Moore's take-over of *WildC.A.T.S.* from issue 21 and the first Grifter solo-series.~JC

WILDSTORM SPOTLIGHT

Image/WildStorm: *4 issues 1997*

Solo stories of superheroes populating WildStorm's titles. Alan Moore writes a bleak look at the end of everything, featuring Majestic in 1, while 2-3 are occupied by Steven Grant and Roy Allen Martinez's 'Loner', as an old name is inherited by a new owner. Neither are poor, but they won't rank among their creators' highlights. 4's Stormwatch tale confuses a Scottish phonetic accent for an Irish one throughout in an overcrowded superhero outing. What was to have been issue 5 was eventually released as *Lynch*.~WJ

WILDSTORM SUMMER SPECIAL

WildStorm: *One-shot 2001*

This three-strip celebration of ten years of the Gaijin artists' studio is padded out with text history and pin-ups. Warren Ellis and Cully Hamner's interlude with The Authority's Jack Hawksmoor is unnecessary hand-wringing. Paul Jenkins and Georges Jeanty's tale of The Authority's Engineer, a sad metal space lady who fancies a bit of rough, is as tasteless as it sounds, and the silent about Zealot, and what seems to be a swordfight over an apple, is not worth trying to follow. Chris Sprouse's pin-up of the Gaijin artists doing convention sketches for the Gen^{13} girls is well suitable for framing, though.~GK

WILDSTORM THUNDERBOOK

WildStorm: *One-shot 2000*

Sixty-four shiny (wipe-clean?) pages of DV8, Cybernary, Gen 13, Jet and Backlash, and Grifter trivialising parent-child relationships, homelessness, and role-modeling in the hit style of the X-Men. The big ladies are not wearing much, but the man's gun is triple-barrelled so we know where we are. Despite it all, though, the art of Adam Hughes and Kevin Nowlan on Gen^{13} looks good.~GK

WILL EISNER'S Quarterly

Kitchen Sink: *8 issues 1983-1986*

Predominantly black and white magazine showcasing Will Eisner's work. The major presentation is the serialisation of *A Life Force* in 1-5 prior to its appearance in a single volume. This thematic sequel to *A Contract with God* depicts urban decay in the 1930s Bronx shortly after the Great Depression, focusing on a tenement building inhabited by deprived immigrants and un-deprived cockroaches. Eisner's great gift shines in the depth of imagery and storytelling conveyed by his minimalist artwork, yet great excitement is rarely generated and much of the social satire is heavy-handed. Long-underwear characters and Pamela Anderson clones refuse to be spotted, no matter how hard you look. Anyone who believes that superheroes are a requirement for good comics should take note of this eye-opener.

From 6 onwards, stand-alone stories take centre-stage, eventually collected as *The Will Eisner Reader*. Irregular back-ups include 1940s newspaper reprints of the Spirit, Mr Mystic and Lady Luck, the latter two by Bob Powell and Klaus Nordling. Irritating partial colour and format changes detract from the overall package, which is rounded off with several interviews and articles concerning Eisner.~APS

WIMMEN'S COMIX

Last Gasp: *10 issues 1972-1984*
Renegade: *3 issues (11-13) 1987-1988*
Rip-Off: *4 issues (14-17) 1989-1992*

Created by the San Francisco Women's Comics Collective, this was a follow-up to *It Ain't Me Babe*, the first women's underground comic, and designed as an ongoing anthology title to help publish women in the often violently misogynistic world of underground comix. The initial run of *Wimmen*'s often featured immature and amateurish work, but also gave folks like Trina Robbins, Lee Marrs, Roberta Gregory, Melinda Gebbie and Sharon Rudahl greater exposure, in some cases their début, and consolidated their progress. When *Wimmen's Comix* returned in 1982 several former mainstays were still present, but new contributors appeared Lee Binswanger, Leslie Ewing, Mary Fleener, Leslie Sternbergh, Julie Hollings and the standard was higher. Theme issues appeared, international contributors were invited... even the occasional male was allowed to be an ancillary contributor, provided a 'grown-up lady' was doing most of the work! *Wimmen's* (*Wimmin's* for 17) averaged an issue about every couple of years, but after 17, the 'Kvetch' issue, the collective threw in the towel, declaring it was their last issue. The Supernatural issue 13, 'Disastrous Relationships' issue 14, and 'Men' themed 16, are the best overall, the latter including an outrageously horny 'Desert Peach' vignette by Donna Barr.~HS

THE WIND IN THE WILLOWS

NBM: *4 Volumes 1997-2001*

Kenneth Grahame's 1908 children's book is in many ways the quintessential English pastoral fantasy. In his rhapsodic hymn to the glories of the countryside, Grahame lovingly depicted a idyllic world of high teas, punts down the river and jolly japes in motorcars, all complimented by a strain of ecological mysticism that's best exemplified by the famous 'Piper at the Gates of Dawn' sequence. Ernest H. Shepherd's original, charming yet unsentimental, illustrations remain the definitive visual interpretation of the main characters Mole, Ratty, Badger and Toad, and any new adaptation of the novel also has to contend with A. A. Milne's popular, high-spirited 1928 stage version, 'Toad of Toad Hall'. Happily, in these full colour hardback graphic novels, French writer/artist Michel Plessix more than rises to the challenge of turning this much-loved classic into a comic strip. He wisely uses as much of the original text as possible, yet simultaneously avoids a static, over-reverent style. You get plenty of broad visual comedy and pure comics storytelling, too. Plessix is fully in tune with Grahame's vision of England as a lush, exotic natural playground, and his gorgeous, highly detailed line and colour work luxuriates in every green leaf, dark brown branch and sun-kissed twig. When depicting Toad and chums, the artist also finds an acceptable compromise between Disneyesque cuteness and Shepherd's more refined, classical penwork. In short, this is exactly the kind of meticulous labour of love that helps to give comics a good name.~AL

WINDS OF WINTER

Antarctic: *One-shot 2001*

Visually impressive if simplistic fantasy from Gianluca Piredda and Stefano Cardoselli wherein the embodiment of death falls in love with a mortal woman, although his merest presence would mean her doom. Classical tragedy that art fans will find well worth seeking out.~WW

WINTER WORLD

Eclipse: *3 issue miniseries 1987-1988*

The writing of Chuck Dixon is combined with the Argentinian artwork of Jorge Zaffino to produce a European-style adventure comic that wouldn't be out of place in *Heavy Metal*. In a cold, bleak post-holocaust world a trader and his pet badger meet a young woman, only for them all to be captured and enslaved on a jealously-guarded enclosed farm, where it's still possible to grow food. The series chronicles the trader's escape and subsequent attempts to rescue the woman. The script's as bleak as the landscape and as violent as you'd expect. Zaffino's artwork, influenced by Caniff and Toth, never quite reaches those heights but is pleasurable, although the third issue looks rushed.~NF

Vertigo: WINTER'S EDGE

DC/Vertigo: *3 issues 1998-2000*

Annual anthology featuring short story selections of Vertigo favourites celebrating Christmas and the holiday season. *The House of Secrets* provides a framing sequence in 1, which has a very half-hearted interview with the *Preacher* team of Garth Ennis and Steve Dillon, and the Minx does so in 2. That also boasts cutout Invisibles dolls and a promo interview with Paul Pope about upcoming series *Heavy Liquid*. *Books of Magic*, *The Dreaming* and *Hellblazer* feature in all issues, the latter in 3 a text story by Dave Gibbons. Otherwise the features are Sandman (in 1, but actually Desire of the Endless) by Neil Gaiman and John Bolton, *Deadenders* (3), *Death* by Gaiman and Jeff Jones (2), *The Invisibles* (1), The Minx (1), *Nevada* (1, 2), *100 Bullets*, *Outlaw Nation* (3), *Sandman Mystery Theatre* (1, 2), *Scene of the Crime* (2), *Swamp Thing* (3), and *Transmetropolitan* (2, 3). In the scaled down 2000 edition Desire returns by Gaiman and Michael Zulli. All in all a surprisingly mediocre collection considering the host of big names assembled, but die-hard Vertigo fans will love it.~WW

WISE SON: The White Wolf

DC/Milestone: *4 issue miniseries 1996-1997*

Ho Che Anderson crafts a disturbingly uncompromising tale of racism and black male disaffection, as the indestructible leader of the *Blood Syndicate*, in response to a surprise twentieth birthday party, and resultant early mid-life crisis, leaves his homeys and searches for Purpose. Sinking deeper into himself whilst white supremacists murder black ministers, and his woman and child become pawns in a political game, Wise Son spends an unheroic four issues griping and whinging and cussing. Heavy-handed and not to everyone's taste.~WW

WITCH

Eternity: *One-shot 1989*

The (Love) Witch is a young woman with a pet dragon who lives in Stonehenge. She fights a perpetual battle with druids, armed only with her magic powers. It's all just an excuse for the artist to draw naked women, really. Originally seen in Skywald's *Psycho* 3 and *Nightmare* 6 from 1971 it re-presents some of the earliest work of Marv Wolfman and Ernie Colón.~WW

WITCH

Slave Labor: *3 issues + 2001 to date*

Lorna Miller's professional debut is steeped in observations stemming from her Glasgow origins, even though the contents encompass a pseudo-biblical tale. There's also the frustrated life of a university graduate working in an off-licence and sharing a flat with tossers, and, in the first issue, a strip drawn by Peter Bagge, a fan of Miller's work. 3 is padded with earlier work not of the same standard, but has its compensation in the form of pages from Tobias Tak, who'd drawn comics for twenty years, but never previously shown them to anyone. His art is similar to David Boswell, but his story impenetrable. Overall, *Witch* is a funny and promising debut from the marine life title logo on in, and a collection is also available.~WJ

THE WITCH AND THE JACKAL

Chisai Publishing: *3 issues + 2002 to date*

There have been very few new takes on the sword and sorcery genre in comics, and this hasn't managed it either. So far it's been little more than one long chase sequence uniting the Tolene witch and human jackal, both escapees from the Tolene society that practises witchcraft and enslaves humans. There is apparently a wider story, but there's little sign of it yet.~FP

WITCHBLADE

Image/Top Cow: *60 issues, 3 one-shots (Witchblade/Darkness, ½, 'Infinity') 1995-2003*

The witchblade is a gauntlet of incredible power passed through the ages, which affixes itself to improbably proportioned policewoman Sara Pezzini. Able to transform into very scanty body armour (wouldn't want to omit any tits or ass shots!), it guides its novice owner against others coverting the gauntlet's power. From frequent 'homages' in the early issues Michael Turner's pencils develop an attractive style, but lacking foundation. He's never one to sacrifice a pin-up shot for basic storytelling, which, as he's also co-plotter, is a fundamental flaw, prolonging thin plots stringing the issues together. None of this harmed sales, however, and it mattered not to buyers that scratching beneath the surface gloss revealed little other than soundbites and poses. The most positive aspect to 1-25 is the understated relationship between Pezzini and her police partner.

10 introduces smooth assassin Jackie Estacado, later of *The Darkness*, and he and Pezzini meet again in 18-19, with repercussions for her as the witchblade is transferred. There's a further crossover begun in 36, continued in two *Witchblade/Darkness* specials and concluding in *Darkness* 28, a daft trip into a sordid underworld. With 26 Turner departs leaving the plotting to his collaborators Christina Z and David Wohl, with the former writing alone from 32, and the pencilling to Randy Green. There's a discernible improvement, with more attention to story, and 31 revealing some secrets from Sara's past is a sample. A slim recurring cast of tedious evildoers is the bane of the series until 40, always lurking, always aloof, and always dull. Paul Jenkins prioritises the police work aspect of the series, resorting to the Witchblade sparingly in writing 40-49. It might seem daft to regular readers, but matches the procedure of the TV series that had then emerged. It also produces the best issue of the run dealing with parental ignorance, sketchily drawn by Michael Zulli in 47.

In 50-52 Jenkins changes focus for a story explaining the remaining mysteries of the Witchblade, its' purpose, and the purpose of recurring nasty Ian Nottingham. Nottingham becomes more important in the issues to 60, with original co-writer David Wohl now back on board and bringing old baggage with him. The series temporarily ends with 60, but is scheduled for an early relaunch. Throughout plots are raised and dragged beyond the point where only the most dedicated don't realise they're being conned. An example concerns secrets Pezzini's boss knows about her father, dealt with in the comic by her marching into his office every five issues and mentioning the topic only to be interrupted by something. The Infinity special spotlights an alternative witchblade host, and 'Collected editions' combine two original issues, reprinting 1-14. There's also been a black and white reprint of the first issue, and all issues to 25 are available in book form.~FP

Tales of the WITCHBLADE

Image/Top Cow: *9 issues 1996-2001*

This provides a history of the Witchblade, including a partial origin in 5. As an ancient and possibly alien weapon that chooses only women as wielders, there's plenty of scope for carriers down the centuries, even as historical figures – pirate Anne Bonny in 1 (which also features Mary Read and Blackbeard) and Annabella Altavista in 16th Century Sicily in 2. Christina Z primarily writes 1-4, with David Finch providing a story set in Roman times in 6, and Warren Ellis a very nasty tale about sensory deprivation, murderous revenge and sexual manipulation featuring a Witchblade of the future (3-4). Michael Turner and Bill O'Neil round off the series by completing a story begun in *Witchblade/Tomb Raider* about an ancient Egyptian goddess and her mortal lover who are enemies of the Witchblade (7-9).

The artists each bring some style to the comic, Tony

Daniel's cleanly depicted pirates, Finch's oppressively religious monastery (2), Billy Tan and Brian Ching's bright yet sinister future and Richard Bennett's detailed science fiction meets the Mayans (5). That is until the final issues which are the work of multiple pencillers and inkers.~NF

WITCHBLADE Miniseries and One-shots

Image/Top Cow: *One-shot (Witchblade Tomb Raider) 1997, one-shot (Witchblade Tomb Raider) 1998, 2 issue microseries (Witchblade Darkness Special) 1999, one-shot ('Infinity') 1999, one-shot (Witchblade Darkchylde) 2000, 3 issue miniseries ('Destiny's Child') 2000, one-shot (Withcblade Lady Death) 2001, one-shot ('Obakemono') 2002*

Sara Pezzini and Lara Croft first fight a demon, then an escaped Egyptian goddess and her familiar. Both meetings are written by Michael Turner and Bill O'Neil, with Turner's art as usual more concerned with style and a pretty pose than good storytelling. *The Witchblade/Tomb Raider* collections reprint these issues, then individual issues from each of the characters' own titles. Randy Queen overwrites and under-draws the Darkchylde team-up, and clear storytelling is the best to be said about the Lady Death issue. The *Witchblade/Darkness* specials are two parts of a four part crossover between the two titles, as Jackie Estacado, on his way to testify against his 'uncle' Frankie Franchetti, escorted by Sara, is kidnapped by Cull, employed by the shadow race, the Necrobi. 'Infinity' provides an alternate origin for Sara Pezzini and the Witchblade, as the weapon is given to a dominatrix with connections to Sara's police partner. 'Destiny's Child' tells the tales of Ian Nottingham (1), Sara (2) and their clash to determine the Witchblade's destiny (3). Christina Z writes interestingly about the characters in 1-2, but 3's nonsense and the artwork's completely uninspired. After the murder of her husband, Lady Shiori gathers a group of women warriors on a quest to find the Witchblade, which is summoning her, in order to avenge him and defeat the tyrant who killed him. The Witchblade itself is just a weapon, a prop that's hardly used in the otherwise archetypal 'Obakemono', well told by Fiona Avery and well drawn by Billy Tan.~NF

WITCHCRAFT

DC/Vertigo: *3 issue miniseries 1994*, 3 issue miniseries ('La Terreur') 1998*

The former hosts of DC's *Witching Hour* are the traditional three aspects of womanhood, the Maiden, Mother and Crone. Each motivates an opportunity for revenge for the reincarnated leader of a Goddess-worshipping women's coven slaughtered by barbarians. Peter Snejbjerg draws a tale of the Dark Ages in 1, while the explorer and adventurer Richard Burton's diaries provide the inspiration for Michael Zulli's 2. A modern-day tale of an old woman with good reason to distrust her son-in-law is illustrated by Steve Yeowell, completing the cycle. The package is rounded out with framing sequences drawn by Teddy Kristiansen and fine Mike Kaluta covers. The artwork throughout is excellent, but James Robinson's plots vary considerably, with the third particularly daft. The thematic unity never really convinces, and only the second issue really stands up, as Burton recounts a shaping experience of his early life. The sequel is a rite of passage story set during the French revolution, again written by Robinson. Well illustrated by Zulli and Vincent Locke, it also fails to engage, lacking both plot and warmth amid a surfeit of atmosphere.~FP

WITCHES' CAULDRON

Heritage Collection: *One-shot 1997*

Having delineated several American Civil War battles, Wayne Vansant here turns his attention to the Germans under siege from Russian forces in the Ukraine during World War II. It features his usual confident art, but a lot of explanation is required for the complicated alliances, and this is too often imparted in the form of clumsy expository dialogue. Interestingly, Vansant depicts the battle independently of any political causes and moral judgements, detailing the incredible bravery of the Germans in a hopeless situation.~WJ

THE WITCHFINDER

Image: *3 issue miniseries 1999*

History is given a wide berth in this "you killed my brother" revenge story, as Father Morand, local Irish witchfinder, begins to doubt his mission after teaming up with England's Witchfinder General Matthew Hopkins. There's a lot of dialogue, yet none of it seems to further either the plot or the character development. Why burn witches when you can burn this?~DB

WITCHING HOUR

DC: *84 issues 1969-1978*

As with other DC horror comics, *Witching Hour* was a mixture of the excellent and the bland, although its horror hosts, the three witches, gave it a character of its own. Up until 12 most of the witches' intro pages were drawn by Alex Toth, who provided many of the comic's artistic highlights. His strips in 1, 3, 8, 11 and 12 were typically fine, but he excelled himself on Gerry Conway's haunting script for 'Hold Softly, Haunting Death' in 10. The stories were typical DC horror material, rarely outstanding, almost always competent, and rarely appalling, and as such it's largely the contributions of the artists that raise them occasionally to greatness. Other early artistic contributors of note included Berni Wrightson (3, 5), Neal Adams (8), Gray Morrow (10, 13, 15, 16) and Gil Kane (12). This early period's best issue was 14, with lovely art from Jeff Jones, Stanley Pitt and Al Williamson, although it was the following issue that contained the best story, 'Freddy Is Another Name For Fear', by George Kashdan and Wally Wood.

16-21 were fifty-two pages long and featured a number of 1950s reprints by Jack Kirby, Nick Cardy and Ruben Moreira amongst others. From this period on the comic was increasingly drawn by Filipino artists, and consequently from 20 to 50 most issues have at least one nice job. Artists to look out for include Alex Niño (31, 40, 45, 47), Alfredo Alcala (24, 27, 33, 41, 43), Nestor Redondo (20, 21, 23, 34), and the little-known but highly talented Romy Gamboa (32, 36, 49). The Canadian Bill Payne provided this period's finest hour, though, with 'Happy Death Sweet Sixteen' in 25, a deliciously rendered story in Graham Ingels mould. Art enthusiasts should also look out for a lovely Ralph Reese strip in 23.

Adding to the feeling of consistency, each cover from 15 to 52 was by the excellent Nick Cardy, and it's no coincidence that his departure coincided with a general downturn in Witching Hour's quality. Since 14, when Murray Boltinoff had become editor, almost every story had been written by Carl Wessler, George Kashdan or Boltinoff himself, and, not surprisingly, later issues are rather lacking in inspiration. Artistically, the highspot was 83's five-page strip by the woefully obscure Nords Cruz, but in general issues after 50 contain little of note. 38 was a hundred-page collection reprinting some choice early material.~DAR

WITHIN OUR REACH

Star*Reach: *One-shot 1991*

Although Star*Reach stopped producing comics in 1979 the company continued to represent comics creators' rights. This one-off Christmas special was a charitable project in aid of an AIDS and an environment charity. Most of the stories are worthy rather than interesting, but there are some gems to be found, including a Concrete Christmas tale by Paul Chadwick and an adaptation of O. Earnest but mediocre tale relating the observations of a female reporter trapped on the front lines during the Nazis final push at the Battle of the Bulge in 1943. WITZEND

Wally Wood: *4 issues 1966-1968*
Wonderful: *5 issues (5-9) 1968-1976*
CPL: *1 issue (10) 1976*
William Pearson: *3 issues (11-13) 1978-1985*

As the first significant example of self-publishing and distribution directly to comic shops, Wally Wood's *Witzend* is of historical importance. It was the first time mainstream artists produced work for a primarily adult audience and sold it directly to the fan market. In this it even predates the underground comics. However, the creators had seemingly little idea of what constituted adult material, and much content was inconsequential. 1-8 contained work from several different directions: mainstream professionals, unpublished strips from Wood's artist friends, early strips by underground artists and work by new discoveries.

Of the mainstream cartoonists, Wood was the most prolific, and his contributions varied from straight adventure (Animan in 1 and 2) through winsome cod psychology ('Pipsqueak Papers' in 3-5) to Tolkienesque fantasy ('The Wizard King' in 4, 5, 8). While Wood's idea of artistic freedom didn't extend much beyond drawing naked women, for Steve Ditko it meant an opportunity for a good old rant. His notorious right-wing strips Mr A (3, 4) and 'Avenging World' (6, 7) must have come as a shock to unsuspecting Spider-Man fans. Gray Morrow's work in 2 and 7 was also high on the tits-and-ass count, and it was left to Archie Goodwin's affecting tale of religious intolerance in 1, to produce the title's intellectual content.

Previously unpublished material included strips by Al Williamson (1), Frank Frazetta (3, 8) and Wood (6) that had been lying around for a while, and a series of Edgar Rice Burroughs illustrations by Reed Crandall in 2-5. Art Spiegelman (2, 3), Roger Brand (3-5, 7) and Vaughn Bodé (5, 7) would develop, but only Bodé's work had much to offer at this point. His 'Cobalt 60' (later reprinted in *Epic Illustrated*) was one of Witzend's more thought-provoking stories. New mainstream discoveries Jeff Jones (6), Berni Wrightson (7) and Ralph Reese (8) were to go on to better things.

9 was, bizarrely, all text about W.C. Fields, and readers had to wait five years for Witzend's best issue. It was far less ambitious, favouring more straightforward fare by the likes of Dick Giordano, Mike Zeck, Joe Staton and Wood, in this case an episode of his Sally Forth. Howard Chaykin's three-page 'March 17, 1969' was intriguing, but the issue's real substance was provided by Alex Toth's '39/74', a majestic piece set on a 1930s cruise liner and reprinted in the *Toth Black & White* book. By comparison 11 and 12 were a sorry collection of mostly semi-pro material, with Wood himself clearly past his best (he was to die soon after). 13, actually titled *Good Girls* on the cover, was a collection of illustrations from editor Bill Pearson's collection, including art by Roy Krenkel, Mike Zeck, Stan Drake and, inevitably, Wood. Despite its shortcomings, there's much to enjoy here for most readers, but *Witzend* is something of a missed opportunity.~DAR

WOLF AND RED

Dark Horse: *3 issue miniseries 1995*

Henry Gilroy's scripts make this the most successful of Dark Horse's Tex Avery titles. Sparsely written, with just enough plot to keep things moving, the Wolf And Red strips are actually quite droll, avoiding comparison with the frenetic pace of the cartoons by playing to the strengths of the comic page. Bob Fingerman's overwritten Screwball Squirrel is the poorest of the back-ups (2), while, fittingly, the Droopy story in 3 is practically another Wolf And Red adventure.~NF

WOLFF & BYRD, Counsellors of the Macabre

Exhibit A: *23 issues, one-shot ('Greatest Writs') 1994-1999**

"Beware the creatures of the night!" screams the cover, "They have lawyers". Wolff and Byrd, paranormal solicitors, began life as a newspaper strip, and their early comic length adventures suffer from jerky pacing and low-rent jokes that might be excusable on a daily strip. Later the writing improves as writer/artist Batton Lash has to work harder to find unusual supernatural plots for them to become involved in, such as defending a guardian angel when his client accuses him of not being watchful enough. A broadening cast including their secretary Mavis – a girl not phased by the accidental conjouring of Cthulu-like elder gods or a client's brain living in their water cooler – and other lawyers they encouter allows the creator to poke more fun at the legal profession and rely less on the supernatural elements of the stories. The strip's concept is almost a one-joke idea but the quality of the later scripting and artwork carries it through. Lash's angular, elegant-lined artwork suits the quirky nature of the stories. From 24 the series changed its name to *Supernatural Law*. 'Greatest Writs' is a sampler reprinting a strip from 1 along with short strips produced to accompany collections of the Wolff & Byrd newspaper strip.~FJ

WOLFPACK

Marvel: *12 issue limited series, Graphic Novel, 1988-1989*

In the midst of their superhero comics, Marvel attempted a take on 'normal' streetwise kids, following the adventures of a gang of interracial tough-but-well-meaning teenagers from the wrong side of town. This is not a complete success, and comes over far more as a picture of how Marvel writers think streetwise kids behave than the kind of social comment it sometimes tries to be. Early issues, written by Larry Hama are better than later ones by John Figueroa, but none are really worth the trouble, although Ron Wilson's pencils (especially under Kyle Baker's inks in earlier issues) deserve an honourable mention and at least suit the subject matter, which is more than can be said for any other aspect of the series.~JC

WOLFSHEAD

Cross Plains: *One-shot 1999*

Conan fans may be surprised to learn that Robert E. Howard also dabbled in gloomy gothic horror. Howard fan Roy Thomas merges two stories starring Simon deMontour, a 17th century equivalent of the grim Solomon Kane. They're awkward throughout, containing an un-necessary framing sequence that results in flashbacks within flashbacks, and a colourist's palette that rarely strays from shades of brown muddying artwork reproduced from Tony DeZuniga's pencils. At almost $7 buyers deserved better.~FP

WOLVERINE

Marvel: *4 issue miniseries 1982*, 188 issues + 7 Annuals, 2 Specials, 1988 to date*

Hulk 181 introduced a feral character with retractable metal claws. His next appearance was as a surprise member of 1975's revived X-Men, an apparent lack of the prerequisite inborn powers notwithstanding. Carefully placed hints as to a mysterious past and Wolverine's reclusive and belligerent nature made him the most popular of the team by some distance. His mutant abilities were eventually revealed as heightened physical senses and a capacity for rapid healing, while his indestructible adamantium claws (and skeleton!) were the result of experimentation. Marvel were extremely cautious about a *Wolverine* title, tentatively issuing a miniseries. But what a miniseries! Writer Chris Claremont and artist Frank Miller were both at a creative peak, and provided a dramatic and compelling tale of gang warfare, love, honour and betrayal. It was all the more successful for removing Wolverine from his superheroic milieu and transporting him to the alien culture of Japan. Miller's art drew heavily on Japanese comic influences, and Claremont's plot writhes like a squid in the hand. Fifteen years of ongoing issues haven't topped it.

The belated regular series was set in the fictional Asian port of Madripoor, and involved Wolverine (without costume until

14) in adventure plots befitting the locale. Claremont indulged himself with *Casablanca* homages, and penciller John Buscema was patently uninterested, and even less inspired by the scripts of Peter David in 9-16. The odd pairing of John Byrne and Klaus Janson in 17-23 was a slight improvement in the course of a meandering story from Archie Goodwin, who emphasised superheroics. 25 is a fine poetic debut from Jo Duffy concerning a favour called. Buscema was still on autopilot, but the story offered some adapted Kipling, a good reason for Wolverine's alias, conducted a gang war largely off panel and hinted as to his past.

31 saw Larry Hama arrive to write almost ninety issues, joined initially by the art team of Marc Silvestri and Dan Green, who retained Buscema's style while adding more depth and enthusiasm. Hama's offered a variety of plots and moods. While quality varyied he rarely failed to deliver a decent action pageturner, often devoid of costumes, and when the superheroes or villains appeared Hama's use of them bore an individual touch. His initial issues concerned Japanese gangsters moving into Madripoor (31-34), starting with a brutal issue long battle. Wolverine's Spanish Civil War exploits co-starring Ernest Hemingway occupy 35-37, and 38-39 have an ingenious murder plot by a pair of sympathetic assassins. One is a robotic Wolverine simulacrum and the other a robot with the looks and personality of a five year old girl, yet with genius level intelligence. Both continue to appear until 53, and for another of Hama's idiosyncratic takes on robots try 72-74 with a poetic Sentinel. Wolverine's mysterious past is a continuing subtext in the form of hints, quests and revelations that monopolise the comic. Over time, though, the tinkering carried out on Wolverine's mind and those of his past companions renders many revelations false or redundant, such as 41's claim from Sabretooth to be Wolverine's father. The Origin miniseries eventually reveals the truth, and the best of the issues taking the search for the past as main plot is 50, offering up many secrets.

From that point guest appearances from fellow X-Men and X-Men related villains are more commonplace, with junior X-Person Jubilee a long-term supporting character. Silvestri and Green draw most issues to 57, and while their replacements are perfectly adequate, the appointment of Andy Kubert and Mark Farmer as the art team with 75 provides some artistic highlights. 75 also has the repercussions of Wolverine being stripped of his adamantium skeleton (in *X-Men* 25), a worthwhile plot device beyond shock value. Previously over-reliant on all-shredding claws, Wolverine is left with bone claws and a diminished healing factor. Attempts to rectify things take around the globe, with 82 in Japan particularly good, as Logan checks back on the daughter of his dead love Mariko, well followed up by Steve Skroce in 150-153. To further compound his problems, he reverts to a more primal and feral nature, as exemplified by a stunningly brutal battle with Sabretooth in 90. Hama protracts this plot way too long, though, seemingly treading water until 100, but there confounds all expectations as to a resolution. Along the way there's plenty of decent art, with 82 again being worth a look to see Adam Kubert's pencils, inked by his father Joe as well as by Farmer.

Post-100 there's an involvement with ninja warrior Elektra, while 107-109 are the best of the run since 82, and, coincidentally, have Wolverine back in Japan. The art team of Leinil Francis Yu and Edgar Tadeo arrive in 113, starting well, and improving issue by issue to 122, thereafter drawing 125-130. Hama departs with 118, his last three issues an X-Men story in all but title, followed by four clichéd Warren Ellis issues about the world's best assassin, collected as 'Not Yet Dead'. Chris Claremont's subsequent return is a disaster, introducing daft plots (the marriage of Wolverine!) and dumping the title into the standard superhero bin. Erik Larsen continues this between 133 and 149, restoring the adamantium claws in 145. These are improved by Yu returning to pencil most of 139 to 148, but Larsen deserves credit for a novel idea behind some dumb plots. Decent atmospheric thrillers served up by Todd Dezago in 128-132, and Frank Tieri and Sean Chen take over with 159 and produce the best regular issues since Hama was on form, largely in three part story arcs. They introduce novel new characters alongside familiar guest stars, and vary the settings while having fun with Marvel's history. Chen restores a human dimension to Wolverine, and is never less than dynamic while also coping well with Wolverine's feral side. Try 164-166 set in a prison for those with super-powers and five pages drawn by Barry Windsor-Smith in 166, or 173-175 in which three old enemies set about devastating Wolverine by targeting his friends. The conclusion to 175 may be a surprise, but its swift resolution isn't, and the title sees out 2002 in good form with Tieri recycling Sopranos as Wolverine takes on organised crime.

The annuals bear the publication years from 1995 rather than numbers. It's '97 that's the best, teaming moody Leonardo Manco art with a John Ostrander plot diverting enough to quickly suppress the groan promptes by learning it concerns yet another enemy from Wolverine's distant past. *Wolverine* is well served by collections, with the three 'Essential' volumes reprinting 1-69 in cheap format black and white the best value.~WJ

Marvel/Crusade: *One-shot (Wolverine/Shi:'Dark Night of Judgement') 1995*

For such a popular character, it's strange that so many of Wolverine's special appearances are of such poor quality. The man called Logan is brash, good at fighting, noble, misunderstood and indomitable, just the characteristics that the average adolescent would claim for himself given the choice, although they'd probably want to be taller. Coupled with the fact that until recently Wolverine's history has been a blank slate, it should make for quality entertainment but...

Many of the specials are compilations from a long run in *Marvel Comics Presents*, including 'Bloody Choices', 'Save the Tiger', 'Typhoid's Kiss' and 'vs Spider-Man'. The best is 'Blood Hungry' compiling Peter David and Sam Kieth's run from 85-92. *Wolverine Battles the Incredible Hulk* reprints the little mutant's first appearance from Hulk 180-181,

Most Wolverine tales are remarkably single-minded affairs, pick a location, a time frame, and wait for the claws to pop. For instance, the unremarkable 'Black Rio' finds him in Brazil for the carnival and a few brews when all of a sudden he's hip deep in killer biker zombies. Alan Davis and Paul Neary's 'Bloodlust' broaches new territory with its Arctic encounters, while 'Guts and Glory' from Joe Casey and Stephen Platt teams the secret weapon of the Canadian military with Cable, freshly back from the future. 'Days of Future Past' is set in, and a prequel to, an alternate tomorrow where Sentinels control America and any surviving mutants live in concentration camps. When a power grab by the Hellfire Club goes awry Wolverine teams with Magneto to prevent the deadly robots from sterilising the planet in retaliation. 'Doombringer' features an above average clash with the Silver Samurai, whereas the awful 'Evilution' from Anne Nocenti and Mark Texeira is a half-baked eco-fable set in a sleepy town with a gang problem. 'Global Jeopardy' also has an ecological message, but as its sponsored by the World Wildlife Fund and written by Peter David it manages to be fun, readable, and unpretentious. It also has lots of guest-stars.

'Inner Fury' pits Wolverine's mutant healing factor against murderous nano-machines in his bloodstream, in a trite tale magnificently illustrated by Bill Sienkiewicz. 'The Jungle Adventure' is a romp through the prehistoric Savage Land in a great looking yarn from Walt Simonson and Mike Mignola. Kent Williams' 'Killing' also looks great, but John Ney Rieber's quasi-philosophical ramblings on man against beast are hard to stomach. 'Rahne of Terra' and its sequels, 'Rahne Fall' and 'Knight of Terra' are woeful alternate magical universe adventures, rushed and uninspiring.

George Pratt's 'Netsuke' is a rare treat. To save the woman he loves Wolverine journeys to ancient Japan, and seemingly into a previous life to gather a lost set of carved kimono toggles – the Netsuke of the title- for an evil snow witch. 'Scorpio Connection' and 'Scorpio Rising' hark back to Wolverine's Canadian Secret Service background as he teams with superspy Nick Fury to combat Fury's brother Scorpio and the evil hordes of Hydra. 'Shadow Society' is also set during Logan's agency days and deals with the rising paranoia in the days before mutants were revealed. It also features the first meeting of Wolverine and his arch nemesis Sabretooth. *Wolverine Saga* is a compilation of text, clips and quotes that purport to tell his complete history, most since superseded.

'Damaging Evidence' typifies many team-ups with the Punisher and is little more than a body-count competition, but 'Revelation' is an attempt at a *Dark Minds* type of story, complete with art from Pat Lee. A Morlock girl escapes from a dungeon with the uncontrolled ability to kill people via the radiation she emits. This is set during the Punisher's brief co-opting by the angelic host to atone for his sins by fighting evil without killing, and is different, but not startling. 'Victims' is a very poor showing from Jeph Loeb and Tim Sale as Logan and Gambit wander about a ridiculous parody of London, mistaking each other for the reincarnation of Jack the Ripper. *Wolverine/Hulk* reunites the old foes in an eccentric mystery as Wolverine is approached by a little girl who can't be there, who moreover wants him to help the Hulk rescue her dad. Another fine change of pace story from Sam Kieth.

Wolverine/Shi by Bill Tucci is set in a war blasted Tokyo and is just one long beautifully drawn fight, heavy-handedly wrapped in Samurai "Right Way to Die" pseudo-philosophy, which seems par for the course really.~WW

WONDER MAN

Marvel: *One-shot 1986, 29 issues, 2 Annuals 1991-1994, 2 issue microseries ('The Wonder Years') 1995*

A one-shot villain in *Avengers* 9 (1964), the superstrong Wonder Man died and was forgotten. His resurrection in *Avengers* 152 was a surprise to all concerned. The one-shot was to test ownership of the name, since DC considered it infringed upon their Wonder Woman. Featuring the safari-suited geek incarnation, it was a throwaway slugfest. In 1991, following favourable responses to his presence in West Coast Avengers, the ionic-powered hero had another try. Simon Williams moved to Hollywood to pursue an acting career. Gerard Jones deftly introduced a cast of phonies, eccentrics and hangers-on, and Jeff Johnson's pleasing, clean line was a refreshing change from the hyper-distorted illustration prominent at the time. The emphasis on characterisation, humour and intelligence was sadly lost on readers, and the series changed direction after a three-part introspective story that culminated in 25. Purists should disregard 26-29, cynical team-ups with the Hulk and Spider-Man attempting to revive the title. Both annuals should also be dismissed. Make these culls, and you're left with twenty-five issues of definitely B+ entertainment. 'The Wonder Years', featured a look back at Wonder Man's career through the eyes of one of his grieving fans following his apparent death. Moving and thoughtful, it's extremely well-presented.~HS

WONDER WART-HOG

Miller Publishing: *2 issues 1967-1968*
Rip-Off: *2 issues ('The Best of') 1973*
Print Mint: *1 issue ('The Best of Vol III') 1973*
Rip-Off: *1 volume (Wonder Wart-Hog and the Nurds of November) 1980, one-shot ('The Battle of the Titans') 1985, 3 issues (Hog of Steel) 1995-1996*

Gilbert Shelton's Wonder Wart-Hog began in 1961as a humour-packed parody of *Superman*, even down to his human identity as mild-mannered reporter Philbert Desanex. Strips from student papers were reprinted in Help!, and from there Shelton went to *Drag Cartoons* published by Miller. Much of that work is published in the 1970s *Best of*. Spurred by his seeming popularity, Miller published newsstand *Wonder Wart-Hog* magazines, which were a total failure, and according to Shelton, partially responsible for bankrupting the company. These, though, contain tremendous work, with a biting political edge long absent from Shelton's material. Strips are set in the ghetto, comment on the war in Vietnam, and have President Lyndon Johnson bare-knuckle fighting. And Wonder Wart-Hog meets God, which must have gone down a treat with the newsstand customers of middle America.

The strip marking the future for the character was 'The Battle of the Titans', only the first two chapters of which appeared. It was a knockabout romp in which Wonder Wart-Hog meets a prehistoric ancestor and a descendent from the distant future. It was only concluded fifteen years later in the pages of *Rip-Off Comix*, before being reissued as a one-shot. After the Miller magazines Wonder Wart-Hog appeared in a few one-shot undergrounds, but lay largely dormant until *Rip-Off Comix* began running new strips. These along with work from *Hydrogen Funnies* and others were reprinted in *Wonder Wart-Hog and the Nurds of November*, which also contained several new strips over 210 pages. There's little in the way of connecting threads between chapters. Indeed 'Philbert Desanex's 100,000th Dream', has been issued as a separate comic, and occupied most of *Rip-Off Comix* 6. The title story is by a fully-formed Shelton casting his net wide in providing a satirical look at the election process via Philbert Desanex. Also later issued as a one-shot by Rip-Off, it was the final new Wonder Wart-Hog story, and among the best. The 1990s *Hog of Steel* series is a chronological hodge-podge spanning twenty years, but frustratingly omitting the never reprinted strips from the Miller issues.

Wonder Wart-Hog doesn't quite match the belly laughs of Shelton's Freak Brothers strips, but there's still plenty of worthwhile material and the cartooning is great.~WJ

WONDER WOMAN

DC: *Series one 329 issues 1941-1986, series two 188 issues +, 8 Annuals, 3 Secret Files, 1 Special, 1987 to date*

In the late 1930s, William Moulton Marston, psychologist and inventor of the polygraph lie detector, was concerned about the then infant comics medium. He deplored the violence, the emphasis on criminal activity, but primarily what he termed "the blood-curdling masculinity", where women, if present at all, were decorations, or trophies to be fought over by the men. Marston was a popular psychologist with a wide readership, the author of numerous articles for national magazines. DC's executives cynically, but accurately, reasoned that Marston's criticisms might be set aside if he was invited to join the "Advisory Board" of psychologists and educators who, nominally, supervised DC's output. From this position, Marston lobbied to create a series that would encapsulate his views on the relationship between the sexes, offering a counterpoint to the often brutal heroes of comics' formative years. Together with artist Harry G. Peter, an illustrator who cut his teeth in sophisticated humour magazines, Marston created Wonder Woman, who débuted in *All-Star Comics* 8.

On the island hideaway of the legendary Amazons, Princess Diana and her friend Mala see a plane crash. The pilot, on the brink of death, is swiftly restored to health by Amazon science. This presents Diana's mother, Queen Hippolyta, with a dilemma. The Goddesses of ancient Greece, whom the Amazons still worship, have commanded her to send an Amazon champion to warring Man's World, to fight for freedom. The winner of a contest to determine the mightiest Amazon will accompany the pilot, Steve Trevor, back to the United States. Hippolyta knows that Diana is the Amazon champion, and fears that she is already half in love with Trevor. Does she allow Diana to win, and leave Paradise Island? Well, this would be a pretty short review if she didn't. Diana wins, is awarded a costume bearing the stars and eagle of her new nation, and flies to the USA as Wonder Woman. From her one-off première to the lead story in *Sensation Comics*, her own title, stories in *Comics Cavalcade*, and membership of the Justice Society of America back in *All-Star Comics*, within a year of her début Wonder Woman was one of the most popular and recognisable characters in comics. Perhaps one reason for this is that, contrasting the youngsters who comprised the bulk of comics workers, Marston (operating under the pseudonym of Charles Moulton) and Peter were both mature men when they began work on *Wonder Woman*, lending the series a gravity and authority its contemporaries often lacked. Furthermore, Peter's distinctive, organic, woodcut style gave it a look unlike anything else on offer, an incalculable advantage by a mid-1940s with hundreds of comics on the market. Under their guidance, the Amazing Amazon fought some of the most bizarre villains in comics history: the misogynistic Dr Psycho, the schizophrenic Cheetah, Zara, Priestess of the Crimson Flame, Dr Poison and Hypnota. Then there was the Duke of Deception, pawn of the war god Mars, the psychotic Mask, in reality an abused wife pushed over the edge, and Villainy Inc., the first alliance of female villains in comics, with several of the Amazons' most noted foes teamed to destroy her.

Many critics and comics historians have been severely disparaging of Wonder Woman. She has been accused of encouraging lesbianism and sadomasochistic practices, and of appealing to male fantasies of sexual domination. The last charge may have some validity. Marston's own comment, in response to the unpopularity of heroines in comics, that men, "given an alluring and powerful woman to submit to... will become her willing slaves", is certainly open to interpretation. Loaded language such as the Amazons' credo of "Submission to loving authority" has been seized upon by detractors, but the submission in question relates to rehabilitation. Unlike most heroes of the time, who were content to either kill or imprison their opponents, Wonder Woman made strenuous and frequently successful attempts to reform her enemies. Paula Von Gunther, an implacable foe in 1941, became one of Diana's closest friends and allies, and in the strip's first ten years several other women are shown as having turned away from crime or delinquency thanks to the intercession of Diana and her Amazon sisters. The female solidarity of the stories is a bond of empowerment and mutual support, not of sexual allure. Far from the aloof and unattainable feats of Superman, Wonder Woman is adamant on many occasions that any woman can achieve power such as hers if she can overcome the mental shackles placed upon her by Man's World. Samples of her dialogue to other women from the middle 1940s include "You saved yourselves. I only showed you that you could!", "All you have to do is have confidence in your own strength", "Make yourself strong! Don't be dependent on a man – earn your own living!"; and, from a woman who has been betrayed by her lover; "I've learned my lesson – I'll rely on myself, not on a man!" Contrary to many critics' beliefs, Wonder Woman's stories do not centre on hatred of men, but on righteous indignation towards bullies and abusers of all kinds. True, she is shown saying that romantic love is often (not always) a trick men use to make women give up their independence, and that marriage is often (not always) a mind-numbing trap for women, but to true love between equals she's the first to give her blessing.

And yes, Wonder Woman tied people up a lot; this was because her main weapon was a magic lasso, which she used to restrain her captives harmlessly, as opposed to punching them out. Get a grip, folks. People didn't bitch about the number of times Robin the Boy Wonder got his tight little buns tied up over in Batman! Not that socio-political or putatively quasi-sexual themes were all that Wonder Woman had to offer. Rooted in mythology and magic rather than the pseudo-science of the majority of superheroes, she ranged between historical, extraterrestrial and contemporary adventures, presenting a rich and dazzling canvas to her readers. If the stories were sometimes a little inaccurate (as when she travelled back in time to help Boadicea overthrow the Romans and drive them from Britain!), then what the heck, they were more fun that way.

In 1947 Marston died, though he was so far ahead of schedule that his scripts continued to be published for at least two years. Without his patronage, Wonder Woman's star began to fall. The empowerment ethos faded, the villains, with the exception of the limp Angle Man and a toned-down Duke of Deception, were gone, and she became just another adventuress. Even Peter's art, through the bulk of the 1950s, altered in tone, looking cluttered and badly dated. When he died in 1958, a radical new look was introduced in 98 courtesy of artists Ross Andru and Mike Esposito, who gave Wonder Woman a slick European makeover with wild, windblown, tousled hair. Unfortunately, DC decided Wonder Woman looked too 'loose', and the curly permed look returned by 110. Under writer/editor Robert Kanigher, Wonder Woman's powers were revealed to be the gifts of the Gods, making her in effect a super-Amazon. 'Wonder Girl' and 'Wonder Tot' flashback stories, showing that even at an early age Diana had been capable of feats her sisters could not hope to equal, left the original concept of any woman being a potential Wonder Woman trailing in the dust. As her powers expanded, her aspirations narrowed, becoming domesticated. She daydreamed about marrying Steve Trevor, but these fantasies inevitably went awry, usually because her Amazon education hadn't covered cookery or housekeeping. Things went from bad to worse. Wonder Girl and Wonder Tot were written into contemporary stories, firstly as 'Impossible Tales', narrated by Hippolyta (who got a blonde rinse and started calling herself Wonder Queen, trying to muscle in on her daughter's act!), then, without explanation as to how these characters could exist alongside Wonder Woman, as bona fide members of Amazon society. The comic was haemorrhaging readers, but because of her long history, and her involvement in the *Justice League of America*, it would have been too embarrassing to cancel her. A silly attempt to restore her to her 1940s glory was initiated in 159, but it came across as a camp parody of the old tales.

A more radical revamp occurred in 178, where, under the new team of Denny O'Neil, Mike Sekowsky and Dick Giordano, Diana quit her job at military intelligence, ditched the female Clark Kent frump look, and went undercover to help Steve Trevor when her Amazon alter ego could not. In the next issue her sister Amazons retreated to another dimension to replenish their magical energies. Left behind because she couldn't leave Steve Trevor, Wonder Woman was suddenly bereft of all her Amazon powers and weapons, and forced to face the world as a mortal, fragile human. Several feminist critics, including Gloria Steinem, look down upon these stories as a negation of the liberated Wonder Woman, dismissing these adventures as those of a "female James Bond, but even more boring because she was denied his sexual freedom". These folks have missed a couple of important points. Firstly, that the true Wonder Woman, who insisted that any woman could achieve her feats and believed that even enemies could be rehabilitated, hadn't actually been published for decades at this point. The silly, fluffy stories of an addlepated Amazon whose powers were a christening gift from the Gods was the true violation, and had been the status quo for a long time. Secondly, the non-powered Wonder Woman was a symbol of empowerment and self-determination. She was a woman of vast power and wealth, who has all that stripped from her in a moment, and, completely unprepared and untrained, re-invents herself and takes charge of her life again. Okay, she had help from her friends (including, yes, a rather embarrassing blind Oriental mentor who handily teaches her self-defence skills), but she still had to do the work. And it was quite a workload. Reeling from major losses in her life, she's caught up in the machinations of one Dr Cyber who murders someone close to her. In rapid succession, Diana and her allies faced an international crime cartel; urban sadists who prey on runaways; the War God Mars, who has followed the Amazons to their dimensional hideaway; a stroppy carousing witch; assassins, ghosts, cross-dressing pickpockets and more. After Denny O'Neil's initial script assistance, artist Mike Sekowsky wrote the stories, deftly alternating espionage, supernatural and slice of life stories and establishing Diana as a warm, vivacious character with a previously unsuspected sense of irony. The illustrations were stylish and engrossing, Sekowsky's kinetic approach lending a sense of movement even to the talking-heads scenes, and Giordano's inking finishing off the package with slick sophistication. These stories may not be 'real' Wonder Woman to the purists, but they were closer to the original concept than most people acknowledge. Sadly, health problems made editor/writer/artist Sekowsky later and later. There were fill-in issues, reprinting material barely two years old, and some of Sekowsky's last issues were uninspired. By 199, the series was back in the hands of O'Neil, who tried to turn Diana into a toned-down Modesty Blaise. These issues were not without merit, even the notorious 'Women's Lib Issue' (203), which, though justifiably hootered, er, hooted at for its chick-in-bondage cover, raised some intelligent concerns inside.

In the early 1970s, Diana was optioned for a TV movie, so she was back in the star-spangled panties, but with the hallmarks of a rush job. Steve Trevor was alive again; no, he wasn't, it was an illusion of Amazon scientists; yes, he was; whoops, he's dead again; now he's back. Wonder Woman has to be tested by the JLA to prove she's fit to rejoin; she's a member in good standing; she's on probation; now she's back; Wonder Woman has a black sister called Nubia; no, she doesn't, she never existed. For the next eighty issues, creative teams changed faster than most people's underwear, barely establishing one set of parameters before the next, equally mediocre, team altered it all again. The TV show starring Lynda Carter was the only reason the comic survived at all for several years. And for a couple of years, the title focused on World War II adventures to tie in with it, the contemporary Wonder Woman being unseen in her own comic. With 288, a relaunch that stood a chance took effect. The track records of Roy Thomas and Gene Colan stood them in good stead, but both rapidly lost interest, and there was scant improvement. Following 300, which had a semi-intelligent story about different perceptions of the Amazon, and several interesting guest artists, *Wonder Woman* fell into the hands of writers Dan Mishkin and Gary Cohn, and workhorse artist Don Heck. All parties, unexpectedly, produced some decent work, Heck, in particular, having shaken off his 1970s hack mantle to produce his nicest art in twenty years. Tragically, it was too late to help: Wonder Woman's fate was already sealed, and the *Crisis on Infinite Earths* crossover ended the old *Wonder Woman* to make way for the new. In the final issue of the series, pleasingly, Diana did marry Steve Trevor, (handily alive at the time) before going off to meet her final fate. It could be argued that the comic should have been cancelled long before, but, to those with memories of her finer hours, it's hard to read the last issue without a pang or two.

Following *Crisis on Infinite Earths*, it was retroactively declared that Wonder Woman's career 'never happened' and she was reintroduced as a new character, starting from issue 1. New writer Greg Potter was teamed with superstar artist George Pérez, but Potter's name vanished from the credits, and from comics, after 3, leaving Pérez illustrating and plotting, with Len Wein helping with the scripts until 16, after which Pérez flew solo. The new incarnation of Wonder Woman, like the old, was the daughter of Queen Hippolyta of the Amazons, sculpted from clay and given life by the Goddesses. When US pilot Steve Trevor crashes on Paradise Island, now named Themyscira, in keeping with a greater emphasis on Diana's Greek background, he is once again taken back by an Amazon champion, who becomes a heroine in the United States. This Steve Trevor is older, and becomes a friend and ally of Diana's, rather than an insipid romantic interest. The new version is closer to her predecessor's original philosophy, too. Once more the first among equals, she strives to deliver a message of peace and forbearance – though, Man's World being what it is, she often has to kick in a few heads to do so. Settling in Boston, she develops a circle of friends: Julia Kapatelis, Professor of Archaeology at Harvard University, and her daughter Vanessa; Etta Candy, in the original series treated as comic relief, here given a dignified role and a romantic involvement with Steve Trevor; Ed Indelicato of the Boston Police Department, who may or may not be in love with our heroine; and Myndi Mayer, a gloriously synthetic publicist who seizes upon Diana, whom she names 'Wonder Woman', as her meal ticket. Most importantly, Wonder Woman is given intelligent, well-crafted stories, thoughtfully paced and full of interesting characters who are around to do more than just advance the plot or be kidnap fodder of the month. These stories are slower paced than those in many comics, and there is, particularly in the early issues, a grandeur, an epic feel, suiting the characters' ties to mythology. And Pérez's art, sumptuous and detailed, has never been finer.

Forced by Myndi Meyer's machinations into the role of a superheroine, something for which she is completely unprepared, Diana faces some of the classic menaces including Mars (now Ares), the Cheetah, and the tragic Silver Swan. All the time she's still trying to understand her mission in this strange new world, her new human friends, and her relationship with her Gods, several of whom, particularly the pushy Hermes, become significant supporting characters. A high point was 20, with the death of a major character, and the impact of her demise on the rest of the cast, being subtly and movingly portrayed. With 25, financial hardship ("It sold better than any other version of Wonder Woman had done for years, but that still wasn't enough to make royalties") forced Pérez to withdraw from the art, and new artist Chris Marrinan proved inappropriate. Muddy art and less imaginative stories, as Pérez devoted the bulk of his time to other projects, led Wonder Woman into the doldrums. Mindy Newell became co-plotter with 36, but made little impact. Different artists were tried: Colleen Doran, Jill Thompson and Cindy Martin all filled in on the odd chapter and issue. 46's powerful and moving tale of teenage suicide and its repercussions, Mindy Newell's last issue and Jill Thompson's first entire issue, featured the strongest work either would do on the series. 50 included guest contributions from Chris Bachalo, Brian Bolland, Adam Hughes, Kevin Nowlan, P. Craig Russell and Marie Severin, among others, after which Thompson's etiolated version of Wonder Woman was seen in most issues until 65.

Pérez left after 62, passing Diana into the hands of Bill Messner-Loebs, who promptly took her into outer space in 65-71, which rambled endlessly and served no purpose. Despite lovely cover illustrations from Brian Bolland between 63 and 100, these issues are disposable. When Diana returned to earth, Loebs made a consistent and conscientious attempt to reintroduce character-driven stories. New supporting characters were introduced, and with artist Lee Moder (from 72) things were promising. Unfortunately, with 90, Mike Deodato took over the artwork, and it all went horribly wrong. Suddenly, Diana was ten feet tall, with a six-inch waist and enormous hooters. So was Queen Hippolyta, her regal robes replaced by three (small) handkerchiefs and a string of pearls. So were both the fifty-something Julia Kapatelis and her fifteen year old daughter! In came a new supporting character, a rival Amazon named Artemis, who fought Diana for the right to be Wonder Woman. Guess what she looked like? Yup. Deodato just wouldn't draw any other kind of physique. As the stories nose-dived at this point, either Messner-Loebs saw the art, thought "Oh my God" and gave up trying, or, more sadly, that all his plot and characterisation was editorially excised in favour of more boob-and-butt shots. Sales shot up and *Wonder Woman* was suddenly a big hit with the retarded adolescent market, accounting for these stories being collected.

Thankfully it was a temporary phenomenon, and, from 101, John Byrne took over the writing and art. Disappointingly, though superior to the issues that immediately preceded it – what wouldn't be? – his take on the Princess of Paradise Island was a generic, hatchet-faced superwoman, stripped of everything distinctive and unique. During his second year on the title, Byrne came up with a few intriguing ideas, most notably a time-travelling 'continuity implant'. This involved Diana's temporary ascension to Olympus as the Goddess of Truth, and Hippolyta's replacing her as Wonder Woman for a period (from 128) involving a lengthy sojourn in the 1940s, thereby again giving the Justice Society of America a Wonder Woman to call their own. 113 saw the débūt of the new Wonder Girl, a pretty ghastly character who developed, albeit primarily as a member of Young Justice, into an appealing new hero. From 139 neither writer Eric Luke nor artist Yanick Paquette produced involving work, and more excitement was generated by Adam Hughes becoming regular cover artist. He turned in gloriously-illustrated scenes that – despite the abbreviated costume, bimbo poses and stunned-halibut expression he habitually depicted Diana with – were great sales draws.

With 164, Phil Jimenez began his run as artist and writer, and started promisingly with the 'Gods of Gotham' storyline, (164-171), which had excitement, tension, characterisation and detailed and intricate artwork. Perhaps involving every member of the Batman and Wonder Woman cast was too much, but hey, got to give him credit for effort. Hughes remained main cover artist, and Jimenez's run of solid, meticulously-crafted stories perked the series up considerably. The worst to be said about his work is that he's over-respectful of the character's history, but after years in which she's had no respect, that's no bad thing. 171-175 are now collected. Avoid the crappy 'Joker; Last Laugh' tie-in (175), and, sadly, the 'Villainy Inc.' revival (179-180), which has very shoddy fill-in art, and most of Jimenez' run is quality, if very wordy, craftsmanship.~HS

WONDER WOMAN Graphic Novels and miniseries

DC: *4 issue miniseries (Legend of Wonder Woman) 1986, Graphic Novel ('Amazonia') 1997, one-shot (Wonder Woman + Jesse Quick) 1997, one-shot ('Once and Future Story') 1998, one-shot ('Realworlds') 2000, one-shot ('Spirit of Truth') 2001, one-shot ('The Hiketeia') 2002, one-shot ('80pg Giant') 2002*

Considering her longevity, only a handful of Graphic Novels, miniseries and specials concern the Princess of Paradise Island, and few have been unqualified successes. Bridging the old Wonder Woman title and her reworking, Legend of Wonder Woman opens with Queen Hippolyta mourning her daughter. Trying to ease her grief, she uses the Magic Sphere to look upon happier times, and takes courage from one of Diana's triumphs against Atomia. Kurt Busiek writes this intriguing hybrid of old and new, and Trina Robbins' homage to 1940s Wonder Woman illustrator H.G. Peter is skilful and enjoyable. It's a respectful and affectionate farewell to the old girl.

'Amazonia' is her only Elseworlds outing to date, William Messner-Loebs placing her in Victorian England as a performing strongwoman and paradoxical victim of male oppression. Phil Winslade's art is intended to resemble Victorian engraving, but is overly cluttered and unappealing to the eye. 'Once and Future Story' has Trina Robbins running parallel storylines, one in the present day and one in ancient times, about two Wonder Women's attempts to free friends or family from an abusive husband. Although it starts strongly, it fizzles out and becomes didactic rather than engrossing, and Colleen Doran's pencils are sapped of all life by the heavy-handed and inappropriate inks of Butch Guice. 'Spirit of Truth' was a sixtieth-anniversary tribute tabloid by Alex Ross and Paul Dini, a creative combination that ordinarily guarantees top-notch entertainment. Sadly, they treat WW's iconic stature as equating to 'dull', and deliver a long waffle about the nature of and need for truth and deception in the environs Diana must work in. The art is striking, but Ross' inability or unwillingness to give our heroine more than two expressions (smiling or baffled) eventually irritates. 'The Hiketeia', by Greg Rucka and J. G. Jones, concerns an ancient rite of hospitality and protection, and its use and abuses, and co-stars the Batman. Sounds tedious, right? Not at all. It's a densely-written story of intrigue and manipulation, and while there is an inevitable confrontation between the two heroes, it's entirely plausible and integral.

Wonder Woman + co-starred second-generation speedster Jesse Quick, in an adequate but unexceptional 'female crimefighters bond' story. 'Realworlds', written by Glen Hanson and Alan Neuwirth, details the struggle of an aspiring actress, playing the heroine in a movie serial during the McCarthy era, who is caught between her ideals, her personal loyalties, and that elusive One Big Break. Art by the presumably pseudonymous Salgood Sam captures the feel of the era perfectly. *The Wonder Woman 80 Page Giant* was one of several reprint compilations published under the premise "if so and so had had an Annual in the 1960s, this is what it would have been like". It features the classic Marston/Peter 'Villainy Inc.' story from 1948, and a bunch of cute, camp early 1960's Kanigher/Andru and Esposito tales.~HS

Rick Geary's WONDERS AND ODDITIES

Dark Horse: *One-shot 1988*

Collection of short strips by the magnificently offbeat Rick Geary. He's possessed of a talent similar to Gary Larson in being able to view the mundane with a unique perspective and transform it into something strange and magical.~FP

WOODSTOCK

Marvel: *One-shot 1994*

An overblown glossy production of charmless, cretinous trash about a gang of idiot aliens from the far future who time travel to the famous festival of din and bullshit in 1969, and to the sequel in 1994, with which this was published to coincide. The tone, with big helpings of fictitious hep lingo, is that of mid-1960s Harvey rock comics, which were just bad Archie rip-offs anyway.~GK

WOOFERS AND HOOTERS

Eros: *One-shot 1992*

There's some nice cartooning from Greg Budgett and Gary Dumm in this collection of Shooty Beagle strips, primarily reprinted from *Dr Wirtham's Comix & Stories*. The perpetually randy Shooty interacts with the TV in a series of tit and bum vignettes, but the idea is never taken anywhere and the material hardly serves as arousing, or very funny.~FP

WORDSMITH

Renegade: *12 issues 1985-1988*
Caliber: *9 issues 1996-1998*

It's the 1930s and Clay Washburn is a writer, makes his living writing for pulp magazines. Detective stories, gangster stories, Westerns, jungle adventures... he'll produce almost anything for his penny-a-word, but none of it under his own name. The comic deals with his searches for a good plot-twist and the right words, and with more abstract issues: how much should he analyse his stories? How much reality should he try to put into them? When should he say no to publishers and editors? And how much can you talk about politics without alienating your friends? In 1-6 David Darrigo and Rick Taylor produce an entertaining read, with his small, real-life dilemmas mixed to good effect with extracts from the raw, dramatic escapism he's producing. It starts to flag as Washburn becomes more successful, with the extracts longer, but the stories weaker, and by now it's obvious that the tone will remain abstract throughout, without a hint of humour and with characters who are mere mouthpieces. The Caliber issues reprint the previous material, the first eight issues of which were available in collections.~FC

THE WORLD BELOW

Dark Horse/Maverick: *4 issue miniseries 1999, 4 issue miniseries 1999-2000*

Paul Chadwick's able pastiche of Jules Verne, *The Lost World* etc. has six clichéd excuses for characters, working for a billionaire industrialist, in a red truck called Helen ("we're going to hell on wheels"), trying to bring back alien biotechnology from a dangerous subterranean realm. There is a truly frightening battle between giant patchwork monsters in the second issue but otherwise little new life is brought to this tired genre. The second series, in black and white, subtitled "Deeper and Stranger", works a little better. The industrialist's paranoia about Microsoft is fun, and the very downbeat ending is refreshing.~GK

WORLD CLASS Comics

This Big Bang special continues that series' homages to the heroes and creators of the Golden Age. They're authentic enough, but that just means they're fun but pointless. Dr Stellar, Vita-Man, Mr Martian and Speed Queen are all featured, but the most accomplished piece is the Frazetta-ish 'The Atomic Sub', by Gary Carlson and Vatche Mavlian.~NF

THE WORLD OF KRYPTON

DC: *3 issue miniseries 1979, 4 issue miniseries 1987-1988*

The 1979 miniseries, DC's first, recounts a history of Superman's parents, including a computer attempting to keep them apart. Paul Kupperberg merely pulls scraps of detail from past stories and allows Superman the chance to be a guest at his parents' wedding, while the pencilling by Howard Chaykin is uninspired. Based on John Byrne's reworking of Superman in *Man of Steel*, the second miniseries attempts a history of Krypton. Byrne uses the questionable morality of cloning to spark a civil war, resulting in an ageless population, perfect but unfeeling. It's a more ambitious tale, and though flawed it at least looks good thanks to Mike Mignola and Rick Bryant.~NF

THE WORLD OF METROPOLIS

DC: *4 issue miniseries 1988*

After revamping Superman, John Byrne takes to opportunity to reshape the supporting cast and their past lives too. This focuses on Clark's Editor and father figure Perry White in 1, recounting his earlier days as a newspaper man. Lois Lane features in 2 where we read of her first scoop, and 3' is Clark Kent's first days in the big city. Cub reporter Jimmy Olsen is the inventor of a Superman signal watch according to 4. Byrne's scripts are surprisingly crisp, abetted by old pro Win Mortimer's pencils.~SW

THE WORLD OF SMALLVILLE

DC: *4 issue miniseries 1988*

Second of three series re-interpreting Superman's supporting cast and background after his reinvention at the hands of John Byrne. Here, we find out about Ma and Pa Kent (1-2) before having to endure some nonsense about how Lana Lang came to be a puppet of the Manhunters (see *Millennium*). The art of Kurt Schaffenberger solidly inked by Alfredo Alcala, is easy on the eye but Byrne's script is hard to take for anyone who's had any previous contact with Lana Lang.~NF

A WORLD OF TROUBLE

Black Eye: *3 issues 1995-1996*

His admirers consider Jeremy Eaton's work haunting and thought-provoking, and he's certainly been published by the more prestigious imprints. Are they blind to his ponderous writing style, hollow pontification and deliberately vague imagery? Questions are raised and never answered, probably because no answers exist beyond a supercilious fleecing of the gullible. The major piece here occupies most of 2 and 3 in revealing the life of former silent film star Charlie Gleason. He's never seen, but defined by his obsessions and the illustrated reactions of others. It's a repetitive and tedious piece, and there's more entertainment and edification to be derived from an average *Spider-Man* comic.~FP

WORLD OF WOOD

Eclipse: *4 issue miniseries 1986*

A collection of black and white stories drawn by Wally Wood between the late 1960s and early 1970s, but coloured, often very poorly. Writers include Archie Goodwin, Bill Dubay, Nick Cuti, Gerry Boudreau and Wood himself. Both episodes of Wood's superhero team 'The Misfits' (originally from *Heroes Inc*) are reprinted in the first two issues, alongside choice examples of the work Wood drew for *Creepy* and Eerie. There are also two war stories from *Blazing Combat*, and, mercifully in monotone, the superb 'To Kill a God', which traces vampirism back to Ancient Egypt. As a sampler of a magnificent artist you can't go wrong, but don't blame him for the colour.~SW

WORLD OF YOUNG MASTER: DEMON BLADE

New Comics: *One-shot 1989*

Much as Charlton's *Yang* inspired the 'historical' *House of Yang*, so too *Young Master* begat the *World of...* one-shot. Nitobe is a roving Samurai meting out instant justice to a bewildering array of hoods, soldiers and monsters, much in the manner of every Samurai film you have ever seen. With Chuck Dixon and Alex Niño on board, however, this is genuinely passionate, bloody, kinetic and feverish. Sadly, plans for more issues never materialised, but this obscurity is a hidden gem waiting to be discovered.~.DAR

WORLD WAR 3 Illustrated

Seth Tobocman and Peter Kuper: *15 issues 1979-1989*
Fantagraphics: *4 issues (16-19) 1989-1990*
Confrontational Comics/Modam Records: *13 issues + (20-32) 1991 to date*

This approximately nnual publication was conceived by Peter Kuper and Seth Tobocman, and developed into the cutting edge of underground and avant-garde cartooning, reaching out to interrogate every aspect of American political and social life without ever becoming part or party to the system it challenges. Controversial criticism mixes with fiercely, not to say stridently, illustrated assaults on all levels of venality, mediocrity and iniquity. On many occasions, however, the degree of commitment and outrage works against the material and, every so often, it stops being comment, it ceases to be art and it becomes just plain self-indulgent rubbish. In later years the content has moved further away from what could be called a liberal bent and toward a much more actively left wing and markedly strident agenda, and issue by issue seemed to bewail the lack of something to rail against.

Then the World Trade Center was destroyed on September 11 2001. As America galvanised so did the magazine, producing probably the best and most coherent issue in its long and checkered history. As a Pearl Harbor spirit gripped the USA, and other publishers rushed to release work of varying quality but uniformly emotive content, *World War 3 Illustrated* 32 contained a powerful and necessary counterpoint of reflection to balance the countrywide reaction. Christopher Cardinale produced an autobiographical strip of his bicycle ride around the city as the events unfold uptown, rife with trenchant observations such as tourists blithely posing whilst elsewhere buildings fell. Many contributors deal with the problems of perpetuating cycles of violence whilst the likes of Tom Tomorrow, Sue Coe and Spain Rodriguez examine the curtailing of personal freedoms, and the nature and history of America's involvement in Afghanistan. The most evocative response is Seth Tobocman's ironic and instruction manual-styled 'Not Enough People Have Died' wherein he took the prevalent arguments of the man in the street, that everyone who had given money or support to terrorists were equally guilty, to its absurdist extreme. Therefore Presidents such as Reagan and by extension anybody who had bought oil, used electric power or filled a car with gasoline were complicit and responsible.

Aggressive, self-important, and often stepping so far over normal bounds that it ends up doing itself more harm than good, *World War 3 Illustrated* is nevertheless a vehicle of social commentary that is impossible to deny. No fun at all, but compulsive reading nonetheless.~WW

WORLD WAR II: 1946

Antarctic: *2 issue microseries 1998, 12 issue limited series 1999-2000, 1 Annual 2000*

This is part of Ted Nomura's larger 'Families of Altered Wars' series spread over several titles, in which he depicts an alternative history, created by a few changed events, such as the death of Hermann Goring in 1917 and the successful development of German rocket technology. The microseries reprints short stories from *Tigers of Terra,* while each issue of the limited series concentrates on a particular aspect of the altered World War II, for example, Kamikaze pilots (2), communism (3), the Tuskegee Airmen (an all black fighter squadron, 8), the race into space (10) and Korea (12). The follow-up series is *Kamikaze:1946.*

Nomura's approach provides masses of exposition, but very little story, and a large cast (many related to each other, but on different sides of the conflict) is only revealed through biographical profiles. The artwork is a crude manga style and Nomura's insistence on including technical information in the dialogue is wearing. That said, the positive portrayal of women in combat, the narrative points of view, mostly through the eyes of female Luftwaffe pilots, and the technical detail are commendable and can be fascinating.~NF

WORLD WITHOUT END

DC: *6 issue miniseries 1990-1991*

Sumptuously illustrated by John Higgins, this is a convoluted science-fiction parable set on a devastated Earth. There's ongoing war between the sexes, who are divided into two separate camps, and Jamie Delano's bleak story matches the bleak planet as the aptly named Rumour moves ever further towards a showdown with the brutal and megalomaniac Brother Bones. Not one to be read for comfort and relaxation, Delano's script pulls no punches regarding gender relations or, by implication, a need for greater ecological awareness. Any messages, though, are couched in the unrelenting and off-putting stylised language Delano created for Brother Bones and his acolytes. It can be understood, but it takes time, and doesn't really repay the effort. Delano would later address similar concerns in far more satisfying fashion in *Animal Man.*~FP

WORLDS COLLIDE

DC/Milestone: *1 issue 1994*

This opens a crossover story that ran through the *Superman* titles and the entire Milestone line in the summer of 1994 in a brave but futile attempt to convince a mass audience to pick up the underrated Milestone titles. The cities of Dakota and Metropolis are merged by the mutant powers of Fred Bentson, a disgruntled mail carrier, and Superman, Superboy, Static, Icon, and company have to sort all the mess out. The creative teams' changing every few pages in this issue does not help readability at all, though the resulting crossover was generally satisfactory. There was also a 'premium' edition with a laminated cover and re-useable stickers of the cast for the purchaser to create their own battle.~HS

WORLD'S FINEST Comics

DC: *323 issues 1941-1986, 3 issue miniseries 1990*, 3 issue miniseries (Legends of the World's Finest) 1994, 2 issue microseries 1996, 10 issue limited series 1999-2000, one-shot ('Our Worlds at War') 2001*

For the first issue titled *World's Best Comics,* Superman and Batman shared the early covers, often in patriotic stance once the USA entered World War II, but didn't meet inside for over a decade. The earliest issues featured a variety of strips to contrast the superheroics of the cover stars. Hop Harrigan was an adventurous pilot, Young Dr Davis is self-explanatory, and Red, White and Blue were three young soldiers battling Nazis and saboteurs. There was also the Crimson Avenger (until 5) and offbeat superhero strips Johnny Thunder and his humorous Thunderbolt, and Zatara the magician ran to 51. Gradually, though, other superheroes edged out the supporting features. T.N.T. and Dan the Dyna-Mite, two heroes with explosive punches, were only in 5, But Sandman (by Joe Simon and Jack Kirby in 6 and 7) and Star Spangled Kid (from 6) lasted longer. So did Green Arrow, who made an impressive début in 7, not surrendering his slot until 140. The Boy Commandos joined the line-up from 8. From 10 the page count started shrinking from a generous 100, and the late 1940s fall in the popularity of superheroes meant they were replaced, initially by a succession of short-run features. War of Independence and frontier hero Tomahawk managed a long run, though, from 65 to 101, sometimes drawn by Nick Cardy, strangely running simultaneously with his own title.

1954's 71 was an important issue. Further reduction in pages prompted the Superman and Batman strips being combined, thus introducing the team-ups for which the title is best remembered. There was no danger of incompatibility because the 1950s Batman was encountering aliens and travelling through time in his own titles. Much like Superman in fact. Superman was the brawn while Batman used his acrobatic and detective skills, but as editor Jack Schiff also edited the *Batman* titles, Batman tended to predominate visually, with his artist Dick Sprang being a regular here, sometimes inking Curt Swan's pencils. At the time, however, Superman was by far the more popular of the pair. The stories were gimmick-driven, with plots very similar to those in the Superman titles, but more likely to use the Batman supporting cast. In 90, for instance, Batwoman takes the Lois Lane role of acquiring superpowers for a single story. The team-ups from 71-101 are available in two volumes of *World's Finest Archives.*

In the back-up strips Green Arrow was still going strong, largely drawn by George Papp, but in 96-99 Jack Kirby took over, with Lee Elias thereafter. Tommy Tomorrow replaced Tomahawk in 102, and you couldn't ask for a greater contrast than a historical strip giving way to stories of intergalactic policemen of the future in purple shorts with yellow boots. It was a charming strip, illustrated by Jim Mooney, who would progress to the lead strip, alternating with Dick Sprang. Beautifully illustrated by Nick Cardy for two issues, then Ramona Fradon, in 125 Aquaman displaces Tommy Tomorrow, and runs until 139. In these issues *World's Finest* presented four of the five DC superheroes to survive since their 1940s introduction, the exception being Wonder Woman.

There was a drastic change with 141, as Mort Weisinger became editor, planting *World's Finest* firmly in the *Superman* stable. There was a greater flair to the stories from this point, some being far better than those appearing in the other *Superman* and *Batman* titles, although elements from both were used here. Jim Shooter wrote some of the best and his peak came in 164, in which the evil android, Brainiac, creates a female computer to battle the World's Finest team. Weisinger introduced 'imaginary' stories already familiar to *Superman* readers, telling tales unconstrained by established continuity. An early example is 154, with the sons of Superman and Batman, who make an early return in 157. These children were kids, as opposed to the 1970s series where the sons were teenagers. A nice variation on the regular theme came with the teaming of Supergirl and Batgirl in 169, plotting to usurp their male counterparts. The best of the 'imaginary' stories is 172, positing that Bruce Wayne might have also been adopted by the Kents, making Superman and Batman brothers.

Losing sales to Marvel, in 1968 DC refurbished their titles to compete. There's a Neal Adams cover on 174, and he draws the stories inside the following two issues. While his art is lovely, his pseudo-realism doesn't suit the style of story. It's below-par Ross Andru and Mike Esposito art from 180, with the writing handled by Cary Bates, whose strength was ingenious plots, Robert Kanigher and Bob Haney. By 1970 the title was failing to live up to its name, and drastic surgery came with 199, as Batman was evicted, giving Superman the chance to team with other characters. Denny O'Neil began with a crowd-pleaser as Superman raced against The Flash, with art regularly by Dick Dillin and Joe Giella. The Superman team-ups lasted to 214, with 210's script by Elliott Maggin picking up on a plot last seen in Green Lantern, in which the socially aware Green Arrow planned to run for mayor. The best of a generally decent bunch, though, is 212's return of The Martian Manhunter. When last seen in Justice League of America 71 he'd left Earth to locate other survivors from his race, and this story followed on. 207-212 were forty-eight page comics providing back-ups dating from the 1940s, the best being a very nice looking Black Pirate from Sheldon Moldoff in 210.

Batman was back in 215, although only by proxy as one of inexplicably popular teenage Super Sons, under writer Bob Haney. Always a good plotter, and packing a lot into his stories, these weren't his most exciting work, and he didn't improve when the real Batman returned in 220. 223-228 were each one hundred pages, with the reprint strips more than compensating for the lacklustre lead. The Super Sons appeared every now and then when the comic reverted to normal size; the less said about them the better.

It's ironic to note that what eventually breathed new life into *World's Finest* was a return to the original premise of an oversize comic with a selection of all-new features. From 244 Green Arrow, Black Canary, Martian Manhunter and Wonder Woman all ran in solo strips after the Superman and Batman team. The best of the early runs was the Gray Morrow-illustrated Vigilante in 244-248, although the Sal Amendola drawn Black Canary strip in 247 looks very nice. Steve Ditko returned to his creation The Creeper in 249-255, and the E. Nelson Bridwell and Don Newton Captain Marvel strip modernised the classic old hero without destroying the innocent feel of the character in 253-282. 283 drops back to a standard twenty-four pages, though it retains a back-up strip, Green Arrow nicely drawn by Gil Kane. Throughout the changes in format the Superman and Batman team-ups remained uninspired. A long story in 300, drawn by George Pérez and guest-starring the Justice League, Outsiders and Teen Titans, only temporarily livened up a dying title. Writer Joey Cavalieri institutes a marginal rise in quality as *World's Finest* limps to its demise, but there's nothing of real note.

Did the comic ever live up to its name? No, to be honest. There were some decent strips, but very little that can be ranked above acceptable, with the stories from the mid-1960s the best. When *World's Finest* died to make way for the new look Superman it was not mourned.

The 1990 miniseries has Dave Gibbons delivering a plot that mixes and matches Superman and Batman's supporting cast, cities and villains, contrasting and playing them off each other. Lex Luthor turns up in Gotham for a business deal, and the Joker decides to take a vacation in Metropolis, each well characterised. There's a nice touch in that all of Luthor's henchmen are bald, and the Joker is more manic than maniac: the exchanges between the two make good reading. Steve Rude's city designs are excellent, and he also captures Superman and Batman very well, with an original take on the latter. The smooth inks of Karl Kesel and colourist Steve Oliff contribute considerably as well. It's taken a long time, but this is finally a series that lives up to the title. In 1994 Walt Simonson includes supernatural elements, with Batman and Superman's dreams and nightmares blending with deadly consequences. Superman becomes ever more brutal, and Batman begins to question his sanity after dreaming constantly of Krypton's destruction. It's well-paced and lavishly illustrated by Dan Brereton.

World's Finest 3 teams Superboy and Robin, as the pair take on Metallo, now able to morph into any robotic shape, and the sexy Poison Ivy, able to control any man she's kissed. In this story it happens to be Superboy, whose help she wants in transforming Hawaii into a Garden of Eden. Metallo's abilities are imaginatively employed, and he has the best dialogue of Chuck Dixon and Karl Kesel's action-packed story, very nicely illustrated by Tom Grummett and Scott Hanna.

The 1990 series features ten meetings between Batman and Superman, one to an issue. They meet annually on a certain day to reflect on a death they apparently inadvertently caused. Each issue tries to capture the mood of the relevant year with guest-stars such as Batgirl in 5 and Catwoman in 8. It's written well by Karl Kesel, particularly his handling of the contrasting moods and styles of our two heroes. They're not an obvious team, but Kesel explains why they work well together. Along with crisp clear art and good storytelling, largely by Dave Taylor and Robert Campanella, this is a very readable series. The title was revived again to end DC's 2001 crossover, featuring the aftermath. It's a solemn occasion highlighting fallen heroes, but well handled by a multitude of creators.~HY

WORLD'S FUNNEST

DC: *One-shot 2000*

Evan Dorkin has Mr Myxzptlk and Bat Mite kill every DC character, on every world or dimension or alternative reality, in a variety of inventive and/or sadistic ways. Clearly, this is not exactly Maus we're talking about, but it is all fun and, more to the point, it gives various pencillers and inkers a chance to strut their stuff. With over twenty artists, this is inevitably something of a mixed bag: Dave Gibbons, Alex Ross and Frank Cho are terrific; it's nice to see Jim Woodring and Jaime Hernandez in a mainstream setting; and Frank Miller is abysmal.~DAR

WORLDS UNKNOWN

Marvel: *8 issues 1973-1974*

1-6 contain adaptations of science-fiction stories that mostly suffer from being contracted to fit the comics' page-count, but with some notable art, particularly Ralph Reese in the first issue. The final issues adapt *The Golden Voyage of Sinbad*.~FP

THE WORM

Slab O'Concrete: *Graphic Novel 1999*

To raise funds for the London Cartoon Centre in 1991, a platoon of comic creators produced the longest comic strip in the world in a single day. Five writers broke down a story from chapter outlines supplied by Alan Moore (reprinted here), while dozens of artists drew individual panels. It took eight years to find a publisher despite contributions from John Bolton, Hunt Emerson, Glenn Fabry, Dave Gibbons, Arthur Ranson and Bryan Talbot among many famous names. Eventually it was enabled by a grant from The Swedish Council For Cultural Affairs, requiring awkwardly pasted over Swedish and French text. Divorced from its purpose, *The Worm* is a problematical creature. Moore constructs an adaptable scenario that whisks through the history of cartooning to an upbeat, if fanciful, ending. The variety of approaches, though, distracts from the story. Apart from the everyman cartoonist designed by David Lloyd, characters differ from panel to panel, and artists have fundamentally different ways of portraying essentially the same scenario. Usually of value, here it's to the detriment of the story. A brave attempt for a worthy cause, but now merely a curiousity.~FP

WORLD'S WORST COMICS AWARDS

Kitchen Sink: *2 issue microseries 1990*

A leisurely trawl through comics' lowlights presented as an awards ceremony. Categories such as Worst Costume (male and female), Worst Team, Worst Name and Worst Series are interspersed with other less than shining moments, leading to a top ten rundown of the Worst Comics. The choices are apt and the links amusing. To be avoided by those without a sense of humour about their funnybooks.~WJ

WOUNDED MAN

ComicsOne: *9 issue limited series 2001-2002**

Keisuke is hiding after having fallen foul of an organisation that specialises in blackmailing celebrities and sports stars into performing for pornographic films then sold to the world's elite. Keisuke's refusal to perform leads to the death of his lover, and he's now looking to finance his revenge. There's perhaps some grim humour as thereafter all Keisuke's lovers end up dead (after having had plenty of opportunity to be seen naked), in Kazuo Koike's men's adventure. It's visceral and intricately plotted, with artwork from Ryoichi Ikegami, who, even on autopilot, can make comics attractive.~NF

WOW COMICS

Fawcett: *69 issues 1940-1948*

Wow began as an anthology featuring Fawcett's second stringers, the first issue starring Mr Scarlet and Pinky by Simon and Kirby as well as Atom Blake, Boy Wizard, Jim Dolan & Rick O'Shay among others. From 9, though, it became the starring vehicle for Mary Marvel, Captain Marvel's twin sister. Aimed at girls, the stories were generally gentle in tone, lacking the surreal, slapstick charm of the World's Mightiest Mortal or the slam-bang action of Captain Marvel Jr. Mary and a succession of back-up strips ran until 58 when she was replaced by humour strip Ozzie. Tom Mix began in 65, confirming the general decline in fantasy hero titles and the boom in Westerns. *Wow* became Real *Western Heroes* with 70.~WW

WRATH

Malibu: *9 issues, 1 Giant-Size 1994*

It's rumoured that Marvel bought Malibu to acquire their impressive computer-colouring process. Certainly the colouring on *Wrath* is the most impressive thing about this superhero series... and even that ain't so hot. Although the series has creators credited it might as well've been produced by another of Malibu's fancy computers, so generic are their efforts. Wrath works for the shadowy organisation Aladdin, seeking out other superpowerful "Primes" and teaming with fellow Ultraverse heroes in a series of dull escapades that never justify the high cover price or deluxe packaging.~AL

The Nine Rings of WU-TANG

Image: *5 issues 1999-2000**

Under the influence of much weed, the members of rap band Wu-Tang Clan created aliases for themselves from an eccentric set of influences that fused kung-fu movies, buddhism and mob culture. Attempting to attach a rationalisation to this hotch-potch was always going to be difficult, particularly since the real lives of some band members, particularly Ol' Dirty Bastard, overshadow any fiction. The result is third-rate *Conan* with a side order of half-baked spiritualism.~WJ

WULF The Barbarian

Atlas: *4 issues 1975*

Of the many sword-and-sorcery books produced in the 1970s this, although not particularly original, was one of the best. 1 and 2 are handsomely drawn by Larry Hama, who also wrote the title, and inked by Klaus Janson (and a cast of thousands in 2). 3 and 4 are respectively bizarre and banal and need only trouble completists.~DAR

WWF World Wrestling Federation

Valiant: *4 issues 1991*

WYATT EARP

Marvel: *34 issues 1955-1960 (1-29), 1972-1973 (30-34)*

Exploits of the frontier marshal by Stan Lee and Dick Ayers. They're all flaccid Western fare, as are the accompanying strips by Lee, with such talents as Al Williamson, Reed Crandall and Angelo Torres on art. The 1970s reprint series was deservedly short-lived.~SW

WYNONNA EARP

Image/WildStorm: *5 issues 1996-1997**

U.S. Marshall Earp, a possible descendant of the legendary Wyatt, confronts supernatural criminals in this fun, action adventure. Beau Smith writes Wynonna as a strong action hero without particularly falling into a Bad Girl riff but the artwork (Joyce Chin 1-3 and Pat Lee 4-5) is patchy and often seems unsuitable to the western/horror atmosphere that Smith tries to create. At any rate, it wasn't strong enough to last.~NF

X

Dark Horse: *24 issues, 1 Special 1994-1996*

Part of Dark Horse's *Comics Greatest World* superhero titles, X concerns a masked vigilante who warns his victims once only with an X mark. The next time he kills them. Initially his targets are the corrupt controllers, police, politicians and gangsters of Arcadia. Ghost appears in 8, and with 15 X has to face forces from outside, while a Predator turns up in 18, after which the series concerns his visit to Washington to warn off federal interference and the subsequent invasion of Arcadia by every psycho looking for a home.

Full of early promise, Steven Grant has some good ideas but doesn't really develop them, always prioritising action. Artists are Doug Mahnke and Jimmy Palmiotti (1-5), Ron Wagner and then Chris Warner until, with 13, Javier Saltares became the regular artist. Although he provided a consistency his compositions are rather rigid and dull.

The Special, 'One Shot to the Head', is actually a prequel to X's first appearance, and the only other element of note is Frank Miller covers for 18-22 and the special.~NF

XENA: WARRIOR PRINCESS

Topps: *3 issue miniseries (1,2,0) 1997, 3 issue miniseries ('Joxer: Warrior Prince') 1997-1998, 3 issue miniseries ('The Dragon's Teeth') 1997-1998, 3 issue miniseries ('vs Callisto') 1998, 3 issue miniseries ('The Orpheus Trilogy') 1998, 2 issue microseries ('Bloodlines') 1998, 3 issue miniseries ('The Original Olympics') 1998, one-shot ('The Wedding of Xena and Hercules') 1998, 2 issue microseries ('The Wrath of Hera') 1998*

Introduced as a villain in the *Hercules: The Legendary Journeys* TV show, Xena progressed to hero status her own series, where she gained a companion in Gabrielle. Regrets and guilt about her past are major plot elements. In comics she first appeared in Topps' *Hercules* title before her own succession of miniseries. Roy Thomas revels in retellings of the past, whether historical or mythological, and introduces 'new' characters like Perseus and Gilgamesh, and Oedipus ('The Dragon's Teeth'). 'Callisto' features TV characters, including Pandora and Cassandra. Tom and Mary Bierbaum begin less successfully in 'Joxer: Warrior Prince'. Much better, is 'The Orpheus Trilogy', which includes Xena in a retelling of the myth of Eurydice's return from Hades. There is a better grasp of Xena's character here and the mythological elements are nicely handled. Samson and Arthur Pendragon show up in 'The Original Olympics' and the Bierbaums move closer to the light-heartedness of the TV show's comedy episodes. Aaron Lopresti is the final writer, normally illustrating his own strips ('Zero Issue', 'Bloodlines'), which have a horror feel.

The first miniseries is drawn very attractively by Joyce Chin, but other artists fail to enliven the scripts. Robert Teranishi's art is firmly in the fantasy tradition, not unattractive on 'The Dragon's Teeth', but much better when inked by himself on 'The Orpheus Trilogy'. The comics follow the TV show's lead in being unconcerned about whether featured characters can realistically co-exist, which is at once painful and intriguing. There's no additional information about the TV show's regulars but fans will find much to enjoy.~NF

XENA Warrior Princess

Dark Horse: *14 issues 1999-2000**

There are closer ties to the TV series than the Topps version, making for a jarring transition between 3 and 4, but otherwise this is much the same. The best artwork comes from Mike Deodato (3, 4, 9-14), although it's heavily photo referenced, and chances are those who enjoy the TV show will also enjoy the comics. There's more Xena in *Dark Horse Presents* 148 and *Dark Horse Presents Annual* 2000. The comic comes with illustrated covers or a run of increasingly unflattering photos of *Xena* actress Lucy Lawless.~FP

XENE

Eyeball Soup Designs: *4 issues 1995-1996*

Had the editors lavished as much care on the content as the production this Singapore produced anthology might still be with us today. XENOBROOD

DC: *7 issues (0-6) 1994-1995*

A couple of anthropologists find some crystals that hatch four superpowered aliens made of super dense protoplasm. Unfortunately, while they have to learn all about their new environment, other aliens want them back. Doug Moench can't do much with this slim premise, even with Superman guest-starring in 3 and 4. Changes in artist after only the second issue suggest that DC didn't have any confidence in the strip either.~NF

XENOZOIC TALES

Kitchen Sink: *14 issues 1987-1996*

Although it's the 26th century, post-cataclysm, Mark Schultz' world of dinosaurs and ruined cities owes more to the 1950s. In the Xenozoic Age small pockets of humanity, who've spent the last four and a half centuries underground, emerge and set up tribal societies in the ruins of the old world. Jack 'Cadillac' Tenrec is a mechanic who spends his spare time fixing old cars until he meets Hannah Dundee, an ambassador from the neighbouring Wassoon tribe. She's on a mission to find the stash of books Jack's people are reputed to hold in their ruined City in the Sea, but seems perfectly happy to hang out, have adventures and ride around in his cars.

There are usually two or three inter-connected stories in each issue, with plenty of action, but *Xenozoic Tales* is actually a slowly developing love story between the two leads, drawn in mock Wally Wood style with just a hint of Williamson for good measure. Schultz has all the things he likes in one comic (shapely women, guys in safari suits, dinosaurs and classic cars), and while the exercise is diverting and well drawn, it's ultimately a load of very pretty fluff.~FJ

X-FACTOR

Marvel: *149 issues, 9 Annuals, one-shot ('Prisoner of Love') 1986-1998*

X-Factor débuted, amid much hype, after a lead-in story in *Avengers* 263 and *Fantastic Four* 286. Initially written by Bob Layton and drawn by Jackson Guice, the comic reunited the five original X-Men. Disillusioned by the growing anti-mutant bigotry and angered by Professor X's decision permit former enemy Magneto to run the X-Men, Cyclops, The Beast, Angel, Iceman and Jean Grey set up their own team. Posing as mutant hunters who could be hired to 'remove' mutant problems, they gather frightened young mutants – including many who would later become major characters in *X-Force* and other X-titles – aiming to train them in the way they themselves had been trained. There's a heavy soap-opera feel to early issues, along with a subplot that leading into the introduction of major villain Apocalypse.

Louise Simonson writes from 6, and is joined by artist husband Walt from 10 to 40. His arrival coincides with events leading to the loss of the Angel's original wings and his transformation into one of Apocalypse's horsemen, a subplot that ran over a decade. The team sensibly drop the mutant hunters charade, for an eminently readable comic. Louise Simonson then works with a series of artists (including Art Adams on 41-42) until Jim Lee (with occasional assists from Chris Claremont) and Whilce Portacio take over on 61. They bring a welcome vitality on their short but nonetheless impressive run, and 68 sets into motion the events that will one day lead Cyclops' young son to become the futuristic warrior Cable, complicating *X-Men* continuity for evermore.

With 71 the original members return to the X-Men, to be replaced by Havok, Polaris, Strong Guy, Wolfsbane and Madrox the Multiple Man. Under the wing of government liaison Val Cooper the team become, effectively, the US government's pet mutants during a run by penciller Larry Stroman and writer Peter David. The new look was well-received, but relied on David's tricks with in-jokes and one-liners to carry plots generally weaker than the scripts.

After David's departure with 92, *X-Factor* suffers from frequently changing creative teams until John Francis Moore and Steve Epting arrive with 114, bringing the criminal Mystique into the team as a means of repenting her crimes. This change was forced by Val Cooper, and the heroes begin to question the amount of government control over their operation. The subplot continues when Howard Mackie seamlessly takes over the writing from Moore, and is still a major feature when Jeff Matsuda replaces Epting on the art. Towards the end of the run more and more 'reforming' criminals are forced on the increasingly unhappy team, with predictably divisive results, as Duncan Rouleau becomes the artist from 138. Mackie writes to the end, eventually returning Havok, but realising a new approach was necessary, *X-Factor* was cancelled to make way for *Mutant X*.

Throughout its run *X-Factor* was never outstanding, but was always a solid read, with generally above-average storytelling. If you can get the entire run, you could do worse than sit down and read them in one go. The one-shot, though is dire, with the usually cheery Beast moaning about being a monster. The most interesting aspect is how Jackson Guice and Jim Starlin obviously wrote it as a *Fantastic Four* story, and how out of character the X-Factor heroes are made to act in a reworking that merely changed the names.~JC

X-FACTOR

Marvel: *4 issue miniseries 2002*

For some reason the vacant title was transferred to this, related solely through its use of mutants, although largely in peripheral fashion. It's a character piece spotlighting two FBI agents, each with their own problems to resolve, investigating anti-mutant incidents and eventually making an unsavoury discovery. Jeff Jensen's story is well plotted, but the star quality is provided by artist Arthur Ranson, whose work is rarely seen in the USA. His detailed and gritty realism is gorgeous, with Paul Mounts providing gloomy colouring suitable to the downbeat tone. If only all mainstream comics reached this standard.~WJ

X-51

Marvel: *12 issues 1999-2000*

Machine Man is back, now looking more like Robocop. 1-5 feature The Brotherhood of Mutants in a confusing start, a subplot about The Hellfire Club and trainee Avengers Firestar and Justice before 5's battle with The Vision. Karl Bollers' writing is dense and downright obstructive in early issues where he's co-scripting with Mike Higgins, while Joe Bennett's manga-influenced art (with more than a nod in Alan Davis' direction) conveys the effects, the power and the machinery well. His figurework and objectified females lose points. Our hero has to come to desperate terms with the realisation that he's part mutant-hunting Sentinel, and 9-10 involve A.I.M. with Machine Man reborn once again. 12 is a patience-testing illustrated narrative with the entire development of man and machinekind covered. The plot reincorporates the mysterious obelisk from Jack Kirbys *2001* series where "Mister Machine" first appeared, then summarises the previous 11 issues. The very cosmic ending is clearly a compacted version of what was planned for further issues. Exciting if somewhat po-faced and macho.~SW

THE X-FILES

Topps: *44 issues (-2-41), 2 Annuals, 3 Digests, 5 Special Editions 1995-1998, one-shot ('AfterFlight') 1997, 9 issues ('Season One') 1997-1998, 4 issue miniseries ('Ground Zero') 1997-1998, one-shot ('Fight The Future') 1998*

Stefan Petrucha writes 1-16 in the same vein as the early episodes of the TV series, and his interest in the subject matter shows in the wordiness of the scripts. 1-12* are linked by a common theme (memory), and subsequent issues investigate computer programs (13), survivalists (15-16), ball lightning (18-19), spontaneous combustion (33), bird attacks (34), Bigfoot (Digest 1) and Chupacabras (Digest 3). Kevin J. Anderson's two-parter (20-21) features mummification, but John Rozum's stories (17-19, 22-41), adjusting to the changes in the TV show, include more conspiracy theory and regular FBI actions, including international terrorists (27-29), hostage negotiations at a militia compound (30-31), witness protection (35-36) and cult murders (Digest 2). The Annuals and Digests contain new adventures, but the Special Editions are reprints of 1-13 and Annual 1. The -2 and -1 issues reprint promotional stories from *X-Files Magazine* and *Hero Illustrated* respectively. Generally, the scripts and art work hard to capture the spirit of the TV show. Charles Adlard (1-16, 18-19, 22-23, 27-29, Annual 1, Digest 1-3) successfully captures the FBI agents' likenesses in his heavy-lined, blocky style, but, given the nature of the stories, can't avoid drawing a lot of pages of talking heads. His successors, Gordon Purcell (17, 20-21, 24-29) and Alexander Saviuk (30-41) continue this approach, but are generally more cartoony and less stylish than Adlard. 'AfterFlight', by Petrucha and with artwork from Jill Thompson and Saviuk, is about an old man's attempt to rebuild his grandfather's early flying machine and with its aliens, men in black and crime elements feels very like a TV episode. The 'Season One' series contains adaptations of episodes from the TV show by Roy Thomas. Artwork on these issues includes John Van Fleet on 'Pilot Episode' (reprinted from 0) and 'Fire', Claude St Aubin on 'Deep Throat' and Val Mayerik on 'Squeeze'. The other episodes covered are 'Beyond the Sea', 'Conduit', 'Ice', 'Shadows' and 'Space'. 'Ground Zero' is Anderson adapting his own X-Files novel with artwork by Purcell, while Rozum and Van Fleet adapt the *X-Files* movie in 'Fight The Future'. Titan Books reprint the main Topps series in seven volumes, as well as 'AfterFlight' and two of the Digest issues.~NF

X-FLIES

Twist & Shout: *1 Special 1995, one-shot ('Conspiracy') 1996, 4 issue miniseries ('Bug Hunt') 1997*

Richard Johnston's recasting of adventurous agents Scully and Mulder as flies. Yes, that's about it. Johnston's gloppy, gelatinous art style is skillful and not unappealing, and there's the odd pleasing slapstick gag, but those slender merits alone don't hide the fact that this title was long past it's sell-by date on publication. The appearance of guest-strips by people like the very talented Mark Stafford means one mildly amusing pun is not all the series has to offer. But it's very nearly all.~HS

X-FORCE

Marvel: *129 issues, 4 Annuals 1991-2002*

Back in the early 1990s, Rob Liefeld was the darling of both comic fans and the industry, riding high on the big guns and ultraviolent manga-influenced style that offered something different to the boy scout, mom-and-apple pie values with which comics were most associated. In *New Mutants* he introduced a character named Cable, an enigmatic time-traveller who immediately became a fan favourite. With 100 *New Mutants* was cancelled and relaunched as *X-Force*, a showcase for Liefeld's style and ideas. Under Liefeld's guidance, and with Cable rather than Professor Xavier at the helm, they woke up from Xavier's impossible dream of humans and mutants living in peace and became more militant. Early issues establish the team, their viewpoint on the human/mutant situation (cynical, basically) and introduce characters such as Deadpool and Kane (in 2) who would also become fan favourites. Cable's origins are also explored, tantalising with a story readers would have to wait years to fully understand.

Liefeld's fall from grace was fast and hard, and it's often forgotten that he brimmed with good ideas and creativity that needed a stronger editor than he was ever offered. Give him a chance and you'll find some of his best and freshest work in these early issues, including his transformation of the gawky hick Cannonball into a strong leader who fully understands and sympathises with Xavier's dream yet rejects it. Cable departs in 10, and Cannonball's development survives Liefeld's parting at 14. His position somewhere between Xavier's open hand of friendship and Cable's closed fist of attack is a theme that recurs again and again.

Fabian Nicieza and pencil artist Greg Capullo (later replaced by Tony Daniel) take over, and while the series loses the in-your-face rawness Liefeld injected, the greater emphasis on characterisation is no bad thing. The team are no longer naïve teenagers, they're older and wiser, more often operating as a mutant underground than traditional superheroes. Like all mutant titles throughout the 1990s, this suffers cross-company events (not to mention alternate cover versions of virtually every issue between 30 and 50), but mostly manages to maintain its own identity. 38 leads into *Generation X*, and the series is interrupted by its transformation to *Gambit and the X-ternals* for four months between 43 and 44. The lead-in to *Onslaught*, the next cross-company event, obstructs most subsequent issues. This is a shame, as left to its own devices the sense of team spirit in the face of adversity and us-against-the-world attitude that forms the heart of *X-Force* generally provides a perfectly good read.

After 50 the comic rarely manages a settled creative team, and as a result it's often merely treading water, although it's rarely poor, and there are interesting moments. Writer John Francis Moore plays around well with concepts of post-teen directionless disaffection as he sends the group on a literal and metaphorical road trip starting in 71, and Adam Pollina's more cartoony art complements this lighter tone perfectly. The team's visit to the mutant separatist homeland Genosha, guest-starring Pete Wisdom, in 94 and 95 is worth a mention. As the series edges into treble figures, there's a new direction from writer Warren Ellis, who treats it as a sequel to his *Excalibur*, nudging it in the direction of the superhero-noir style he favoured elsewhere. Ellis is assisted by Ian Edginton, who eventually supplants him while continuing to explore his pet concepts, many of which can be traced back to the Alan Moore golden era of *Captain Britain*. It's fin-de-siecle superheroes by numbers, however, and proceedings are brought to a halt with 115.

116 is essentially a completely new title, with nothing but the name carried over. Michael Allred is only credited with the art, but the characters and concepts have a lot in common with his work on *Madman* and *The Atomics*, presenting a group of dysfunctional but media-savvy mutants who live the high life on the back of PR-controlled celebrity. Their missions are dangerous and often fatal, but the public love them. Pete Milligan writes a screwed up and awkward bunch in a 1960s Marvel way updated to the 21st century, and it's wonderfully fresh, vibrant, painfully self-aware and brilliant fun. In essence, it's a satire on the comics industry and the cult of celebrity tarted up as the best superhero comic available. The new direction proved such a word-of-mouth hit that the title was relaunched as *X-Statix*, to see if extra readers could be enticed.~JC

X-MAN

Marvel: *75 issues, 1 Annual, one-shot ('All Saints Day') 1995-2001*

Starting in Marvel's 'Age of Apocalypse' alternate timeline experiment, X-Man is the alternate version of Cable. Adolescent Nate Grey was bred by Mister Sinister from the genetic material of Scott Summers and Jean Grey (Cyclops and Phoenix) to be a weapon against the evil Apocalypse, but was freed by Summers and raised by a troupe of mutants disguised as travelling actors. When 'reality' was restored the immensely powerful Grey bled into the regular Marvel Universe, further complicating an already ridiculously convoluted alternate world/time-travel continuity.

Early issues are unremarkable. Jeph Loeb writes entertaining enough fights with the X-Men, Cable and the Hellfire Club, but did Marvel need another time-twisted X-comic? Even one in which the lead character is having an affair with his alternate-world father's ex-wife, who also happens to be a clone of an alternate-world version of his mother, whom his formidable psychic powers resurrected from the dead because he was curious about her!

There are good points. Nate's power burns brightly, but it's also burning him out, threatening an early death, investigated by writer Terry Kavanagh in the 20s. Nate's attempts to find his place in the world lead into the series' best sequence in 33-36: his inadvertent courting of an X-Man cult, unaware that he is being manipulated by the Purple Man. A team-up with Spider-Man follows, and a Cable crossover in 45-47 suggests flagging sales may have required guest-star bolstering. Kavanagh produced a generally entertaining though unremarkable superhero romp until his departure in 62. In his later issues, he starts to play with the idea that Grey, born of an alternate reality that may never have really existed, has a special link to other realities. Warren Ellis and Steven Grant pick up on this, guiding storylines towards a more European science-fiction style, unmissably influenced by Brian Talbot's *Luther Arkwright* and Vertigo comics. Proclaiming himself Shaman of the mutant tribe across all realities, Grey makes the multiverse his playground. Until, in 75, his candle burns out, as it always threatened to, bringing a disparate series to a neat and conclusive end. Remarkably *X-Man* didn't outstay its welcome.~JC

X-MEN

Marvel: *137 issues +, 10 Annuals 1991 to date*

With the X-Men divided into two combat teams in *Uncanny X-Men* 281, one might consider the resulting two titles as separate publications, but such is not the case. Jim Lee got his own *X-Men* comic to play with, discarding three scripters in his 11 issues. It kicks off with Magneto tracked to the moon provoking an overblown punch-up (1-3), and progresses into a forgettable run of soap opera and mutant persecution nonsense. 9-10 cross over with *Ghost Rider* 26-27 and Longshot appears in 10. Fabian Nicieza arrives with 11 with a succession of artists, most notably Andy Kubert, as relentless crossovers afflict the now burgeoning X-titles, causing even the most dedicated fan pause. In 20 Psylocke turns up, claiming that the woman who's been fighting with the team is an imposter named Revanche and the ghastly machinations so much mocked in TV soap operas become part and parcel of the comic. The is she?/isn't she? nonsense lasts almost eighteen issues, briefly interrupted by the tedious wedding (30) of founding members Cyclops and Jean Grey/Marvel Girl/Phoenix (only one girl but lots of code names). Some edge enters with the introduction of Sabretooth in 34, as mentor Professor Charles Xavier convinces the team to attempt the rehabilitation of one of the world's most murderous mutants. Villains have reformed before but the manner in which this story unfolds is a rare high point in an otherwise largely mediocre series. The only quibble is that, as usual, much of the story development happens in other series, particularly Wolverine's comic.

40-41 are the second and fourth parts of 'Legion Quest' wherein Professor X dies again, leading directly into 'The Age of Apocalypse', at the close of which Professor X was alive again. Nicieza leaves with 45 and Scott Lobdell, who'd scripted some early issues, returns to lay the groundwork for the next big X-Thing. With the first hints in 46, the Emissary of Onslaught beats the stuffings out of the team in 50, and the saga proper runs in 53-56, as well as in every other Marvel title. For a brief time it "changed the Marvel Universe Forever", as the cosmically powerful dark side of Professor X nearly destroys the Earth. In 57 a repentant Xavier turns himself over to the US authorities, leaving the mutants to fend for themselves in a brief flurry of mawkish fights and fluttery hearts, including a guest shot for Shang Chi, Master of Kung Fu in 62-64. Then yet another crossover crisis looms as the mysterious Bastion, organises world governments to crack down on the potentially lethal mutant population. This is 'Operation Zero Tolerance' in 65-69 and all concurrent X-Titles.

70 introduces some brand-new X-Men (Maggot, Marrow, Cecilia Reyes) as the team retrench lacking the financial resources they're used to, and Cyclops and Jean leave in 71. The return of Nightcrawler, Kitty Pride and Colossus (80) prompts another X-Event. It's the search for the missing Professor X (82-84) as Joe Kelly and Adam Kubert hand over to writer/artist Alan Davis (85) in a prelude to 'Magneto War' (86-87, *Uncanny X-Men* 366-367). Davis' tenure, even the obligatory X-events 'Apocalypse: the Twelve' (96-97), and 'Ages of Apocalypse' (99) is a welcome blend of the old magic and a light touch, in a title increasingly histrionic and mega-melodramatic. It's a change in tone continued with the return of Claremont for 100, who, with new artist Leinil Francis Yu brought some narrative cohesion to what was for too long the equivalent of a point-and-shoot computer game. He's only around until 109, bidding farewell with a weepy Christmas tale. Lobdell then pops up one final time to handle the really, truly, honest, we-mean-it final showdown with Magneto.

The series is retitled *New X-Men* with 114, as Grant Morrison and rotating artists Frank Quitely, Ethan Van Sciver and Igor Kordey drop-kick the mutants to a new level. The first story to 116 introduces ultimate villain Cassandra Nova and re-invents long time X adversaries the Sentinels. The island of Genosha, long a metaphor for apartheid, had become a refuge for mutants, and in a bold move, Morrison has the entire population exterminated, provoking the X-Men to go public, and open the doors to any mutant in need. 118-120 deal with the newest batch of students and degenerate human businessmen before there is a return to the cosmic themes so well-beloved by X-fans (122-126) as Lilandra and her Shi'ar Empire re-enter the lives of the X-Men by invading and attempting to sterilise the Earth. After that we move back into the arena of relationships with humans, governments and that darned double-crossing military-industrial complex. John Paul Leon illustrates a low key tale dealing with the funeral of an extended team member and interior monologues on the deteriorating marriage of Cyclops and Jean Grey (131) and Phil Jimenez draws a haunting episode set on ghost-plagued Genosha (132) before the next big story-arc begins.

These stories are much darker than any previous *X-Men*, and more concerned with the world of realpolitik. Jean Grey heads a new and much more believable school for mutants, but one that has protesters picketing the gates. The X-Men are uniting mutants into a global rescue network and world governments are having to treat mutants as a dispossessed nation, and not a monstrous criminal plot. The most potentially chilling theme amongthe new narrative sensibility, is the theory that at the current rate of birth, baseline humanity will be extinct in six generations. There's still plenty of action and emotional interplay, but with a logical and sympathetic underpinning that makes for a more mature read. About time too. Marvel have been issuing collections as quickly as they can since Morrison's first issue.~WW

The Uncanny X-MEN

Marvel: *414 issues +, 25 Annuals, 2 Giant-Size 1963 to date*

One of the final titles introducing the first flush of Marvel Comics (only *Daredevil* would follow), the X-Men reflected the Fantastic Four. Another closely knit team, instead of being loved and admired by the public at large, their inherent extra abilities, designating them as mutants, made them figures to be feared. The slim reasoning that endemic superpowers somehow make their possessor a threat, whereas accidentally conferred abilities are okay with the public at large, has seen X-Men through forty years of plots. This stood up a little better in the less populated Marvel Universe of 1963, and a début issue that introduced Professor X, Angel, Beast, Cyclops, Iceman, Marvel Girl and Magneto, all still going strong four decades later, wasn't a bad week's work from Stan Lee and Jack Kirby. The adjective 'uncanny' was first appended on 114, appearing on most issues thereafter, and permanently from 151.

The teenage heroes were theoretically honing their abilities at Professor Xavier's School For Gifted Youngsters, yet emerged almost every issue to confront new mutant threats. 2's Vanisher was always a second-stringer, but 3's introduction of The Blob (a corpulent, immovable mutant) was more permanent, and further perennials arrived in 4, with Scarlet Witch and Quicksilver introduced as Magneto's henchmen. This is the most memorable of the early issues, packing a lot into twenty-three pages under a fabulous cover of Magneto and Co. looming over the X-Men. The Mastermind also débuted that issue and later prompted one of the most powerful stories of the 1970s revived team. Lee and Kirby were having fun here, and even the unsympathetic inking of Paul Reinman (1-5) couldn't dull the edge. Chic Stone, from 6, was a superior inker and remained until Kirby's final fling at full pencils in 11. 12 has the bizarre art combination of Alex Toth pencilling Kirby layouts, and Werner Roth did the same between 13 and 17 (under the alias of Jay Gavin) before pencilling to 49. The Juggernaut was introduced in 12, but a daft moment of plotting established him as Professor X's half-brother, a fact generally forgotten these days. The X-Men's other great recurring foes, the Sentinels, arrived in 14-16. Fearing mutant supremacy (after all, there were over a dozen of them at Marvel by that time), giant robots were constructed to protect humans, but proved too zealous in deciding that the best way to achieve this was to subjugate humanity. Roy Thomas arrived as writer with 20, one issue after Lee had created The Mimic in a memorable finale. All these issues are available in two hardcover editions of *Marvel Masterworks*, with a cheaper *Essential Uncanny X-Men* covering 1-24.

Thomas moved the plot on with less reliance on Magneto (eight villainous appearances in 1-19), moved the team out of the school more often, and produced a readable run to 39. Memorable issues included a battle with an endearing set of loser villains in 22-23, the début of the Banshee in 28, a subterranean romp in 34 and the very silly Mekano in 36. Thomas' ongoing plot concerned the foreboding Factor Three. Despite noting they sounded like a toothpaste, they were a threat, 39's disappointing conclusion until Professor X dies in 42, but don't worry, he doesn't really, it's all explained away in 65, but in 1967 this was a daring move and the issue retains a poignancy. Without the Professor the X-Men were aimless, and without Roy Thomas *X-Men* became gormless, as Gary

Friedrich, then Arnold Drake, turned in some dreadful efforts. 50 and 51 have noteworthy Jim Steranko art on a stupid story, while Barry Smith's first comic is 53, and boy, does it show. Between 39 and 56 only the back-up strips are of note, detailing the origins of the individual X-Men.

Thomas returned with 55, in the company of Neal Adams from 56, whose illustrative style and dynamic layouts resulted in a startlingly drawn run, on which Tom Palmer's smooth inking was a factor. Cyclops' brother Havok had been introduced in 54, also a mutant and unsure of how to cope with his blossoming power. Thomas and Adams showed the way in 57-59, with the frightening return of the Sentinels, this time looking invincible, and the desperate conclusion is excellent. It's truncated for republication in *Giant-Size X-Men* 2. 60-61 introduce Sauron, a villainous pterodactyl who's proved surprisingly long-lasting. It runs into 62's adventure in Ka-Zar's Savage Land, and the début of mutants genetically engineered by an old foe in 63. The Adams issues have been collected, but re-coloured in inferior fashion. Sunfire arrives in 64, drawn by Don Heck, and 65 is the last Adams *X-Men*, and even he can't save a daft Denny O'Neil story returning Professor X. The first-run finale in 66 is a surprisingly low-key battle with the Hulk, after which the title reprinted 12-45 until 93, two stories per issue until 72 permitting the otherwise impossible mathematics. In the meantime the X-Men were kept alive with odd guest slots (*Marvel Team-Up* 4, *Captain America* 172-175), while the Beast was transformed in *Amazing Adventures* 11-16.

The X-Men re-emerged in 1975, as comics' most successful makeover. *Giant-Size X-Men* 1, written by Len Wein with art by Dave Cockrum, told the story of the original team's disappearance and the efforts of a new team gathered to rescue them. The new X-Men retained the feel of a group of outsiders who found friendship and understanding with each other. The originals had been teenagers struggling to understand their mutant powers; the new team added a multiracial, multinational tilt to remind us even more that, at its core, X-Men has always been about intolerance towards those who are different. Of the newcomers, Wolverine (introduced in Hulk 181) became one of Marvel's most popular characters, and Storm and Nightcrawler still appear regularly.

After Giant-Size 1, the *X-Men* title switches back to new material with 94, and Wein and Cockrum guide it through the next two issues, with Chris Claremont co-plotting 95 and writing 96-279, an unbroken run over sixteen years. The early part of 94 deals with the departure of three original X-Men, reducing the cast from battalion levels, although everyone returns sooner or later. Claremont's first solo story, deals with Cyclops' remorse at the death of a team-mate in 95, starting as Claremont means to go on, with an emphasis on angst and soul-searching that was to become his trademark. The Cockrum and Claremont issues are good, solid superhero fare, and a little overlooked in the wake of what followed. In the landmark 100, returning from a mission on the moon, Jean Grey (then still Marvel Girl) apparently sacrifices her life to save her friends, piloting their crippled shuttle back to Earth through terrible radiation. In 101, though, she's revived as Phoenix, a being with phenomenal psychic powers, signalling the beginning of 'The Phoenix Saga'. As the team subsequently battle the alien Imperial Guard and then Magneto, it becomes apparent that the resurrection has turned Jean into something more godlike than human. The addition of John Byrne on art from 108 completes the *X-Men*'s creative team supreme, and for the next thirty issues there's hardly time to pause to catch your breath. After defeating Magneto, the team head to the Savage Land for a run-in with Sauron and Ka-Zar, then take on Moses Magnum (119, the only forgettable issue of this period), Alpha Flight, Arcade and, in 125, Mastermind. By now, Jean is effortlessly rearranging molecules of her costume to street clothes, holding back the forces of volcanoes, and wiping the floor with the best any villain has to throw at her. Mastermind, like Jean a telepath, starts playing with her mind. Unfortunately, it's at the same time that she's beginning to become overwhelmed by her powers, and the combination unbalances her completely. 129-137*, 'The Dark Phoenix Saga', are the peak of an incredible run, if not the best superhero comics ever produced. Jean fights to control her sanity, but becomes more addicted to the destructive nature of her powers until, having destroyed whole solar systems for thrills, she takes the only way out – suicide, while she still has enough lucidity to do it. The power of these issues, intermixed with the soap-opera aspects that were also sending the popularity sky high, is incredible.

After this, the storyline leads almost immediately into 'Days of Future Past' (141-142*), in which the body of the team's youngest member, Kitty Pryde, is taken over by the mind of her adult self from a nightmarish future. Despite all their best efforts since, the X-Men are no closer to preventing it now than they were then. This began the convoluted time-travel that still dogs the *X-Men*'s continuity today, but the story is excellent. Byrne leaves with 143's *Alien* pastiche, and Cockrum returns for another more than creditable run. The team face a constant stream of foes, including returns from old enemies Arcade, Magneto, and the Brotherhood of Evil Mutants, but it's already apparent that John Byrne's influence on the plots is going to be sorely missed.

The next regular penciller is Paul Smith from 165. The tempo relaxes slightly from all-action adventures, as Claremont focuses more on the characters. There's an adventure with the Morlocks, deformed mutants who live in the New York sewers, the addition of former villain Rogue to the team, and the introduction of Madelyne Prior, Cyclops' amnesiac lover, who looks remarkably like the late Ms Grey. The is-she-isn't-she-Jean Grey plot occupies 171-175*, leading to a well-executed conclusion and wedding. Claremont then teams up with John Romita Jr from 176 to 212. While remaining considerably above average during this period, only a few fill-in issues by Barry Windsor-Smith (186,198 and 205) match the Claremont/Byrne days. The major subplot at this time is the introduction of Rachel Summers, the 'Days of Future Past' timeline's daughter of Scott Summers, and her efforts to prevent her world coming about. 201, in which Cyclops fights Storm for the leadership of the X-Men, is also very good.

By the time Romita leaves, however, it's clear that Claremont is growing bored. The art is handled by a succession of big-name, but irregular, pencillers, until Marc Silvestri comes on board with 220, at which point *X-Men* regains a sense of direction. Claremont's storylines start to ramble too much, though, despite some good new ideas including the anti-mutant island of Genosha and the emergence of Mr Sinister as a major villain. At this period the comic was bi-weekly and this frequency may have overstretched the creative team. *X-Men* picks up again with the introduction of penciller Jim Lee, again suggesting that Claremont works better with an artist who makes major contributions to the plot. Lee draws 248 and 256-258, then regularly from 267, at which point his contribution is most easily noticeable, as the issues brim with an enthusiasm lacking in Silvestri's. By 274, a superb tale of Rogue and Magneto in the Savage Land, Lee is taking the plotting credits, with Claremont relegated to scripter. Lee's run is unfortunately short as, following 277, he switched to the new adjectiveless *X-Men*, and after two further collaborations with others Claremont departed after nearly two hundred issues.

Artist Whilce Portacio moves the comic back to all-out action from 280, sometimes assisted on the plots by Lee and the scripts by John Byrne. Trevor Fitzroy and Shinobi Shaw are developed as new major villains, and the time-travelling Bishop is introduced in 281-284*. Around the mid-280s, Scott Lobdell joined the creative team, initially scripting Portacio's plots, then as writer returning a soap-opera feel. When Portacio left with 292, Lobdell continued, and the issues around the wedding of Cyclops and (the long since resurrected) Phoenix are particularly good. Joe Madureira first pencils 313 before becoming regular penciller with 325. His exaggerated, but open, style would make him a fan favourite, and once he's over his storytelling difficulties he's the best regular artist the title has seen for some while. The conclusion to the 'Onslaught' story in 337 had ramifications throughout the Marvel Universe, in the X-Men's case separating them from guiding light Professor X. A long-running subplot about Gambit's past is settled in 350, Lobdell and Madureira's finale, after which Steven T. Seagle writes. He provided too many quiet moments, exemplified by 351's good story of an outed mutant doctor adapting to the changes in her life, and not enough crescendos. Seagle is paired with stunning art by Chris Bachalo and Tim Townsend from 353. Long-time fans should enjoy the original team getting away from it all in 356-357, Rogue's disenchantment is dealt with in 359, and 360 begins a story returning Professor X with plenty of surprises along the way. Both Seagle and Bachalo depart with 365 having served up a satisfying run within limitations. At this point not buying the adjectiveless *X-Men*, and often other related titles, meant gaps in the stories, a cynical exploitation of a captive audience. During the subsequent better run plotted by Alan Davis, with most issues well drawn by Adam Kubert, all distinctions between the two *X-Men* comics vanished, with stories crossing between them continually. For those not concerned with having the original comics, this period is best read in the UK's *Essential X-Men* reprint title, printed on superior paper and featuring three stories per issue. Davis first returned Magneto, then has the X-Men encounter alien shapeshifter versions of familiar Marvel heroes, before setting up conflict between assorted X-Men in the exciting 375. Thereafter he returns one of their most powerful enemies in an ultimately unsatisfying story with tragic consequences. Of course, in the X-Men's world a tragedy is nothing a miniseries and a special or two can't set right.

Claremont is back from 381 for a disappointingly dull and introspective few issues, only perked up by the arrival of new penciller Salvador Larocca in 387. There follow two deaths. A character long associated with Claremont goes pointlessly in 390 (courtesy of Scott Lobdell) while in 388 a character he created succumbs to a more poignant demise, well followed-up in 389, the best issue of Claremont's second run. After some strange new X-Men in 392 there was a highly publicised re-tooling, which starts decently enough with Jean Grey and Wolverine exploring long-dormant feelings in 394. Thereafter it leaves the rails with extraordinary rapidity. New artist Ian Churchill bails two issues later, leaving the art alternating between the contrasting styles of Ron Garney and Sean Phillips, writer Joe Casey stretches slim plots to snapping point, and the most positive aspect is that readers no longer had to buy both *X-Men* comics for a complete story. Particularly dull is 400, kindly described as a failed experiment, with Eddie Campbell and Ashley Wood surprising choices among six artists, and Casey's best overall is his finale in 408-409. It's a character study offering a few ethical dilemmas and a novel way of dealing with an old villain. The idea of a mutant brothel in 399 is also interesting, but goes nowhere. Writer Chuck Austen's arrival with 410 provided the best story seen here in some years, viewing a crisis through novice eyes, in this case a set-upon teenager joining the school thrown into the middle of a battle between the X-Men and Juggernaut. Well drawn by Garney, the dialogue is sharp and there's a long absent exuberancee. 414 is even better, and with the companion title currently at a creative peak, the future for *X-Men* looks bright.

There have been twenty-five *Uncanny X-Men* annuals, numbered to 18, then designated by year from 1995, missing 2002. Despite top quality art for many years, few match the best of the regular title. George Pérez draws a sprightly annual 3 set on the world of faux-barbarian Arkon, and Art Adams' annual 9 teaming the X-Men and their protogées The New Mutants still reads well. He also illustrates 10, introducing Longshot, 12 and 14, the latter the first appearance of Gambit and Claremont's last annual, while Alan Davis pencils 11's insight into the X-Men's dreams. Notable artists drawing less notable scripts include Jae Lee on 16, Jason Pearson on 17 (collected with 3 and 10 as 'Danger Room Battle Archives') and Bryan Hitch on *Uncanny X-Men '95*. Beware Duncan Rouleau's grotesque distortions on '97, while 2000 is the best of the recent annuals, although stretching a slim story about an emerging mutant a long way. Mention should also be made of the wretched, wretched Ashley Wood art on the 2001 annual. All flat technique with no storytelling, the word balloons have more depth. What were they thinking?

This title has been better served than almost any other by reprints, with almost any noteworthy story (and vast quantities of tosh) available. Three deluxe *Marvel Masterworks* volumes cover *Giant-Size* 1 and 94-120, while that run is also available as *Essential X-Men* volume 1, with three further volumes reprinting up to 176 and annuals 3-6.~WJ/JC

X-MEN ADVENTURES

Marvel: *Series one 15 issues 1992-1994, series two 13 issues 1994-1995, series three 13 issues 1995-1996, series four 12 issues (Adventures of the X-Men) 1996-1997*

Adaptations of animated TV series episodes with a variety of artists, retrofitted and pared down for the attention deficient TV audiences. Initially, the stories are often more accessible than their source material, but by the middle of series two pressure to introduce more of the character back catalogue to the TV fans (and their attendant action figures to the toy shelves) had grown. The result was that the show and its comic adaptation became as bogged down and wearisome as the real thing. Completists only~WW

X-MEN Chronicles

Marvel: *2 issues 1995*

Bookends for the 'Age of Apocalypse' story occupying many *X-Men*-related titles in 1995. The past is altered, resulting in alternative groupings of Marvel's mutant teams. The first issue has Magneto leading a team of X-Men's first mission, and the second has the same, now far more experienced, team in an altogether better tale of love and superhero fights. That's not saying much, mind.~FP

X-MEN: EVOLUTION

Marvel: *9 issue limited series 2002*

Based on the animated *X-Men*, this is the origin of the team, starting with Professor X, Wolverine and Storm in 1 and continuing until there's a whole troupe by 4. At that point the emphasis shifts to the X-Men mixing with the teens at the local high school. There's interesting art with Udon Studios producing manga style cartoon figures laid over computer generated backgrounds. Aimed at the younger end of the X-Men fanbase, it's a job well done. The best issue is 5, with Rogue tempted.~WJ

X-MEN: The Hidden Years

Marvel: *22 issues 1999-2001*

John Byrne's aim here was to produce substitute issues of *Uncanny X-Men* 67-93, providing original stories within the established continuity to replace the reprints in those issues, an idea he first suggested in the early 1980s.

It starts with Professor X dispatching the team to ascertain Magento's fate after *Uncanny X-Men* 63 in the Savage Land. Subplots include a bickering love triangle involving Iceman, Havok and the green haired Lorna Dane (later Polaris). The Beast is rescued by a "goddess" called Ororo, Marvel Girl's phoenix-like powers begin to manifest in 9, and the Angel experiences a personal tragedy in 15. Byrne can be a good writer, and his pencils shine under the inks of Tom Palmer. Best of all, he knows how to tell a story. He includes plenty of guest stars, and villains include the Sentinels, Kraven the Hunter and the Mole Man, and his final story incorporates the events in *Fantastic Four* 102 involving Magneto and the invasion of the surface world by Namor, the Sub-Mariner. Everything slots nicely into continuity, and this was only cancelled as uncompatible with the planned revamp of other X-Men titles. A shame, as it was a readable comic.~HY

X-MEN: THE MANGA

Marvel: *26 issues 1998-1999*

A tag-team of various Japanese creators produce a series of mutant misadventures roughly echoing the continuity of the *X-Men* animated series, beginning with Jubilee's abduction by Sentinels and her subsequent induction into the team. At least, unlike the companion *Spider-Man* title, this features the 'real' X-Men rather than re-casting the heroes as Orientals, but that's its sole and slender merit. The stories remain warmed-over re-introductions of established characters and themes, and it's both inferior mutant fodder and inferior manga.~HS

'God Loves, Man Kills' was the fifth of Marvel's graphic novel series, but has since been reprinted at comic size. It's Chris Claremont's sharpest definition of the role of the X-Men in a world prejudiced and scared of mutants, well illustrated by Brent Anderson. The 'Heroes for Hope' charity comic, is a jumble of good intentions, but poor comics. 1980s teaming with The New Teen Titans by Claremont and Walt Simonson makes good use of both teams, without appearing too crowded. They meet a Phoenix resurrected by Darkseid in order to turn Earth into another Apokolips, and it's Simonson on top form. The lamentable team-up with the Exiles has Juggernaut a member of the Exiles and an X-Men appearance seemingly inevitable.

The team-ups with the Micronauts and Avengers are insipid affairs, with too much plot and too little characterisation. On the other hand, the X-Men have always worked well Alpha Flight. The first, by Claremont and Paul Smith concerns a magical threat, the second, by Ben Raab and John Cassaday, the theft of Vindicator's technology by Baron Strucker and Alpha Flight's rescue of the X-Men after their capture. Both are visually enjoyable, but the latter's emphasis on Vindicator's emotions and the shorthand narrative style are wearing. 'The Gift' reprints the first of these miniseries. *X-Men & ClanDestine* is primarily a showcase for the latter group, as cosmic demon manipulates the two teams. Alan Davis puts on a good show artistically, but it's difficult to care about what's happening in his script.

X-Men titles were suspended during the 'Age of Apocalypse' involving an alternate timeline in which Professor Xavier is killed. Magneto continues his work, but Apocalypse becomes master of the world, annihilating humanity and rebel mutants alike. Different groupings of X-Men were involved in a likeable set of comics, with some interesting and entertaining stories. *Astonishing X-Men*, by Scott Lobdell and Joe Madureira focused on the mutants led by Magneto, his wife Rogue and their child. *The Amazing X-Men*, by Fabian Nicieza and Andy Kubert has Storm and Quicksilver among others, facing the threat of Apocalypse's religious fanatics. Both are linked by common plot-threads, though the attitudes of the heroes are different, with Rogue and Magneto more positive about success. Within the same event, 'Chronicles' covers turning points leading to the Age of Apocalypse, the opening battle and the death of the Scarlet Witch (1) and the well-portrayed, romantic triangle of Rogue, Magneto and Gambit (2). The entire saga is book-ended by the 'Alpha' and 'Omega' one-shots, and 'Prime' followed in its wake, ostensibly a young mutant's attempt to reach the X-Men, but really an excuse to preview storylines from upcoming comics. Bryan Hitch and Gary Frank are among seven different pencillers. 'Road to Onslaught' and 'Onslaught' are parts of another major event, in which the personification of the combined evil in Professor X and Magneto threatened to destroy the world, until stopped by the sacrifice of the non-mutant Marvel characters (though Spider-Man must have been on holiday at the time). The actual assault on Onslaught makes no sense, and the whole premise was spectacularly unsatisfactory.

In John Ostrander and Hitch's 'Brood: Day of Wrath', the Brood Empress send assassins to Earth to eliminate a Brood Queen, who's somehow found the strength to resist the Empress' will, after infecting many of the members of her husband's ministry. A team of X-Men arrive to help her (or kill her, in Wolverine's case), and the series becomes one long fight, occasionally interrupted, disturbingly, by some cloyingly moralistic dialogue. 'Liberators' is the tale of Wolverine, Colossus and Nightcrawler travelling to a Russian detention camp. Joe Harris attempts to widen his tale around the morality of such places and the artwork's by Phil Jimenez, but this is a disjointed, dull affair. 'The Magneto War', by Davis and Nicieza with artwork by Lee Weeks, prefaces the storyline of the same name beginning in *Uncanny X-Men* 366, as the Acolytes search for information about Magneto's whereabouts. In much the same way, the sole purpose of The *Astonishing X-Men* (1999 version), appears to be to kill Wolverine. It's a terribly scripted story (by Howard Mackie) about a new manmade race and a very powerful character called Death, whose origin and identity remain unexplained. 'True Friends' is better, and more offbeat, featuring Shadowcat and Phoenix (Rachel Summers), travelling back in time to 1936 Scotland. There they team up with a pre-Wolverine Logan, Shadowcat falls in love and Nazis in league with Amahl Farouk are plotting the downfall of the English monarchy. It's good, old-fashioned adventure somewhat burdened by Claremont's moralising.

'Children of the Atom' begins well, as a first-time telling of how Professor Xavier established a school for mutants, exploring, in more detail than before, the lives of the founder members before they joined the X-Men. It's competently written by Joe Casey, who avoids too much tampering with what's already been revealed, but beautifully drawn by Steve Rude, at least for 1-3. Thereafter, Paul Smith (4) and Essad Ribic (5, 6) seem poor in comparison, not helped by rougher inking. 'Black Sun', written by Claremont (with occasional help from Roy Thomas of all people), concerns the demon Belasco's support for an invasion of Earth by the N'Garai. Various X-Men try to stop them both. This is a dull idea, and even Thomas Derenick gives up, leaving 3-5 to other artists. 'The Hellfire Club' is told as the biography of the Shaw family through the investigations of journalist, Irene Merryweather. It begins in Salem, 1692 with Hiram Shaw trying to prevent his son's liaison with Abigail Harkness. Hiram happens to be Sorcerer Supreme at the time so his attitude to witches is somewhat hypocritical, but leads to his descendant's position as head of the X-Men's archenemies regardless. Charlie Adlard's artwork works well, but the later issues are rather lifeless lists of events. 'Declassified' is little more than pin-ups, having a flimsy story about misleading scenes of past events interspersed with single-page character profiles of current X-Men. A deliberately unpleasant and ugly comic is *Codename: X-Men*, designed to be read as if published by the 'Marvels Comics' company within the Marvel Universe. Mark Millar and Duncan Fegredo provide a distorted view of the X-Men with some forming a government-sponsored suicide squad, others working for master terrorist Doctor Strange (of all people).

Marvel published a substandard adaptation of the *X-Men* film and three prequels. 'Magneto', by Joe Pruett and Mark Texeira, is a powerful story about the friendship between

Xavier and Magneto that led to them creating the school for mutants together, before their ideologies clashed. Magneto wants to enforce tolerance, Xavier to overcome intolerance through teaching. It's easy here to see why Magneto is so popular a character – readers want to believe that Xavier is right, but think that Magneto is. 'Rogue' has her captured by genetic researchers and meeting others like herself for the first time before they team up to escape (though this contradicts her perceived knowledge in the film). 'Wolverine' sees him protecting a woman with amnesia from the police and the Yakuza, with guest villain, the Silver Samurai. All are let down by overly dark colour and printing. Beware the 'Movie Adaptation' collection, which reprints *Uncanny X-Men* (112, 113, 171) and *Marvel Comics Presents* (72-75) rather than the movie prequels.

In 'Forever', a sentient space ship projects Jean Grey, Iceman, Mystique, the Toad and Juggernaut back into their own past lives, in order to protect the future development of mankind. It seems they're the keys to human evolution and this experience should change them all for the better. Written by Nicieza and attractively drawn by Kevin Maguire, it's an effective examination of each character's motivations, with a twist at the end over who's been manipulating whom. Another series that's largely attractively drawn (by Kevin Sharpe), Claremont's 'Savage Land' is nevertheless a stunningly banal story.

The remaining titles contain reprints as follows: 'Archives' (1995) of *New Mutants* 26-28 and *X-Men* 161; 'Archives' (1995-1996) of *Captain Britain* strips by Alan Moore and Davis from titles published by Marvel UK; 'Earthfall' of the first Brood storyline; 'Firsts' of *Avengers Annual* 10, *Hulk* 181, and *X-Men* 221 and 266, the first appearances of Rogue, Wolverine, Mr Sinister and Gambit; 'Lost Tales' of backups from *Classic X-Men*; 'Rarities' of Bizarre Adventures 27 (coloured), *Classic X-Men* 1, *Marvel Fanfare* 40, *Amazing Adult Fantasy* 14 (Stan Lee and Steve Ditko prototype mutant story from 1962) and a Lobdell and Chris Bachalo promotional strip for *Generation X*; 'Special Edition' of *Giant-Size X-Men* 1; 'vs. Dracula' of *X-Men Annual* 6 and 'Wrath of Apocalypse' of *X-Factor* 65-68.~NF

X-MEN: THE EARLY YEARS

Marvel: *17 issues 1994-1995*

Reprints the early issues of the 1960s X-Men, thoughtfully repackaged with often very lovely new covers, several by Adam Hughes. Cancelled, not because of poor sales, but solely to clear a schedule space for the trashy updating, *Professor X and The X-Men*. Philistines.~HS

X-MEN 2099

Marvel: *31 issues, 2 Specials 1993-1996*

In the far future a man named X'Ian dreams of a "Mutant Nation", where the genetically enhanced can live in peace, free from prosecution. He holds gatherings at which mutants congregate, hoping to mobilise them, but when one is broken up by the ruling élite, he and a select few of his followers become fugitives, searching for their Mutant Nation. Written by John Francis Moore, illustrated by the lacklustre Ron Lim, this series patches together a bunch of post-Apocalyptic science-fiction movie clichés competently, but without vitality. Early on, the series becomes diverted into endless fights with various other groups – the Freakshow, genetic barrel-scrapings; the Chosen, a twisted version of Xavier's original X-Men – and X'Ian's dream of a mutant nation fades further into the background, to be replaced by slugfest-of-the-month. Even the use of the hijacked X-Men name didn't prevent this title from sliding into deserved obscurity with the rest of the 2099 line.~HS

X-MEN UNLIMITED

Marvel: *40 issues + 1993 to date*

With woefully convoluted storylines in the regular *X-Men* titles, Marvel decided readers needed a giant-size comic that concentrated on just a few characters at a time. There's little of note in the early issues. Assorted creators write to formula and you're lucky if there isn't a committee drawing the results. The worst example is 6, which not only has Paul Smith credited with storyboards, but also lists four pencillers and seven inkers. Artistically, the best of these issues are by Liam Sharpe drawing the X-Men in space (5), and Val Semeiks inked by Bob McLeod illustrating the return of wizard Belasco (9). In 4, years after everyone guessed as much, Mystique is revealed as Nightcrawler's mother, but the best story from this period is 8, though stretched way too thin by the format. A young mutant comes to terms with his powers when they manifest at school and the X-Men then tell him he's got the Legacy Virus. Stories are self-contained to 24, and the artwork's stronger, but only the writing of Brian K. Vaughan in 22 reaches past the surface conflicts.

Joe Pruett becomes regular writer with 24, hamstrung by closer ties to other titles during his run. From here there's a backup strip in most issues, with the best being Doug Moench and Mark Texeira describing a preachy, anti-hunting Wolverine in 25 and Jimmy Palmiotti and Liam McCormack-Sharp doing a poor Frank Miller with their Deadpool strip in 28. From 30 creators not normally associated with Marvel or the X-Men play with the mutants, and issues contain at least two stories. Andi Watson's tale of three female members of Generation X in space is fun enough and engagingly drawn by Jim Mahfood, but could be any three characters. 31 has a good X-Man story by Steven Grant and Charlie Adlard, while Michael Golden and Brian Stelfreeze work on Jean Grey with Rogue and Cyclops respectively. 32 is something of a high point artistically, with a Dazzler biography by Will Pfeifer and Jill Thompson, Nightcrawler by Pruett and Mike Deodato and comedy from the Starjammers, by John Ostrander and Ian Gibson. Villains are spotlighted in 33 with well-drawn offerings from Esteban Maroto and Quique Alcatena. Sabretooth versus Jean Grey by John Smith and David Finch is another winner in 35, which also features smooth artwork from Amanda Conner and Kevin Maguire on strips by Palmiotti and Gail Simone respectively. More good artwork on thoughtful pieces comes in 36 with Ian Edginton and Joe Chiodo on Magneto, and Jeff Jensen and John Totleben on the Beast.

38 has Shadowcat grieving for Colossus while fighting bigotry (nothing like packing in as much as possible), though Greg Rucka and Darick Robertson do make this a sympathetic piece, without becoming too maudlin. Storm takes the spotlight in 39's three stories, the pick of which is Jason Pearson's conversation between Magneto and Storm after yet another funeral. 40 is another all-villain issue, but it's to be hoped that with the title becoming monthly from 39, some wider ranging plots and different emotional content will emerge.~NF

X-NATION 2099

Marvel: *6 issues 1996*

Despite having little connection with the modern-day X-Men, the magic 'X' designation made *X-Men 2099* the most popular of the 2099 titles, and this spun-off. X-Nation is Halo City, a haven for mutants. One recent arrival is prophesied to be the Mutant Messiah, who will alter the known world for good or bad, and to this end former X-Men (2099 variety, natch) member Cerebra bands a selection of teens to train them right and proper. This is the 2099 version of *Generation X*, written for an audience with a minimal attention span. There are plenty of scraps, lots of arguing between the cast and a big fight each issue, but behind it all there's hardly a plot to be located. In the end all comes down to a battle between youth and the eternally old. Nice Humberto Ramos art in 1-3, though.~WJ

X/1999

Viz: *6 issue miniseries 1995*, 8 Volumes 1996-2002*

Kamui Shiro returns to Tokyo after an absence of six years. His childhood girlfriend, Kotori, is having prophetic dreams about the end of the world and Kamui is attacked by super-powered strangers. The final battle to decide the fate of the world is about to start and Kamui must choose whether to join the Seven Seals (Dragons of Heaven) or the Seven Harbingers (Dragons of Earth). This is revealed slowly as the action scenes depict Tokyo being struck by earthquakes as representatives of the Seals and Harbingers gather, occasionally challenging each other to a fight, but with no decisive outcomes. Kamui's fateful decision is left to the eighth volume, at which point Viz had to halt publication. Created by Studio Clamp, the script is repetitive and slow moving, concentrating on the characterisation and romance, with occasional lapses into extreme violence. The artwork, meanwhile, is studied, elaborate and ornate, full of symbolism. The first volume reprints the miniseries, after which the story was continued in anime magazine *Animerica* and then in manga anthology, *Animerica Extra*.~NF

X-O Manowar

Valiant: *69 issues (0-67 – two number 50), 1 Yearbook 1992-1996, 2 issue microseries ('Heavy Metal') 1996*

X-O is Valiant's armoured hero, but the inventive twist characterising the initial Valiant cast has him as a Goth barbarian who inherits a 20th-century corporation, Orb Industries. Early issues had Aric adapting to his new existence, aided and manipulated by Ken Clarkson, and the best were 9-10, as Aric returned to 400 AD and Ken had his chance to take over the X-O armour. Other factions shared an interest in the armour: the Harbinger Foundation (4), the government (18-20), the Armorines (25) and the spider aliens who created it. The initial concept serves the series well as Aric was a sympathetic character in an interesting situation and the interplay between him, Clarkson and Orb's security chief Randy Cartier could carry a mundane plot. Jorge Gonzalez wrote most issues between 14 and 44, and they're almost all better-than-average superhero adventure despite artists generally lasting no more than five issues. The team of Rik Levins and Katherine Bollinger in 26-40 was the exception: their best issue was 30, with Aric requiring new armour.

Complications pertaining to that new armour arose in the two issue 50s, in which X-O underwent wholesale changes, leaving Aric in space from 51. This new direction was dull, with issues to 57 slim on plot, big on large panels and extended fight sequences, and readable in three minutes. The grimly distorted art of Bart Sears and, to a lesser extent, Andy Smith was ugly and unappealing. Keith Giffen's arrival with 60 to write all but the final issue was welcome. Plot and humanity once again come to the fore, and there were more surprises and horror than at any previous time during the run. Sadly, by then it was too late, except for the last spasm of 'Heavy Metal', which teams X-O with Iron Man in two number one issues, the second published by Marvel and reversing the billing. It's standard stuff issued to tie-in with a video game.~WJ

X-O Manowar

Acclaim: *21 issues 1996-1998*

X-O is completely reworked for the Acclaim reboot, all-purpose scientist Donovan Wylie now occupying the armour. Never less than good, Sean Chen warms up for *Iron Man* by pencilling 1-4. Never less than professional, writers Mark Waid and Brian Augustyn are coasting. With 7 Augustyn becomes sole writer, but despite solid art from Scot Eaton in most issues X-O is never compelling. The reason is Wylie. He's a smarmy egotist whose glib dialogue grates. The origins of this X-O armour are revealed in 12-14, the best Augustyn issues. A new logo signals the arrival of Dwayne McDuffie in 17, and the combination of his writing and Eaton inked by Don Hudson provide the best issues by far. McDuffie ups the intrigue, adroitly wraps up dull dangling plots, introduces some surprises and there's finally a feeling of new ideas filtering through. Again, cancellation was a shame.~WJ

XOMBI

DC/Milestone: *22 issues (0-21) 1993-1995*

Xombi is David Kim, a research scientist working on "the application of nanotechnology to biological regeneration". When he's fatally wounded his assistant saves his life by injecting him with technology that continually renews Kim's limbs and organs. Unable to die, our hero becomes a weirdness magnet for such villains as 4's "four stable boys of the apocalypse", Manuel Dexterity, a psychotic killer with a giant hand for a lower torso (7), a bizarre cult called the Beli Mah (7-10's 'School of Anguish'), and a race of subterranean man-eating monsters. As David learns more about his new immortality he seeks advice from such offbeat supporting characters as superheroine Catholic Girl and paranormal investigator Rabbi Sinnowitz.

The early issues are uncertain, but by 4 writer John Rozum and artist J.J. Birch had struck the right balance between absurdist humour, occult intrigue and superhero conflict. Birch's scratchy, stylised artwork takes some getting used to, but nicely accentuates the title's mysterious, menacing atmosphere. Although the storytelling is occasionally obscure for obscurity's sake, this rather neglected series compares with the best Vertigo titles, and should appeal to fans of Grant Morrison's run on *Doom Patrol*, a clear influence on Xombi's surreal storylines.~AL

X-PRESIDENTS

Random House: *1 Volume 2000*

This is based on the satirical animated cartoon segment shown on *Saturday Night Live*. Jimmy Carter, Gerald Ford, Ronald Reagan and George Bush Sr become brain-dead loser superheroes. Their enemies are a cartel of evildoers including Castro, Ghaddafi, Saddam, Noriega, Milosevic, Yeltzin, Amin, the Ayatollah, the brain of Pol Pot and Imelda Marcos. There's a scaly alien called Reptilio and Electrobrain too as well as their agent Barbara Walters. No wait, it'll get funny in a minute. Seventy-seven pages later you're still waiting. So whilst Nancy Reagan saying "My astrologer told me that you're a homo" is priceless it also gives an idea of the level of humour. This shouldn't be read as a comic: this is political satire dressed as a comic to downplay the rank xenophobia and prejudice that feeds it. The hilarious indicia at the foot of page one eclipses the entire comic.~SW

X.S.E. Xavier's Security Enforcers

Marvel: *4 issue miniseries 1996-1997*

Introduced in *Uncanny X-Men* 282, Bishop arrived from the future knowing a 1990s X-Man was a traitor. His future, or past, so to speak, is explored for the first time here. The title sounds like a squad of club bouncers, and inspiration was in equally short supply for the content. Expository infodumps occur as Bishop and Shard discuss their history, and the revelations aren't worth wading through the morass from the usually reliable John Ostrander. The art begins badly and deteriorates from 2 as the Deodato Studios produce their regular crimes against human anatomy.~FP

X-STATIX

Marvel: *4 issues + 2002 to date*

Peter Milligan and Michael Allred continue the satire on media manipulation and marketing via exaggerated soap opera theatrics that they began in *X-Force*. The team go about their business whining, bickering about and exploiting profile, and now sniping at a new team more popular than they are. Unfortunately an almost omnipotent mutant awaits both teams, and the only person who might have tamed him died in *X-Force*. The creative approach stunned when introduced, but there is now a feeling of recycling. That, though, is what superheroes have done for decades, and this is a unique approach.~WJ

X-TERMINATORS

Marvel: *4 issue miniseries 1988-1989*

This is well-nigh incomprehensible since major events take place before, after and outside these issues. It draws on *New Mutants* stories, but the cast is mostly assembled from *X-Factor*. And what a cast it is; Skids, Rusty Collins, Rictor, Boom-Boom, Artie and Leech, a barrel-scraping's worth of third-stringers and no-hopers. They're joined by a plucky paraplegic computer geek with a mighty morphin' wheelchair. Oh dear me, Louise Simonson. Jon Bogdanove actually appears to be having fun at first, using a semi-cartoony style with some grace and charm. By 3 both are flagging, and 4 might just as well have had "For Christ's Sake get This Over With!" writ large on every page. Why not just ignore the whole lot at once?~HS

X-TREME X-MEN

Marvel: *19 issues + 2001 to date, 4 issue miniseries ('The Savage Land') 2001, 2 issue microseries (' X-Pose') 2002*

During the great X-relaunch of 2001, former *X-Men* writer Chris Claremont claimed the characters he regarded as most 'his': Psylocke, Storm, Rogue, Thunderbird, Bishop and the Beast. The heroes seek the Books of Destiny, a precognitive's diaries of mankind's future, to prevent them reaching the wrong hands. As this doesn't readily lend itself to cheesecake poses on the part of the female cast, the lengths to which artist Salvador Larocca has to go to achieve this are remarkable. The poses are also embarrassingly inept and inappropriate. Amid the extraneous gussets, the opening story concerns a man named Vargas. Perhaps an oblique reference to the classic pin-up artist, hence the sleazy poses? No, Claremont's not that clever. Vargas overpowers the team, killing one of them, but it's only a couple of issues before she's a spiritual presence to sundry team-mates.

New characters include Sage, a shapely thing whose primary ability appears to be the power to squat in high heels while thrusting her leather-clad arse at the audience, Lifeguard, an Aussie metamorphing chick, and her brother Helpless Lad. Or is it Hostage Boy? No, Slipstream, that's it. The Beast escapes to *New X-Men*, but Gambit joins to reprise the tired old "I love you but we can never touch" angst with Rogue. This shambling, flatulent slurry of a series shambles forward, laden down with badly-judged flashbacks diverting any grain of interest in the narrative. Characters tell each other things that they must already know, again and again and AGAIN; people talk endlessly about emotions, displaying none. It's like a parody of Claremont's worst excesses, but without any redeeming humour.

The Savage Land miniseries is a pointless battle in Ka-Zar's old stomping grounds. Rather better is 'X-Pose', where a team of investigative reporters pursue the X-Tremes in a tight storyline, deftly-co-ordinated with events in the other X-titles. Artist Arthur Ranson does a stellar job, despite seeming vaguely embarrassed when having to draw super-heroics. If regular issues were up to this standard, everyone's patience would be in much better shape.~HS

X-UNIVERSE

Marvel: *2 issue microseries 1995*

In 1995 X-titles were replaced with miniseries about an Earth where Professor X had died before forming the X-Men. This sidebar series concentrates on the non-Mutant characters of the Marvel Universe, specifically, Don Blake, Ben Grimm, Gwen Stacy, Tony Stark, Sue Storm and Victor Von Doom. Set against a doomsday backdrop, these ordinary people strive to thwart the seeming unstoppable forces of Apocalypse from overwhelming the last outposts of humanity. It's competent and enjoyable, with just enough backstory provided to assist casual readers without boring the diehard collector.~WW

Star Wars: X-WING ROGUE SQUADRON

Dark Horse: *35 issues 1996-1998**

The further adventures of film favourite Wedge Antilles, Luke Skywalker's old pal from Tatooine, as he leads the best fighter squad in the Rebel Alliance. Mostly four part story-arcs, the series suffers from having different creative teams and usually flounder in clichés and irrelevant detail. Exceptions include the top-flight thriller 'The Phantom Affair' (5-8) with Darko Macan and Edvin Biukovic delivering a pacy mystery as the squad are sent to the College world to protect a prototype super-weapon. Another success is 'Masquerade' (28-31) as Michael Stackpole, on full writing chores, and Drew Johnson and Gary Martin illustrating, play bluff and double-bluff. The regular cast plus Han Solo, Chewie and Leia all go to extraordinary lengths to test the veracity of a high ranking Imperial defector. Dedicated fans won't ever be disappointed but the casual reader should consider caution.~WW

Dark Horse: *7 issue limited series 1994-1995**

Forty years from now multinational industries control countries, and Hans Nobel has escaped American martial law. Relocating to Amsterdam to discover how his grandfather died, and living with a bunch of squatters threatened by totalitarian police, he becomes the prime suspect in a series of assassinations of leading corporate figures. Arnold and Jacob Pander craft a complex and depressing saga owing more to European adventure strips than to traditional US comics. It moves at its own pace, encompassing over a dozen major characters, and by the climax the body-count is high. Mention should also be made of the excellent black and white tones of colourist Pamela Rambo. The title has little relevance, and salacious content is minimal, but you could do far worse looking for a thriller.~FP

Xxxenophile Books: *6 issues + (The Xxxenophile Collection) 1998 to date*

The most accurate description here is the paradoxical phrase "Wholesome pornography". Yes, writer/artist Phil Foglio turns out a hardcore nomping comic, replete with dangly, wobbly and sticky out bits, but mercifully free of the appalling artwork, repetitive storylines, and blatant misogyny that infests most 'erotic' comics. It's also clever, inventive, charming, funny, and, yes, sexy regardless of your gender, or gender preference. Each self-contained story (two or three in most issues) has different characters and settings, exotic, alien and mundane. Unlike most porno comics, this is a series you can actually read, and enjoy the hell out of.

The series originally ran ten issues, with 11 reprinting new stories produced for collections. The second series starts by repackaging the first, but 6 is an all-new tale of a band of fantasy adventurers. A spin-off, *Xxxenophile Presents*, ran five issues (1992-1995), with full length stories by Foglio's friends, but, although not without merit, it's not as inventive or entertaining as the original.~HS

For reasons as yet unrevealed, almost every male creature on Earth dies. The statistics are provided, but suffice to say society is devastated worldwide. There are two survivors, though, Yorick Brown and his recently acquired Capuchin monkey. Yorick's existence makes him a target for various reasons, while his mother, once a minor state representative, is now the highest ranking elected official, and so President. It's nice to see artist Pia Guerra on a high profile comic, and from the double meaning of the title on down Brian Vaughan has crafted a page-turning thriller with a brilliant hook. It remains to be seen whether he can sustain the intrigue, but for the time being it's provided Vertigo's biggest hit in years, which is why a collection has been rush released.~WJ

YAHOO
Fantagraphics: *6 issues 1988-1992**

This debut series from acclaimed cartoonist Joe Sacco began rather shakily, with a competent but undistinguished collection of humour strips, such as 1's 'Cartoon Genius'. In 2 Sacco offered his disillusioned look at the music business from a roadie's perspective, and Yahoo began to profit from increasingly unusual storytelling and acute first-hand observation. 5 contains some of Sacco's most scathing, troubled musings on the Gulf War. Strangely, the *War Junkie* collection omits this issue, while finding time for 2's largely unconnected story. 6 is a very effective change of pace. Written by cartoonist Susan Catherine, 'Take It Off' is a fascinating, coolly objective account of Catherine's career as a stripper, meticulously illustrated by Sacco.~AL

YELLOW DOG
Print Mint: *22 issues (1-8, 9/10, 11/12, 13/14, 15-25) 1968-1973*

One of the oldest and longest-running underground titles (bettered only by *Weirdo*), *Yellow Dog* started life as an underground newspaper before becoming a regular-sized publication with the combination issue 13/14. Despite some nice Robert Crumb art, the earliest issues were very insubstantial, consisting largely of dope-oriented vignettes and scatological humour. Issues from 7 up were considerably better, although still with a fair proportion of filler material each issue. Highlights included Gilbert Shelton's Freak Brothers (7-10), Crumb's Mr Natural (8) and some great art from Robert Williams (7, 9/10), Kim Deitch (9/10) and Skip Williamson (11/12).

The first comic-sized issue was the best of the run, containing substantial strips by Crumb and S. Clay Wilson, and a nice Nard'n'Pat story from Jay Lynch. After this the title increasingly came to be seen as a showcase for new talent, and again, most issues were patchy, although there was still a lot to admire. Greg Irons developed from a psychedelic artist into a cartoonist with some bite, and this is reflected in his fine strips in 13/14 and 17-20. Other notable contributors were Justin Green (15, 19, 21, 22), Trina Robbins (19, 20, 23, 25) and Bill Griffith (18-20). Young cartoonists Bob Armstrong (23) and Howard Cruse (24) also got their breaks in *Yellow Dog*, though both were to progress to greater things.~DAR

YIKES
Steve Weissman: *4 issues 1994-1995*
Alternative Press: *2 issues 1997-1998*

Yikes is lots of stories about kids, whether they be Li'l Bloody, Kid Medusa, X-Ray Spence, The Pullapart Boy or Dead Boy (who gets eaten by a dinosaur). Parodying *Caspar* and *Peanuts*, amongst others, the humour's sharp and black. The Alternative Press scripts are more adventurous, particularly the extended 'A Hayride with Dracula' in 2. The pencils owe much to Daniel Clowes and the inking style is a mixture of old (Eisner, Wood) and new (Burns, Ware), but the combination is distinctive and makes Weissman a figure to watch.~NF

YOUNG ALL STARS

DC: *31 issues 1987-1989*

With *Crisis on Infinite Earths* rewriting DC's entire character continuity, the meticulous work Roy Thomas had been doing patching up the history of DC's heroes in *All-Star Squadron* came to an abrupt end. Thomas, however, persuaded DC to let him create a new team with adventures set in World War II that wouldn't clash with their revised history, scripting the whole series with his wife Dann. This team consisted of Arn 'Iron' Munro, Tsunami, Flying Fox, Neptune Perkins, Fury and Dyno-Mite. From the start they are presented as the Junior All-Stars, propaganda vehicles whose exploits were meant to appeal to the hearts of Americans during the war. However, the first storyline in 1-6 is actually condemnatory of the camps set up to house Japanese Americans during World War II (Tsunami included).

10 and 11 feature a retelling of Philip Wylie's 1930 novel *Gladiator*, the story of 'Superman' Hugo Danner that is widely credited with establishing the concept of superhumans. Thomas only puts a foot wrong when he brings in stranded aliens (being used by evil Nazis in the long 'Dzyan Inheritance' plotline in 16-19). The 1940s Atom turns up in 'Atom And Evil' in 21-25 in preparation for an all-hero slugfest (28-31) in which the whole of the All-Star Squadron join the Young All-Stars to battle the Nazis.

Artistically the series started badly, with Michael Bair, Brian Murray and Howard Simpson alternating 1-14. Ron Harris turned up with 19, becoming the regular penciller. Inker Malcolm Jones III did his best to deal with a number of disparate styles but the comic suffered from a lack of visual coherency. *Young All-Stars* is full of good characters, but it's overwritten, looks rushed and uncared-for, and is, ultimately, too much like hard work.~NF

YOUNG CYNICS CLUB

Dark Horse: *1 issue 1993*

Cold story of a group of teenagers facing up to leaving home, getting jobs and generally living in the real world, the one in which they'll become insurance clerks, not famous writers. Glenn Wong's script is fluid and his art is clean and confident, but somehow it fails to engage your emotions. It's just too drab and realistic, with no peaks and troughs to the story.~FJ

YOUNG DEATH the Boyhood of a Superfiend

*Fleetway/Quality: 3 issue miniseries 1991**

As seen in several battles with Judge Dredd, Judge Death is an other-dimensional undead fiend whose solution to the problem of crime on Earth is to wipe out humanity. No humans = no crime = perfect world. This warped agenda is extrapolated as Death relates his childhood, youth and transformation to a crass tabloid journalist, along the way also explaining his acolytes and companions. It's both terrifying and thrilling, and writer John Wagner also has the black-humour button pushed to the max, particularly with a great dentist scene in 2. After an unsuccessful campaign, Death is in hiding, lodging with a half-blind old landlady ("If you don't eat you'll shrivel away to nothing"), and there's suitably dark and gloomy art from a débuting Peter Doherty.~FP

YOUNG HERO

AC: *2 issues 1990*

For fifteen years from 1941 Charles Biro wrote stories of kid gang The Little Wise Guys for *Daredevil Comics*, well drawn by Norm Maurer and William Overgard for the most part. Hard to come by in their original printing, these issues each reprint two stories from the prime early 1950s period, by which time they'd ousted Daredevil from his own title. While somewhat dated, the quality of the plot and art remain high, although the attempt to revive Daredevil as Reddevil in 2 is misguided.~FP

YOUNG HEROES IN LOVE

DC: *18 issues (1-17, 1,000,000) 1997-1998*

United by the mysterious telekinetic, Hard Drive, several fledgling super-heroes are rapidly caught in a morass of seething emotions. Tempers flare, passions rise, misunderstandings occur with catastrophic consequences. Taking the soap-operatic subplots of modern comics to their logical extreme, co-creators Dan Raspler and Dev Madan produced rather a treat here. The dialogue is sharp and contemporary, the 'semi-animated' style art very attractive, possibly too attractive to younger readers, given at least one "implied sexual situation" per issue. Infidelity, deception, betrayal, enforced celibacy and bisexuality are all on the menu. Needless to say, a comic with this degree of skill and style fell profoundly between two stools: older readers largely dismissed it as a kiddie book, based on the art style while younger readers were sternly told by their mums that they weren't buying that again, and no mistake!~HS

THE YOUNG INDIANA JONES CHRONICLES

Dark Horse: *12 issues 1992-1993**

Dan Barry adapts episodes of the *Young Indiana Jones* TV series, writing each issue and pencilling most of them. Indy encounters plenty of significant historical figures during World War 1. Stories intended for TV don't always transfer well to the comic, and the best are 9 and 10, showing both the eight-year-old and the sixteen-year-old Indy meeting the crowned heads of Europe. Each issue also has a text piece by Kurt Busiek giving a background perspective on the events or people of the issue.~WJ

YOUNG JUSTICE

DC: *55 issues, 1 80-Page Giant, 1 Secret Files, 1 Special 1998-2003*

Spinning out of the events of *JLA*: 'World Without Grown-Ups', this showcases Impulse, Superboy and Robin as the nucleus of a new heroic team, setting out to fight the good fight in their own chaotic style. They find a mentor figure in the android Red Tornado in his only good characterisation to date. Having feared he'd lost touch with his humanity, he proves the existence of his emotions by a frequent desire to slap the hell out of his young charges! Many puns (courtesy of a less restrained than usual Peter David), are incomprehensible, but the bitchy aside about Hawkman's numerous continuity revisions almost justifies the publication on its own. 4 sees the end of the 'Boy's Club', with the addition of Wonder Girl, Arrowette and the Secret as the team's distaff component, and the core is complete. *Young Justice* is an unashamed comedy, with just enough drama to keep the action fans interested, and although many jokes misfire, they're frequent enough that all but the terminally po-faced will chuckle. The comedy tone accentuates the occasional serious issue for a vivid impact. An outstanding examples is 15, where Arrowette is forced to a decision about her future in the wake of a tragedy. By way of considerable contrast, 16, introducing Old Justice, a group of superannuated 'kid sidekicks' from the 1940s, is one of the better comedy spotlights, but the quality is pretty unfailing. Occasional new members are added to the team: Empress in 19, Li'l Lobo in 20, the Ray (who is way too old to be hanging around with kiddies...) in 31, and Snapper Carr, the JLA's former mascot, replaces the Red Tornado as the team's mentor, training the next generation of heroes. The lighter tone of Young Justice precludes unqualified recommendation, but any given issue is reasonably accessible, and if you like one, the odds are good that you'll like them all. Just avoid the 1999 Special, a poor 'No Man's Land' crossover not authored by David.~HS

YOUNG LOVE

DC: *88 issues (39-126) 1963-1976*

Following the enormous success of their pioneering romance comic *Young Romance* in 1947, Joe Simon and Jack Kirby provided a sibling. Assembled by the same skilful artists (Ann Brewster, Mort Meskin, Bob Powell, Leonard Starr, etc.) with Simon and Kirby providing layouts and plots, *Young Love* settled into the mixture of sophistication and melodrama that characterised its older sister. Stories focused on insane jealousy, romantic duplicity, and the dangers a young girl faced on the road to, she hoped, matrimony. Unlike the many

* Available in a collected edition

imitators from other companies, though, they emphasised the need for fairness, honesty and responsibility, not only on the part of the young protagonists but on that of their parents too, who had the duty to deal fairly and openly with their children. A strong, but not preachy, morality was at the core of most of the stories. *Young Love* never reached quite the dramatic heights of its big sis, but the title featured strong and mature, but never lurid, stories until its final issue in 1957. The title was revived in 1960 for a continuation of another Prize romance title, All For Love, but had little in common with its predecessor. Now firmly in the grip of the Comics Code, it featured simpering stories with no conflict and little entertainment, but was nevertheless assimilated into DC's romance line when Prize closed. The second Prize run was issued as an annual series of volumes numbered 1-6, beginning with volume 3, issue 3, and ending with volume 7, issue 1.

The DC *Young Love*, beginning inexplicably with 39, gained a semi-regular character in 'Mary Robin, Registered Nurse', whose one-chapter crushes and flings always ended in disappointment. Illustrated by John Romita, Mary Robin epitomised the sleek, machine-tooled style of DC's romance titles at the time. In the mid 1960s, a slightly racier serial replaced Mary: 'The Lives and Loves of Lisa St. Clare', the saga of a rich girl looking for someone to love her and not her money, ran for several issues, but never really caught on. If she really wanted true love, Lisa should have tried to look a bit less overdressed and slutty, but maybe it was just the way Dick Giordano drew her. In the late 1960s and early 1970s *Young Love* fell victim to the same problems as every other romance comic. Still conforming to the Comics Code Authority, they just couldn't compete with the more salacious TV soap operas and Confessions magazines that were soaking up the female consumers. Not that they didn't try to feature stronger topics; 'That Strange Girl' was the first comics story to tackle the subject of lesbianism – albeit very, very obliquely, and only so that our heroine could turn out to be just a tomboy after all, much to everyone's relief. Other stories promised much in their titles – 'Daughter of Women's Lib!', 'Bad Trip!' and, Gods help us, 'Horoscope, Don't Fool With My Heart!' – but fizzled out. The loopy desperation of the 1970s romance titles is something to see. Nevertheless, *Young Love* did have the last laugh: while not the first romance comic, it was one of the last, outliving its big sister, *Young Romance*, by nearly two years.~HS

Conceived as a hard-core spoof of romance comics, editors Bill Griffith and Jay Kinney gradually transformed *Young Lust* into a rather more interesting satire on contemporary society and its sexual mores. With 2 Justin Green was added to the creative line-up, and by 4 it was successful enough to add colour. The comic's highlights include Art Spiegelman's formalist 'Little Signs of Passion' in 4, Bill Griffith's jaded 'Too Much Fun' in 5 and Greg Irons' despairingly autobiographical 'Monkey Lust' in 6. Other noted contributors, like Spain Rodriguez (2-8), Kim Deitch (4, 6), Paul Mavrides (6, 7) and Daniel Clowes (7), helped make later issues far more essential purchases than the comic's original premise ever suggested. *The Young Lust Reader* collection cherry-picks from 1-4.~DAR

YOUNG MASTER

New Comics: *9 issues 1987-1988*

On what sometimes seems like a feature prepared a decade earlier during the height of the martial arts craze, Val Mayerik turns in some of his best comics art, and Alex Niño maintained the standard in 6. As initially plotted by Larry Hama, the nameless Young Master is a prodigious swordsman in a more primitive Japan. He hooks up with a blind child princess in 2, where he earns the anger of local villain Lord Yagyu, whose operatives plague him until a resolution in 8. The parallels to *Lone Wolf and Cub* are obvious, not least through the timeless simplicity of the stories, but also the mood and excellent action sequences from Mayerik, who also provides back-up strips in 1-6. Any issue can be sampled and understood, but the Chuck Dixon written 9 stands alone with a decent story about the Young Master's presence causing the repressed secrets of a town to erupt.~WJ

YOUNG ROMANCE

Prize: *124 issues 1947-1963*
DC: *84 issues (125-208) 1963-1975*

Launched by Joe Simon and Jack Kirby, this title was inspired in part by a humour title, *My Date*, that the two had worked on a year previously for another publisher. Although *My Date* was short-lived, its romantic-comedy tone inspired the duo to try something that hadn't been attempted before, a straight romance comic. Although romance pulps and magazines sold well, no one had previously attempted to translate the genre to comics. The first issue was a huge success, and made waves in the industry. Martin Goodman, publisher of Timely Comics, attacked *Young Romance*, with its emphasis on adult protagonists and situations, as 'virtual pornography'. He presumably had some sort of epiphany on seeing the sales figures, because within three years of *Young Romance*'s release, Timely was publishing thirteen romance comics! Altogether, *Young Romance* had no fewer then fifty imitators, including its own sibling, *Young Love*, within three years of its début. A new genre had been brought to comics.

No imitator could compete with *Young Romance* for quality and value. Simon and Kirby did the bulk of the work in the early years themselves, but when they had to start farming it out, they hired the finest artists in the business: Jerry Robinson, Mort Meskin, Leonard Starr, Ann Brewster, Bruno Premiani, Bill Draut, Bob Powell, Ross Andru and dozens more filled the pages with vitality and emotion. Nor were they afraid to tackle contentious subjects. 'Different' dealt maturely with anti-Semitism, 'The Town and Toni Turner' had a young woman facing down her delinquent criminal past, and 'My Old Flame' neatly exposed the futility of romantic ideals and unrequited love, a controversial plot in a comic where those commodities were a stock-in-trade. The Simon and Kirby romances were also much more vigorous than the average romance comic; love affairs took place at roller derbies, at sea, in the middle of teenage gang fights; the heroes and heroines were caught in hurricanes, involved in car crashes, arrested – anything to get some action in the story! But occasionally such tricks weren't necessary. The best Simon and Kirby romance story, 'The Girl Who Tempted Me' (17, 1950), has a rural farm setting and only four characters. There's an elderly woman, her two sons, and the fiancée of the younger son, a "townie" with "loose ways" who decides to seduce the older, religious brother, but finds her game escalating out of control. In a rare story inked by Kirby himself, her mounting passion is virtually a palpable presence in the story, and the irresistible attraction between two people who know they're bad for each other is superbly portrayed. Oh, it's melodramatic schlock, sure, but of the very finest quality.

Following Prize's closure in 1963, DC grabbed *Young Romance* and *Young Love* for its own romance line, but having secured them, did nothing to make them exceptional. 'Bonnie Taylor, Stewardess' had semi-regular self-contained flings in exotic foreign parts, but apart from that, it was very much by-the-book DC romance, illustrated by all the thoroughbred workhorses of the era – John Romita, John Rosenberger, Gene Colan, et al. This state of affairs persisted until the late 1960s, when romance comics, haemorrhaging readers as the more lurid TV soaps grabbed their attention, resorted to ever more desperate come-on titles: 'Make Love to Me!', 'Greaser's Girl', 'Lily Martin – the Swinger!'. But because they had to abide by the wholesome Comics Code, the stories couldn't deliver the goods. Hitch-hikers, hippies, rock stars and motorcycle gangs became the new staples, but in amongst the dross, there were some well-meaning, if clunky, attempts to innovate. 194's 'Full Hands, Empty Heart', by Bob Kanigher and Rosenberger, showed, in a sympathetic way, the love affair between a white doctor and a black nurse (of opposite sexes: things hadn't loosened up that much. And needless to say, the guy got to be the doctor!).

Unfortunately, such efforts were lost in the frantic scramble for readers, and in an attempt to titillate, plots became ever more risible. A favourite is 'I Won't Kiss That Evil Way!' – written by a fledgling Tom DeFalco! – in which we not only don't ever find out what evil way our heroine won't kiss, but we're also not told how evil it is. Is it the osculatory equivalent of shoplifting? Grand theft auto? Napalming a busload of nuns? Enquiring minds want to know... Sadly, the craziness couldn't be sustained forever, and in 1975 *Young Romance*, mother of a genre, breathed its last. *Young Love* trundled on for two years, but the last nails were already being pounded into the coffin of the romance genre, which, apart from sporadic nostalgia specials, seems well and truly dead.~HS

The YOUNG WITCHES

Eros: *4 issue miniseries 1991*, 6 issue miniseries 1995-1996*, 3 issue miniseries ('Empire Of Sin') 2000*, 3 issue miniseries ('The Eternal Dream') 2000, 6 issue miniseries ('The Legacy') 2002-2003*

The first series is an atypical Eros comic as the sexual content isn't explicit, and there's a story, albeit a slim one, with gorgeous artwork from F. Solano Lopez. Lilian Cunningham is orphaned at birth, but sent to a college with feminist teachings dating back to the Amazons. Her latent powers of witchcraft emerge and it all ends very messily. Series two, as if by deliberate contrast, is so graphic there's an editorial requesting readers not to judge individual episodes, but the series as a whole, since it concerns the hypocrisy of the Victorian attitude to sex (and, presumably by extension, the present-day attitude). This is a load of tosh, as there's little purpose to the story beyond hardcore sex. Lilian and her companion Agatha reach Victorian London to encounter many out-of-copyright fictional characters in the company of historical figures and all kinds of sexual activity. It's still beautifully drawn, but the sexual variations involved are potentially repugnant. The third series is in colour and a more traditional sex comic, but Solano-Lopez hardly knocked himself out producing the sometimes extremely sketchy art. By the fourth series "Pol" has replaced Barreiro as writer for an investigation of dreams in the company of Sigmund Freud, Dorian Gray and Sherlock Holmes. It becomes very silly in 'The Legacy', which jumps forward a couple of generations with Lilian's daughter having trouble curbing her nineteen year old twins. The slimmest of stories connects hardcore variations on Hammer horror scenes, presumably in an attempt to keep Solano-Lopez interested, as he's all over the place. Sometimes he can't be bothered erasing his pencil lines, the once-detailed backgrounds are sparse, and some of his figures are poor. Regular readers won't care, but it should be pointed out.~FP

Awesome: *2 issues 1998*

Little kids that a certain comic wish there was more and more of it. Bigger kids with artistic aspirations make up their own stories and favourite characters are transformed into thinly disguised knock-offs. A young professional riding a wave of acclaim for work at Marvel can start their own company, do all that and no one can stop them. *Youngblood* was a launch title for the neophyte Image Comics, featuring two teams ("Home" and "Away" – each featured in one half of the first issue's flip format) of government sanctioned generic superheroes with very strong "echoes" of cast from *X-Force*, *Justice League* second series, *Avengers* and *Fantastic Four*. The stories themselves are a pointless morass of fighting and posturing, interspersed with mindless who's shagging who, and is my enemy my brother subplots. Rob Liefeld starts it all off but soon surrenders the bulk of the creative chores. 1-4 are collected. The reboot is better, with greater concentration on fewer characters and stories above fights, with tighter art, but even the crossover with its spiritual parent *X-Force* at the end of 10 couldn't save the title when Liefeld acrimoniously left Image. Restarting as Maximum Press, Liefeld tried to carry on, but although issues 11-15 were solicited, only 14 and the Super Special (a tale of earlier days by Eric Stephenson, beautifully drawn by Chris Sprouse) were actually released, rushed and botched looking. For the Awesome issues Alan Moore and Steve Skroce breathed life, albeit briefly, into the tediously derivative group of now ex-Federal superheroes in the wake of the *Judgement Day* miniseries. Moore's light touch and signature subversion of comic cliches, such as possession by aliens in 1, are fun, but fourteen alternate covers to that issue aren't.~WW

YUMMY FUR

Vortex: *24 issues 1986-1991*

Drawn and Quarterly: *8 issues (25-32) 1991-1994*

Chester Brown's work revolves as much around repetition of image, iconography and mythology as it does around plot and structure, making *Yummy Fur* a difficult but rewarding read. 1-3 reprint material from mini-comics, from which the recurring character, Ed The Happy Clown, emerges as star of the comic while Brown settles down to telling a more complex and distinctly lateral tale involving the trappings of B-movies but the intensity of myth. It's a great tragedy wrapped up in ridiculous notions, including the infamous Ronald-Reagan's-head-on-the-end-of-a-penis sequence. This amazing tale of vampires, aliens and disappearances was backed up with a re-telling of the gospels intended to emphasise the differences between the versions in the Bible. Unfortunately, when the series ended (with an all-Matthew special issue 32) only two had been completed.

After the obtuse nature of the Ed stories Brown progressed to autobiographical material, including an examination of his relationship with *Playboy*, which struck a huge chord with the readership (21-23*). 'Fuck' (26-30*) traces his adolescent unwillingness to swear, and leads neatly into the story of his first love. Brown enunciates the shy and playful gropings of adolescents, the sudden silences, the retreats into childhood behaviour to cover your sudden and perplexing lusts, beautifully, but the work is nowhere near as stimulating as either Ed or the Gospels. By Brown's choice, 13-19 remain uncollected.~FJ

Print Mint: *3 issues (7-9) 1974-1978*
Last Gasp: *5 issues (10-14) 1982-1998*

Zap Comix is the quinetessential underground title, put together by a collective of cartoonists whose names have become synonymous with the movement; S. Clay Wilson, Robert Crumb, Victor Moscoso, Gilbert Shelton, Spain and Robert Williams. The unique mix of sexual abuse, drug-fuelled narratives, biting satire and crazy graphics in the early issues is still powerful today, and still shocking. The title was lionised for freeing comics from the grip of simplistic adventure stories, but many readers seem to have forgotten quite how nasty some of these creators' imaginations were. Anyone who worries about the depiction of women in Crumb's widely-known work should take a look at S. Clay Wilson's amazing vistas of degradation, the 1960s equivalent of Hogarth (the English allegorical painter, not the *Tarzan* artist). And predictably the title has its share of failed experiments, strips you can only understand when the wallpaper explains them to you, and unfunny parodies.

All the famous underground characters appeared here: Shelton's comic Fat Freddy's Cat and Wonder Warthog, Crumb's Mr Natural, Spain's impenetrable Trashman, Williams' Coochy Cooty and Wilson's The Checkered Demon. Although the drawing was often rough and scratchy the strips got their points across admirably, although by the 1980s the liberal agenda espoused by *Zap* was starting to look a little careworn. In the late 1990s Crumb had a falling out with his fellow cartoonists and wanted to close the magazine, feeling their worldview was outmoded and that they themselves had become, as he put it in his final strip, like weirdoes from a Dan Clowes comic. Reading the first half of 14, largely filled with Wilson strips up to twelve years old and Moscoso's doodlings, you can see his point. Once everyone pitches in to bitch about him, though, the final few pages become more interesting, if watching aging radicals display their dirty laundry floats your boat. The final word is given to 'newcomer' Paul Mavrides, who presents the 'hearsay' version of the falling out to hilarious effect. *Zap* was a huge liberating force in comics, and still rewards careful study with laughter, if nothing else. All issues have been kept in print since the original publication.~FJ

ZATANNA

DC: *One-shot 1987, 4 issue miniseries 1993*

Zatanna is DC's resident Mistress of Magic. The story of her quest to make peace with the spirit of her dead father Zatara was planned as a miniseries. Ill-judged economics resulted in drastic cuts, to the extent that the writer requested his name be removed from the credits, and the one-shot was all that remained. It's a shame, as the Gray Morrow artwork is deeply gorgeous. The later miniseries is profoundly ill-advised in its attempt to remove Zatanna from all that makes her distinctive and original and reduce her to a practitioner of the Generic Art Of Mystic Handwaving. Fortunately, it's subsequently been ignored editorially.~HS

Imagine the innocence of *Bone* given an injection of Jack Kirby, and that's roughly what *Zed* boils down to. He's a small cartoon alien whose invention is sabotaged to destroy a planet as an excuse for a declaration of war. Animator Michel Gagné's art is charming and successful in evoking strange worlds with strange beings, and this is a comic to be enjoyed by adults and children alike. The one problem is that with large panels there's very little story for your buck, making a quick read. The proposed collection will rectify that, mind.~FP

Ross Andru and Mike Esposito illustrate the Saturday morning kids cartoon version of the artificial warrior and his Earth chum as they fight villains and save the rainforest. Good for the kids. The Entity series reprints the Archie one.~WW

ZENDRA

Penny Farthing: *6 issue miniseries 2001**

Centuries after humans have been hunted to extinction by the Jekkarans, a benign geneticist attempts to revive humanity from fragments of found DNA. The result is Halle, guided by a member of an evolved race to fulfil ancient prophesies that she will be responsible for the return of humanity. Stuart Moore, highly regarded as an editor, takes the creation of artists Martin Montiel and J.C. Buelna to weave what was intended as the first part of a science-fiction saga. There's a suitably sadistic and imposing villain, but overall, while competent adventure, few elements will have an unfamiliar feel to science-fiction fans. Then that's what makes *Star Wars* great.~FP

ZENITH

Titan: *5 volumes 1988-1990*

This ran in British weekly *2000AD* between 1987 and 1990. Phase I is an introduction to Zenith and his world. His reality resembles ours but superheroes emerged during World War II and Maximan, who dies when the US drop the big one on Berlin rather than Hiroshima. Zenith becomes a pop star and needs an agent and also meets Welsh hero The Red Dragon, and 1960s hero Mandala, now MP Peter StJohn, an important ally. Apart from being a gradual build-up to all-out interdimensional war, Phase II, in books 2-3, reveals Zenith's origins. He and CIA agent Phaedra Cale investigate genetic experiments that spawned seven heroes in the 1960s including Red Dragon and Mandala. Phase III, occupying books 4-5, is a gripping battle against the chaotic Lloigor across alternate worlds, three of which are completely destroyed. A gathering of hundreds of heroes, many recognisable from forty years of British weeklies, travel in taskforces across realities using an Einstein-Rosen Bridge. You soon learn not to get too attached to anybody.

* Available in a collected edition

Grant Morrison's hero is engagingly vain with a passing resemblance to Smiths vocalist Morrissey. Morrison chooses to keep the entire series very informal – nobody is conveniently named or has their powers explained in expository dialogue. The captioned flashbacks are equally matter of fact due to Zenith's low attention span! It's like a remedy for all the cretinous plot-clogged superhero gatherings of the 1980s. Steve Yeowell's artwork quickly matures from an early Alan Davis influence to the elegant dance of spare linework and audacious solids that he's famous for. Repeat doses of Phases II and III are recommended.~SW

ZERO GIRL

Homage: *5 issues 2001**

Amy Smootster is a fifteen year old bespectacled, but pretty high school outsider bullied by other girls. When she is humiliated green gloop comes out of her shoes. She lives under a bench, likes circles and hates squares, which intrigues the male school councillor, who falls in love with her. While they are working out their feelings, all sorts of crazy shape related visions and stuff go down. Considering the lack of psychological complexity, it all goes on for a bit too long but Sam Kieth's pictures of Amy with a photo-realistic head and torso tapering away to straw thin legs in candy striped tights should grab some jailbait fanciers.~GK

ZERO HOUR Crisis in Time

DC: *5 issue miniseries (0-4) 1994**

Parallax (formerly Green Lantern – the Hal Jordan one) decides the DC multiverse is too confusing. He embarks on a scheme to obliterate it and restart space-time from the Big Bang without all those messy alternate worlds. Every superhero and his brother objects to this self-appointed godhood. They thwart Jordan, but as a side-effect of the mêlée, space-time restarts from the Big Bang without all those messy alternate worlds. In the new squashed timeline Superman made his début ten years ago, thus solving all DC's generation-gap problems.

The five issues were published weekly in reverse number order with a September 1994 cover-date. As a prelude to this series, about forty mainstream DC titles carried tie-ins featuring characters and locales from different timelines coexisting. All these titles had their October 1994 issues numbered 0, and most zero issues retold origins according to the new timeline.

Zero Hour fails as a story because every event, action and assertion is built on a foundation of cloud, candyfloss and thin air. Nevertheless, *Zero Hour* would still have been creditable if it had simplified DC continuity. It didn't.~APS

ZERO PATROL

Continuity: *5 issues 1984-1985 (1-2), 1988-1989 (3-5)*

Zero Patrol reprinted Estaban Maroto's classic 1960s Spanish strip 'Ginco Por Infinito', rewritten, and to a large degree redrawn, by publisher Neal Adams. Despite the glorious art the story rarely rises above standard space-opera fare. It's a daft idea: five humans are selected for their various abilities, including capacity for forward thinking and understanding of emotions. They're then costumed and sent out to fight robots! Those after a good read are better directed elsewhere. To round out the package Adams provided a number of back-up strips. There's the début of Megalith in 1, an Adams high-school-era project also titled 'Zero Patrol' in 2, and the first appearance of Shaman in 3.~DAR

ZERO STREET

Amaze Ink: *1 issue 1998*

Prefaced by a one page Tarantinoesque bar discussion on the merits of science fiction, this rapidly devolves into a manga style action comic starring the perfect female assassin. You've been there, done that, and bought the baseball cap, probably a dozen times. The start was interesting, but appears to have been self-critical justification. A shame.~WJ

ZERO TOLERANCE

First: *4 issue miniseries 1990-1991*

Zero Tolerance is an organisation founded to investigate government corruption in 2017. Populated by caricatures like the tough-guy agent, the feisty female agent and the cartoon villainy of the President, this could be adapted as an episode of *Scooby-Doo* with few changes.~WJ

ZERO ZERO

Fantagraphics: *27 issues 1995-2000*

Editor Kim Thompson wanted *Zero Zero* to be considered a worthy successor to *Raw* and *Weirdo*. Not entirely successful, he does manage to collect good contributions from a wide range of creators, though Thompson mostly avoids material from outside the US (apart from Max Andersson) until later issues. Avoiding autobiographical work was also a good move.

Frank Stack's 'New Adventures of Jesus' (1-3) is fascinating while Spain (12), Skip Williamson (3, 9, 13, 16), and Bill Griffith (7) from the old guard are joined by Chris Ware (5, 16), Archer Prewitt (8), Al Columbia (16, 20, 26, 27) and the controversial Mike Diana (1, 8, 10, 14, 23, 24), a man subject to regular house searches in his home state after the county court declared his self-published comics obscene. The most consistent of the short stories, however, are provided by David Mazzucchelli (2, 11, 27), Joe Sacco (15, 25, 26) and Andersson (1-3, 5, 7, 11-13, 16, 17, 19, 27), whose 'Death' (12), is like a very strange road movie. Lewis Trondheim's single page astronaut strips (20, 22, 24) are also beautifully crafted.

Of several long series, Ted Stearn provides the surreal story of 'Fuzz and Pluck'*, a chicken and a bear trying to escape from slavery (1, 3, 6, 9, 11, 13). Kim Deitch's 'Molly O'Dare' (6-8) and 'The Search for Smilin Ed' (all of 21, 22, 24-27) are sequels of sorts to all of his other series, and continue his fascination with tall tales and Hollywood. Dave Cooper's 'Crumple'* concerns the adventures of Knuckle and Zev, who travel to Hollywood and uncover a feminist/alien conspiracy. Francesca Ghermandi and Massimo Semerano's 'Pop. 666' (19, 20, 22, 24) is an unfinished tale of a ravaged future, splendidly rendered in a fine line style. The title was also home to Rick Sala's twisted magnum opus 'The Chuckling Whatsit'* (2-18), a convoluted horror tale about the Gull Street Ghoul, a notorious serial killer who starts killing again after years of inactivity. The collections of the Stearn, Cooper and Sala series are definitely worth seeking out, while fans of other creators may be interested in the individual issues.~NF

ZETRAMAN

Antarctic: *4 issue miniseries 1993, 4 issue miniseries ('Revival') 1996*

Action comedy series spinning off from Ben Dunn's *Ninja High School*, which sees much of the support cast in the roles of Super-heroes as the mysterious space element Zetranite makes its presence felt. The Zetranite concept is revived when rival gangs from Ninja High School become *Power Rangers* knock-offs in a lame comedy spoof of kids action TV and L. Ron Hubbard's Dianetics as Professor Steamhead and Zetraforce combat L. Roy Dullard's Steamanetics invasion. No, stop, my sides, they're splitting. One for completists only.~WW

ZILLION

Eternity: *6 issues 1993*

Tom Mason, Harrison Fong and Keith Conroy adapt the animé tale of yet another war-mongering race wanting to enslave humanity. On the colony world Maris (Earth II) only the three enigmatic Zillion Guns and the insufferably cute young heroes who use them can hold out against the otherwise invulnerable alien invaders. Manga diehards will love it but the rest of us have seen it all before.~WW

ZIPPED

Actus Tragicus: *One-shot 1996*

Bearing the production values of a fine art publication, those looking for story alone will find this slim and expensive fare. It's a three minute diversion of man who wakes one morning with a zip running down his chest. While Mira Friedmann's art is great, she takes this Kafkaesque set-up nowhere. Disappointing.~FP

ZIPPY Quarterly

Fantagraphics: *18 issues 1993-1998, 2 Annuals 2000-2001*

A magazine-sized compilation of underground legend Bill Griffith's daily newspaper strip *Zippy The Pinhead*. Griffith is one of the medium's finest creators and he's at his peak here, casting his scabrously critical eye over contemporary America. Zippy is a unique mixture of intellectualism, pop culture, knockabout humour and Dada that deserves a place in any collection. Griffith has been using Zippy in comics for years, and there are several collected editions of previous comic-format *Zippy* material, most prominently the Fantagraphics-published *Zippy Stories*. The two annuals present the cream of each year's output (in almost 150 pages) and reveal a new interest in the bizarre architecture of postwar America. Incredible though it may seem, in his fourth decade as a cartoonist Griffith may only now be hitting his peak.~DAR

Tales of the ZOMBIE

Marvel: *10 issues 1973-1975*

Much like Vampire Tales, with its main feature and themed back-up strips, Zombie (as its original credits ran) is similar in its lack of consistency. Steve Gerber tackles the Zombie's own story (1-9) as Simon Garth, once a wealthy New Orleans plantation owner, is turned into a zombie by the loyal Layla to avenge his death. As well as the tale of Garth's vengeance, Gerber uses the character much as he did Man-Thing, to comment on others, the Zombie being the deus ex machina that concludes the story. Pablo Marcos is very effective as artist, drawing in a style that's halfway between Maroto and Wrightson. Apart from Gerber, Doug Moench and Alfredo Alcala's fill-in issue (7) is a good *Cat and the Canary*-type story with very little zombie action at all. Brother Voodoo's appearances (6,10) are best forgotten, even drawn by Gene Colan, and only the short stories, drawn by Alcala, really have anything to recommend them. The exception is Tom Sutton's 'Grave Business' in 10, a wonderfully drawn tale, as Sutton's normally intricate pencils give way to a loose, freer style.~NF

ZOMBIE BOY

Timbuktu Graphix: *One-shot 1988, one-shot ('Zombie Boy's Hoodoo Tales)' 1989, one-shot ('Rises Again') 1994*

Antarctic: *1 issue 1996*

Morgan McCorkindale, whitebread son of a whitebread US Senator, suffers from a condition that has made him zombie (i.e. he's dead), and another that has made him a spoiled Hollywood brat (no reason, he just is). They all live in a Beverly Hills mansion with their faithful Vadoun servants, having the most peculiar adventures. Engaging, quirky, and often very funny tales from Mark Stokes. 'Rises Again' reprints the first two issues with some extras, such as a pin-up gallery by Chester Brown, Gilbert Hernandez, Moebius, Kyle Baker and many others. When picked up by Antarctic, most of the charm vanished, replaced by action/comedy one-liners. Voodoo lord Baron Samedi ousts the overlord Danballah in a mystic coup and only the princess Tabu escapes. Making her way to Earth, and specifically Beverly Hills, she attempts to steal a magical staff from Morgan. Nevertheless they team up in a lacklustre horror adventure to save the afterlife.~WW

ZOMBIE WORLD

Dark Horse: *3 issue miniseries ('Champion of the Worms') 1997, one-shot ('Home for the Holidays') 1997, 2 issue microseries ('Dead End') 1998, one-shot ('Eat Your Heart Out') 1998, 4 issue miniseries ('Winter's Dregs') 1998, 4 issue miniseries ('Tree of Death') 1999*

Intended by Dark Horse to be another long-running franchise with any interested creators given an opportunity to tell their zombie tales, *Zombie World* produced some excellent material before running out of steam. Mike Mignola and Pat McEown gave the series to Dark Horse as long as creators kept the rights to their own issues and their 'Champion of the Worms' depicts how the necromancer, Azzul Gotha, with his own death and resurrection, prepares the way for a world-wide infestation of zombies. He plans to take as his queen, Rebecca Dean, whose father discovered his tomb. She's protected by a small group of adventurers who vow to fight on against the hordes of undead.

Gordon Rennie and Gary Erskine's 'Home for the Holidays' is the story of a family reunion at Christmas, disturbed by rather more family members than expected. Stephen Blue's 'Dead End' adds some mystery to the horror as a man mourning his missing wife and daughter takes in a stranded woman, but zombies are not the only thing she needs to be afraid of. 'Eat Your Heart Out' is a tale of madness and obsession by Kelley Jones as a man tries to tames his beloved, now undead, girlfriend. 'Winter's Dregs' features the stories of several New York inhabitants as the zombie outbreak reaches their city, by Bob Fingerman and Tommy Lee Edwards. The Killcrop, a reincarnated, Hyperborean, zombie hunter is introduced in the Pat Mills and J. Deadstock produced 'Tree of Life', re-introducing Miss Dean. She tries to find the resting place of the Necronomicon's author in order to put a stop to Azzul Gotha's plans to re-introduce the Elder Gods. This final series is more tongue-in-cheek than previous episodes and as such, probably the least satisfying, for all that it's very bloody and entertaining.~NF

Thomas Florimonte's ZOMBOY

Inferno: *3 issues 1996-1997*

Zomboy is the masked defender of the weak in his junior school. There's an enthusiasm to Florimonte's writing, but his cartooning lacks the rounded charm the feature cries out for.~FP

ZONE

Dark Horse: *One-shot 1990*

By Michael Kraiger and collected from *Dark Horse Presents* 28 and 31-34. Two artists have stumbled across a seven-foot alien in the landfill sites of New Jersey and are deciding how to handle the situation. It's about dumping and pollution, but it seems a very indirect way of tackling the issue.~FC

ZONE CONTINUUM

Caliber: *2 issues 1992, Volume II 2 issues 1996*

The world is composed of interconnected spheres called Zones, undetectable without special technology, and we mere mortals are generally unaware of them. When disaster threatens to destroy them, Tallon, a zone dweller, falls to Earth and events spiral towards a catastrophe that is only averted by the series' premature cancellation. Bruce Zick writes and draws effectively but with little discipline. When the series restarts, Sphere, Tallon's evil opposite, plans to destroy all Zones, but he's not reckoned on the interference of Manx, an expatriate of the Earth Zone, which is just as well as Talon (note new spelling) is hamstrung by the loss of his lover, Paris. Once again an intriguing start that dies before going anywhere.~WW

ZOOM'S Academy for the Super Gifted

Astonish: *3 issues 2001-2002*

Taking his inspiration very obviously from *Harry Potter*, Jason Lethcoe transposes wizards for superheroes. The plot concerns Summer Jones, who tests positive for super powers, but doesn't appear to manifest any. Another from the Astonish Comics school of animators who can't be bothered to erase the pencil lines on their work, Lethcoe's story is well produced and charming, and goes to unnecessary colour with the final issue. After this point he intends to publish illustrated novels with flip-corner animation pages.~WJ

ZOONIVERSE

Eclipse: *6 issues 1986-1987*

'Zoon' is the general term for any intelligent being in this part of the galaxy, where countless species meet to trade and intrigue and try to have sex. The three-Zoon Kren patrol is caught up in the intrigue when they are given the job of escorting a courier and things go wrong within minutes. The story is fine, but it's the travelogue aspects that make the comic special. Fil Barlow had been working out the details of these worlds and these species for years, and it shows. He's got quantities of imagination, most of it grotesque and quirky, and a sense of humour that's generally surreal but always grounded in a good understanding of human (zoonan?) nature. Any quibbles? The ending is decidedly abrupt, as if Barlow, in full flow, suddenly got a fax ordering him to wrap it up within three pages. This doesn't ruin the comic as it stands, but is cruelly tantalising. One could cope with a lot more of *Zooniverse*.~FC

ZOOT

Fantagraphics: *6 issues 1992-1994*

Even at this early stage the art of Roger Langridge was wonderful, a blocky and expressive delight. Unfortunately it's wasted on meandering pointless stories that often read as if plotted not further than a single panel ahead of the art. While largely forced and unfunny humour, the material sometimes trespasses elsewhere, such as 4's long profile of a murder victim, but it's no better. Look and admire, but don't attempt to read. A collection titled *Zoot Suite* was issued containing a lot of the material from these issues, but also a fair percentage of new material in the same vein.~FP

ZORA Lady Vampyre

Sound & Vision: *1 issue 2000*

The editorial page provides a vast amount of background information on this translated Italian comic, none of which disguises the fact that this is very old-fashioned eroticism indeed. It also seemingly includes only every tenth panel of the original, such is the shorthand storytelling, and is very poorly translated. Still, Balzano Birago draws nice pairs of tits and buttocks, and if you can't smuggle any Eros comics into the house, this will have to do.~FP

ZORRO

Dell: *22 issues (Four Color 228, 425, 497, 538, 574, 617, 732, 882, 920, 933, 960, 976, 1003, 1037), 8-15 1949-1961*

Gold Key: *9 issues 1966-1968*

ACG: *One-shot ('The Sword of...') 2002*

Sporadic and much-loved tales of the masked and mysterious hero fighting injustice in Spanish controlled California in some mythic period between 1795 and 1825. The first seven appearances are based on the Johnston McCulley novellas and the 1940 Rouben Mamoulion film *The Mark of Zorro*, starring Tyrone Power. It's now legendary in comics lore as the last movie Bruce Wayne saw with his parents. There are usually two complete comic tales and a short prose story per issue, unwieldy and laborious, concentrating on repetitive adventures, although Everett Raymond Kinstler handled *Four Color* 497, 538 and 574. The next seven issues are based on the Walt Disney TV show, hence the succeeding issues being numbered 8-15. Longtime western strip cartoonist (and creator of *Casey Ruggles*) Warren Tufts drew stories in 1037, 8, 9, 10 and 13, but the fame of the series rests on the magnificent and tempestuous run by the legendary Alex Toth (882, 920, 933, 960, 1003, 9 and 12). Toth had a long running battle with his editor, arguing that the many static set-pieces, lifted word for word and scene for scene from episodes of the TV show, were deadly dull and detrimental to a character that he felt was the epitome of swashbuckling, non-stop action. It culminated in a challenge to replace him as soon as they could, because he was going to draw Zorro his way until they did. 15 was his last work and the last issue published. When the TV show was revived during the height of the mid-1960s *Batman* craze Gold Key revived the comic, with Toth reprints in all but 3 and 6. It's compulsory reading for all fans of comic art and students of comic form, and thankfully the Toth issues at least are readily available as collections.~WW

ZORRO

Marvel: *6 issues 1990-1991*

Like the TV series on which it's based, the 1990s comic ditches any sense of rebellion or suspense and tells moralistic tales in which no one dies, swords aren't really dangerous and the soldiers are good guys at heart. Gag me with a spoon.~NF

ZORRO

Topps: *12 issues (0-11) 1993-1994*

Well-thought-out series written by Don McGregor, playing heavily on the political, racial and sexual problems of early-19th-century California. He creates a new supporting cast that includes Machete, an ex-slaver, Moonstalker, an Indian freedom fighter, and Lady Rawhide, a mysterious adventuress. Mike Mayhew (1-8*) and Hearn Cho (9-12) provide rather stiff artwork, but it's not unattractive, and there are some excellent covers from the likes of Paul Gulacy (7), Mike Mignola (6) and Adam Hughes (3). The scripts are kept interesting by McGregor's skill with words, but there are always going to be plenty of them to get through in a McGregor opus, and this sometimes slows the pace.~NF

ZOT!

Eclipse: *36 issues 1984-1985 (1-10)*, 1987-1991 (11-36)**

Zachary T. Paleozogt, otherwise known as Zot, seems to have come from the far future, battling robots, carrying a blaster and talking about a lost key to the Doorway at the Edge of the Universe which a neighbouring planet, Sirius IV, wants back at any cost. In fact he's from an alternative Earth circa 1965 which is a paradise compared to our reality. Jenny Weaver and her brother Butch follow Zot back to his world and Butch is promptly devolved into a chimp by a crazy representative of the Church of De-Evolution. As the story of the key unfolds we meet 9-Jack-9, an electrical assassin, Dekko, a robotic world-conqueror, and Zot's Uncle Max, an inventor who represents Jenny and Butch's best chance of getting back to their own world. The colour series was cancelled due to poor sales at this point, but revived two years later in black and white.

From 11 Jenny has to adjust to being back on her own, flawed world, while Zot tries to fight crime and discovers just how difficult that can be in New York, when his only 'superpower' is flight. The series continues in this vein, with excursions back to Zot's world and the return of 9-Jack-9 and Dekko for most of the second run. Then with 28 writer/artist Scott McCloud took a new direction. As Zot is stranded on Earth, Jenny introduces him to her family and school friends to help him blend in. He becomes part of a love triangle with her and a friend, Woody. Each issue is told from a different person's point of view. Thus McCloud explores the world-views of a variety of adults and teenagers as well as that of Zot himself, contrasting their hopes and fears with the beauty and perfection of his lost homeworld. The story reaches a peak in 33, one of the most beautifully crafted, humane single issues ever written. Read it.

With *Zot!*, McCloud succeeded in creating an exuberant, fun comic that can still deal with important matters, that's more about feelings than adventures despite the science-fiction trappings of the early issues and the fantastic basis for its premise. *Zot!* 10½ (Not Available Comics, 1986) is a minicomic by McCloud and Matt Feazell, whose stick-figure character Cynicalman co-stars. 14½ is a regular sized comic entirely by Feazell which continues the off-beat but funny 'Zot in Dimension 10½' back-up strip that runs in issues 12-36.~NF

ZU

Mu Press: *One-Shot 1995, 19 issues 1995-1998*

Anthropomorphic anthology with two main features in most issues plus short gag-strips by regulars such as Kris Kreutzman, Mike McMurry and Mark Stanley. Of note otherwise are the three series that run through most of the run. 'Sergei' by Darko Macan (2-4, 15) is similar in execution to Stan Sakai's Usagi Yojimbo. After an appearance in Menagerie and her own self-published fanzine, Donna Barr's 'Hader and the Colonel', about an enchanted harpy and rabbit, is concluded here (6, 8, 10, 12, 14, 16-19). 'Frontiers', by Adrian Kleinbergen, is an adventure strip dealing with war and racism in an intelligent and appealing manner (7-9, 16-18). While nothing else stands out, the rest of the strips are engagingly produced and will appeal to fans of the genre. The one-shot contains strips by, amongst others, Roberta Gregory, Tom Stazer, Phil Yeh, Tracy Kazaleh and Cathy Hill (a Mad Raccoons story).~NF

ZULU NATION

Caliber: *3 issue miniseries 1996-1997*

Examination of the Zulu wars at the end of the 19th century, with features on the history of South Africa, the battles of Isandhlwana and Rourke's Drift and biographies of the major players such as the great Zulu chief Shaka. Erudite but unremarkable work from Wayne Reid.~WW

ZZZ

Alan Bunce: *1 issue 2000*

A little chap starts dreaming. He finds treasure cave, then a genie, not so keen to be removed from the bottle. Using a strict eight panel grid, Alan Bunce's silent cartoon is fast-paced, delightful, imaginative and extremely accomplished for someone producing their first comic. To counter the quick read first time through, Bunce has thrown in plenty of visual asides. You know the end, of course: he wakes up, but getting there is a lot of fun.~FP

INDEX OF CREATORS

If a creator is mentioned in more than one entry on a page a bracketed number indicates the amount of entries in which they are mentioned. It could be that a creator is mentioned in connection with several strips within a single review, but they will only be noted once for that entry. Creators with a massive influence such as Jack Kirby are noted in the index whenever mentioned although they might not have contributed directly to the title reviewed. Some creators are known only by an alias or by a single name. Wherever possible we've attempted to supply a full name.

RETURN OF THE
QUESTION

Mysterious Suspense 1 (October 1968)

Steve Ditko

With this comic Steve Ditko reaches a peak, balancing commercial needs with proclaiming his extreme opinions. He would later produce more stunning artwork for unreadable personal tracts, while, with few exceptions, the quality of his commercial work deteriorated. Here investigative journalist Vic Sage and his crimefighting alias The Question combat corruption and racketeering sanctioned by the indolent, while Ditko harangues his readers with questions concerning what constitutes a hero. It's not subtle, and is very wordy, but it's a powerful slab of polemic enjoyable even to a lifelong lefty.

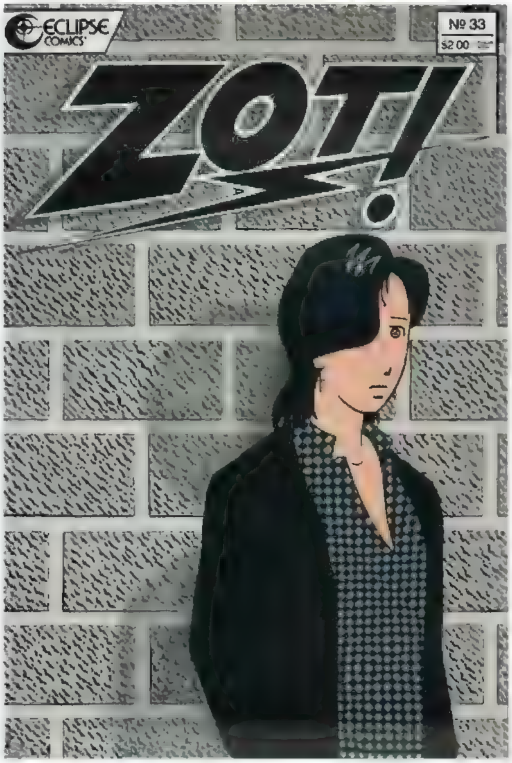
New Gods 1 (March 1971)

Jack Kirby and Vince Colletta

A new decade, I'm at Big School now. Girls are interesting not annoying, music is cool. I've had comics all my life. My parents, both immigrants, taught me, and themselves, to read English with comics. Now I'm growing beyond them. Then I see New Gods 1. I'd loved Kirby, but that stuff he'd been drawing lately. Wordy and repetitious. But This! Power! Drama! Raw edges to the characters, the scope of a novel or ancient legend, and I'm sucked in and blown away all over again. But now I want to do this kind of stuff too. I still do.

Win Wiacek

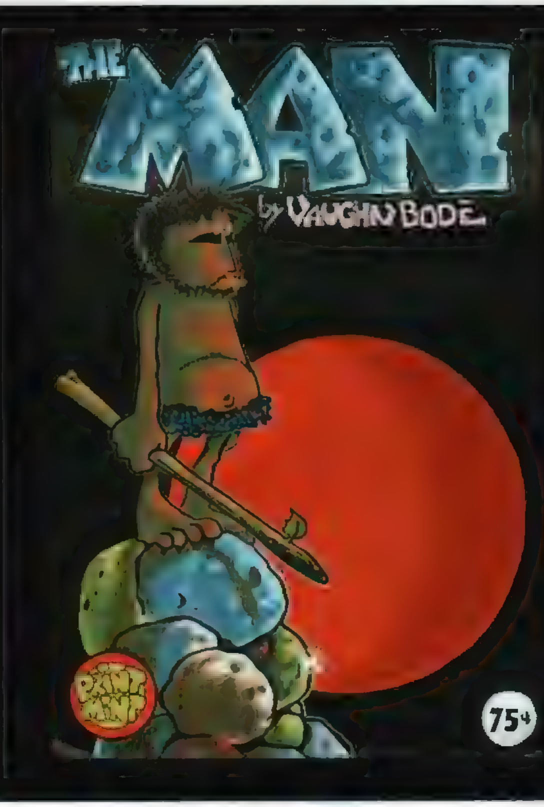


Zot! 33 (October 1990)

Scott McCloud

One of several single-issue stories focusing on Zot's friends on Earth, 33 tells the story of Terry. Triggered by news of a prank that disables a boy who's labelled "faggot" for doing ballet, Terry remembers that she used to be close to his sister, Pamela, who is now shunned after her own reaction to the accident, which was to announce that she's a lesbian. Zot's compassion helps Terry to understand that her friends will stand by her, whoever she is. McCloud even uses the positioning of the comic's letters' page to emotional effect in this romance and appeal for tolerance.

Nigel Fletcher



The Man (1972)

Vaughn Bodé

The Man's inability to articulate the feeling of loneliness - even to himself - is brilliantly developed. His conversations with "Stick", his spear, highlights a growing dissatisfaction with living alone. The arrival of the lizard Erg gives a taste of companionship that spoils the Man for solitary life. Readers may choose to see the back cover (drawn much later) as the strip's last panel.

Justice League of America 5 (July 1961)

Gardner Fox, Julie Schwartz, Mike Sekowsky and Bernard Sachs

The vertiginous cover, disorienting yet intriguing as the JLA, and sundry bystanders, are drawn away from the Earth's surface. Eight of the World's Greatest Heroes, one of them seemingly a traitor. Seven villains, six of our heroes' arch enemies and the seventh a deadly new threat. Dazzling battles against the elements, a genuinely surprising twist, unusual settings and intelligent use of the heroes' abilities. The skilful scripting of Gardner Fox (not as verbose as usual), and Sekowsky & Sachs' scandalously underestimated kinetic, expressive artwork given free rein. Compelling and mesmerising when I first encountered it as a five year old; still stellar work even in the cold light of 2003.

But not just any copy – that ripped, tattered and dog-eared copy up there that no comic shop in the country would give me a penny for. Tempted as I was to nominate "the one that's waiting for me at the comic shop next week" as favourite comic, I couldn't help but go the other way and instead plump for the first American comic I ever read – which is why this reprint of Fantastic Four 86 rather than the original is the one that gets my vote. Lee and Kirby at their best was more than enough to blow my six-year-old mind. There had been Titans before, but this was full-sized and in colour and the world never was the same again.

Action Comics 583 (September 1986)
Alan Moore, Curt Swan and Kurt Schaffenberger

The end of a legend has to leave tears in your eyes (e.g. King Arthur, Robin Hood). When DC consigned their Earth One universe to oblivion with Crisis on Infinite Earths Alan Moore wrote a tragic denouement for the "old" Superman (commissioned by editor Julius Schwartz). It starts in Superman 423 and concludes here, drawn iconically by Swan and Schaffenberger. All the major elements of the legend, even some of the sillier bits, are used with respect and dignity. As Moore says, "This is an imaginary story. Aren't they all?" Yes, and after this, Superman stories are just another bunch of comics.

The cover wasn't outstanding, but the interior certainly was! Jack 'King' Kirby's whole 'Fourth World' trilogy blew this thirteen year old's mind away with the ultimate cosmic opera. Seven issues into this great title (just look at that wonderful logo) Kirby decided to produce a prologue to the New Genesis/Apokolips conflict. 'The Pact!' had everything: fantastic art and graphics, helped by the crisp inking of Mike Royer, intense powerful drama, great dialogue (yes – great dialogue!), intriguing new characters, and just simply superb pacing. Jack Kirby was at his peak. All this plus a short back-up tale and a 1940s Simon and Kirby Manhunter reprint. Magnificent!!

Walt Disney's Comics & Stories 633 (February 1999)
Carl Barks, Don Rosa, Vicar, William Van Horn

If you must discontinue a title after almost sixty years, you might as well go out with one of the best issues of the run. The great cover is possibly the work of Hank Porter, but no-one knows for sure. Inside there's a sentimental, yet not cloying, Carl Barks Christmas tale, followed by a fun Vicar story and two great duck stories from Don Rosa and William Van Horn, both returning Barks characters. All are top quality charming entertainment, and all bar Vicar's have a point to make besides. There's no Mickey Mouse, but the duck material is so good he's not missed.

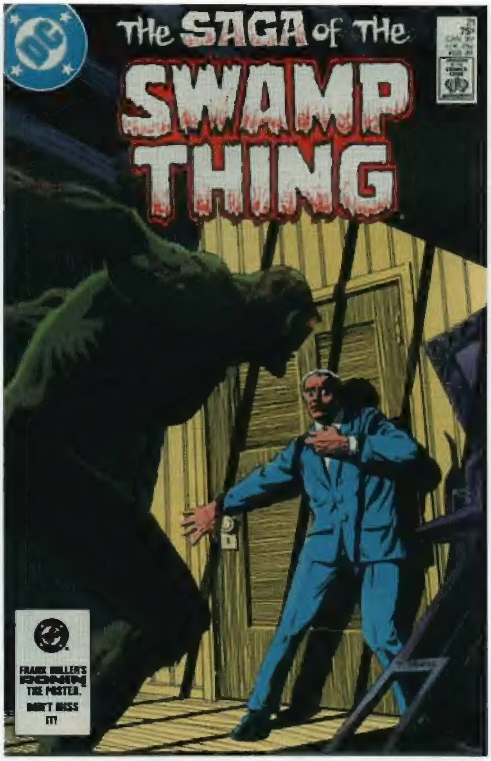
Fungus the Bogeyman
RAYMOND BRIGGS

Fungus the Bogeyman (1977)
Raymond Briggs

After a particularly heavy and indigestible read, such as Kiss Psycho Circus, I like to look at dear old Fungus, whose family life reminds me of my own with my parents in 1977, when the book came out and my father brought me my copy home from work, and now of my new one with my own dumpling. I admire the satisfying balance of lavatory humour and the war against meaninglessness in a quiet world, not unlike our own, where there is no magic, and there are no giant punch-ups, and I can drink my pint of slime in peace.
Gerard Kingdon

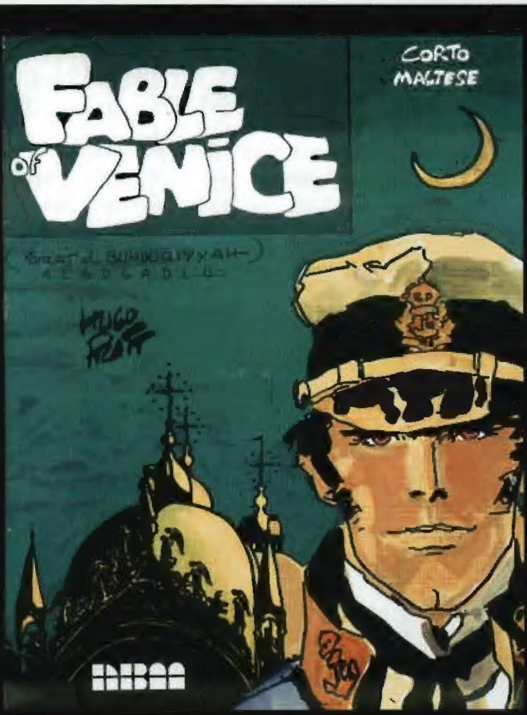


Swamp Thing 21 (February 1984)

Alan Moore, Steve Bissette and John Totleben

Before 'The Anatomy Lesson', Swamp Thing had little choice but to string the reader along with a con; DC were never really going to let Swamp Thing get his human body back because that would bring the entire story to an end and they wouldn't be able to sell you any more issues. In just twenty-three pages Alan Moore changed the rules. He opened out the story and all the characters, managing to avoid undermining what had gone before, and while telling a chilling horror story. It can't be bettered as a writer's display of thought, intelligence and skill.

Fiona Clements



Corto in Venice (1981)

Hugo Pratt

There is so much to love about Hugo Pratt's storytelling: the amazing looseness of ink and pen line, his ear for dialect, and his ability to create mysterious and compelling characters. His most magical work is Corto in Venice, with Corto in search of an ancient sigil – that just happens to be in the form of a giant emerald. The star of this most beautifully drawn book is the city, whose twisting alleys, ancient courtyards and peeling grandeur are lovingly delineated, and the story evolves as both a taut thriller and a metafiction about searching. In itself it's a jewel – brief, richly characterised, labyrinthine and exquisite.

Miracleman 1 (August 1985)

Alan Moore and Garry Leach

Alan Moore's writing broke new ground with its real world setting and dialogue, while Gary Leach's clean line and beautiful panel layouts showed us that he was as good as anyone drawing comics. Mike Moran, freelance journalist, regains lost memories during a terrorist siege and transforms to Miracleman after an eighteen year absence. Then Kid Miracleman comes calling. In just six pages Moore and Leach make him one of the most evil and corrupt characters in comics. By the last panel the tension is such that you genuinely fear for Moran and his wife. Now that's entertainment.

Binky Brown meets the Holy Virgin Mary (1972)

Justin Green

Binky Brown meets the Holy Virgin Mary was the first Autobiographical comic and not only is it historically important but it is still a terrific read. Green manages to meld together all sorts of elements from religious guilt to bizarre sexual urges and schoolboy angst into a package that is at once hilarious, terrifying and hallucinatory. I can't think of any other comic in which the hero is troubled by invisible rays shooting from his phallus and passing through catholic schoolgirls, but there are times when no other kind of comic will do. If you ever feel the need for this particular sort of entertainment then you know where to go.

AND NOW-- IT'S YOUR TURN!
WRONG, GOBLIN! YOU MURDERED THE ONLY GIRL I'LL EVER LOVE--
AND TODAY'S THE DAY YOU'RE GOING TO DIE!!
The GREEN GOBLIN'S LAST STAND!

Amazing SPIDER-MAN 122 (July 1973)

Gerry Conway, Gil Kane, John Romita and Tony Mortellaro

'The Goblin's Last Stand' depicts the death of the Green Goblin, Norman Osborn, after he had been responsible for killing Gwen Stacy the previous issue. Peter Parker's grief, anger and denial over her death is portrayed in a manner never surpassed in comic storytelling. Gerry Conway pulls out all the stops in an explosive release of Spider-Man's rage culminating in his near murder of the Goblin who eventually endures a self inflicted death in the battle. Gil Kane's expressions of Peter Parker's haunted face linger long in the memory. The stunningly emotional final page epilogue shows a sensitive side to Mary Jane's airhead character for the first time and contributes to an unforgettable story even thirty years on.

The Calculus Affair (1956)

Hergé

The best comic by the best comics artist of all time? Oh, how to choose between this and 'Prisoners of the Sun' or 'The Castafiore Emerald' or… Let's just say that the artwork is immaculate, crisp, detailed, full of life and visual humour, and that the script is a masterpiece of intrigue, suspense and verbal wit. By the time that 'The Calculus Affair' was published, Hergé had mastered every aspect of the comic strip form. The confidence, the feeling that you're in the hands of a master capable of anything, makes this album one of the most re-readable and pleasurable comics that I've ever encountered.
